ON Thursday last was heard before the bench of magistrates of Cranbrook in Kent, an information laid by a labourer against Painter, alleged to be a sub-contractor under Mr. Betts, the contractor on the South-Eastern line. The informant stated that he was a labourer employed upon the railway near Staplehurst, and on the 9th of March he received a ticket on a tommy-shop, for 4*s.*, in part payment of wages—that the tommy-shop, he believed, belonged to Mr. Betts, but the ticket was to one Christian Ralph, who kept the shop. The Chairman called upon Mr. Chell, of Maidstone, the informant's solicitor, to show the jurisdiction of the magistrates. Mr. Chell referred to the 1st and 19th sections of 1 and 2 Wm. IV., cap. 37, and said the informant was a labourer who worked in "clay." The Chairman said, he could not consider the making a railway as within the meaning of the Act, even though occasionally clay might be found in forming the railway—and the information was therefore dismissed. Mr. Tyrrell, of Guildhall, London, appeared on the part of Mr. Betts, and stated that both the Railway Company and Mr. Betts had set their faces against tommy-shops, and that no such shop existed on the whole line—that the men were not *obliged* to take tickets on account of wages, and many of them never received any, nor were they ever asked to do so; that in fact it was only the improvident men who ever required them before their wages were due, and the tickets were letters of credit only upon a shop, at which shop the generality of the men who waited until their wages were due, and received cash, expended their money. The mode used was adopted out of charity to the men, as the improvident always spent their money in drunkenness, and therefore, the pay-days were not made frequent—though, if really required, cash was always advanced to any man who applied for it—and the improvident, who could not wait for the pay-day, but required subsistence, might to the extent of about two-thirds of their wages, procure a promise on the part of the ganger to the shopkeeper, that he (the ganger) would pay if he trusted the labourer. Neither the ganger nor Mr. Betts were in the slightest degree interested in the profits of the shop.

Recently a man named Park, having, in an intoxicated state, leaped four times over the boundary wall of the Glasgow and Ayr Railway at the Ayr station, and attempted to get on a train of carriages after it had started for Glasgow, and struggled with and attempted to strike the servants of the Company, was taken before T. M. Gemmell, Esq., one of her Majesty's Justices of the Peace, and having pleaded guilty, was sentenced to pay a fine of 4*l.*, or suffer 40 days' imprisonment.

Last week two individuals were taken before the magistrates of Gorbals, on the charge of having misconducted themselves in one of the Glasgow and Ayr Railway carriages, by smoking, &c., in defiance of the regulations—subsequently assaulting one of the guards, and using abusive language towards the agent at the Glasgow station. The case being fully proved, the magistrates convicted both the defendants in a fine of 1*l.* 10*s.* each.

Two labouring men were on Tuesday brought before J. M'Donald, Esq., Sheriff-Substitute of Edinburgh, accused of quarrelling in one of the third-class carriages on the Edinburgh and Glasgow

Digitized by Google

Railway, to the annoyance of the passengers. They pleaded guilty to the charge, and were fined 5s. each, which they paid. The Sheriff, however, stated that he had in their case mitigated the penalty, in consequence of the testimony given to their previous good character, and because of its being the first railway offence brought before him.

RAILWAYS IN BELGIUM—CARRIAGE OF GOODS.

Report of the Director of the Administration of Railways to the Minister of Public Works, dated August 31, 1841.

SIR,—While the Special Commission appointed by the King is discussing the rates and regulations of the State railways, allow me to submit to you a short *exposé* of the different systems adopted for the conveyance of goods, and their several results.

Three plans have been attempted.

The first (commencing in March, 1839,) consisted in simply conveying, from station to station, the goods—the collection and the delivery of which were managed by the carriers.

The second (commencing in August, 1840,) only modified the first by taking the delivery of small* parcels into the hands of the Government, which substituted itself so far for the coach proprietors and carriers.

The third (commencing in June, 1841). By this last plan, the Government took upon itself the entire carriage of all sorts of goods, with all the details of the business.

FIRST SYSTEM.

In adopting the first system, the Government secured to the country a cheap and speedy means of conveyance, and at the same time an unlimited freedom of trade. It gained the co-operation of all existing undertakings for the conveyance of goods, and, by respecting their industry, interested them in the increase of the weight of goods moving, and consequently in the prosperity of the railway, which became as it were a river, carrying waggons instead of boats, from one end of the kingdom to the other. This river the Government worked, but nothing further, understanding its true mission. It destroyed nothing—it simply made up for that which private industry was unable to supply. We should notice that in this period the Government incurred no responsibility.

SECOND SYSTEM.

By an extension of the first, the second system comprised the collection and delivery of small parcels by the agents of the Government, to the exclusion of all other parties. It was supposed that the trade thus brought into immediate connection with the railway would come to it direct, rather than go to the carriers scattered over different parts of the town. On this supposition the hope of great benefit was founded, which the experience of ten months completely upset. Faithful to their usual custom, the trade continued, and continue, to employ their several carriers. It was then proposed to establish receiving houses. But these were not entirely successful in remedying the evil, nor sufficiently numerous to constitute a complete competition; besides creating a responsibility which was not found the less inconvenient from its limited extent.

THIRD SYSTEM.

Lastly, after 27 months of experiments, the Government, undertaking a complete responsibility, with all its consequences, thought itself able to manage the conveyance and delivery of all goods indiscriminately, through the interposition of an authorised delivery agent who represented it, and whom it imposed upon trade. For this purpose the charge for carriage was calculated to include the delivery, so that the merchants saw this agent come into their warehouses, and were forced to pay him, while their own horses, waggons, and men, which as yet they were not able to do without, remained of necessity unemployed. So also was it with all branches of trade dependant upon commercial intercourse other than by railway. This system, with all its embarrassments and defects, is that at present in use.

Let us see what have been the effects of these successive experiments.

Results of the First System.

An immediate alliance between the railway and the body of carriers,* anxious to establish their connection with the grand enterprise, of which they had become, so to speak, the co-associates.

A complete freedom from responsibility on the part of the Government; which, while it had neither expenses nor obstacles to fear, avoided compromising its dignity, and escaped endless complaints, which arose partly from the faults of its own establishment, and partly from the captiousness of the public—always unreasonable where it has the opportunity.

The profits of working the line rose generally, in less than a year and a-half, from 6,000 f. to 80,000 f. per month; at a less distant period, they were equal to 400 f. per day, without any other charge, except that of locomotion; without porters, waggons, offices—in short, without extraordinary expenses of any kind.

Results of the Second System.

Numerous complaints on the part of the traders who were injured. The organisation of a regular system of frauds. Decline of the railway in public estimation, from delay of the passenger trains. Complication in the accounts and management, hitherto so simple; hence increased expenses.

Independently of wear and tear of stock, the additional establishment of servants only cost in the first month 18,000f., which had increased in August, 1841, to 25,000f. In short, in ten months, the small parcels produced 248,000f., of which the extra expenses had consumed 228,000f.

Results of the Third System.

An open combination of the trade which the Government monopoly had swamped. The commencement of a desperate struggle. Competition re-established on certain roads. Obstinate recurrence to every method of conveyance independent of the railway. A general dissatisfaction among commercial interests, which lost instead of gaining by these innovations. Increase in the rates of carriage, which are considerably higher than would satisfy the carriers if they were allowed the free use of the means at their disposal, each on his own account. Loss to the public and to the carriers unwillingly compelled to be idle. Loss to the Government, which often pays more to its delivery agent than its own profit amounts to.

On the other hand, the financial results are not less remarkable.

The first system, after a gradual advance during 17 months, had reached a monthly profit of more than 79,000f., which the introduction of the second reduced at once to 57,000f. Thanks, however, to the natural increase in the weight of goods moving, the profits of the second system increased in ten months from 57,000f. to 101,000f.—to fall to 85,000f. upon the commencement of the third system at present in force.

To sum up in round numbers the result of the three plans—

	Gross Return.	Extraordinary expenses.	Net Profits.
	Francs.	....	Francs.
1st July, 1840	79,000	Francs.	79,000
2nd August, 1840 to May, 1841....	76,000	19,000	58,000
	126,000	25,000	101,000
3rd June, 1841....	135,000	50,000	85,000

Thus, exclusive of the expenses of locomotion, which have also increased, the change from the first to the second system (July to August) diminished the gross monthly receipts 21,000f.; and that from the second to the third (May to June) caused a decrease of 16,000f.

In my opinion, the net amount of the monthly receipts would be at present about 135,000f., if the Government had continued to confine itself to the first system, while the extraordinary expenses alone now amount to more than 50,000f. per month.

But whatever be the opinion which may be formed of the respective merits of these three plans for the conveyance of goods, it is certainly to be desired that the Commission, without neglecting the admitted reasons for a new schedule of passengers' fares, should at least act with caution, and spare the public and the Government the alway injurious shock of a sudden and complete change.

(Signed) MASUI, the Director.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVE-HILL RAILWAY (ROAD AND SHIPPING PLACE).

Breviate;—

The object of this Bill is to enable the Belfast and Cave hill Railway Company to construct a road and shipping place connected with the railway, and to take quay dues.

New Works.—The Bill empowers the Company, in lieu of any works which may have been authorised to be constructed by them, to make and maintain a public road or highway parallel with the railway and shipping places at the port and harbour of Belfast, connected with the railway: and also to carry the turnpike road from Belfast to Antrim, and from Belfast to the Copeland Water, over or under the railway, by bridges or tunnels. The new works are to be in the line and upon the lands described on the plan and in the books of reference.

The new works are to be completed in five years from the passing of the Act.

Quay Dues.—The Bill empowers the Company to take a quay due not exceeding 6d. per ton on every ship, lighter, or other vessel which shall in any manner use the shipping places or quays of the Company.

The dues are to be recovered by distress of the vessels and their tackle.

Limitation of Actions.—The limitation of actions clause of the former Act is repealed.

Protection of Individuals.—The Bill provides that Robert Thompson, Esq., who has conveyed certain lands to the Company in consideration of the construction of a road parallel to the railway (which road has not been completed) shall be entitled to claim the price of the land, and in case of dispute, it is to be settled as directed by the former Acts and this Act.

The Bill provides that certain lands purchased from Elizabeth May, and not essential for the purposes of the Acts, if the works by this Act authorised are made, shall, if Elizabeth May shall so desire, be conveyed to her upon the purchase money paid for the same, or such part thereof as shall be agreed upon, being paid to the Company.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.

April 29.—Message from the Lords that they have agreed to the Bill without amendment.

BOLTON AND PRESTON RAILWAY.

May 3.—Message from the Lords, that they have agreed to the Bill without amendment.

BRISTOL AND GLOUCESTER RAILWAY.

April 30.—Mr. Wodehouse (Norfolk), Mr.

* "*Petites marchandises*," is here and throughout translated as "small parcels."

* "*Des industries accessoires*," is translated "the body of carriers," certainly not correctly; but, perhaps, with a tolerable approach to the meaning of the original.

Lambton (Durham County), Mr. E. Antrobus, (Surrey), selected, and added to the Committee; Col. Bruen, and Col. Westenra, discharged.

May 4.—Bill reported; to be ingrossed.

May 5.—Bill read a third time, and passed.

DUNDEE AND ARBROATH RAILWAY.

April 30.—Mr. Buck (Devonshire), Mr. Archbold (Kildare), selected, and added to the Committee; Mr. O. Morgan, and the Hon. R. Trevor, discharged.

May 5.—Bill reported; to be ingrossed.

EDINBURGH AND GLASGOW RAILWAY.

April 29.—Mr. Speaker reported the Royal Assent to the Bill.

GREAT NORTH OF ENGLAND RAILWAY.

May 4.—Bill reported; clauses added; Bill to be ingrossed.

GREAT NORTH OF ENGLAND, (CLARENCE AND HARTLEPOOL JUNCTION) RAILWAY (No. 1.)

April 29.—Bill read third time and passed.

LONDON AND CROYDON RAILWAY (GRANGE-ROAD APPROACH), (No. 2).

April [29.—Petition of Robert Sheddon Scrimgeour, against the Bill; referred to the Committee on the Bill.

NORTHERN UNION (NEWCASTLE AND DARLINGTON JUNCTION) RAILWAY.

May 4.—Bill read a third time; amendments made. Amendment proposed, to leave out clause 333. Question put, "That clause 333 stand part of the Bill." The House divided; Ayes 105, Noes none; Bill passed.

[The Report from the Committee on the Bill will be found in another page.]

SAUNDERSFOOT RAILWAY.

Breviate—

The object of this Bill is to authorise the Saundersfoot Railway and Harbour Company to make an extension of their present railway, and also to make two branches from it within the county of Pembroke.

The Bill also extends some of the provisions of the Act relating to the Company.

The Bill extends the provisions of the former Act (10 Geo. IV. c. 108.) to the present Act.

Further Capital.—The further capital of the Company is to be 7,000*l.*, the whole of which is stated to have been subscribed for.

The Company are authorised, so soon as half the further capital is paid up, to borrow on mortgage on bond 2,333*l.*, with power to convert any part of that sum into capital.

The Bill empowers the Company to buy up shares, and either to retain them, or sell them, or cancel them, for the benefit of the Company.

Note.—The Bill provides, that subsisting mortgages are to have priority over the mortgages under this Act (sect. 16). Consider the effect of sects. 27 to 29, giving a summary remedy by means of a receiver to mortgagees under this Act.

Bye-Laws.—The Company are empowered to make bye-laws with a penalty of 5*l.* for regulating the use of the railway, subject to the regulations of the General Railway Act of the 3rd and 4th of Vict. c. 97.

A copy of the bye-laws is to be given to every officer and servant of the Company.

Arbitration.—Provision is made for settling disputes by arbitration, and power is given to the arbitrators to call for the production of books, &c., and to examine parties and their witnesses on oath.

Purchase of Lands.—The Bill empowers the Company to purchase the lands necessary for the purposes of the Act as laid down in the deposited plans, the power of compulsory purchase being limited to three years.

Copyhold lands taken by the Company are to be enfranchised.

Lands belonging to parties under disability or absent from the country are to be submitted to a valuation.

Provision is made for acquiring interests in lands by mistake omitted to be purchased.

The Company may purchase small pieces of severed land instead of making a communication bridge, where the quantity is less than half an acre, or the expense of the bridge would be more than the price of the land.

The Bill empowers the Company to purchase by agreement not exceeding 30 acres of land for making additional stations, offices, &c.

Warehouses, &c.—The Bill empowers the Company to let their warehouses and lands for lives or for a term of years and with or without taking a premium.

Construction of Works.—The Bill empowers the Company to construct the extension and branch railways and works mentioned in sect. 87, in the lines and upon the lands described in the deposited plans and books of reference.

The breadth of the railway is not to exceed 22 yards, and the Company are not to deviate more than 100 yards from the line of the plans.

The Bill contains clauses empowering the Company to take possession of lands for temporary use during the construction of the works, the Company giving previous notice and making compensation to the owners. The owner of lands so taken may compel the Company to purchase them if they be taken for spoil lands or to get materials for the construction of works.

The Bill regulates the working of mines near the railway.

The Bill contains clauses for the protection of roads, and for regulating the construction of bridges.

The new lines of railway and works are to be completed in five years.

Branch Railways.—The Bill contains a clause empowering owners of adjoining land to construct branch railways to communicate with the main line, such branches to be constructed under the direction of the Company.

Land Tax, &c.—Provision is made for making good any deficiency in the land tax and poor's rate.

Tolls.—The Company are empowered to take the tolls and rates mentioned in sects. 122 and 123.

The Bill requires that the tolls and rates shall be charged equally on the same portions of line, and under the same circumstances.

The Bill contains clauses for facilitating the recovery of tolls, and for the prevention of frauds on the Company, and requiring the publication of the tolls.

The Bill contains clauses for regulating the conduct of toll collectors.

Summary Proceedings.—The Bill contains clauses for regulating summary proceedings.

Breviate of amended Bill:—

Accounts.—The Bill as amended provides that for the purpose of rating the railway to the poor, the Company shall keep an account of the tolls received by them, rateable to the poor, showing the gross amount of the monthly receipts, and the amount and particulars of the expenditure in every year on account of any expenses, the probable annual average cost of which is to be taken into account in ascertaining the net annual value of the railway; and if they act as carriers, a separate account, showing the amount that would have been received by them in each year if other persons had been the carriers, and also the amount actually received by the Company. This account is to be open to inspection of the overseers of the poor during the first 14 days in February and August.

An annual account in abstract is to be transmitted to the Clerk of the Peace for the county of Pembroke.

Shares.—The clauses empowering the Company to buy up shares, and either to retain them, or sell them, or cancel them, for the benefit of the Company, have been struck out.

Compensation.—Questions of compensation not exceeding 50*l.* are to be settled by two justices.

Warehouses.—The clause empowering the Company to let their warehouses and lands for lives or for a term of years, and with or without taking a premium, has been struck out.

Works.—The Company are not to proceed in execution of the new works, without previously depositing with the Clerk of the Peace a plan and section of all alterations of the original plan and section, and with the parish clerks, copies or extracts of so much of such plan and section as relates to each parish.

Branch Railways.—The clause empowering owners of adjoining land to construct branch railways to communicate with the main line has been struck out.

Steam Engines.—Locomotive steam-engines are not to be used on the railway. The clause empowering the Company to charge a toll for propelling power has been struck out.

Limitation of Actions.—The limitation of actions clause of the former Act is repealed.

April 29.—Bill read a third time, and passed.

STANHOPE AND TYNE RAILWAY.

May 2.—Message from the Lords, that they have agreed to the Bill with amendments.

May 3.—Lords' amendments agreed to.

STOCKTON AND HARTLEPOOL RAILWAY.

April 29.—Petitions against the Bill: of the Hartlepool Dock and Railway Company; and proprietors of shares in the Stockton and Hartlepool Railway Company; referred to the Committee on the Bill; counsel ordered.

April 30.—Right Hon. T. B. Macauley (Edinburgh) selected, and added to the Committee; Mr. H. M. Tuite discharged.

YARMOUTH AND NORWICH RAILWAY.

Breviate:—

The object of this Bill is to incorporate a Joint Stock Company for making a railway from Great Yarmouth to Norwich, in the county of Norfolk.

Incorporation.—The Bill incorporates the subscribers to the undertaking by the name of "The Yarmouth and Norwich Railway Company."

Capital.—The capital of the Company is to be 150,000*l.*, to be raised in shares of 20*l.* each.

The Company are authorised, so soon as the whole of the sum of 150,000*l.* is subscribed for, and one-half thereof is paid up, to borrow on mortgage or bond 50,000*l.*, with power to convert any part of that sum into capital.

Shares and Calls.—The Bill contains provision for the registering and transmission of shares, and for enforcing the payment of calls and subscriptions.

Interest not exceeding 2*l.* per cent. per annum may be paid by the Directors upon all sums paid up until the opening of the railway.

Management.—The affairs of the Company are to be managed by a body of Directors, 11 in number, one-fourth of whom, it is stated, are to go out of office by rotation annually, with capacity of re-election. Qualification, the holding of 20 shares.

The first Directors are named in the Bill, and the proportions in which they are to go out are stated.

A permanent Chairman and Deputy-Chairman are to be annually appointed.

The Directors are empowered to appoint Committees, to be entrusted with such powers as the Directors think fit, except to make calls.

Meetings.—The Bill provides for the holding of half yearly general meetings, and extraordinary meetings, and regulates the business to be transacted at such meetings, and the manner of voting.

Twenty shareholders, holding in the aggregate 500 shares, are the quorum.

The Bill declares what powers are to be exercised only in general meetings, and declares that all the other powers given to the Company may be exercised by the Directors, subject nevertheless to the control of a general meeting specially convened, but not so as to render invalid any act of the Directors prior to the resolution of such general meeting.

Minute of Proceedings.—A minute of the proceedings of the Directors is to be kept, which is to be received in evidence in the courts; it is to be open to the inspection of the shareholders.

Auditors.—The Company are to elect two auditors, one of whom is to go out of office annually by rotation, with capacity for re-election. Qualification, the holding of 20 shares.

Officers.—The Company are to elect a Secretary and Treasurer in general meeting, and the Directors are to take a security from all officers entrusted with the control of monies.

Provision is made for enforcing the summary accountability of the officers.

Accounts.—The Bill provides for the keeping proper accounts, which are to be balanced half-yearly, and the books so balanced, together with the balance-sheet, are to be open to the inspection of the shareholders and loan creditors 14 days previous to each ordinary meeting and one month afterwards.

For the purpose of rating the railway to the poor, the Company are required to keep an account of the tolls received by them, rateable to the poor, showing the gross amount of the monthly receipts, and the amount and particulars of the expenditure in every year, on account of any expenses, the probable annual average cost of which is to be taken into account in ascertaining the net annual value of the railway; and if they act as carriers they are to keep a separate account, showing the amount that would have been received by them in each year if other persons had been the carriers, and also the amount actually received by the Company. This account is to be open to inspection of the overseers of the poor during the first 14 days of February and August.

An annual account, in abstract, is to be transmitted to the Clerk of the Peace for the county of Norfolk.

Bye-Laws.—The Company are empowered to make bye-laws with a penalty of 5*l.* for regulating the affairs of the Company, and the conduct of their officers; and also bye-laws for regulating the use of the railway, subject to the regulations of the General Railway Act of the 3rd & 4th of Vict. c. 97.

The latter kind of bye-laws are required to be published.

The laws are to be so framed as to allow the convicting magistrate to mitigate the penalty.

Abitration.—Provision is made for settling disputes by arbitration, and power is given to the arbitrator to call for the production of books, &c., and to examine parties and their witnesses on oath.

Purchase of Lands.—The Bill empowers the Company to purchase the lands necessary for the purposes of the Act, as laid down in the deposited plans; the power of compulsory purchase being limited to three years.

Copyhold lands taken by the Company are to be enfranchised.

Lands belonging to parties under disability, or absent from the country, are to be submitted to a valuation; and provision is made for investing the monies coming to such parties, in the name of the Accountant-General of the Court of Chancery, and in the case of leaseholds for adjusting the interests between the tenant and the reversioner.

Questions as to compensation not exceeding 50*l.* are to be settled by one or more justices; beyond that amount, by a jury.

Superfluous lands are to be sold within ten years, or they are to vest in the owners of adjoining lands. A right of pre-emption (except as to lands within a town) is to be offered to the owner of the lands from which the superfluous were severed; and, if he decline, to the owner of the adjoining land.

The Bill empowers the Company to purchase by agreement not exceeding 50 acres of land for making additional stations, offices, &c.

Construction of Works.—The Bill empowers the Company to construct the railway and works in the line and upon the lands described in the deposited plans, and in the schedule and books of reference.

The general breadth of the railway is not to exceed 22 yards, and the Company are not to deviate more than 100 yards from the line on the plans.

The Bill contains clauses empowering the Company to take possession of land for temporary use during the construction of the works, the Company giving previous notice, and making compensation to the owners.

When the lands are so taken for making spoil banks, or side cuttings, or for obtaining materials for the construction of the railway, the owners of the lands may compel the Company to purchase the lands.

The Bill regulates the working of mines near the railway.

The Bill contains clauses for the protection of roads, and for regulating the construction of bridges, and requiring ac-

Digitized by Google

commodation works to be constructed for the use of owners of adjoining lands

The Company are not to be required to make any further accommodation works after the expiration of ten years.

The railway is to be completed in five years.

Branch Railways.—The Bill contains a clause empowering owners of adjoining land to construct branch railways to communicate with the main line.

Land Tax, &c.—Provision is made for making good any deficiency in the land tax and poor's rate.

Tolls.—The Company are empowered to take the tolls and rates mentioned in sects. 286 to 289.

The Bill requires that the tolls and rates shall be charged equally on the same portions of line, and under the same circumstances.

The Bill contains clauses for facilitating the recovery of tolls, and for the prevention of frauds on the Company, and requiring the publication of the tolls.

The Bill contains clauses for regulating the conduct of toll collectors.

Leasing of Tolls.—The Company are empowered to lease the tolls for any period not exceeding seven years; and a summary remedy is given against defaulting lessees.

Regulation of the Railway.—The Company are empowered to regulate the use of the railway by passengers and carriers, and to prevent the smoking of tobacco and commission of other nuisances.

It provides that the Company are not to prevent the passage of engines or carriages on the railway, except when necessary to close the railway during repairs, or for other necessary cause.

Various penalties are imposed for regulating the engines and carriages to be used, and for prevention of accidents and obstructions on the railway by overloading of carriages, or suffering goods to remain on the railway.

Summary Proceedings.—The Bill contains clauses for regulating summary proceedings.

Breviate of amended Bill:—

Reedham Ferry.—The Bill, as amended, empowers the Company to purchase from John Francis Leathes the ferry called Reedham Ferry, with its appurtenances, and all such rights and liabilities as are now possessed by Mr. Leathes.

Protective Clauses.—Clauses have been inserted for protection of the Eastern Counties' Railway Company, and the lands of Alexander Turner Cory, and of the Breydon Water, and of the Earl of Roseberry, and saving the rights of the Commissioners for improving the haven of Great Yarmouth, and of the municipal corporation of Great Yarmouth.

Clauses have been inserted for protection of the navigation of the river Yare, and regulating the construction of the bridge, and of the proposed new channel, and vesting the new channel in the Corporation of Great Yarmouth, and provision is made for keeping the works in repair under penalties.

Clauses have been inserted for protection of the Hassingham Dyke, the Cantley Boat Dyke, and the Cantley Mill Dyke, and regulating the construction of the bridge for carrying the railway over the Dykes.

The Company are required, on request of Sir William Beacham Proctor, to construct a road on his lands from the railway to Buckenham Ferry.

Crossing of Roads.—The Railway is to be allowed to cross three public roads mentioned in sect 261 as amended, on a level. The Company are to provide gates and gate-keepers, to prevent accidents.

Bridges.—The width of bridges for carrying roads over the railway is not to be required to be greater than that of the road; but in the case of a turnpike road or a public highway, the bridge is not to be of less width than 20 feet.

Drains.—The Company are not, in the excavation of side ditches or drains of the railway, to divert the water of the existing drains, except by consent of the owners or parties appointed to take charge of the drainage of the several marshes and lands through which the railway passes.

Branch Railways.—The clause authorising the construction of branch railways is struck out.

EDINBURGH AND GLASGOW AND MANCHESTER AND LEEDS RAILWAYS.

To the Directors of the Edinburgh and Glasgow Railway Company.

GENTLEMEN,—The termination of the first half-year, since the completion and opening of your line, is fast approaching; and although from the weekly traffic returns (the best of tests) it is easy to perceive that a handsome dividend will then be forthcoming, I beg leave to point out the means of making that dividend even greater still. For this purpose, allow me to draw your attention to the economical character of the arrangements for conducting the business of the Manchester and Leeds Railway Company, and, as a shareholder in your line, earnestly to request you will take advantage thereof and copy them. I may state, then, that in the Manchester and Leeds line, the most searching inquiry is instituted into every department of the expenditure by the Directors in person, and all possible means perseveringly used to draw traffic, and every manner of inducement held out to use the line, both as regards passengers and goods, third-class carriages, low fares, ample accommodation, encouragement of public carriers, judicious arrangement of trains, fostering of local traffic, and a prudent regard to the construction of the branch lines; whilst the cost of the locomotive power of passenger and goods' trains is but 11¼d. per mile, money borrowed at 4½ per cent., and the whole line worked at 34½ per cent. on the gross receipts. Nay, the Directors of this most thriving line are now thoroughly convinced, that to make a good dividend it is quite as needful to reduce expenditure as to increase receipts, cutting, as this needs must do on both sides, like a two-edged sword; and I beg leave to add, that would you but keep this last undoubted truth continually before your eyes, the Edinburgh and Glasgow Railway would soon become one of the very first in public estimation.

I am, Gentlemen, your most obedient servant,

ŒCONOMICUS.

BIRMINGHAM AND DERBY RAILWAY.

To the Editor of the Railway Times.

SIR,—As a reader of the *Railway Times*, my attention has been drawn to a letter which appears in your paper of Saturday last, from "Inspector." He pretends to tell your readers that there in an increase of 20*l.* more, for the week ending April 16 this year, than the corresponding one of last. This I must tell him is not correct. Let him first add 85*l.* 8s. on the week receipts of last year—being the 26th part of 2,220*l.* 8s. 8d., which was due for carrying of the mails for the half-year ending June 30—he will then find a decrease of 65*l.* for the week on this year's receipts; for the toll for carrying of the mails was not put down in the weekly returns until the 1st of July.

I do therefore hope, when "Inspector" gives in his next Report, he will be more particular, and not omit for the future those items, whereby the public may be deceived.

I am, Sir, yours, &c.,

SUPERINTENDENT.

BIRMINGHAM AND DERBY RAILWAY.

To the Editor of the Railway Times.

SIR,—I am a holder of 10 shares in the Birmingham and Derby Railway, which I bought at a premium. The dividend was declared on the 4th February last, and I, of course, expected it would soon be paid; but upwards of three months have now elapsed, and it has not been paid, nor does it appear likely that it will be paid, at all events for some time to come, for upon my application to the Secretary for payment, he informs me "that no time is appointed, and that the shareholders present at the meeting did not expect it would be speedily paid." My object cannot be to depreciate the price of these shares below their present ruinous quotations, but I think the attention of the shareholders should be called to this case, for it appears to me little less than a fraud to declare a dividend out of profits which had been previously made, and then to decline paying such dividend. I believe this is a solitary case, no other Railway Board having acted in a similar manner.

I remain, Sir, yours, very obediently,

L. T.

London, May 5, 1842.

LONDON AND BIRMINGHAM RAILWAY —SUNDAY PARCELS.

To the Editor of the Railway Times.

SIR,—Will you allow me to inquire, through the medium of your widely circulating journal, why the booking offices of the London and Birmingham Railway, at the west end of the town, are not permitted to receive parcels for Liverpool and Manchester on Sundays, after eight o'clock in the morning. Sunday, in London, being a "*dies non*" for letters, is a most important day for the transmission of parcels containing patterns, samples, &c., for the Monday morning inspection of the Lancashire and Yorkshire manufacturers.

A parcel intended to reach Manchester or Liverpool, or Preston, on Monday morning, must, according to the present arrangements of the London and Birmingham Railway Company, be sent as far as Euston-square, for the purpose of being booked and forwarded the same night. The public have a right to the accommodation which they enjoyed under the old system of coaches, particularly as the change would benefit the railway, by adding to its income.

I am, Sir, your obedient servant,

A WEST-END RESIDENT.

London, May 2, 1842.

[We give the above because it embodies what may be deemed a tangible complaint against a Railway Company. The fact, however, we believe to be, that when the Birmingham Company first commenced business, the Directors were averse to carrying parcels on Sundays at all. After a time a few complaints were made to them of the inconvenience experienced, as there was no post to resort to in cases of necessity. It was then agreed, that in order to meet such cases, parcels should be received at the Euston station, and forwarded by the trains; but it was never intended for a moment that parcels offices should be opened at every part of London for the accommodation of the *very few cases of* emergency. The Post-office will not forward a letter on Sundays, even in cases of life and death; and surely if the Railway Companies allow parcels to be sent at all, it cannot be considered a hardship to take them to the station, if they are *of importance;* if they are not of importance, let them wait till Monday morning, or be sent on Saturday. Again, how can houses in London require to send patterns into Yorkshire and elsewhere on Sundays, when their houses of business (if respectable) close on Saturdays long before the departure of the night mail, and have consequently time enough to send their patterns off that night?—ED. R. T.]

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—In the *Railway Times* of Saturday last appears an extraordinary advertisement from the Croydon Railway Company, with a new list of fares—extraordinary for the rate of charges to the several stations in relation to the distances, and for reasons assigned for such differences in the rates.

From Croydon to London the charge is 2s. 3d. to a Croydon first-class passenger.

Croydon to New Cross, about 9 miles, fare 1s.
New Cross to London, over 3 miles..... 1s.
} Together 2s., the same distance.

The reason assigned, one might suppose, applied equally to both cases; it is, that the Greenwich Company have given them notice that, on and after the 10th of May, they will require them to pay the additional or full toll (reduced and regulated by Act of Parliament) agreed to be paid by the Croydon Company, to meet the great extra expense of the additional new line of railway, built for their sole use, and deemed by the Government necessary for the public safety.

Now, Sir, in troubling you upon this occasion, my object is to disabuse the public mind by showing, that in this remarkable document "the reason assigned" is not the "real reason." The "motive power" which suggested to the Directors the new scale of prices, which they announce to make with regret, is more likely to be the mortification and disappointment of the Major Domo, at being baffled in his efforts to avoid the payment of a rate consented to under Parliamentary arbitration, though, looking to the great cost of the line to be used, both as regards the locality and the construction, not such a toll as the Croydon Company would easily have submitted to, if one may judge from their expectations and demands in their negociations with the Companies using and coming upon their line. Perhaps also there may be detected a lurking hope that the public may be blinded to support them in their most insincere expression "regard

Digitized by Google

for the public convenience." Let us however, see how the matter stands.

In their advertisement they say they are not insensible of the inconvenience to which passengers will be subjected; and therefore (!!!) what follows? Why, that as they have to pay 4½d. out of the fare to the Greenwich Company, from New Cross, for the use of 1¾ miles of the most expensive portion of the line—and which I believe I do not err much in saying, cost, as it now is, as much or more than the entire Croydon line—they therefore, must subject the public to the inconvenience they *profess* to regret, or subject them (the public) to a great imposition in price; and that not for *profit*, (I therefore assume for *spleen*,) they propose to charge from New Cross to London, to *Croydon* passengers, in addition to the Greenwich toll of 4½d., 10½d. for the use of one mile, and perhaps a trifle over, of the least expensive portion of their own line, with locomotive expenses for the distance, while from Croydon to New Cross, the distance being about nine miles, the charge is 1s. also. Will not the public see in this a barefaced imposition, as well as a false pretext?

What their own shareholders will say I know not. To end the dispute I would test these pretended anxious caterers for the public convenience and low fares, by suggesting to the Greenwich Company to offer to purchase that portion of the Croydon line from New Cross to its junction with the Greenwich line, either at the *cost price*, or at its present value, which as the Croydon Company are now seeking to make valueless to injure their neighbours, they readily, I apprehend, will consent to. By this arrangement the public convenience would really be promoted, instead of inconvenienced by the unseemly and unprincipled struggle, in support of which the Croydon Company would hypocritically invoke the aid and countenance of the public. I fear not, however, that the public, upon a fair statement of the facts, will see through their tortuous policy. The Greenwich Railway Company in such case would, I imagine, gladly undertake to carry passengers to New Cross for a little more than one-half the fare now advertised to be charged to the *Croydon passengers*. Or, again, perhaps the Croydon Company would be willing (query, would the Greenwich Company consent?) to rent the line of road built for them, upon the terms they themselves refused to accept from the other Companies, at a rental computed at 6 per cent. upon the actual cost of land, building, &c. &c., and of one moiety of the line to Corbett's-lane. With reference to the continued and increasing depression of the Greenwich shares, I sometimes fear there is a wavering and indecision upon the subject amongst our Directors. On the amount of the toll it was that the shareholders consented, and were induced, to take the last new shares, the keeping up of which toll in its integrity, is the hope, I had almost said the forlorn hope, of the unguaranteed proprietary. And for myself, I hereby protest against any compromise as far as the amount of the toll is concerned, as a breach of faith with the unguaranteed proprietary.

Your Constant Reader, and an Old Shareholder in the Greenwich Company, G. H. B.

THE TURNPIKE-ROAD BILL.

To the Editor of the Railway Times.

SIR,—The clause (to which you referred last week) proposed by an honourable member to be introduced into the "Turnpike-Road Bill," viz. "that from and after the passing of this Act, no turnpike gate or chain shall be permitted to remain in any city, borough or town, sending members to Parliament," if enacted, will be the means of awarding justice to individuals whose residences, by a recent Act of Parliament, are included in the adjoining borough, city, &c.; previous to which they were not liable to any borough rate, but now being liable, they have cause to complain of being subjected to a tax in passing from one part of the borough to another.

Your obedient servant,
GEORGE JONES.

Bristol, May 4, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Allow me, through the most general channel for railway information, to answer an interrogatory of your correspondent "Passe-partout," as to whether "all the tunnels on the Brighton line are cased with brickwork, or whether they are mere excavations," &c. &c. In answering that they are *so cased*, I may fairly add that he has given himself a misnomer, it being evident that he has never *passed* through the above tunnels. The term *passe-partout* is generally applied to a key that will open every lock. If he can find no better key to knowledge than the one he appears possessed of in the present instance, the door is likely to be long closed against him.

His letter offers one specimen of the many charges preferred against Railway Directors and Engineers, in which ignorant surmise is made a peg whereon to hang unmerited abuse.

I am, Sir, your obedient servant,
ALTERA PARS.

London and Brighton Railway Company,
Croydon, April 29, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Instead of your readers being tired of your again recurring to the conduct of the Directors and their Engineers, Solicitors, &c., they will, I am sure, feel with me, that great credit is due to you for not allowing the matter to subside. This, however, will be the case (and the Directors are calculating upon it) unless you continue to exert yourself in behalf of the shareholders.

How completely you have exposed the futility of Mr. Rastrick's excuses for his excessive expenditure, and how apparent it is that he must either have intentionally deceived the public with regard to the estimate, or have been absurdly ignorant of the science he professes! The fact is, I have a very poor opinion either of his manner of treating the public, or of his professional skill. But it puzzles me, if the money has been fairly spent, how Mr. Locke could be so much out as well as Mr. Rastrick. Three millions instead of one million!! I hear that Mr. Locke is not only an experienced and clever, but an honest man. How then can the matter be reconciled? It seems to me to be due to Mr. Locke that an investigation should take place, in order that his judgment and character may not be made to suffer in the eyes of the public; that in fact the whole of the work executed should be valued by an indifferent person, skilled in engineering, and in the prices of the various works—and which person should not be waited upon by Mr. Rastrick and the Directors, as in the case of the late Committee—a person whose high character could withstand every temptation, let it come in what shape it might. We should then see whether Mr. Locke's estimate was right, or Mr. Rastrick's execution *such* as to give him the high character he claims.

There is another point which seems to be on the first blush very strange. The Directors have declared Mr. Wood not a defaulter only, but something worse—that he has decamped with some hundreds of pounds, the property of the Company; and yet no steps seem to have been taken to discover his retreat, or to recover the money! What is the reason of this? Is it because the concerns of the Company are so prosperous that these hundreds are of no moment? or is it because the late Secretary has threatened to make some awkward disclosures if he be sought after and proceeded against? If the latter, I trust, Mr. Editor, your powerful pen will be the means of dragging Mr. Wood from his hiding place, and bringing him before the Investigation Committee.

I have been told that to be a Director on this line is as good as to secure a fortune. Now, that cannot be from the sum voted them by the shareholders. Is it then from the connection it brings in the way of business? or how is it? and what can it mean?

It seems that at length some of the principal Liverpool shareholders are going to call a special meeting for the purpose of appointing a Committee of Investigation, who are to be paid for their trouble, with proper officers to assist them, and who are to report from time to time to adjourned meetings; and if in their Reports anything should appear to the discredit of the parties concerned, application will be made to the Court of Chancery for an injunction to restrain them from expending any further sums of money until the regular course can be taken for appointing a fresh Board.

In conclusion, I take leave to suggest to the members forming the late Investigation Committee, that it will be wise in them not to allow of their names being put in nomination at the next election of Directors; at least if it be to act with the present Board, which, by-the-bye, it is not likely will be re-elected, but a new system adopted altogether.

I am, Sir, your obedient servant,
CENSOR.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—That your correspondent "Vigil's" fears, respecting a 6 per cent. dividend not being declared at the next meeting of the Great Western Railway Company, are groundless, the following calculation will show, I hope to his satisfaction:—

Gross receipts from December 31, 1841, to April 17, 1842		£161,309
One week's receipts to April 24		12,951
Estimated receipts, from April 24 to May 29, five weeks, at 14,500*l.* per week		72,500
Estimated receipts, from May 29 to June 30, five weeks, at 16,500*l.* per week		82,500
Total		329,260
Less expenses, at 35 per cent		115,241
		214,019
Less rent and tolls of branches	£26,500	
Interest	81,850	
Depreciation fund	10,000	
		118,350
		95,669
Dividend at 3 per cent		90,750
Surplus		4,919
To which add surplus of 1841		10,937
Total surplus		£15,856

This surplus would enable the meeting to declare a dividend of 7 per cent. per annum, and leave a surplus of 731*l.*; and considering that the first half-year is by far the least productive of the two, the meeting would be quite justified in dividing the whole. The last half of the year is sure to yield a net revenue equal to 1 per cent. more than the first half.

"Vigil" has made an error in his calculation of the gross receipts up to April 17, which he has stated at 167,868*l.*; the real amount is 161,309*l.* "Vigil" has supposed all the items of expense to be the same for the current as they were during the past half-year; but the tolls will be rather less, the interest about 8,000*l.* more, and the working expenses less. Hence the difference in the result of our estimates.

A comparison of the Great Western with the London and Birmingham, at the same stage of its history, will show the receipts of the latter to have been much less than those of the former, while the rate of expenses was larger. If, therefore, the receipts of the Great Western should progress agreeably to the law which obtains in railway statistics, the Great Western, at the same period of its existence, must produce the same splendid results as the London and Birmingham.

I am, Sir, your obedient servant,
L.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—As your correspondent "Vigil" talks of *our* dividend, I presume he is a shareholder in the Great Western Railway, and as such will be glad to learn that his fears, on the score of a reduction in the dividend for this half-year, are groundless. I

Digitized by Google

therefore shall feel obliged by the insertion in your paper of the subjoined statement, which clearly shows, that an *average receipt for the months of May and June of* 14,000*l. per week* will enable the Directors to declare a dividend of 3 per cent. at the next meeting.

There can be no doubt that the 14,000*l.* per week, upon which I have calculated as the average for the remaining portion of the half year, will be fully realised, and, in all probability, exceeded; and I must also mention, that a further sum will be received for extra service, in conveying mails up to the 31st December last, "no credit having been yet taken for working two mail trains over the Bristol and Exeter line, nor for the day-mail service between Bristol and London."

I am, Sir, your obedient servant,

E.

Bristol, May 3, 1842.

Amount of Traffic from December 31, 1841, to April 24, 1842.

16 weeks and 2 days		£174,700
9 weeks and 4 days, to June 30, 14,000*l.* per week		134,000
		£308,700
Deduct—		
Working expenses, at 37 per cent.	£114,219	
Interest on loans as per last ½-year	73,882	
Half-year's rent to the Bristol and Exeter Company	18,377	
Ditto, Cheltenham, ditto	8,500	
Fund for depreciation in stock	10,000	
		224,978
		83,722
Surplus balance from last half-year		10,937
		94,659
To pay 3 per cent. for the half year, on 3,025,000*l.*, amount paid on shares, will take		90,750
Leaving an undivided balance of		£3,909

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I expect in common fairness you will insert this in answer to "Vigil's" letter in your columns of last week.

The Great Western, with a balance in hand of 1,000*l.*, and gross receipts between the 1st July and 31st December, 1841, of 337,300*l.*, paid a 3 per cent. dividend for the half-year.

This year the receipts have been:—

January	£42,400
February	40,000
March	48,300
April	56,000
May, compute	65,000
June, compute	70,000
Over last half-year	11,000
Total	£382,700

I find May and June on the Birmingham line in 1840 produced *much more* than July and August in 1841, and I have calculated the Great Western returns on that data for these two months.

I am, Sir, yours, &c.,

A. B.

London, May 2, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The gross receipts of the Great Western line for the last week in March, 1842 (when the line had been opened through 39 weeks),

Amounted to	£11,033	0	0
Deduct from this a week's gross traffic of the Exeter and the Cheltenham branches, computed on the *autumnal* receipts of the 26 weeks, or half-year ending 31st December, 1841, which were 42,341*l.*, consequently one week would be	1,629	0	0
Leaving for the traffic of the Great Western line of 118 miles, London to Bristol	9,404	0	0
The gross receipts of the London and Birmingham line, 112 miles, the last week in March, 1839 (when the line had been opened through 28 weeks), amounted to	9,239	0	0
Excess of receipts in favour of the Great Western line per week	165	0	0

What do "Ignotus," "Known Correspondent," and the rest of Job's comforters, say to this?

I am, Sir, yours, &c.,

A CONSTANT READER.

London, April 2, 1842.

RAILWAY ADJUDICATIONS.

THE QUEEN IN RE WOOLLEY V. THE GREAT WESTERN RAILWAY COMPANY.

Court of Queen's Bench, April 30.—It will be in the recollection of our readers that in December last an accident occurred on the Great Western Railway, by which several persons were killed, and among others a man of the name of Woolley, who died a few days afterwards within the borough of Reading. The Coroner for the borough held an inquest on the body, and the jury returned a verdict of accidental death, with a deodand of 100*l.* A rule had been obtained to set aside this inquisition, on the ground that the Coroner had no jurisdiction. It appeared on the face of the inquisition that the cause of the death arose in the parish of Sunning, in the county of Berks, and that the death itself occurred in Reading, and the inquisition was taken by the Reading Coroner.

Mr. WADDINGTON now showed cause against the rule, and contended that the Coroner of the borough where the death actually occurred, had full authority to summon a jury and take the inquisition, and that the Coroner for the county had no such authority, because the body was not in the county at the time of the inquisition, and an inquisition could only be taken on view of the body; that to say the borough Coroner had no jurisdiction would be to prevent an inquest altogether, when the death was in one jurisdiction and the cause of it in another. The old law, which might have raised a doubt of this sort, had been remedied by the statute of Edward I.

Mr. KELLY, in support of the rule, said that the defect of the old law had not been remedied; that a case like the present had never been provided for; that the jurisdiction of the Coroner did not exist, because the possession of the body alone was not sufficient, but the cause of death and the body being found must both concur, and as that was not the case, he had no right to hold the inquest. At all events, if the statute had remedied any defects as to Coroners of counties, it had not been extended to Coroners of boroughs.

The COURT said it was a matter of great importance, and therefore time ought to be taken to consider its judgment.

HARTNELL V. THE THAMES HAVEN RAILWAY AND DOCK COMPANY.

Court of Common Pleas, April 30.—This was an action brought by the plaintiff to recover a sum of 27*l.* 1s. 2d., under the following circumstances:—

Mr. Serjeant LUDLOW, with whom was Mr. R. GURNEY, was for the plaintiff.

Mr. Serjeant TALFOURD conducted the defence.

It appeared that the plaintiff is the proprietor of a publication called the *Post-office Magazine*, and in the month of October, 1840, a Mr. Pateman called on the Secretary of the Company to solicit him for advertisements, and was ultimately told to cut the advertisement out of the *Times* and insert it. *The Secretary then wished an original article should be written in furtherance of the speculation; upon his wishes being complied with, he was so well pleased that he ordered* 500 *copies for distribution.*

Mr. Serjeant TALFOURD, for the defendants, contended, that as the advertising agents (Clarke and Lewis) accepted a bill for the plaintiff, for the amount demanded, and that previous to its arriving at maturity they became bankrupts, therefore his clients were exonerated; that fact being proved, there was a verdict for the defendants.

[The *Times* of Thursday says:—"In the Report of this case it was erroneously stated, that before the bill for 28*l.* at three months given by Messrs. Clarke and Lewis to the plaintiff arrived at maturity, they became bankrupts. The bill was dated the 14th of April, and was paid when it became due, and it was not till the 10th of March in the present year that the business of Messrs. Clarke and Lewis was brought to a close." Why then was this action brought?—ED. R. T.]

THE QUEEN V. THE EASTERN COUNTIES' RAILWAY.

Bail Court, May 2.—Mr. BUTT moved the Court in this case for a rule to show cause why a mandamus should not issue commanding the Eastern Counties' Railway Company to pay over to a gentleman named Collenridge compensation for injury done to his property by their works. In 1840, a mandamus to have a jury summoned and damages assessed in this case had issued, and a sum of 75*l.* had been awarded as due by the Company to Mr. Collenridge. The inquisition had been properly signed, and sent to the Clerk of the Peace to be registered. The Company, however, refused to pay, and seemed determined to resort to every expedient to avoid doing so. This application, therefore, became necessary.

Rule to show cause granted.

ACCIDENT ON THE DUBLIN AND KINGSTOWN RAILWAY.—On Monday a slight accident, but one which under other circumstances might have been attended with serious consequences, occurred on the Dublin and Kingstown Railway. As the half-past three o'clock train was proceeding from Dublin, the fore-axle of the tender broke, but fortunately at a time when the diminished speed of the train was such as to obviate in a great measure all the evils which the concussion necessarily attendant on the sudden stoppage of a cumbrous machine moving at such velocity. The accident occurred as the train approached the Booterstown station, at about the distance at which the "drag" is usually applied. The broken tender and the train were dragged along the rail for some hundred paces, which apparently received no damage from the "ploughing" action. The engine was freed with the greatest possible speed, and having been turned to the other end of the train, brought the passengers back to Dublin, none of whom, we are happy to learn, received any injury.—*Dublin Monitor.*

Just Published, price 3s., and sent free on receipt of a Post Office Order for 4s.,

MANLY VIGOUR: a Popular Inquiry into the Concealed Causes of its Premature Decline; with Instructions for its Complete Restoration, addressed to those suffering from the Destructive Consequences of Excessive Indulgence in Solitary and Delusive Habits, Youthful Imprudence, or Infection; with Remarks on the Treatment of Gonorrhœa, Gleet, Stricture, and Syphilis. Illustrated with Cases, &c.

By C. J. LUCAS & Co., Consulting Surgeons, London.

Published by the Authors; and sold by Brittain, 11, Paternoster-row; Effingham Wilson, 18, Bishopsgate-street; Field, 65, Quadrant, Regent street; Burgess, 28 Coventry-street, Haymarket; Huett, 141, High Holborn; and by all Booksellers in the United Kingdom.

"The best of all friends is the Professional Friend; and in no shape can he be consulted with greater safety and secrecy than in 'Lucas on Manly Vigour.' The initiation into vicious indulgence—its progress—its results in both sexes, are given with faithful, but alas! for human nature, with afflicting truth. However, the authors have not exposed the evil without affording a remedy. It shows how 'Manly Vigour' temporarily impaired, and mental and physical emasculation, produced by uncontrolled indulgence of the passions, can be restored; how the sufferer, who has pined in anguish from the consequences of early indiscretion—afraid almost to encounter his fellow man, can regain the vigour of health and moral courage. The work is written in a concise and perspicuous style, displaying how often fond parents are deceived by the outward physical appearance of their youthful offspring; how the attenuation of the frame, palpitation of the heart, derangement of the nervous system, cough, indigestion, and a train of symptoms indicative of consumption or general decay, are often ascribed to wrong causes; and instead of being the natural results of congenital debility or disease, are the consequences of an alluring and pernicious practice, alike destructive to the mind and body."—*Bell's New Weekly Messenger.*

Messrs. Lucas and Co. are to be daily consulted from ten till two, and from five till eight in the evening, at their residence, No. 60, Newman-street, Oxford-street, London.

Country Patients are requested to be as minute as possible in the detail of their cases, as to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party. The communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application; and in all cases the most inviolable secrecy may be relied on.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY—SUMMER HOURS.

The Public are informed, that on and after May 2, 1842, and until further notice, the Trains will run at the following hours:—

From Glasgow to Greenock. DOWN.	From Greenock to Glasgow UP.
8 a.m.	Half-past 8 a.m.
• 10 —	• Half-past 9 —
12 Noon.	Half-past 10 —
• 2 p.m.	• Half-past 12 p.m.
3 —	Half-past 1 —
4 —	Half-past 3 —
• 5 —	• Half-past 6 —
8 —	Half-past 8 —

☞ No Trains on Sunday.

The Trains marked • stop at the Houston and Bishopton Stations.

All the Trains stop at the Paisley and Port-Glasgow Stations.

COMMUNICATION WITH THE WESTERN COAST.

DOWN TRAINS.

Steam-Boats are at present advertised to depart from Greenock for the undermentioned places (weather, &c., permitting), on the arrival of the Trains which leave Glasgow at the hours specified below:—

Gourock.	Helensburgh.	Row and Roseneath.	Gareloch head.	Dunoon and Rothesay.
8 a.m.	8 a.m.			8 a.m.
	10 —			
12 Noon.	12 Noon.	12 Noon.		12 Noon.
4 p.m.	4 p.m.	4 p.m.	4 p.m.	4 p.m.
5 —				5 —

UP TRAINS.

Steam-boats are at present advertised to arrive from the undermentioned places (weather, &c., permitting), for the Trains which leave Greenock at the hours specified below:—

Gourock.	Helensburgh.	Roseneath and Row.	Gareloch head.	Rothesay and Dunoon.
8 30 a.m.	8 30 a.m.	8 30 a.m.	8 30 a.m.	8 30 a.m.
10 30 —	10 30 —			10 30 —
	12 30 p.m.			
1 30 p.m.				1 30 p.m.
	3 30 —	3 30 p.m.		
6 30 —				6 30 —

By the above arrangement, Passengers coming from the Watering-places on the Western Coast, leaving Greenock by an early Train, and joining the Edinburgh and Glasgow Train at Eleven o'Clock, can remain in Edinburgh four hours, and return to Greenock the same night; or leaving Edinburgh by the Seven o'Clock, a.m., train, can remain four hours and a-half in Greenock, and return to Edinburgh in the evening.

Arrangements are in progress which will afford regular communication with Largs and Millport.

For the sailings of the Liverpool, Irish, and Highland boats, which vary according to the state of the tide, see their advertisements.

It is particularly requested that passengers, in going to and from the steam-boats, will use all convenient expedition, that the regularity of the communication may not be interfered with.

Children under ten years of age, if with their parents (but not more than one child with one passenger) free; from ten to fourteen years of age half-price.

Passengers' personal luggage, not exceeding 112lbs. weight, or 10 cubic feet, will be conveyed free. If above that weight or measure, it will be charged at the rate of 6d. per cwt., or 2d. per cubic foot, at the option of the Company's agent. The Company do not hold themselves responsible for luggage, unless booked and paid for according to value.

No dog or other animal is permitted to be taken into a first-class carriage.

Passengers at the intermediate stations should arrive ten minutes before the time when the train is expected.

Goods of every description are carried by this Company. See rates of carriage.

Light goods requiring extra dispatch will be taken, at any hour, by the passenger trains.

BY ORDER OF THE DIRECTORS.

In the Press,

SECOND APPENDIX to HOBLYN'S MANUAL of the STEAM-ENGINE.

—Recent Report of the Officers of the Admiralty on Mr. Samuel Hall's Condensers. This Report will be bound up with all the copies of the above work still on hand, and may be had *gratis* by those who have already purchased that work.

Holt, Webster, and Geary, Charterhouse-square.

CROYDON RAILWAY FARES.

— NOTICE having been received from the Greenwich Railway Company that on and after the 10th day of May, 1842, an additional Toll will be demanded for every passenger carried by this Company over the Greenwich Railway, the Directors regret to announce that they are therefore compelled to abandon for the present the hope they have always entertained of conveying passengers to and from the London Bridge station at a greatly reduced scale of fares. The toll of Fourpence-halfpenny per passenger thenceforth payable for the use of one mile and three quarters of the Greenwich Railway is so disproportioned not only to a lower, but even to the present scale of fares, that the Directors are placed under the painful necessity of increasing, instead of diminishing the charges to the public. In resorting to this alternative they are not insensible of the inconvenience to which passengers will be thereby subjected, and they beg to give their assurance that every facility will be afforded to those passengers between Croydon and New Cross, who may desire to extend their journey from the latter place to the several parts of the metropolis by omnibuses or otherwise.

By order of the Board of Directors,

R. S. YOUNG, Secretary.

April 29, 1842.

LONDON AND CROYDON RAILWAY.

— NOTICE is hereby given, That a Special Meeting of the London and Croydon Railway Company will be held at the City of London Tavern, Bishopsgate-street, within the City of London, on Tuesday, the 10th day of May next, at One o'Clock precisely, for the purpose of submitting to the Proprietors, then present, a copy of a Bill now before Parliament, intituled, "A Bill to enable the London and Croydon Railway Company to make an approach to their railway in the Parish of St. Mary, Rotherhithe, in the County of Surrey."

WILLIAM ARTHUR WILKINSON, Chairman.
R. S. YOUNG, Secretary.

Dated the 7th day of April, 1842.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline,

with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Bailliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

THE SOUTH-WESTERN STEAM PACKET COMPANY,

—Capital £100,000, in 4,000 Shares of £25 each.—Deposit, £5 per Share.

PROVISIONAL COMMITTEE.

James Aiken, Esq., Liverpool.
Thomas Cooke, Esq., Manchester.
W. J. Chaplin, Esq., 1 Adelphi-terrace, London.
J. W. Drew, Esq., Southampton.
John Hibbert, Esq., 47, Great Ormond-street, London.
Ambrose Humphrys, Esq., 22, Upper Wimpole-street, London.
Thomas Smith, Esq., Liverpool.

(With power to add to their number.)

BANKERS.

Messrs. Glyn, Halifax, and Co., Lombard-street, London.
Messrs. Maddison, Southampton.

The projectors of the present undertaking having effected the purchase of seven Steam Packets, for some time past employed between Southampton and Havre, the Channel Islands, and some of the Ports on the Southern Coast of England, and the good will of their Trade, on very advantageous terms, invite the public to join them in the formation of an efficient Company to carry on the existing business, and to enlarge and improve it by the application of further Capital.

Before the construction of its Railway, Pier, and Docks, Southampton was always a favourite port of passage. Assisted by these great adjuncts, there cannot remain a doubt that the trade of Southampton will in all future time be such as to afford high remuneration for capital judiciously employed in providing efficient Steam Packets to run to and from that port.

Several of the London and South-Western Railway Directors are on the Provisional Committee of the projected Company. The most friendly disposition towards the intended Packet Company has also been secured at Havre, and with the Paris and Rouen Railway Company; and it is believed that there remains to be created a very large traffic of Passengers and Goods from the Ports on the South-Western Coast of England, which, from the inadequacy of any provision hitherto made for it, remains almost wholly undeveloped.

Applications for the remaining Shares may be made, until the 10th instant, to, and Prospectuses and further information may be obtained from, Mr. Bircham, Solicitor, No. 15, Bedford-row, London.

LONDON AND SOUTH-WESTERN RAILWAY.

—In consequence of the satisfactory result of an excursion from London to Southampton round the Isle of Wight and back to Nine Elms, in the autumn of last year, the first of a series of excursions will take place on Monday, the 16th inst.

The Train will leave Nine Elms at ¼-past Seven o'Clock in the morning, precisely, proceed to Southampton, and the passengers will be conveyed thence by Steam-boat to Portsmouth, and the principal places of interest on the Coast of the Isle of Wight, and return to Nine Elms about Ten o'Clock in the evening.

Tickets for the whole trip 20s. each, may be obtained on and after Wednesday, the 11th instant, at the Nine Elms Station, and the following Coach Offices, viz.:—

Swan with Two Necks	Lad-lane.
Spread Eagle	Gracechurch-street.
Cross Keys	Wood-street.
Golden Cross	Charing Cross.
Universal Office	Regent Circus.
George and Blue Boar	Holborn.
Griffin's Green Man and Still ..	Oxford-street.

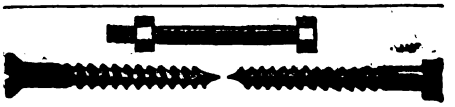
Early application is desirable as the tickets are limited in number.

By order,

ALFRED MORGAN, Secretary

Nine Elms, May 6, 1842.

Refreshments will be provided on board the Steam-boats at a moderate charge.



CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.

—CALL of £7 10s. per Share.—NOTICE is hereby given, That the Directors have resolved that a CALL of Seven Pounds and Ten Shillings per Share be made on the Proprietors: they are therefore hereby requested to pay the same, on or before the 28th day of May, 1842, to the account of the Treasurers, at one of the following banks:—

The County of Gloucester Bank and all its branches.
The Gloucestershire Banking Company and all its branches.
London—Messrs. Glyn and Co.; Messrs. Roberts and Co.; Messrs. Masterman and Co.; Messrs. Barnett, Hoares, and Co.

C. F. SAGE, Chairman of the Directors.

Board-room, Cirencester, April 29, 1842.

T. H. RYLAND AND CO., OZELL'S STREET, • BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws, Screw Bolts, Spikes, &c. for Railway and other purposes, also Boiler Rivets, &c.

GREAT WESTERN RAILWAY.—J. BLAND

begs to inform the Public that he is the sole appointed Agent in Bristol, to the Great Western Railway Company, for the Collection and Delivery of Goods and heavy Merchandize for the Luggage Trains.

Copper, Tin, Iron, &c., is conveyed to Paddington at 20s. per Ton, and other goods at rates as shown in the Company's Bills, which also give the particulars of the delivery charges in London.

The charges for Parcels and small Packages, per Goods' Train, including collection and delivery in London, and the Towns on the line of Railway, are as follows:—

	Up to 65 miles.	Up to 95 miles.	Up to 125 miles.	Up to 151 miles.
lbs. lbs.	s. d.	s. d.	s. d.	s. d.
From 1 to 7	1 0	1 0	1 0	1 0
„ 7 „ 13	1 0	1 2	1 3	1 3
„ 13 „ 19	1 0	1 4	1 6	1 6
„ 19 „ 31	1 0	1 6	1 9	1 9
„ 31 „ 56	1 2	1 9	2 3	2 3
„ 56 „ 70	1 4	2 0	2 9	2 9
„ 70 „ 84	1 6	2 6	3 0	3 3
„ 84 „ 112	2 0	3 0	3 6	4 0
„ 112 „ 140	2 3	3 3	4 0	4 9
„ 140 „ 168	2 6	3 6	4 6	5 3
„ 168 „ 190	2 9	3 9	4 9	5 9
„ 190 „ 224	3 0	4 0	5 0	6 0

And then the graduated scale for Tonnage.

The Rates of Conveyance between the undermentioned places and Bristol, are as follows:—

Chepstow, Newport, and Cardiff, 1 lb. to 7 lbs... 0s. 6d.
„ „ „ 7 lbs. to 14 lbs... 1s. 0d.
Bridgend, Neath, Cowbridge, and Swansea ..... } 1 lb. to 14 lbs... 1s. 0d.

Above 14 lbs., 1d. per lb.

Carts or Waggons will be in attendance upon the arrival of Packets or Sailing Vessels, by addressing an order to Mr. John Bland, Bristol; or to the Clerk of the Goods' Department, Great Western Terminus, Bristol.

Goods for Ireland or Wales are invariably forwarded by first Packet, unless otherwise directed.

N.B. Parties in London wishing to forward goods by the Great Western Railway, are informed that the undermentioned Offices are the only ones where they can be received on account of the Company, as follows:—

Bull and Mouth Inn, St. Martin's-le-Grand;
Ditto ditto Coach Office, Regent's Circus;
Moore's Green Man and Still, Oxford-street;
At the Company's Office, Princes-street, Bank;
And at the Paddington Station;

And in Bristol, at the Rummer Hotel Office, High-street;
Bland's Warehouse, Broadmead;
And the Railway Terminus, Temple Meads.

Bristol, April, 1842.

CONTRACTS FOR WORKS.—WILSONTOWN, MORNINGSIDE, AND COLTNESS RAILWAY.

—The Directors of the Wilsontown, Morningside, and Coltness Railway, are now ready to receive Tenders from Contractors for the execution of the following works, viz.:—

Morningside Contract, No. 1.—This Lot extends from the eastern termination of the Wishaw and Coltness Railway, to a point in the lands of Stane, parish of Cambusnethan, about 700 yards west of the Edinburgh and Ayr road, being in length, 4 miles 3 furlongs, or thereby, and includes the entire construction of this portion of the railway, and all the works connected therewith, together with the maintenance of the same for one year after the due completion thereof.

Knowton Contract, No. 2.—This Lot extends from the point above named, in the lands of Stane, to a stake numbered 125, and fixed in the lands of Crossfoot, parish of Whitburn, about 600 yards east of the Coltness Iron Company's Tramroad, being in length, 3 miles 3 furlongs, or thereby, and includes the entire construction of this portion of the railway, and all the works connected therewith, together with the maintenance of the same for one year after the due completion thereof.

Plans, Drawings, and Specifications of the Works, together with printed forms of Tender, may be seen on and after Monday, the 18th instant, at the office of the Secretary to the Company, No. 36, Miller street, Glasgow, to whom all Tenders must be addressed, endorsed, "Wilsontown, Morningside, and Coltness Railway."

"Tender for Works, Contract, No.——"

No Tender will be received after Monday, the 16th day of May next; and the Directors do not bind themselves to accept the lowest Tender, nor will they be liable for claims from persons whose offers may not be preferred.

Glasgow, April 15, 1842.

CRANES, ROPE BLOCKS, AND SCREW JACKS,

manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.

In connection with the above lines of Railway, Places can be secured by

By Order,
CHARLES R. MACKENZIE, Secretary.

10, Angel-court, Throgmorton-street,
May 1, 1842.

N.B.—The quickest route to Paris is by Railway to Brighton, and thence by steam to Dieppe. The packets leave Brighton every Saturday, and Dieppe every Wednesday.

MANCHESTER AND LEEDS RAILWAY —MANCHESTER JUNCTION LINE.—CONTRACTS FOR WORKS.

—NOTICE is hereby given, That the Directors will meet at their Office, Clowes's-buildings, Hunt's Bank, on Monday, the 30th day of May next, for the purpose of receiving Tenders for the completing the following Contracts:—

CONTRACT No. 1.—The formation and completion of the Junction line from a point about six chains east of Collyhurst-lane to the east of Lower Tebbut-street, in the town of Manchester, being a distance of about 1,316 yards, including the formation of the excavations and embankments. The building of the arches over the reservoirs near Collyhurst; the bridges over Collyhurst-lane; bridges with iron girders, under St. George's-road and Cropper-street; retaining walls; drains; laying and ballasting the permanent way; and other works connected therewith.

CONTRACT No. 2.—The formation and completion of the said Junction line from termination of the last Contract to the intended station at Hunt's Bank, being a distance of about 701 yards. This Contract consists principally of a *viaduct* containing several bridges, with *iron* girders, and crosses some of the principal streets in Manchester, as well as passing three times over the river Irk.

Plans and Specifications of the works intended to be let will be ready for inspection at the Engineer's Office, Palatine-buildings, Hunt's Bank, Manchester, on and after Monday, the 16th May next. Printed forms of Tender will be provided, which must be delivered properly filled up, at the Secretary's Office, Hunt's Bank, by Eleven o'Clock on Monday, the 30th of May next. No others will be attended to.

Parties tendering must attend personally, or by their agent, at Three o'Clock in the afternoon of the same day.

Engineer's Office, Manchester, April 22, 1842.

TO ENGINEERS, PATENTEES, CONTRACTORS, AND BUILDERS.—STEAM ENGINES ON SALE OR HIRE.—C. H. CAPPER,

Iron Founder, Manufacturer of Steam Engines, Sugar Mills and Mill Machinery, Broad-street Foundry, Birmingham, has Engines from 6 to 20 horse power always on hand, and any parties wishing to hire new or second hand ones, for a given time, to try experiments, &c., may have the same at work immediately, and upon the most moderate terms.

N.B. Castings, Slide Lathes and Planing Machines, on sale.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S RAILWAY TIME AND FARE TABLES,

containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources. Corrected to the end of February. Price 3d. royal 8vo. *Railway Times* Office, 122, Fleet-street; Groombridge, Paternoster-Alley.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES,

containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to April, 1842, Price 1s., in cloth. *Railway Time* Office, 122, Fleet-street.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842,

containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TUCK'S MAP OF THE RAILWAYS for 1842

throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

V.

MAPS OF ALL THE LINES OF RAILWAY

through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s. in cloth 1s. 6d.; on canvass, 2s. 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES

from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VII.

TABLES OF HACKNEY CARRIAGE FARES

from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

Engineer's Office, Manchester, April 22, 1842.

MANCHESTER AND LEEDS RAILWAY. TO IRON FOUNDERS.—The Directors are prepared to RECEIVE TENDERS for the IRONWORK included in the Contracts on the Manchester Junction Line, which are advertised to be let on the 30th May instant, separate from the rest of the work.

The ironwork alluded to consists of—
Cast-iron girders for bridge under Cropper-street.
Cast iron girders for a long bridge under St. George's Road.
Cast-iron girders for carrying the railway over Lower Tebbut-street.
Cast-iron curved ribs for carrying the railway over Blakely-street; span of opening being 63½ feet on the skew.
Cast-iron girders for carrying the railway over Long Millgate.

Drawings and Specifications will be ready for inspection at the Engineer's Office, Hunt's Bank, Manchester, on and after Monday the 16th May instant.

Printed forms of Tender will be provided, which must be delivered at the Secretary's Office, Clowes's Buildings, Hunt's Bank, Manchester, by Eleven o'Clock on Monday the 30th May; and parties tendering must attend, by themselves or agent, at Three o'Clock in the afternoon of the same day.

By order,
JOHN JELLICORSE.

Manchester, May 10, 1842.

GREAT ECONOMY IN RAILWAY AND OTHER ENGINES.—The Directors of Railway Companies, and the Proprietors of Locomotive and Stationary Engines, are respectfully solicited to inspect Mr. SAMUEL HALL'S PATENT APPARATUS for the Consumption of Coal, as applied to Engines on the Birmingham and Derby, North Midland, and Midland Counties' Railways, and numerous Stationary Engines at Derby, Nottingham, Leicester, Leeds, &c.

Coke is, in most situations, cent. per cent. dearer than Coal, but by this Apparatus the latter fuel may be used, as the Smoke and Inflammable Gases arising from it are thoroughly consumed, and the durability of the Boilers, Furnaces, and Tubes is greatly increased.

N.B. The Apparatus can be applied to Locomotive or Stationary Engines in a few days, and at a trifling expense.

No. 18, King's Arms-yard, London.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

BIRMINGHAM AND GLOUCESTER RAILWAY.—INTEREST ON SCRIP TO 25th MAY, 1842.—Persons holding the SCRIP QUARTER SHARES of this Company are requested to send them to the Company's Office, Waterloo-street, Birmingham, for the purpose of having the Interest (payable on 25th May) noted thereon; which done, they will be returned, together with a Check for the amount.

By order,
GEORGE KING, Secretary.

12, Waterloo-street, Birmingham, May 2, 1842.

GREENWICH RAILWAY.—Brother Shareholders,—Be not alarmed at the present depreciation in the price of the "Old Shares," which are, I am assured, below *their real value*.

The low price is entirely owing to the operation of "bearing." (I must refer the uninitiated to a certain Railway Board, *whose Chairman is a member of the* Stock Exchange, for an explanation of this term). Among other acts of this faction, is the circulation of a report that your Directors are not unanimous in resisting the demand of a commutation of toll, a report which I have ascertained is *utterly groundless*.

Be *firm*, and your prospects *must* mend; and do not suffer yourselves to be cajoled by such dishonest representations.

G. H.

In one handsome quarto volume, with 17 splendidly executed Engravings, including a Railway Map of the United Kingdom, price £1 11s. 6d.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.

"No railway capitalist who studies his own interest, will remain long without it; it is a work of immense labour and research, rich in original and authentic information, and embellished to profusion with splendid engravings."—*Railway Times.*

"This is one of the most striking and valuable works that have lately issued from the press; the author handles his subject in that masterly style which proves his perfect acquaintance with the matters upon which he treats."—*Bath Chronicle.*

"Mr. Whishaw is a discriminating statician, and has a thorough acquaintance with his subject."—*Athenæum.*

"A faithful record of the rise and progress of the greatest modern result of the genius of man."—*Polytechnic Journal.*

"The completest view of railway statistics yet produced."—*Morning Chronicle.*

"A complete history of all the railways in the United Kingdom.—*Liverpool Mercury.*

"Full of sound practical information, derived from the fountain head itself."—*Observer.*

"A more complete and satisfactory account of the railway system of Great Britain could scarcely be devised."—*Courier.*

"Here the practised engineering skill of the author manifests itself."—*Manchester Courier.*

"It may be looked upon as a rare and precious acquisition to the practically scientific literature of the country."—*Manchester Times.*

"It is not the mere opinion of a theoretic man, but the result of a practical and talented engineer."—*Plymouth Herald.*

"Such a work, the product of a practical man, is clearly entitled to the distinctive term 'national.'"—*Hereford Journal.*

"A text-book on railways for the next half century."—*Maidstone Gazette.*

"We know of no work which ought to be so favourably received in Scotland at present."—*Perth Courier.*

"Developing a depth of principle, and a breadth and variety of details of well-digested facts, which nothing in the history of railways at home or abroad can possibly rival, far less surpass."—*Dumfries Times.*

London: Simpkin, Marshall, and Co.

THIRTY-THREE VALUABLE, YOUNG, SOUND, CART HORSES, HARNESS, &c.

TO BE SOLD BY AUCTION, by Mr. DIXON, at his Repository, Barbican, on FRIDAY, May 20, 1842, at One o'Clock, Eight first-rate, handsome, seasoned Cart Horses, the property of Messrs. Thornton and Son, of Brighton, Contractors and Engineers, comprising Five really elegant Greys; a pair of match Blacks, a remarkably powerful Brown Gelding, and including the really beautiful Grey Entire Horse, the "Wonder," unequalled for cleanliness, power, and activity.

Twenty-five fine-shaped, active, young, powerful, Cart Horses, and Twenty Sets of Thill and Chain Harness, which have been employed on a contract by Messrs. Johnson and Co., Stonemasons and Paviors.

Colours—Bays, Browns, Blacks, and Greys.

On View, and Catalogues had, two days before the Sale.

REPORT OF THE OFFICERS OF THE BOARD OF TRADE.

(*Continued from page 489*).

The returns of the past year also show a marked diminution in the number of serious accidents occasioned by the misconduct of engine-drivers, as will apppear by the following table :—

Accidents occasioned by the misconduct of Engine-drivers.

Date.	Name of Railway.	Number of Persons. Killed.	Injured.	Nature of Accident.
1840.				
Aug. 19..	Eastern Counties'	4	6	Recklessness in driving at an excessive speed. The fault, however, was partly that of the Company, for not giving proper instructions as to the rate of speed.
Sept. 7..	Hull and Selby	..	3	Unskilfulness of driver, in not slackening speed soon enough on approaching the terminus.
,, 13..	Eastern Counties'	1	6	Carelessness in driving too fast, and not keeping a proper look-out.
Oct. 25..	Great Western	1	4	Engine-driver supposed to have fallen asleep on the engine.
Nov. 8..	Midland Counties'	..	8	Recklessness in driving too fast over a bad road.
Nov 11..	London and Birmingham ..	2	..	Recklessness in disregarding signals.
,, 15..	Eastern Counties'	..	4	Recklessness in driving too fast, and not keeping a proper look-out.
1841.				
July 16..	Taff Vale	1	..	Disobeying regulations by going on the wrong line of rails.
Mar. 26 .	Manchester and Leeds	1	2	Ditto.
Oct. 16 .	South-Western	..	1	Carelessness in not looking out for signals.

This result may be attributed partly to the beneficial results of more extended experience, and of the measures taken by several Railway Companies to raise the character of that important class of men, the engine-drivers, and partly to the salutary example of the prosecutions which have been instituted under Lord Seymour's Act.

The returns of accidents made to the Board of Trade, and Reports of Inspectors up to the end of January, 1841, are already published, in the return printed by order of the House of Commons, and dated 8th March, 1841. The returns and Reports subsequent to that period, together with copies of the correspondence, conveying suggestions to Railway Companies relative to accidents, will be found in the Appendix to this Report, p. 1 to 95, containing—

1. Returns of accidents made by Railway Companies, from 1st February, 1841, to 1st January, 1842.

2. Reports and correspondence relative to the following accidents :—

Accident on the	Grand Junction Railway,	Feb.	11, 1841.
,,	Midland Counties'	May	6
,,	Newcastle and Carlisle	May	10
,,	Eastern Counties', ...	May	16
,,	London and Greenwich ...	May	28
,,	Sheffield and Rotherham..	June	3
,,	Liverpool and Manchester	June	18
,,	North Union	Sept.	7
,,	Great Western	Sept.	7
,,	Bristol and Exeter.....	Sept.	11
,,	London and Brighton	Oct.	2
,,	London & South-Western	Oct.	18
,,	Great Western.....	Dec.	24

The most important results deducible from these accidents appear to be—

1. The impropriety of running tender foremost, illustrated by the accident on the Sheffield and Rotherham and North Union Railways.

2. The danger of running trains without a sufficient number of breaks and breaksmen.

3. The propriety of using buffer springs with all passenger carriages, and of giving the sides of open carriages a sufficient height, illustrated by accidents on the Great Western Railway.

4. The necessity for using extreme caution, and restricting the speed to a very moderate limit for a considerable period after the first opening of a new line, illustrated by the accident on the London and Brighton and Eastern Counties' Railways.

5. The necessity for extreme vigilance in watching the line when the weather has been more than usually unfavourable, and especially in those places where a tendency to slip has been exhibited ; illustrated by the accidents on the Great Western Railway of the 24th December and 7th September, and by the accident on the London and Brighton Railway.

6. The propriety of having fixed signals at stations, and tail lamps of the best construction, so situated as not to be liable to be accidentally obscured ; illustrated by the collisions on the Grand Junction, the North Union, and the Croydon Railways.

7. The danger of level crossings, and the necessity of enforcing strictly the practice of keeping the gates shut across the turnpike or highway ; illustrated by the accidents on the North Union, the Bristol and Exeter, and the Dundee and Arbroath Railways.

In consequence of the occurrence of the two accidents at level crossings on the North Union and Bristol and Exeter Railways, the following circular letter was issued :—

Railway Department, Board of Trade, Whitehall, 28th September, 1841.

Sir,—The recent accidents on the North Union and Bristol and Exeter Railways having shown that the precautions necessary to insure safety at crossings of public roads on a level are not always adopted, the Lords of the Committee of Privy Council for Trade direct me to call the especial attention of the Directors of the —— Railway Company to the subject, and to request that returns may be furnished to the following questions :—

1. How many turnpike roads and highways are crossed on a level by the —— Railway.

2. Are good and sufficient gates erected across each end of such turnpikes or highways at each of such crossings, in conformity with the 2 and 3 Victoria, cap. 45 ?

3. Are gatekeepers stationed at each of such crossings, in conformity with the said Act ?

4. What wages do such gatekeepers receive ?—how many hours do they remain on duty ?—have they any other employment ?

5. Are positive instructions given to such gate-keepers to keep such gates constantly shut across the roads, unless when opened by the gatekeeper to allow carriages, &c., to cross the railway ?

6. What other instructions are given to such gatekeepers ?

7. What instructions are given to engine-drivers as to precautions to be observed on approaching crossings ?

G. R. Porter.

To the Secretary of the —— Railway Company.

The returns to this circular are given in Appendix, p. 95 to 127. It appears from them that there are no fewer than 312 turnpike and public highway roads crossed on a level by 53 different railways. In a great majority of cases proper gates had been erected and gatekeepers stationed, in compliance with the Act 2 and 3 Vict., c. 45, and proper instructions issued with regard to keeping the gates shut across the road, unless when opened by the gatekeeper to allow carriages, &c., to pass the railway. In 42 cases gates have been erected or altered, and gatekeepers stationed, in consequence of representations from this department; and it is believed that, with the exception of a few railways where horse-power only is used, or where the low rate of speed or other local circumstances render it unnecessary, the provisions of the Act in question are now generally complied with, and the public protected as far as possible against the danger which is always, to a certain extent, incurred by crossings on a level. Some difficulty has arisen in several cases in consequence of clauses in the Acts of various Railway Companies, obliging them under a penalty to keep the gates at level crossings closed across the railway, instead of across the road, which latter method is evidently intended by the general Act, and is clearly the most safe. In two instances upon the Hull and Selby, and Newcastle and Carlisle Railways, the lives of the gatekeepers fell a sacrifice to the former plan, which the Directors considered themselves obliged to adopt, and a practical proof was given of the utter inutility of a gate closed across the railway, as a protection for persons who might happen to be crossing the rails upon the public road. Although there is little doubt that the General Highway Act would be held to supersede the provisions of preceding local Acts, and to justify Railway Companies in adopting the mode of closing the gates which experience has shown to be most conducive to safety, it would be desirable to set the point at rest by an enactment, stating expressly that gates should be erected at every level crossing, and kept shut across each end of the road, unless otherwise ordered by the Board of Trade.

It would be also very desirable that some power should exist to compel the parties interested to come to some arrangement for getting rid of level crossings by a bridge or tunnel, where experience has shown that they occasion a considerable degree of risk to the public. The case of the level crossing over the Glasgow and Ayr Railway by a private coal railway in the town of Newton-Ayr, the details of which are given in the Appendix, p. 96, affords a proof of the necessity for such a power. Without imputing blame to either party for acting on the rights secured to them by Act of Parliament, it is evident that the public safety is seriously endangered by the continuance of the crossing, and that the efforts of the Board of Trade to bring about an arrangement for removing the danger have proved entirely ineffectual.

The correspondence relative to a level crossing on the Croydon Railway affords another instance of an admitted source of danger to the public being continued, in consequence of the inability of the Railway Company and trustees of the road to come to an understanding for removing it.

The correspondence with the Dundee and Arbroath Railway Company (Appendix, p. 95*), relating to the accident by which a woman was killed at a crossing in the village of Westhaven, affords a strong instance of the necessity of some supervising authority to compel the erection of bridges in cases where railways have been inadvertently allowed by Parliament to traverse the streets of villages, or other populous localities, on a level.

The accident on the Brighton line, and the verdict of the jury at the coroner's inquest condemning four-wheeled engines, having called attention to the comparative safety of four and six-wheeled engines, the following circular was issued by your Lordship's directions, with a view to obtaining authentic information as to the opinions actually held on the subject by those practically conversant with the management of railways :—

Railway Department, Board of Trade, Whitehall, October, 1841.

Sir,—The late accident on the London and Brighton Railway having suggested the importance of collecting information upon the respective merits of the different descriptions of locomotive engines employed upon railways, I am directed by the Lords of the Committee of Privy Council for Trade to request the Directors of the —— Railway Company to furnish them with returns to the following questions :—

1. What number of engines are employed upon the —— Railway ?

2. What is the construction of such engines, specifying the number of wheels, and their diameter, the weight of

Digitized by Google

the engine, the weight on the front wheels, the construction of the axles and bearings, and any other particulars bearing upon the question of safety?

3. What are the names of the makers of such engines?

4. What description of engines have the Directors been led by their experience to prefer, and for what reasons?

5. Have the Directors been led by their experience to consider any particular description of engine as peculiarly dangerous, and if so, for what reasons?

6. Are extra engines ever employed upon the —— Railway in propelling trains?

7. If so, is the extra engine applied in front of the engine, or behind?

8. Have the Directors been led by their experience to consider the use of an extra engine either in front or behind as an additional source of danger?

9. Are engines ever allowed to run tender foremost upon the —— Railway?

I am, &c. S. LAING.

To the Secretary of the —— Railway Company.

The returns to this circular, which comprise much valuable information, will be found in Appendix No. VI. p. 189. The following table gives the result as regards the proportions in which four and six-wheeled engines are actually used, and the number of accidents attended with personal injury to the public which may by possibility have been partly occasioned by the peculiar construction of the engine:—

Name of Railway.	Number of Six-wheeled Engines.	Number of Four-wheeled Engines.	Number of Miles of Railway open 1st Jan. 184[illegible]	Number of Accidents attended with personal injury, from 1st August, 1840, to 1st January, 184[illegible], occasioned by Engines running off the rails without meeting with any obstruction or other specific cause.
Arbroath and Forfar	5	..	15	
Birmingham and Derby	14	..	38½	
Birmingham and Gloucester	26	..	55	
Bolton and Leigh	12	1	9½	
Brandling Junction	10	..	25	
Chester and Birkenhead	6	..	14½	
Clarence	9	6	36	
Dublin and Kingstown	8	2	6	
Dundee and Arbroath	6	..	16½	
Eastern Counties'	..	16	17½	One accident, 19th August, 1840—four killed, six injured. Engine ran off the line. Speed excessive.
Edinburgh and Glasgow	10	10	..	
Glasgow and Greenock	12	..	22½	
Glasgow and Ayr	12	8	40	
Grand Junction	67	..	83½	
Great North of England	11	..	45	
Great Western	86	..	118	
Bristol and Exeter			33	
Cheltenham and Great Western			18	
Hull and Selby	14	..	31	
Lancaster and Preston	..	6	20½	
Liverpool and Manchester	34	..	31	
London and Brighton	19	6	56	One accident, 2nd October, 1841—four killed, two injured. Four-wheeled engine ran off the line, attributed to excessive speed on a new line.
London and Birmingham	..	90	112½	
London and Croydon	8	..	10½	
London and Greenwich	5	4	8½	
London and South-Western	44	4	77	
Manchester and Birmingham	6	..	5	
Manchester, Bolton, and Bury	..	10	10	
Manchester and Leeds	34	2	50	
Maryport and Carlisle	2	..	7	
Midland Counties'	2	35	57	One accident, 8th November, 1840—eight injured. Four-wheeled engine ran off; line in a bad state.
Newcastle and Carlisle	19	7	61	
Newcastle and North Shields	5	..	7	
Northern and Eastern	8	..	30½	
North Midland	40	..	72½	
North Union	2	15	22	
Stockton and Darlington	83	3	25	
Ulster	7	..	20	
York and North Midland	29	..	27	
Total	605	224	1330½	Three accidents—8 killed, 16 injured.

From the returns made by the different Railway Companies it will appear, that a very general opinion is entertained that four-wheeled engines are rather more unsteady, and subject to oscillatory movements, and especially to vertical movements, which in extreme cases may lead to jumping off the rails, while on the other hand six-wheeled engines are thought to be less adapted for going round sharp curves; and if constructed with outside bearings, which are generally used with this description of engine, to be more liable to fracture their axles than four-wheeled engines with inside bearings. A reference to the above table will show that experience does to a small extent bear out the opinion that four-wheeled engines are more liable to run off the rails, but, at the same time, it shows conclusively that no description of engine at present in use upon railways can be pronounced dangerous, not a single accident having occurred in the course of 17 months which can be attributed *solely to the construction of the engine*, and only three in which the construction of the engine can be thought to have contributed even remotely to the accident.

The fact of the two railways which in proportion to their amount of passenger traffic have been perhaps most free from serious accidents, viz.: the London and Birmingham and the Grand Junction, use in the one case four-wheeled and in the other six-wheeled engines exclusively, appears quite sufficient to show that any attempt at legislative interference to enforce the adoption of any peculiar construction would be in the present state of experience upon the subject altogether misplaced.

Another result, which appears from the returns in the Appendix is, that the practice of running tender foremost is universally pronounced to be dangerous, and that a very general opinion is expressed against propelling trains by an engine from behind where it can be avoided. These opinions are entirely conformable to the recommendations frequently made by the Inspector-General in his Reports, and urged by this department, and it is believed that the practice of running tender foremost with passenger trains is now almost entirely discontinued, and that the practice of propelling passenger trains from behind is rarely resorted to.

Another opinion very generally expressed is, that in the case of heavy trains it is better to employ an extra engine a-head than to multiply the chances of collision by dividing the train; but as this opinion may be fairly questioned, and it is certain that trains so heavy as to require the assistance of an extra engine are to a certain extent a source of additional danger, the Board of Trade has not thought it right to offer any general recommendation on the subject.

(To be continued.)

YARMOUTH AND NORWICH RAILWAY.

Report from the Committee of the House of Commons on the Yarmouth and Norwich Railway Bill.

SIR R. PIGOT reported from the Committee on the Yarmouth and Norwich Railway Bill, that they had inquired into the several matters required by the Standing Orders to be proved before Committees on Railway Bills, and had agreed to the following Report:—

1. That the proposed capital of the Company is 150,000*l.*, and the amount of loan which they are empowered to raise by the Bill is 50,000*l.*

2. That the amount of shares subscribed for is 115,580*l.*, and the amount of the deposits paid thereon is 11,558*l.*

3. The names and places of residence of the Provisional Committee, with the amount of shares taken by each, are stated in Appendix (A).

4. The number of shareholders who may be considered as having a local interest in the line is 105, and the amount of capital subscribed by them is 34,680*l.*

5. The number of other parties is 43, and the capital taken by them is 80,900*l.*

6. The number of shareholders subscribing for 2,000*l.* and upwards, with their names and residences, and the amount for which they have subscribed, is stated in Appendix (B).

7. That the present means of conveyance and communication between the proposed termini are insufficient for agricultural, commercial, manufacturing, and other purposes.

That the present amount of traffic by land and water, the average charges made for passengers and goods, and time occupied, appear, from the evidence adduced before the Committee, to be according to the statement in Appendix (C).

8. That the number of passengers, and the weight and description of the goods expected on the proposed railway, also appear in Appendix (C).

9. The amount of income expected to arise from the conveyance of passengers is 24,063*l.*, and from goods 7,592*l.*, showing the proportion from passengers to be more than treble that from goods.

The largest revenue with regard to goods is expected to arise from groceries, spirits, and manufactured goods.

10. The railway is a complete and integral line between the termini, and is not part of a more extended plan now in contemplation.

11. With regard to competing lines, it was shown to the Committee that, in the year 1836, a line was authorised by Act of Parliament to be made between Norwich and Yarmouth as part of the Eastern Counties' Railway, but that the compulsory powers to take lands given by such Act had lapsed, and the Eastern Counties' Railway Company consented to abandon their right to make the said line, on terms arranged between them and the promoters of the Bill, which appeared satisfactory to the Committee.

12. There are no planes on the railway proposed to be worked by assistant engines, either stationary or locomotive.

13. There are no peculiar engineering difficulties in the proposed line.

14. There are no tunnels on the proposed line.

15. That the gradients and curves are generally favourable; that the steepest gradient is 1 foot in 345, or 15 feet 4 inches per mile; and the smallest radius of a curve is 45 chains, which however occurs only at the Yarmouth terminus of the railway.

16. That the length of the proposed line is 20 miles 44 chains.

17. That it is not intended to cross any turnpike road on a level, but it is proposed to cross the following highways on a level, viz., two roads leading to Buckenham Ferry, and one road at Reedham; but it appeared to the Committee that these roads were but little frequented, and that the level of the country where the crossings occur did not permit of their being carried over or under the railway without inconvenience to the public, and consequently, that the Standing Order relating to the mode of carrying public roads across railways might in this instance be safely and with propriety dispensed with.

18. That the amount of the estimate of the cost and other expenses to be incurred up to the time of the completion of the railway is 150,000*l.*, and which estimate appeared to the Committee to be fully supported by evidence, and to be adequate for the purposes.

19. That the estimated charge of the annual expenses of the railway, when completed, is 12,000*l.*,

Digitized by Google

per annum, and the calculations upon which the charge is estimated have been sufficiently proved.

20. That the calculations proved in evidence before the Committee have established, to the satisfaction of the Committee, that the revenue is likely to be sufficient to support the annual charges of the maintenance of the railway, and still allow profit to the projectors.

21. That the number of assents, dissents, and neuters upon the line, and the length and amount of property belonging to each class traversed by the said railway, distinguishing owners from occupiers, are inserted in Appendix (D).

22. The names of the engineers examined in support of the Bill are, George Parker Bidder and James Routh.

23. The following petitions were referred to the Committee, viz.:—

First. A petition from the commissioners and mortgagees of the Foundry Bridge over the river Wensum, in the city of Norwich, alleging that the proposed railway would depreciate the value of their property, and praying that clauses should be introduced to restrain the Company from constructing any bridge across the said river.

Second. A petition from the commissioners and mortgagees of the Carrow Bridge, in Norwich, stating that the proposed railway would materially affect the interest and property of the petitioners.

The allegations of these petitions were considered by the Committee, and agents were heard in support of each.

Third. A petition from John Francis Leathes, of Herringfleet Hall, in the parish of Herringfleet, in county of Norfolk, Esq., stating that the formation of the proposed railway through his estates would seriously and materially depreciate and diminish the value thereof.

The allegations of this petition were considered by the Committee, and counsel heard in support thereof, but ultimately the opposition was withdrawn, satisfactory arrangements having been made between the parties.

Fourth. A petition of the Right Hon. Archibald John, Earl of Rosebery, stating that the proposed railway would most injuriously affect the property and interest of the petitioner.

No party appeared in support of this petition, arrangements having been entered into between the parties.

Fifth. A petition of the Eastern Counties' Railway Company, setting forth their powers under their Acts of Parliament, and that the line which by such Acts they were empowered to make was superior to the line proposed to be made under the powers of this Bill.

The allegations of this petition were considered by the Committee, and counsel heard in support thereof, and a clause inserted, on which all further opposition was withdrawn.

Sixth. A petition of owners of property on the line of railway, stating that the line of the proposed railway passes through their property in a most objectionable manner, and would cause great annoyance and inconvenience to them, as well as injuriously affect their property.

No parties appeared in support of this petition.

The railway appeared to the Committee peculiarly fit, in an engineering point of view, for the purposes for which it is intended.

Sir Robert Pigot further reported from the Committee, that they had examined the allegations of the Bill, and found the same to be true; and had gone through the Bill, and made several amendments thereunto.

APPENDIX (A).

Names and Places of Residence of the Provisional Committee, with the amount of Shares taken by each.

Bollingbroke, Horatio, Norwich	£600
Herring, William, Norwich	400
Longe, John, Norwich	400
Reade, H. W., Norwich	800
The Right Worshipful the Mayor, Yarmouth	400
Palmer, W. H., Yarmouth	400
Lacon, Sir E. H. K., Bart., Yarmouth	1,000
Reynolds, F. R., Yarmouth	2,000
Duff, Adam, London	6,700
Stephenson, George, London	5,000
Laurence, John, London	400
Tynedale, Charles W., London	6,600

APPENDIX (B).

Names of Shareholders who have subscribed for 2,000*l.* and upwards, with their Names and Residences, and the amount for which they have subscribed.

Bagnall, Thomas. West Bromwich	£3,000
Balls, James, St. James's Square	3,000
Borrett, Charles William, Lincoln's Inn	2,000
Borrett, Francis Turner, Lime-street	2,000
Corry, Charles, Great Yarmouth	2,000
Cooke, William Fothergill, Kidbrooke, Kent	2,500
Duff, Adam, Blackheath, Kent	6,700
Grissell, Thomas, Lambeth	5,000
Howes, Thomas Wilcox, Great Yarmouth	4,360
Hunt, Henry Arthur, York Road, Lambeth	5,500
Mills, Francis, Scotland Yard	5,000
Nelson, Thomas Marsh, Charles-street, St. James's	5,000
Palmer, Charles John, Great Yarmouth	7,000
Peto, Samuel Morton, Lambeth	5,000
Patteson, Henry, Warnford Court	2,000
Reynolds, Francis Riddell, Great Yarmouth	2,000
Stephenson, George, Tapton House	5,000
Tynedale, Charles William, Sloane-street, Chelsea	6,600
Thompson, James, Carlisle	2,000
Thompson, Mark, Carlisle	2,000
Wright, Joseph, Gough-street	3,000
Winston, John, Charter-House Square	5,000

APPENDIX (C).

Showing the present amount of Traffic by Land and Water, the average charges for Passengers and Goods, and time occupied.

Description of traffic.	Present number per annum	Average charge.	Time occupied.
		s. d.	hours.
Passengers by steam boats	57,278	1 6	4 to 5*
Passengers by coaches	15,288	5 0	2½ to 3*
	tons		
General goods & merchandise by water	49,140	2 8 p. ton	8 to 20†
Coals, corn, and flour	240,610	1 6	Ditto‡

Ten fish vans daily for six months, 182 days‖.
Three fish vans daily for remaining six months, 183 days‖.

Credit is also taken for the carriage of small parcels and mails, to the extent as follows:—

For parcels	£2,176	19	7
Mails	365	0	0

APPENDIX (D).

Table of Assents, Dissents, and Neuters upon the Line; showing the length and amount of Property belonging to each Class traversed by the Railway, distinguishing Owners, Lessees, and Occupiers.

No.		Length. M.	C.	L.	Quantity. A.	R.	P.
	OWNERS.						
38	Assents	14	52	10	140	2	24
22	Dissents	2	63	20	25	2	10
21	Neuters	3	8	70	29	0	24
81		20	44	0	195	1	18
	LESSEES.						
1	Assents	0	1	70	0	1	0
3	Dissents	0	65	30	12	0	0
1	Neuters	0	35	0	3	3	0
5		1	22	0	16	0	0
	OCCUPIERS.

31	Dissents	5	59	30	54	2	0
39	Neuters	7	13	10	67	1	18
94		20	44	0	195	1	18

NORTHERN AND EASTERN RAILWAY.—We observe the receipts of this line exceeded 1,200*l.* last week; and by a new regulation made of charging carriage for every article of merchandise, we may expect it to exceed that sum. The tradesmen of Hertford will be glad to learn this fact; it may prevent the loads of goods the gentry bring down with them every time they go up to their offices in London.—*Essex Mercury.*

* The number of passengers expected on the railway is double the number of those at present travelling by steam, and treble the number of those at present travelling by coaches, without taking credit for any who travel by private conveyances. Total, 160,420 per annum.

† The number of tons expected by the railway is calculated at one-third of the present amount, viz., 16,380 tons per annum.

‡ No account is taken for carriage of corn, coals, and flour.

‖ It is assumed that the whole of these will travel by the railway.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY—GENERAL MEETING.

IN our number of Saturday last we gave a short account of the Cheltenham and Great Western Railway Company's meeting, held on the previous Tuesday. We now supply further particulars, for which we are indebted, principally, to the *Gloucestershire Chronicle*. The Directors' Report and accounts will be found in our advertising columns:—

The advertisement calling the meeting having been read by Mr. Merrick, the Secretary,

The CHAIRMAN (C. F. Sage, Esq.) said, that when the Directors had last the pleasure of meeting the shareholders it was to submit for their approval a copy of the Bill which it was proposed to carry through Parliament. They had now the pleasure of congratulating them on the circumstance of that Bill being beyond the reach of further opposition. It might be regarded as safe. It had only to be read a third time in the House of Lords preparatory to its receiving the Royal Assent. When the application to Parliament was resolved upon it was not anticipated that any opposition would have been made. Nothing was asked but what the Company were in equity and justice entitled to receive. Contrary to expectation, however, a very vigorous and pertinacious opposition was made by the Birmingham and Gloucester Railway Company, to the extension of time for the redemption of the line betwixt Cheltenham and Gloucester. "We thought," continued the Chairman, "that the time originally fixed had reference solely to the completion of the entire line; and that if we could convince Parliament that the delay which had taken place in completing the line had arisen from the peculiar circumstances in which the Company had been placed, no objection would exist to an extension of the time for redemption. The Committee of the House of Commons entered into the views of the Directors, and passed the Bill without any modification. On its reaching the House of Lords the same opposition was brought into action by the Birmingham and Gloucester Company. The Committee of the Lords took a different view of the point at issue from what the Committee of the Commons did. Every disposition was certainly exhibited to do justice to both parties, still it was found that the Committee did not thoroughly understand, at least in my opinion, the real bearings of the question. The Committee of the Upper House prevented the Company from having an extension of time for redeeming the line betwixt Cheltenham and Gloucester, but they gave an extension of time for completing the original undertaking. In lieu, however, of the non-extension of time, a provision was introduced to the effect that in the event of the Cheltenham and Great Western Union Railway Company not redeeming the line in question at the time originally fixed—June, 1845—the Birmingham and Gloucester Railway Company are bound to lay down a broad gauge to Cheltenham, under such conditions as will give us a check and control over the management of that part of the line. This must be looked upon as satisfactory. Opposition was made to other things by the Birmingham and Gloucester Company, but they did not succeed in carrying out their wishes. Into these it is scarcely necessary to enter. One particular, however, might be mentioned, and it is, that an attempt was made to induce the Committee to insert a clause to the effect that no engagement for a transfer of powers should be gone into with any other Company, without the consent in writing of the Birmingham and Gloucester Company. This we objected to, and we carried the original clauses without alteration. With the alteration I have mentioned, the Bill is essentially the same as it was when introduced. There is, indeed, a slight change as regards relations with the Bristol and Gloucester Company, but the alteration is an advantage. The Bill will now pass as it stands, and I think the circumstance affords a subject of much congratulation to all concerned. With regard to future proceed-

Digitized by Google

ings I can only state my own impressions; and my decided opinion is, that it would be imprudent to resolve upon a definite course of procedure till the Company's Bill becomes law. So soon as that takes place, a special meeting of the shareholders will be called, and matters will then be in such a position as will admit of a full discussion as to the best course to be pursued. Mr. Lawrence, our Solicitor, will now read the Report, and should any gentleman wish for additional information on any of the points embraced, I shall be happy to supply it."

The Report was then read by Mr. Lawrence.

A SHAREHOLDER asked whether a copy of the Bill, as altered by the Lords, could be submitted to the meeting?

Mr. LAWRENCE said, the Bill could only be printed that day in London. It would be reported to the House last night, and he at one time entertained the hope that a copy would have been received in time for the meeting, but it could not now be expected.

A SHAREHOLDER said, that he observed by the Report that about 40,000*l.* had been paid since the 25th December, he wished to know if that sum had been calculated upon at the previous meeting?

The CHAIRMAN replied in the affirmative. That expenditure had been anticipated and mentioned at the half-yearly meeting held at Stroud.

The same Shareholder complained of the want of notice having been given to the proprietors of the present meeting. He had reason to believe that the attendance would have been larger had greater publicity been given.

The CHAIRMAN said, that there had been no deviation from the usual manner of announcing meetings. The same course had been pursued as on former occasions—the only exception being the special meeting which was called to consider the Bill proposed to be introduced into Parliament. Notice of the present meeting would certainly have been given earlier but for this reason, that the Bill, at the time when such notice could have been given, was still pending in Parliament; and it was his impression that, so long as doubt existed as to the result, the prudent mode of procedure would have been to have intimated to the shareholders that the present meeting would be held *pro forma*, so as to avoid any discussion occurring likely to influence unfavourably the proceedings in Parliament. Luckily, however, all danger of this had been removed.

The SHAREHOLDER suggested that in future circulars announcing meetings should be sent round to the shareholders.

The CHAIRMAN said, that the suggestion would be attended to, and would have been attended to from the first had the slightest wish been expressed.

W. P. PRICE, Esq., asked when the balance of 26,927*l.* due by the Birmingham and Gloucester Railway Company would be paid?

The CHAIRMAN said that 10,000*l.* had been paid to account, and as to the balance, it had not yet been determined upon. The two engineers to whom the question was to be referred had not yet received the account from the Birmingham and Gloucester Company, which Company refused to pay anything further till that award was made.

In reply to a question as to the amount of arrears the Chairman stated, that the estimate on the 25th of April was 104,000*l.* It required to be borne in mind, however, that this included the forfeited shares. The printed statement of receipts contained the amount which ought to have been received from *all* the shareholders, and a deduction for the deficiency arising from unpaid calls *and forfeited shares*. From not attending to this circumstance, he had reason to believe that much misconception existed amongst certain shareholders as to the question of arrears.

A SHAREHOLDER asked—What do you mean to do with the forfeited shares?

The CHAIRMAN—We mean to hold them for the benefit of the Company, till it be seen what the future proceedings of the Company will be.

In reply to a question as to the amount of good shares,

The CHAIRMAN stated that 5,600 might be reckoned upon as perfectly good. The last call had been paid on 5,192 shares, and some payments had been received since the 25th of April. As to the general expenditure and liabilities of the Company, he was anxious to give some explanation. At the last half-yearly meeting the total expenditure was estimated at 552,000*l.* By the present Report it would be seen that about 462,576*l.* had been expended, leaving 90,000*l.* not yet expended. There were certain liabilities which required to be provided for, the exact amount of which could not be stated till the accounts had been received. He thought that the total amount received by the Company up to the 25th April, from shares, might be taken at 415,287*l.*, and that the liabilities might be stated at 146,000*l.* This estimate, however, would include some expenses strictly applicable to the line betwixt Kemble and Gloucester. But taking the whole expense at 568,000*l.* it will include every obligation that the Directors are aware of, as well as the 26,000*l.* raised by debenture, and the 20,000*l.* advanced to meet future calls. This sum also includes from 12,000*l.* to 14,000*l.* applicable to the line betwixt Kemble and Gloucester. A portion of that sum was for land which had never been taken possession of, and it might consequently be looked upon as standing in place of the money. Upon a full review of the total expense it would be found that the cost per mile of the part finished would not exceed 26,000*l.*, including the expense of the Swindon slips. In connection with this average it required to be kept in view that the large expenses incurred at the outset for surveys, Acts of Parliament, compensation to landowners, &c., were strictly applicable to the entire line. If the proportion of these at a mileage rate were added to the cost of land and works, the outlay on the portion of the railway lying between Kemble and Cheltenham was from 85,000*l.* to 90,000*l.* After deducting this from the total expenditure, it would be found that his calculation was correct. With regard to the income account, which he was happy to say the Directors had now in their power to submit for the first time, it would be seen that a balance of 2,290*l.* remained in hand after paying the last dividend. To this may be added the half-year's rent for the use of the line, payable on the 31st May. This made 10,790*l.* The amount of the half-year's salaries, due on the 26th June, was about 455*l.*, and the amount of interest on the money borrowed by debenture and otherwise was 647*l.* 17*s.* 8*d.* A dividend of 25*s.* on 5,697 shares which the Directors proposed to pay, would amount to 7,121*l.*, and this, added to the salaries and the interest payable to the creditors, and deducted from the 10,790*l.* at the disposal of the Company, would leave a balance of 2,560*l.* to meet any contingency which might arise. He hoped the meeting would allow that the Directors were justified in recommending a dividend of 25*s.* for the half-year. Compared with the previous dividend, this was an increase of 10*s.* on the year, equal to 5 per cent. on an advance of 10*l.* The circumstance of declaring a dividend and making a call at the same time had been ridiculed, but were the circumstances looked at it would be seen that there was nothing to justify ridicule in the slightest degree. The shareholders were clearly entitled to the benefit of that which arose from *bona fide* revenue. Had the accounts contracted been paid for as the works were executed, the case would have been different.

In reply to a question as to what proportion of the salaries incurred in working the line was paid by the Company, the Chairman said, that the sum he had mentioned included the half-year's allowance to the Directors, the Secretary, and the clerk engaged in the office, and the sub-Engineer. The expense of working and upholding the line was defrayed by the Great Western Railway Company.

A SHAREHOLDER asked—Have there been any overtures made to the Company by any of the other Companies? [This gentleman stated that he did not wish a reply if it could not prudently be given.]

The CHAIRMAN said that he was not in a position to answer the question. It would be premature to entertain overtures till the Bill had actually become law. Most ample powers in the way of completing the line, borrowing money, and treating with other Companies, were provided for in the Bill.

In the course of his remarks the Chairman stated, that he considered that 146,000*l.* would be sufficient to cover the liabilities of the Company. It was expected that 40,000*l.* would be realised from the present call, and it was hoped, from the improved position of the Company and the state of the money market, that loans would be raised by debentures with greater facility than before. He had reason to believe from personal knowledge that so soon as the Bill was passed considerable sums would be procured. To show the meeting the extreme anxiety of the Directors to avoid making calls unless absolutely necessary, they had applied to their bankers for an advance of money, so as to avoid the necessity of making the call till a full opportunity of giving the necessary explanation was afforded. The Directors were quite satisfied that the explanations required only to be given to convince the shareholders that they had acted for the best.

A SHAREHOLDER asked—Is there any chance of a further call being required?

The CHAIRMAN—I think any shareholder present is as well qualified to answer that question as myself. I can only state my own opinion, founded on the circumstances I have detailed, and I am quite ready to state that opinion, and it is that the Company will be able to pay off its present liabilities without having recourse to further calls.

A SHAREHOLDER—I think we should know something about the completion of the line?

The CHAIRMAN—My conviction is that it would be premature in the meantime to enter upon such a discussion. As soon as the Bill is passed, the Directors will call a special meeting to consider what is the best course to pursue.

A SHAREHOLDER—Will the Directors be guided by the wishes of the meeting, or will they be prepared to submit a recommendation?

The CHAIRMAN—The Directors, as I have said, will call a special meeting, and in the meantime they will consider whether it would be better to submit a definite proposal, or to ask the shareholders to decide for themselves as to the course which should be adopted. As to the traffic betwixt Cirencester and Swindon, it was stated that there was good reason for believing that it had largely increased.

Attention having been directed to the circumstance of 6 per cent. having been inserted in the Bill as interest which might be allowed on loans,

Mr. CRIPPS explained, that other Companies made a stipulation of this kind, and the Directors were anxious to have as much power as Parliament would grant. He was happy to say that such a rate of interest had never been required. The Company had been much run down in many quarters, but lenders never considered its affairs to be in such a bad condition as to induce them to ask 6 per cent. If money could not be got at 5 per cent. it was not very likely that it could be procured at 6. In connection with this subject the Chairmain remarked, that one cause of the difficulty which had been experienced in raising money was the doubt which existed as to the ultimate intentions of the Company.

The question as to the depreciation of the Company's stock in the market having been adverted to,

The CHAIRMAN said, that the quotations could not be relied upon. A transfer of five shares from one hand to another on the Stock Exchange was sufficient to get a quotation. He knew, however, of parties who had applied for shares at the prices quoted, but could not procure them.

In reply to a question relating to the completion of the undertaking, the Chairman said that he could give no reply beyond his personal impressions. He was inclined to believe that the Company would be able to go on, but whether to the full extent of completing the undertaking was what he could not say. He always considered that the line from Kemble to Cheltenham would be completed some day or other. The Chairman then adverted to the

Digitized by Google

powers which the Act would confer upon the Company, particularly as regarded that portion of the railway lying between Cheltenham and Gloucester. By the new Act, if the railway should not be completed to Gloucester by June, 1845, and it should be finished after that date, this Company were empowered to call upon the Birmingham and Gloucester Company to lay down additional rails for the use of this Company, at the expense of this Company, so as to insure a continuous broad-gauge railway from London to Cheltenham. And in order to secure this Company against any interruption or improper interference with their traffic on this part of the line, all by-laws and regulations respecting the use of the line were to be determined, ultimately, by a reference to the Board of Trade, in the event of any disputes between the two Companies. Should the Bristol and Gloucester Company resolve to make the line from Standish to Gloucester, they must do so at their own expense, under the direction of a Committee. This line could be redeemed, under certain provisions, by the Cheltenham and Great Western Union Railway Company, at any time before the year 1855. The probability was, that the Bristol and Gloucester Company would see it to be their interest to complete the line he had referred to as quickly as possible.

A SHAREHOLDER — Has anything additional transpired as to a direct line betwixt Cheltenham and Cirencester?

A SHAREHOLDER said, that from his connection with Cheltenham, he could state that there was no chance whatever of the speculation being entered upon. He did not believe that 500 shares could be got in aid of carrying it out.

The CHAIRMAN said, that he had recently been told, by a gentleman who at one time was friendly to the scheme, that his eyes had been opened, and his belief now was that the only chance of getting a line to Cheltenham was by the extension of the present undertaking.

Mr. HALE said, that it had been reported that the Company's Engineer had tried an experiment on the Swindon embankment at a cost of 25,000*l.* to the Company, which had failed.

The CHAIRMAN said that the Report was unfounded. No experiments had been tried. Every thing was done in the ordinary way, but he had no hesitation in saying that the experience afforded would be of advantage to others. This might have happened to any engineer.

The excess of actual expenditure over estimates having been adverted to, the Chairman said that he had no wish to screen engineers, but he was anxious that they should have fair play. It was too often forgotten that railway undertakings were but little understood at the time when the great lines were entered upon, and that almost all the surveys were unavoidably done in a hurried manner, and the estimates drawn up from very imperfect data. As to the subject of forfeited shares, he believed the forfeitures arose from parties subscribing for a greater number of shares than their means justified, rather than from the excess of cost over the estimates.

ROBERT BROWN, Esq., said that he had much pleasure in moving that the Report now submitted by the Directors be approved, printed, and circulated amongst the proprietors. It contained three exceedingly gratifying announcements: first, that the Bill had been virtually obtained; second, that the Swindon embankment was in a favourable condition; and third, and not least, that an increased dividend could be paid out of realised revenue.

The motion was seconded by James Bowley, Esq.

JOHN FERRABEE, Esq., moved the re-election of Mr. Whitcomb, Mr. Cripps, and Mr. Lewis, as Directors. It was impossible to find gentlemen better qualified, and he was glad to find that they were willing to renew their services. This was duly seconded, and carried unanimously, as also the motion relating to the forfeiture of shares.

W. P. PRICE, Esq., said, that the gratifying duty devolved upon him of moving that a dividend of 25*s.* per share be made payable. He did not anticipate that any objection would be made to this proposal, but he for one would have entered his dissent, and he was sure that many others would have joined him, had the funds out of which the dividend was to be paid not proceeded from real income. The proposal however involved an honest and legitimate application of realised revenue. He hoped that the Directors under their new powers would come down with some definite plan for completing the works, and call upon the shareholders to aid them. The motion was carried unanimously.

Several shareholders here took the opportunity of thanking the Chairman for the very courteous and satisfactory manner in which the questions they had put were replied to, after which James Bowly Esq., moved, and Dr. Dewsbury seconded, that the thanks of the meeting be given to the Chairman and the Directors for their attention to the interests of the Company.

The CHAIRMAN returned thanks for himself and his colleagues, and assured the meeting that nothing afforded them greater pleasure than to meet their constituents. He, and those who acted with him, had experienced on every occasion the greatest kindness from the shareholders, and as the suggestion which had been made relative to forwarding circulars to each proprietor would be duly attended to, he hoped to see a more numerous attendance next time.

BRANDLING JUNCTION RAILWAY COMPANY—SPECIAL MEETING.

YESTERDAY the shareholders met by adjournment at the office in Gateshead; J. W. WILLIAMSON, Esq., in the chair.

Mr. PHILIPSON read a Report prepared by the Directors, pursuant to the resolution adopted at the previous meeting. It was to this effect:—The Directors, on consideration, were of opinion that the efficient and economical management of the railway would be best insured by the appointment of a competent person, willing to devote his whole time to the duties of the office, and superintending both the engineering and commercial department, with a foreman under him, and a book-keeper and clerk in the office. After coming to this conclusion, the Directors advertised in the newspapers for candidates, and several applications were made for the office, but no appointment had yet been made. The Managing Director (Mr. R. W. Brandling) had expressed his desire to concur in any arrangement that might be deemed by the Directors and shareholders best calculated to promote the prosperity of the line. In conclusion, the Directors stated the gratification which they felt (and in which the shareholders would participate) at the successful issue of their exertions, in common with other Directories, to induce the Government to substitute a charge of 5 per cent. upon the gross receipts for passengers, in lieu of the present mileage duty. From this change they estimated that an annual saving of 1,500*l.* would be effected by the Brandling Junction Railway Company. (Applause.)

A long discussion followed the reading of the Report, during which the Rev. Mr. Green, of Longhorsley, Mr. Thomas Gray, and Ald. Brandling, brought many complaints against the Directors, and called forth explanations from Mr. N. Wood, Mr. Philipson, and others. We have not space to report the discussion. The result of it was the adoption of a resolution, framed by Mr. Green, seconded by Ald. Brandling, and amended on the suggestion of Mr. Philipson. It went to the appointment of a Committee of seven shareholders, to "investigate the accounts and affairs of the Brandling Junction Railway Company," with every facility for the prosecution of their labours. Alderman Brandling expressed the utmost confidence that the inquiry would result in raising the value of the shares in the market; and Mr. Philipson said that the concern could not fail to prosper, if the shareholders cordially co-operated with the Directors. The gentlemen appointed on the Committee were Messrs. M. Longridge, J. Brandling, T. Gray, F. Mason, Green, Plues, and Bolam.

Mr. Atkinson then moved the adoption of the Directors' Report. Mr. Marley seconded the motion, and it was put to the meeting by the Chairman, and declared to be carried.

Thanks were given to the Chairman, on the motion of Dr. Headlam, seconded by Alderman Brandling, and the meeting separated.—*Gateshead Observer*, May 7.

EDINBURGH AND GLASGOW RAILWAY.

ACCIDENT.—A rather serious accident occurred yesterday morning at the Glasgow terminus of the Edinburgh and Glasgow Railway. It appears that the goods train—consisting of 17 heavily laden trucks—having arrived from Edinburgh at the Cowlairs station, was, contrary to the express orders of the Directors of the Company, placed upon the incline with only one "break" attached; and the momentum of the train ultimately overpowering the means of resistance in the hands of the "breaksman," the trucks sped down the declivity with frightful velocity. Fortunately nothing was in the way, and the train was stopped at the terminus by the overturning of two or three waggons in a pit, a few yards beyond the termination of the rails. The overturned waggons were considerably smashed, and a quantity of fish, with which they were filled, were scattered about; but, upon the whole, the damage sustained, we are glad to say, is not very great, and with the exception of the "breaksman," no one is injured, the guard escaping entirely unhurt. The former, however, was a good deal bruised, particularly on one of his legs, and he had to be conveyed to the Royal Infirmary. The accident, we learn, was the result of carelessness on the part of the person at the Cowlairs station, who should have seen that a sufficient number of "breaks" were attached to the train to keep it under complete control. He has consequently been taken into custody, and the matter is undergoing a thorough investigation. — *Glasgow Courier* of Thursday.

CHESTER AND BIRKENHEAD RAILWAY.—The traffic on this line during last week, in consequence of Chester races, has been immense, and far exceeding that of last year. The following is a summary of the passengers during the race days:—

Tuesday, May 3	6,827
Wednesday, 4	3,247
Thursday, 5	2,625
Total	12,700

The following are the receipts of the three days:—

Tuesday	£712
Wednesday	322
Thursday	278
Total	£1,312

—*Liverpool Standard.*

SHILDON TUNNEL.—The opening of Shildon Tunnel forpublic use took place on Tuesday last. A party of the Directors of the Auckland and Weardale Railway, with a number of their friends, passed through the tunnel in a train drawn by a splendid locomotive engine called "*The Manchester*," and proceeded to the South Church station; and, after partaking of refreshments, returned to the place of starting, at the junction with the Stockton and Darlington Railway. A great number of spectators witnessed the ceremony. Passengers are now conveyed daily by the line from Stockton and Darlington to the South Church station, which is about a mile from the town of Bishop Auckland, and two from West Auckland. Horse-power is only used at present; but as soon as a Government Inspector shall have reported the line to be fit for locomotive engines, that mode of haulage will be immediately adopted. The line is in an excellent state, and one of the best in the county. When brought into full operation, it is intended to convey passengers from the south, by the North of England Railway, to South Church; and to forward them to the Durham Junction Railway station at the Rainton Meadows, by omnibuses three times a day—for which contracts have already been entered into—at a considerable saving of time and expense.—Correspondent of the *Durham Chronicle*, April 23.

LONDON AND CROYDON RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL MEETING of the proprietors of the London and Croydon Railway Company was held on Tuesday, at the London Tavern, Bishopsgate-street, WM. ARTHUR WILKINSON, Esq., in the chair, "for the purpose of submitting to the proprietors a copy of a Bill now before Parliament, intituled, 'A Bill to enable the London and Croydon Railway Company to make an approach to their railway in the parish of St. Mary, Rotherhithe, in the county of Surrey.'" The meeting was very numerously attended.

The SECRETARY (R. S. Young, Esq.) having read the advertisement calling the meeting,

The CHAIRMAN said, the notice just read would remind the proprietors that the object of the present meeting was to express approbation of a Bill now before Parliament, and which had been adverted to in the last Report of the Directors in the following terms:—"With a view to facilitate access to the Croydon and other lines from the western end of London, and to afford a goods and cattle station for the South-Eastern Railway, which cannot be so conveniently obtained at London Bridge, your Directors have entertained a proposition, for which the necessary Parliamentary notices have been given, to join the latter Company in procuring an approach to your railway at Corbet's-lane from the Grange-road, a spot about two miles from Westminster Bridge. The Bill for this object, however, will be submitted to your consideration at a special meeting to be called for that purpose." Such was the meeting now assembled. He did not know that it was necessary to detain them by dilating upon the importance to the Croydon Company of securing such an approach to their line; but as it might be natural for some to suppose that all which the Company had to do was to find funds for constructing a railway to Croydon, and take the traffic as a matter of course, he might be excused for reverting briefly to the present position of the Croydon Railway, as compared with its position two years ago. It would be recollected that about the period when the present Croydon Board of Directors was constituted, there appeared the famous Report of the House of Commons' Committee, which had led to the widening of the Greenwich Railway. At the time referred to, it it was far from a matter of course that the Croydon Company should receive the traffic of the Brighton and South-Eastern Companies—in fact, they were threatened with the loss of both; and from that day to the present the Directors had been endeavouring with great pains and labour to secure the advantages which the foresight of original projectors of the line had anticipated. When application was first made to the Directors of the Greenwich Company relative to the widening of their line, the Directors had said that they, the Croydon Company, were not sure of getting even the Brighton traffic, and as to the South-Eastern, so far from such being likely to be the case, the very Report to which he had already referred contained two pretty pictures—pretty to all but Croydon proprietors—of plans for the formation of independent lines, starting, the one from the junction with the Croydon line, and the other from the Dartmouth Arms station, either of which, if carried into execution, would have deprived the Croydon Company in whole or in part of any benefit to be derived from the South-Eastern Railway. It had ever since been the anxious endeavour of the Croydon Directors to prevent such a consummation, and he was happy to say that they had so far succeeded as to gain the co-operation of the South-Eastern Board in the measure now before the meeting, which would secure the use of the whole of the Croydon line. (Hear, hear.) If this were only an "approach" to the Croydon Railway, it was at least an approach from the right direction—(hear, hear, hear)—and if hereafter it should be extended, as he hoped it would, the benefit to the Company would be increased. (Hear, hear, hear.) He trusted, therefore, that the proprietors would acknowledge the importance of the scheme, and the more especially as he trusted the South-Eastern Company would thereby be diverted now and for ever from thinking of any further agitation of a separate and independent entrance into London, and as, moreover, the good feeling now existing between the two Companies would thus be cemented by an alliance of interests. (Hear, hear, hear.) The Solicitor would now read the clauses of the Bill in brief, and if any of these clauses should require further explanation, or if it should be thought necessary to read them in full, the wishes of the meeting should at once be complied with.

The SOLICITOR (W. Burchell, Esq.) then read the clauses, which were for the most part of the usual character. The time for the compulsory purchase of land it was proposed to limit to three years, and the Croydon and South-Eastern Companies were to be at liberty to enter into agreements. There was a clause empowering the Croydon proprietors to reduce the number of their Directors to not less than six.

The Solicitor having read the abstract, and expressed his readiness to supply any further information,

Mr. ADAMS inquired if these were the whole of the clauses of the Bill.

The SOLICITOR answered in the affirmative.

Mr. ADAMS asked if there had not been a clause submitted to prevent the Directors from converting the road into a railway, until they had again gone before the proprietors.

The SOLICITOR said, a clause to that effect had been brought forward by certain landowners, but as the matter was likely to be settled between these parties and the Company, it was not probable that the clause would be pressed.

Mr. ADAMS said, that was no answer to his question. He would ask again, whether there had not been a clause submitted to the Committee on the Bill, which had not now been read to the meeting.

The SOLICITOR said, clauses had been exchanged between the parties.

Mr. ADAMS wished to have a distinct answer; yes or no.

The SOLICITOR would say distinctly that a clause to the effect mentioned by the honourable proprietor had been drawn up by the Company, and a similar clause by the landowners, and had been *read* before the Committee, but that was all. They had not been *laid* before the Committee, for at that time no Committee had been formally constituted, and he did not think that such a clause would now be brought forward.

Mr. ADAMS said, the Directors had taken upon themselves, without asking the leave of the proprietors, to introduce a Bill into Parliament—or rather, he should say, two Bills, for one of them had been thrown out—and now there had, it appeared, been clauses read before the Committee, and might still be pressed, which clauses were not laid before the present meeting. He contended that they ought to be made acquainted with the whole of the clauses introduced, or proposed to be introduced, into the Bill which they were now called upon to approve. It was not necessary at present that he should give any opinion for or against these clauses, but he thought it incumbent upon the Directors to state the object and purport, he would not insist upon the exact words of every clause which they meant to introduce into the measure.

The SOLICITOR would state most unequivocally that, with the exception of some local clauses of no importance, and some which the Commissioners of Sewers, in protection of their own interests, might press upon the Company, no clause beyond those already read was in contemplation by the Directors, nor did he think that any other would be brought forward by other parties.

The CHAIRMAN said, the Directors must in this case ask, to some extent, for a continuance of that confidence in their management, which, at the recent meeting, had so fully been expressed. (Hear, hear.) They had no desire to conceal any part of their policy—on the contrary, they wished at all times to lay it unreservedly before the proprietors—but the meeting would see the inconvenience which might arise if anything that fell from the Chair on this occasion should here or elsewhere affect their position with other parties. (Hear, hear.) The Directors must, therefore, throw themselves on the indulgence of the meeting, if it should happen that they must decline answering questions not put with discretion. (Applause.) In order that the subject might formally come before the meeting, he begged to move the following resolution:—

"That this meeting do approve of the object of the said Bill, and of the same passing into a law, subject to such alterations as to Parliament may seem meet."

Mr. PATERSON seconded the motion.

Mr. LEWIS LEVY was of opinion that the present meeting was wholly useless, and he would soon prove that such was the case. The Chairman had laid much stress upon the co-operation and accommodation of the South-Eastern Company, and it was very clear that unless the South-Eastern Company went with them, the project of a Grange-road approach would be thrown where he (Mr. Levy) hoped it would be thrown. Now, what occurred at the late meeting of the South-Eastern Company? Mr. Baxendale, the Chairman of that Company, after fencing for some time on the subject of the road, had stated, in reply to Mr. Barned, a Liverpool gentleman, that "it was premature to bring the question forward, as the whole scheme might yet be blown into the air."* Before, therefore, the proprietors of the Croydon line approved of the Bill, he (Mr. Levy) thought it indispensable that the two Companies should come to an understanding between themselves, lest, after incurring trouble and expense in procuring an Act of Parliament, the entire scheme should be "blown into the air," or, as he (Mr. Levy) hoped would be the result, blown somewhere else. (Laughter.) It had been stated by Mr. Baxendale, at the meeting to which he had alluded, that the plan of a Grange-road approach would not be approved of by the South-Eastern Company if it were likely to cost anything like a round sum, and therefore he (Mr. Levy) would submit, that the Croydon proprietors should not expend their money on a project which after all might, as the Chairman of the South-Eastern Company said, be "blown into the air." He would submit—

Mr. LAWRIE (a Director) said, the honourable proprietor was quoting partially from Mr. Baxendale's speech.

Mr. LEVY said, he was reading from a most useful publication, which every person in any way connected with railways ought to patronise [Mr. L. held in his hand a copy of the *Railway Times*], and as he was present at the South-Eastern meeting, he knew that what was there recorded was perfectly correct. The truth was, that the Croydon Directors were now submitting a scheme not, be it observed, for a railway, but for a common road, solely because they could not come to an agreement with the Greenwich Company. ("Hear, hear," and cries of "No, no.") Let the matter be fairly stated. The Directors of the Croydon Company could not agree

* See *Railway Times*, April 30, p. 467.

Digitized by Google

with the Greenwich Board, and therefore they were doing all they could to annoy them. (Loud cries of "No, no.") It certainly was so. It was quite preposterous that any person, pretending to have a knowledge of the locality, should maintain that the Grange-road was nearer than London Bridge to the west-end of the town. It was not now as it once was with respect to the streets near London Bridge. There was now an excellent line of road from the bridge through Princes-street into the City-road, and in a direct route to Grosvenor-square and other fashionable districts. He did not believe that there were ten persons in the room who knew where the Grange-road was. (A laugh.) It was a most deserted spot, and after the public had found their way to it, they were not even then to be provided with a railway carriage, but would have to walk a mile and a half further before they could be taken up. He could only repeat his hope, that the absurd scheme would really and speedily be "blown into the air." (Laughter.) It would seem as if the Croydon Company were over-stocked with money, from their thus seeking to buy up a mile or two of turnpike-road, whereas the truth was, that they were almost insolvent, and in a month or two they would be called upon to provide further capital by the issue of new shares. ("Hear, hear," from the Chairman.) Why, he would ask, was not the want of a Grange-road approach found out when the Directors of the three Companies had 1,000*l.* a-year voted to them—333*l.* 6s. 8d. to the members of each Board—for their services at the London Bridge station? At that time all was unanimity, or was represented to be so, and now, because they had had a little disagreement with the Greenwich Company, they were to be called upon to provide funds for a new station. (Hear, hear.) He was sure that in a short time some arrangement would be come to with the Greenwich Company. (Hear, hear, hear.) Nay, he would go further, and say, that but for obstinacy it would already have been accomplished. (Hear, hear.) If it were gone about in a right spirit, the matter might easily be settled to the satisfaction of all parties; and when it was so settled, then the two Boards would shake hands and say, "brother, brother, we've both been in the wrong;" but in the meantime the money of the Croydon proprietors would have been squandered on this Grange-road. (Hear, hear, and laughter.) Even if his proposition should not meet with a seconder, he would move as an amendment to the Chairman's motion, that the subject be further considered at the general meeting of the Company in February or March next.

After a pause,

Mr. JONAS LEVY seconded the amendment.

The CHAIRMAN said, he should be sorry to lose Mr. Levy's support, and he hoped therefore to be able to conciliate him, and to convince him that the measure in question was founded upon a due regard to the interests of the Croydon Railway Company. But first he might be permitted to say one word as to what had fallen from the honourable proprietor with reference to the Chairman of the South-Eastern Company. Having the pleasure of being well acquainted with the character and conduct of Mr. Baxendale, he should say he was the last man to whom a charge of "fencing" with any question could apply. (Hear, hear.) A more open, downright, individual, or one who knew better than Mr. Baxendale what he was doing, he had not the happiness of being acquainted with, and he esteemed it one of the most fortunate things that had ever happened to the Croydon Company that, at the head of the management of a line with which they were so closely connected, there should be placed a gentleman so well qualified in every respect as Mr. Baxendale was universally admitted to be. (Much applause.) When they considered, moreover, that Mr. Baxendale had for many years been at the head of one of the most extensive carrying establishments in the kingdom, and that he had over and over again stated his opinion that it would be impossible to find at London Bridge adequate accommodation for the goods traffic that must pass over the Croydon line, he thought the meeting would find in that fact a strong argument for providing further accommodation elsewhere. (Hear, hear.) And where could such accommodation be better found than at the deserted spot which the honourable proprietor had described? (Hear, hear, hear.) In fact, he (the Chairman) looked upon it as another piece of good fortune in the experience of the Croydon Company that they could secure such a spot—a spot which, as had been remarked to him, Nature seemed to have designed for a railway, and where, even in the construction of the houses along the property to be purchased, gaps had been left, as if purposely, for the line of road. (Hear, hear.) When Mr. Levy argued that the Grange-road was *nowhere*, he should recollect that it was in a direct route to the Bricklayers' Arms, and the populous and increasing districts beyond it. He (the Chairman) did not say that they were to have a railway to the Grange-road—he wished they had, and not only so, but he wished it were still further extended, as he was satisfied it one day would—(hear, hear)—but because they could not at present secure a railway, there was no reason why they should not make sure of an excellent road. With respect to the Greenwich Company he begged to say, once for all, that the measures taken in this matter by his colleagues and himself had not in view in any way, or to any degree, the annoyance of the Greenwich Company; they simply sought to find accommodation for the South-Eastern traffic; and as to the South-Eastern Company not bearing their share of the cost, he would give a distinct pledge, that without the full co-operation of that Company nothing should be done. (Hear, hear, hear.) In fact, the South-Eastern Company were so deeply interested in the scheme that it would be worth while to make the road themselves; but surely it was for the advantage of the Croydon Company to co-operate in whatever would have a tendency to accommodate parties upon whose prosperity and friendship so much depended. (Hear, hear.) He did not mean to say that it was not looked upon as a collateral advantage of the Grange-road approach that it would, to a certain extent, render them independent of the Greenwich Railway. This assuredly was one of the anticipated advantages, but it was not the principal one, nor was it the object of the Directors in bringing forward this measure. It was simply, as he had already said, to provide for the South-Eastern Company that accommodation which could not be procured at London Bridge; and when they found at so convenient a spot, a meadow—a deserted place—admirably adapted for a station, and lying directly in the route of a very populous district, and with the further advantages of being but three miles from Westminster Bridge, while New Cross was four, and moreover bringing into use another mile of their railway—when they had an opportunity of securing such a combination of benefits, he could not but think that it would be extremely unwise to let it escape them. (Hear, hear, hear.) It had been hinted by the honourable proprietor that the arrangements for the management of the joint station at London Bridge had failed; but surely one of the objects in nominating the Joint Station Committee had been to promote the interests of the Croydon Company in connection with the interests of the other Companies; and what closer or more enduring bond of connection could be devised than this Bill presented? He hoped, as the honourable proprietor predicted, that an arrangement would be come to with the Greenwich Company, and for his own part he could not see why it had not already been effected. (Hear, hear.) He was sure the Croydon Company asked for nothing but what was just and reasonable; and as to their manner of asking, they had gone about it in every possible manner, and not only had they not asked for more than what was reasonable and right, but he was persuaded that ultimately they would succeed in obtaining it. (Applause.) He hoped, therefore, the resolution would be carried.

Mr. LEVY—What, before the South-Eastern Company have promised their co-operation?

The CHAIRMAN had no objection to add to the resolution a pledge that they should not go on if the South-Eastern Company withdrew from the arrangement. So far, however, from there being any apprehension of *that*, the South-Eastern Company were actually taking the lead.

A PROPRIETOR wished to know how the expense of the road was to be shared.

The CHAIRMAN said, it would be equally divided.

The PROPRIETOR thought the South-Eastern Company should bear the greater proportion of the cost, as they would require the greatest extent of accommodation.

The CHAIRMAN said, the question was not simply one of making a road—or if it could be secured hereafter, a railway—for the accommodation of the South-Eastern traffic, but for the Brighton traffic also. He had never had occasion to submit to the proprietors any measure which he deemed more advantageous, or one in which he saw his way more clearly. (Hear, hear.) He hoped Mr. Levy would withdraw his amendment, in order that they might have a unanimous vote, especially when he assured him that the South-Eastern Company were heart and soul with them. If the Chairman at the late meeting had said anything that had led to misapprehension on Mr. Levy's part, it was doubtless from a desire not to commit the Company prematurely.

Mr. LEVY said, the Chairman (of the present meeting) was in the room at the time, and had heard what Mr. Baxendale had stated.

The CHAIRMAN said, he had drawn a different inference from Mr. Baxendale's statements, probably because he knew what Mr. Baxendale thought and meant to say.

Mr. LEVY knew nothing of the honourable gentleman's thoughts and intentions, except from what he had said. At least the South-Eastern Company ought to agree with the Croydon before this scheme was pushed further.

The CHAIRMAN would again assure the honourable proprietor that they co-operated in the matter most cordially. He hoped Mr. Levy would withdraw the amendment. (Cries of "withdraw, withdraw.")

Mr. LEVY said, he could not consent to withdraw it.

Mr. FLOOD inquired the distance from the Grange-road, at the point of the intended new road, to Westminster Bridge.

The CHAIRMAN said it was 2 miles, the length of the new road being 1 mile in addition. The distance to the Elephant and Castle was 1 mile 1 furlong; to the Obelisk, (St. George's Fields) 1 mile 3 furlongs; to Blackfriars Bridge 2 miles, and to Waterloo Bridge 2 miles and 1 furlong.

Mr. FLOOD believed that the accommodation at the Grange-road would be much greater than at London Bridge? [The CHAIRMAN—Certainly.] Such being the case, he thought the question for the present meeting to consider was simply their own interest, and not to speculate upon what Parliament might do with the Bill, which however there was every reason to believe would pass in its present state. It was beyond a doubt that this measure would tend greatly to the benefit of the Croydon Railway, and it would be showing a most ungracious and unnecessary want of confidence in the Directors to demur to it. (Hear, hear, hear.) It was true that the distance from Corbet's-lane to London Bridge could be sooner passed over on the Greenwich Railway than the same distance by the contemplated road, but when they took into consideration the great delays which necessarily arose in passing through the most crowded thoroughfares of the city to the west end, the balance of time was much in favour of the other route. (Hear, hear, hear.) He should regret if there were any division on this question; and he felt it the more necessary on this occasion to give his support to the Board, because he had placed the fullest confidence in their predecessors, and had at the time deprecated any change in the Management, but as he found that the present Directors had done their duty, he had great pleasure in extending the same confidence to

Digitized by Google

RAILWAY TIMES

them, and trusted that their arrangements in this instance would be confirmed. (Hear, hear, hear.)

Mr. PARE fully agreed in what had been said by the last speaker, and trusted that the honourable proprietor (Mr. Levy) would, in courtesy, if from no other cause, withdraw his amendment, as it was quite clear that the great body of the proprietors present were opposed to his views. (Hear, hear.)

Mr. LEVY would not only not withdraw the amendment, but pledged himself to oppose the Bill by petitioning both Houses of Parliament, before whom he hoped to prove his case more clearly than before this meeting. It was quite useless to attempt to reason with parties who could receive as a fact a statement that the Grange-road was nearer than London Bridge to Grosvenor-square.

Mr. PARE said it must rest with the honourable proprietor to petition or not as he pleased, but he thought the Chairman had completely answered all the objections of the honourable proprietor, except as to the injury which might be inflicted on the Greenwich Company by the Croydon thus becoming, as sooner or later they must become, so far independent of them.

A PROPRIETOR could confirm what had been said by the Chairman, as to the good feeling existing between the Croydon and South-Eastern Boards. He had the pleasure of being acquainted with one of the South-Eastern Directors, and that gentleman had told him no later than yesterday, that as they had always been treated with honour and liberality by the Croydon Board, they were anxious to respond to such conduct. (Hear, hear, hear.) As to the amendment before the meeting, he was sure no gentleman would allow himself knowingly to be swayed by the interest which he might have in another Company, but a bias might thus be given unconsciously. Perhaps the honourable proprietor would state therefore what interest he held in the Greenwich line?

Mr. LEVY could have no difficulty in answering that question. He held 400 registered shares in the Croydon Company, and 100 more that had not yet been sent in, making 500 in all; whereas in the Greenwich Company the number which he now held, and had held from the first, was 25 shares.

The CHAIRMAN was about to put the amendment, when it was intimated to Mr. Levy that the next meeting of the Company would take place in September next.

Mr. LEVY was quite willing that the amendment should be worded so as to defer the question till September, as he hoped that before that time some arrangement would be come to with the Greenwich Company, and then the expenditure on the Grange-road would be rendered useless.

The CHAIRMAN begged the honourable proprietor's pardon. No arrangement with the Greenwich Company could render unnecessary further accommodation for the South-Eastern and Brighton lines.

Mr. POLLARD inquired if as much accommodation as before would be wanted at London Bridge.

The CHAIRMAN said, that even now as much as ever would be required. It had not been contemplated at the outset that the traffic would be so large. He recollected perfectly well that the original projectors of the line had been blamed for purchasing too much land at London Bridge, whereas it now appeared that it was too little. It was this perfect inadequacy of space which had forced the question of the Grange-road approach on Mr. Baxendale's attention.

Mr. POLLARD fully agreed that it was their duty to provide in conjunction with the South-Eastern Company ample accommodation for the expected traffic, but still he hoped that an arrangement would be effected with the Greenwich Company. At one time he had differed from the Croydon Board on the toll question; but, as a shareholder, although not a large one, in the Greenwich line, he must say, that the offers made to the Directors by the Croydon Board were very fair and liberal, and ought to be accepted. (Hear, hear.)

Mr. SMYTHE, as a holder of 500 shares in the Greenwich Company, had no hesitation in saying that, in his opinion, the Greenwich Directors were most decidedly in the wrong as to the toll question. (Hear, hear, hear.)

The amendment was then put, when but 5 hands were held up for it, and an immense majority against it. The original motion was then put, and declared to have passed; whereupon Mr. Levy remarked that, with it the money would "pass" from the pockets of the proprietors.

The CHAIRMAN said, he might mention a fact with respect to the Government tax on railways, which bore upon the Greenwich toll, the two being hitherto levied on precisely the same principle, namely, at so much per mile per passenger. At the instance, however, of the low-priced Companies, who were seriously affected by it, and with the consent of all the Companies, the Chancellor of the Exchequer had agreed to commute this capitation tax into a fixed duty of 5 per cent. on the passenger receipts. Now what the Croydon Company wanted from the Greenwich was a similar arrangement. The Chancellor of the Exchequer did not anticipate a diminution of revenue, neither need the Greenwich Company; for his own part he believed it would be increased by a judicious commutation, and no one would be more pleased than himself to find the Greenwich Company receiving 10,000*l.* a year from their toll, but then it must be on condition that the Croydon Company were receiving 60,000*l.* from their traffic. He did not for a moment think that they would ever receive anything like that amount from a 4½d. toll, although they might perhaps secure it by a toll of 1d. The Croydon Directors had been accused of exacting from the Brighton Company the same amount of toll as they themselves murmured at paying to the Greenwich, but although it was true that, in one sense, the toll was the same, namely, 1½d. per mile, every one must see that the effect of such a fixed toll must operate very differently upon two lines, the fares of which averaged about 2d. and 1d. per mile respectively. (Hear, hear, hear.)

Mr. PARE, in moving a vote of thanks to the Chairman and Directors, expressed a hope that local Chancellors of the Exchequer would follow the example of the great Chancellor, in arranging their taxes or tolls.

Mr. CAPEL seconded the motion, and having put the question announced, amid applause, that the vote had passed unanimously.

Mr. LEVY said, *such* votes were sure to pass. It was but the other day that they had voted thanks to a Board of Directors, who had made the trifling mistake of putting down 70,000*l.* on the wrong side. (Loud laughter.)

The CHAIRMAN said, such votes might be a matter of course, but at any rate his colleagues and himself should strive to deserve the continued approbation and confidence of their fellow proprietors. They did not lay claim to the possession of any particular abilities, but simply to a great, an abiding, and unceasing zeal in the Company's service. (Much applause.)

The meeting then broke up.

The following statement was circulated in the room:—

"The object of this measure (promoted by the South-Eastern and Croydon Railway Companies) is to afford better accommodation for the merchandise, cattle, &c., conveyed along the Croydon, Dover, and Brighton Railways, from the counties of Surrey, Kent, and Sussex, and also to provide for the convenience of the public residing at the western parts of the metropolis, travelling on these railways, especially those who have with them their own carriages and horses.

"Already serious complaints are made by passengers on the Brighton Railway, coming from the west end of London, of the inconvenience and loss of time to which they are subjected by having to proceed to and from the *present station*, through the crowded streets of the City and Borough; and it is scarcely necessary to add that such station neither is, nor can be, adapted to the accommodation of the whole of the extensive traffic in cattle, hops, and general merchandise, from the counties of Sussex and Kent.

"The present application to Parliament is, therefore, made to provide for these important objects. It is intended to form a roadway or approach, from the Grange-road (near the Green Man turnpike, in the Old Kent-road), to the Croydon Railway, near Corbett's-lane. The length of the proposed road is about one mile; it proceeds through an open district, interfering with but one or two buildings, and those of a very inferior description. The line has been carefully surveyed under the direction of Mr. Cubitt, the Engineer of the South-Eastern Railway Company.

"The convenience of the terminus at the Grange-road, for the objects contemplated, will be readily seen on reference to the annexed plan, and by the following statement of its distance from the undermentioned points:—

	Miles.	Furlongs.
"From the Elephant and Castle.....	1	1
From the Obelisk (St. George's Fields.	1	3
From Westminster Bridge.....	2	0
From Blackfriars Bridge.....	2	0
From Waterloo Bridge	2	1

"The South-Eastern and Croydon Railway Companies have felt themselves called on to provide for the public convenience by the proposed measure, which they now confidently submit for the consideration and sanction of Parliament."

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—The Directors of the Greenwich Company seem likely to realise their wishes, in getting the Croydon Company superseded in the conduct of its own peculiar traffic, but I fear the fulfilment of these wishes will in nowise conduce to the interests of the Greenwich proprietors; for the destruction or injury of the Croydon traffic must, under any circumstances, prove a woful loss to the Greenwich Company, seeing that the toll arising from this traffic has greatly surpassed in amount the toll paid by the Brighton Company, and must always far exceed it, because the same passengers upon the Croydon Railway, provided the fares be moderate, will travel frequently, and in many cases twice daily.

The Croydon Company, it appears, have determined to advance their fares *to passengers over the Greenwich Railway*, to meet the *additional toll imposed by the latter Company*, in consequence of the finishing of the new lines of rails. It was foreseen from the first, even before the Parliamentary contest in 1840, that an additional toll could never take effect—that is to say, on an equal number of passengers; for if its imposition should reduce the number, then the benefit of it to the Greenwich Company would be *pro tanto* lost. And now that it comes to be tried the Croydon Company advance their fares, and the numbers cannot fail to decrease.

The advantage, too, held out to persons taking the turnpike-road from New Cross by omnibuses is so obvious, that unless time be extremely precious to them, that route will be preferred to their going over the Greenwich Railway to London Bridge at an excess of cost. A traveller by a first-class carriage to London Bridge would pay 2s. 3d., while he could get to Gracechurch-street for 1s. 6d., because the charge from Croydon to New Cross is 1s., and omnibuses will convey him thence to Gracechurch-street for 6d. in little more than the same time, thereby saving him the *walk* across London Bridge—avoiding wind, and wet, and heat. Ninepence thus saved each way is 1s. 6d. daily, or upwards of 20*l.* in the year—a sum worth taking a little trouble to save—especially when the Croydon resident feels that he is at the same time promoting the cause of cheap travelling, which is the whole question at issue between the Croydon Company, who are anxious to try low fares, and the Greenwich, who resist the attempt by the imposition of a toll inimical thereto.

Were I a resident of Croydon I should club with a certain number of my fellow travellers using the same train (business-people are usually very punc-

Digitized by Google

tual in their habits of travelling), and engage with some respectable coach proprietor to be in readiness to meet that train at New Cross with an omnibus, and run on without "let or hindrance" to the Bank or Royal Exchange. I have no doubt 10 or 12 passengers could secure such an omnibus on paying 6d. each, leaving the driver to fill up the complement by chance customers; and the same conveyance would be in waiting at 4 or 5 o'clock, or any other appointed time, to take them to New Cross to meet the down train. What would then follow? Why, nobody would be found willing to go over the Greenwich Railway at the additional charge, and the whole toll would be lost to that Company until a fair arrangement should be made, to admit the trains over that railway on the same terms as they travelled over the Croydon line. The Croydon Company would then have the felicity of carrying a multitude of people to and from London Bridge, at fares not exceeding 1s. 6d. for first-class and 1s. for second-class passengers, and an enormous *amount* of toll would flow into the Greenwich coffers.

I said, the Greenwich Directors seemed likely to realise their wish of getting the Croydon Company superseded in the conduct of their traffic. But, good easy men, they hope, nevertheless, to get the toll somehow or other. But how can that be? "Oh [say they], the *excellent* arrangements made by the Brighton Company for the conveyance of Croydon passengers will cause an increase and *diversion* of the traffic, a saving of 10,000*l.* a-year in working expenses will be effected, and our 'four-penny-halfpenny toll' will be paid without grumbling."

But, by what magic is "this consummation, so devoutly to be wished," to be brought about? Why by the Brighton Company working the Croydon traffic at a certain loss! Should such a course be suggested by the Greenwich section at the Brighton Board it would be scouted by the other Directors—*they* have no such affection for the Greenwich Company as so to squander their proprietors' money.

The Croydon Company have advanced their fares. Will the Brighton Company venture to keep theirs where they are at present, being 3d. below those proposed by the Croydon Company—thus presenting the indecent spectacle of competing for a traffic which legitimately belongs to their neighbour, and only anomalously maintained by fares at variance with the entire scale upon their own railway? Indeed the Brighton Company have not taken any more ill-advised step than their competition for the business of the Croydon Company, which they could by no possibility render profitable to themselves while this Company are carriers. The present second-class fare of 1s. 6d. will be exhausted by the toll of 1s. to the Croydon Company and 4½d. to the Greenwich Company—leaving only 1½d. to meet all other charges, which must be at least quadruple that sum.

Surely the Brighton Company will *not reduce* the Croydon fares now that the Croydon Company have raised them, and this is the only measure that would answer for the Greenwich Company; for what would then be the consequence? The second-class fare would be 1s. 3d., and the direct charges thereon a toll of 1s. to the Croydon Company, 4½d. to the Greenwich Company; making together 1½d. more than the gross fare charged—besides all the cost of conveying the passengers.

Thus the false hopes held out by the Greenwich Directors to the much-to-be-pitied proprietors—mush to be pitied, because ignorant of the result—have vanished. The expectation of the Brighton Company's "increasing and diverting the Croydon traffic" the Directors could never have seriously entertained, unless indeed they had hoped to throw dust into the eyes of the Brighton Company, shrewdly suspecting that the very prodigal way in which everything connected with the Brighton arrangements is conducted would extend to this subject also; but, fortunately, by this time the eyes of the Brighton Directors are wide open, earnestly looking out for a profitable return for their great outlay, which cannot be obtained by carrying on the Croydon traffic at a loss. If the Greenwich proprietors are content to go on any longer in this fond delusion, they will have to blame themselves alone, and cannot hereafter complain of the Croydon Company, who have striven hard for an amicable settlement of this vital toll-question, should it hereafter appear that the Croydon Company are able to carry on a successful business *wholly independent* of the Greenwich Railway.

I am, Sir, your obedient servant,

EQUITAS.

[It will be seen from an advertisement in another column, that omnibuses are now running from New Cross to the Bank.—Ed. R. T.]

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—Your readers will have observed an advertisement complaining of the toll levied by the Greenwich Railway Company, in consequence of which the Croydon Company are compelled, as they allege, to raise their fares.

The enormity of the offence charged has, it seems, excited the virtuous indignation of the latter Company in an unusual degree, and no doubt the sympathy of the public will be enlisted on the side of the *oppressed*.

The proceedings of this Company however, on a former occasion, are still fresh in the memory.

We have not forgotten, when the Greenwich Railway Company were obliged by a resolution of the House of Commons to apply to Parliament for a new Act, how the Croydon Company, with singular effrontery, strove to dispossess them of their property, together with the power of constructing additional lines, and we well recollect the signal defeat they met with at the hands of the Committee. But, although for a while discomfited, it seems the Croydon are not to be beaten. They return to the attack with redoubled ardour. They now propose to cease being carriers themselves, leaving the traffic to the Brighton and Dover Railway Companies, from whom they expect to receive a toll of 1½d. per mile, on a line of 8 miles.

A word or two on this subject. There is an old saying that people should never "throw stones from glass windows." Now let us see what the Croydon tolls are likely to be.

It appears that, during the late Parliament contest with the Greenwich, the Croydon Company estimated the toll payable on the passenger traffic of the Brighton and Dover Railways at about double their own, which they put down at 6,000*l.* per annum.

Hence it follows, that the toll to be paid by these two Companies to the Croydon alone, viz.: 1s. for the 8 miles, will amount to the enormous sum of 48,000*l.* per annum! and this too, be it observed, on a calculation made by the Croydon themselves.

Whether this be an *excessive toll* or not I leave to your readers to form an opinion. But it seems to me matter of serious consideration with the shareholders of both the Brighton and Dover Railways, whether they shall submit to this impost of 48,000*l.* a-year, which, by-the-bye, is in addition to what they may pay the Greenwich Company, when it is well known that, by joining their forces, they can throw off a branch line from the neighbourhood of Croydon to the Elephant and Castle at a cost of about 600,000*l.*, thereby securing a most desirable west-end terminus. It is to be hoped that neither of the above Companies will be diverted from this really necessary plan of union by any so absurd a scheme as that of a west-end terminus at the Grange-road, 3½ miles from Westminster Bridge!

I am, Sir, yours, &c.

INVESTIGATOR.

London, May 2, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—I have observed with feelings of pain and regret, the recent proceedings of the Croydon Railway Board towards the Greenwich Company, and as one of their constituents I am at length driven, by the notice advertised by them in your last number, publicly to disavow my concurrence in the crooked policy they have thought proper to adopt. In common with the other shareholders, I have patiently endured for several years the absence of a dividend, and shall rejoice much at receiving a handsome recompense for the hope so long deferred; but I have no wish to arrive at this result by the infliction of a palpable injustice upon another body of proprietors scarcely more fortunate than ourselves, who have been compelled by Act of Parliament to sacrifice *one-half the value of their stock*, in order to provide increased accommodation for our traffic, in common with that of the Brighton Railway. And knowing as we all do that this is the true state of the case, upon what principle of common honesty can we lend ourselves to the present unrighteous effort to divert our traffic from its natural and legitimate direction, by imposing a *discriminating penalty* upon such of our customers, as prefer the Greenwich line to the Grange-road omnibuses? A fair profit upon the toll now demanded of us we are entitled to, and nothing more; but the new scale of fares, so far from answering to this character, is neither more nor less than an attempt to rob the neighbouring line, because the management do not think proper to adopt the peculiar reciprocity views of our Chairman. So satisfied am I of the impolicy, as well as iniquity, of this course of proceeding, that my proxy is quite at the service of any gentleman who will bring this matter fairly before the proprietors of our line at the next meeting. In the mean time I subscribe myself in my real character as

A CROYDON SHAREHOLDER.

May 4, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—Your correspondent "G. H. B." need not fear any "wavering and indecision upon this subject amongst the Greenwich Directors;" on the contrary, he may rest assured that they will steadily pursue that profitable course which they have hitherto adopted, and which has so obviously led to, and will as certainly prolong, "*the continued and increasing depression of the Greenwich shares*" to which he so feelingly refers.

I am, Sir, your Constant Reader, but happily *no* "Old Shareholder in the Greenwich Company,"

V.

London, May 9, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—After the very able, yet very severe, leaders you have lately favoured us with, you cannot refuse me a nook in your well-filled paper for a single word in praise of the Directors of this *magnificent* undertaking: I refer to their zeal and activity in pushing the business of the railway; their great attention to matters of apparently minor importance; their anxiety to secure the smallest profit; witness their unceasing exertions, the talents they have displayed, the labour they have bestowed, the advertisements they have inserted, and the bills they have placarded to obtain the trade, and with it, of course, the *profit* of the Croydon traffic. Their merit in this particular can never be sufficiently appreciated; to do anything like justice to the minuteness of their attention to the interests of their proprietary in this instance, we should know the largest amount of profit which the most favourable circumstances could by possibility be obtained from this source. I regret that I am not in a situation to furnish this information, but the very accurate accounts kept by the Directors, will doubtless supply it with the

Digitized by Google

greatest precision; I will, however, try to give the proprietors some notion of the infinitismal minuteness of the profit for which their Directors have so earnestly struggled.

The fares by "*the London and Brighton Railway Croydon trains*" between London and Croydon are, first-class 2s., second-class 1s. 6d., out of which are to be paid the expense of carriage and haulage for 10 miles, wear and tear, and Government duty on one mile of the Brighton Railway, advertisements, booking-clerks, porterage, printing, stationery, and sundries, a toll of 1s. to the Croydon Company, and a toll of 4½d. to the Greenwich Company, and the balance will be INFINIDISMAL profit to the Brighton Company. Suppose 20 passengers from London to Croydon, 6 first-class, and 14 second-class, (which would be about the usual proportion of the two classes,) the account would probably stand something like this—

DEBTOR.

	£	s.	d.
Toll to Croydon Company, 20 passengers at 1s. each	£1	0	0
Ditto, Greenwich Company, at 4½d. each	0	7	6
Goverment duty, one mile at one-eighth of a penny each	0	0	2½
Carriage and haulage, 10 miles at ¼d. per mile each passenger	0	4	2
The Birmingaam contracted for their haulage at ¼d. per mile per passenger, but as the Brighton Company manage matters so much cheaper than their neighbours, only one-half of the Birmingham contract is assumed. The Birmingham Company too had a notion that the short passengers ought to be charged higher per mile than the longer; because, although the passenger only travelled and paid for 10 miles, yet the carriage in which he rode travelled, and dragged, and wore through the whole journey; but the Brighton Company have discovered that this was all nonsense.			
Wear and tear of railway, one mile, advertisements, clerks, porters, printing, &c. &c., say ONLY 1d. each	0	1	8
Total expenditure	£1	13	6½

CREDITOR.

	£	s.	d.
6 first-class passengers, at 2s. each	£0	12	0
14 second-class do., at 1s. 6d.	1	1	0
Total receipts	1	13	0
Balance on wrong side, or *loss*	0	0	6½
	£1	13	6½

Take care of the pence and the pounds will take care of themselves, is an old maxim, but the Brighton Directors, yet more thrifty, practice the care of the infinitismal fractions of farthings, and leave the hundreds of thousands of pounds to take care of themselves.

I know not whether this is attributable to the collective carefulness of the whole body of 20 Directors, or only to the severe business-habits of *one* master mind. Be that, however, as it may, I trust that it will not be lost sight of, and that you, Sir, and the proprietors, will award to the Directors that full measure of praise which such enlarged views and such gainful policy so justly merit. Yours, &c.,

SPECTATOR.

London, May 10, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—Feeling deeply interested in the future success or failure of our Manchester and Birmingham Railway, and hearing various rumours afloat that are calculated to alarm me, I now write to inquire from you, as the organ of public opinion in railway matters, whether it is true, as reported, that the Directors have refused the offers of the Junction people to work the traffic along with their own from Crewe, south, and are going to set up for themselves with duplicate establishments and engines, to do what is now carried on by one. If it is so, farewell, I fear, to dividends for some years—for the separate expenses added to the toll, will more than swallow up our receipts over the Crewe and Birmingham line.

Are the Companies quarrelling? or are our Managers crazy? At any rate do not let *our* interests and pockets pay for it.

YOUR CONSTANT SUBSCRIBER.

Congleton.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—May I, through the medium of your columns, put a few questions to the Chairman and Directors of the Midland Counties' Railway?

This line was originally formed, and I may say completed, for about 27,000*l.* a mile. It is situated in the midst of a most populous neighbourhood, abounding with large towns, communicating by means of the North Midland Railway with Leeds, Sheffield, &c., and by a continuation of railways from Rotherham with York and Newcastle. Under circumstances so favourable might we not reasonably expect some increase of traffic proportionate with the natural development of the advantage and security of the line, (for a safer one is not in existence), and might not the increase which has *invariably followed* upon other lines of railway for successive years, have been equally expected upon ours? But what is the real state of the case? Eighteen months back a fresh sum of 200,000*l.*, more or less, was raised, for the purpose, we were told, of building additional warehouses, waggons, &c., and to meet the exigencies of *increasing traffic* both in the passenger and the goods department; and what has been the result? A sudden increase in goods of about 200*l.* a week; but which has never altered or amended excepting in the returns for one week, February 5, since the last 12 months. Might we not then have trusted that we should have been spared from any further demand? Instead of this a fresh sum of at least 12,000*l.* is declared to be necessary, and powers by Act of Parliament are applied for and obtained to that effect. All this we could have borne, and have done till now; but what are the benefits we have derived from it hitherto (for a considerable sum has been obtained by loan notes already)? I am compelled to say none. Our passenger traffic is less on many weeks than it was at the corresponding period last year; and it is only the increase of goods which has lately swelled our returns beyond those of 1841. This week is, however, the *last* in which we can expect *this* advantage, for next week was the first of the increase which took place consequent upon the loan of October, 1840.

To what then is this unaccountable state of affairs to be attributed? Why is the London and Birmingham 2,000*l.* better this week than the one which corresponded last year, and why are we shorter in passengers this year than the last? As a large shareholder, I have naturally watched the returns with great anxiety, and have inquired from various brokers and others the cause of the complete stagnation of active business on the line, and the depreciation of the shares in the market, far beyond what is seen on other corresponding railways. The answer has been invariably the same, namely, *that there is not confidence in the Directors*; that most of those who take an active part are ironmasters, or connected with trade in such a degree as to render them careless, save to that part which may affect themselves; that proper means for encouraging travelling, &c., *are completely neglected*; and, in fact (without accusing them of any wilful mismanagement), that the public are of opinion that through these means the railway has *in no degree* arrived at the prosperity which, from its position, it ought ere this to have acquired. Now, Sir, I have the fullest confidence in the honour and integrity of our Directors, yet I cannot but feel that there is just cause for complaint. May I hope, therefore, that some explanation will be offered, accounting for the bad state of our affairs, and our great depreciation in the opinion of the monied part of the community; why we are going back in regard to passenger traffic, and upon what plea enormous additional sums are being raised, and for what beneficial object? I have always befriended the Directors *hitherto*, but I cannot see matters growing worse and worse without raising a remonstrance. Our line has every capability for paying handsomely. If, therefore, it does not, who is to blame? I am, Sir, your most obedient servant,

A MIDLAND COUNTIES' SHAREHOLDER.

NORTHERN UNION RAILWAY.

To the Editor of the Railway Times.

SIR,—I presume this Bill will in a few days receive the Royal Assent. The effecting the communication between Newcastle and the south and midland parts of England and the metropolis will be of the greatest possible advantage to the railways, such as the North Midland, Midland Counties' &c. It must be a long period indeed before any other more extended communication is effected.

In the meantime Newcastle will be the rallying point from all quarters, and the stream of traffic from Scotland, east and west, will necessarily take that course. Who can say when the west coast lines, or indeed the east coast works of such magnitude, will be completed? There is something business-like and discerning in the encouragement of this Northern Union line, and from the names, more particularly that of Mr. Hudson, which I observe in the Direction, I do hope the works will be carried on most rapidly and effectually.

If the gentleman alluded to should see these lines, perhaps he would kindly let us know through your columns, what period he thinks will be necessary to complete the works? I do not exactly understand what amount of work—what extent of *new* railway—there is to be accomplished.

I have the Report of the Committee now before me. It says, "the cost of *constructing* the said railway is 165,112*l.*, and the cost of *purchasing* a certain portion of the Great North of England 334,888*l.*"

But this portion of fifteen miles from Darlington to Shincliff is *to be made*. Well then, from Shincliff a "*new* line will be taken" we are told. What will be the extent of *this?*

I should like to be told the number of miles of railway to be made, and the time expected to be consumed in making them, and I shall anxiously look out, now that the Executive is legally constituted, for those indications of its continued activity and energy which have been apparent in the preliminary steps taken. Certainly, up to this time, there is nothing to complain of on that score.

I may mention, as one interested in the railways I have alluded to, that I am glad to observe an attempt making to establish "an expeditious, commodious, and economical communication, between London, Darlington and Newcastle, by omnibus and rail."

This determination, to direct the attention of the public to Darlington as their nearest point, is highly judicious, and not likely to be overlooked by the thousands who may have occasion to avail themselves of it.

I remain, Sir, your obedient servant,

C. R.

THIRD-CLASS TRAINS.

To the Editor of the Railway Times.

SIR,—I think you ought to notice the inconvenient time the Companies run their third-class trains, as for instance the Brighton, at half-past eight at night. Now if a person wishes to take a cheap trip, which all Railway Companies ought to encourage, he must arrive in Brighton in the middle of the night. Then the fare is extremely high, viz., 6s. As many of the fast coaches now charge only 8s., I think the Company must stand very much in their own light, as it is only a pleasure line. Then there is the Great Western: they start a third-class train at half-past four in the morning. Now if a person should live at a distance from the terminus, such as Wandsworth, &c., he must start about two o'clock in the morning to get there in time.

I am sorry to see that the Companies do not study the convenience of the poorer classes of passengers. If the Brighton Company were to run a cheap fare from Croydon to Brighton, many would embrace the opportunity who live on the Surrey side of the water; they would then save the Croydon toll.

I remain, Sir, yours, &c.,

E. COPE.

May 3, 1842.

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

2. Minus toll to London and Birmingham 20*l.* 11s. 3d.

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 903*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half year's traffic, amounts to 130*l.* per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 29*l.* 9s. 0d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic:—Receipts from passengers (2,906), 108*l.* 8s. 2d.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,302*l.* 17s. 1d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, carriages, 29*l.* 11s. 0d.; horses, 83*l.* 2s. 0d.; dogs, 2*l.* 1s. 0d.; parcels, 26*l.* 7s. 9½d.; cattle, 59*l.* 12s. 6d.; corn, 8*l.* 0s. 11d; heavy goods, 438*l.* 17s. 0d.; coal and lime, 74*l.* 1s. 0d.—Total, 853*l.* 13s. 2½d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,242*l.* 11s. 4d.; carriages and horses, 190*l.* 4s. 7d.: parcels, 155*l.* 18s. 5d.; mails, 50*l.* 5s. 9d. merchandise, 1,109*l.* 6s. 8d.; minerals, 231*l.* 19s. 0d.; cattle, 78*l.* 18s. 10d.— Total, 4,059*l.* 4s. 7d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 111*l.* 17s. 1d.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The traffic stated does not include the Leeds and Selby.

LONDON AND GREENWICH RAILWAY.

The traffic returns of this Company had not reached us at the time of going to press, although a clerk in the office had promised to forward them.

TO CORRESPONDENTS.

A Shareholder *(Liverpool) who wishes us to reprint a portion of one of our last week's leaders, as being, in his opinion, "so very applicable to the position of the Birmingham and Gloucester line," is informed that we do not see the applicability. If our correspondent will give us facts instead of assertions, he shall have every facility for arousing the shareholders.*

Cheltenham and Great Western Railway.—*We think* A Sufferer *takes somewhat too much upon himself when he states that, by copying from the* Cheltenham Free Press *a letter signed* Judex, *we should be obliging the "proprietary generally." Can* A Sufferer *or* Judex *possibly have any interest in the undertaking? We think not.*

"Railway Shareholder."—Aliquis *(Leeds) wishes to know what has become of the correspondent who used to write so pungently under this signature. We can only say that* R. S. *having taken offence at the mode in which we deemed it right to treat one of his communications, has since withdrawn his favours, and for this we feel very sorry, for, as we said at the time, we always admired his talent, even when we differed from his conclusions.*

Railway *(Liverpool).—Nos.* 38, 8, 11, *&c.*

York and North Midland Railway.—*A subscriber wishes to know when the last dividend was* paid.

A Subscriber to the Railway Times.—*The net annual revenue as proved before Parliament, in* 1836, *was* 175,293*l. By a revised estimate the income was increased to* 191,059*l.*

Great Western Railway.—Vigil *and* A Permanent Holder *came too late for our present number. They shall appear next week.*

C. H. F. *in our next.*

Brighton Railway.—*The letter of* A Brother Shareholder *shall be given next week. The writer has our best thanks. His "facts for the Editor's private use" astound us. —The note authenticating* Alkali's *communication of last week has been received. We shall be glad to hear further from him. He may rely upon our discretion.— We feel obliged to* Expositor *and* A Shareholder *for the trouble they have taken, but the* answer (!) *in question is really not worth notice.* Expositor *may well say, "save me from my friends." Will this correspondent give us* names *and* dates *relative to the statement which he makes of a contractor dying worth* 20,000*l*, *leaving a* Resident Engineer executor, *the same contractor having but a short time previously been unable, from want of money, to erect huts for the men he was about to employ?— Other correspondents on the affairs of this Company shall be attended to in due course. So many of them appear disposed to take up the matter, that we shall probably have little further occasion to notice it editorially.*

A Shareholder *(Liverpool), whose note arrived yesterday, shall not be lost sight of.*

Birmingham and Derby Railway.—Inspector *has been received, and shall appear as soon as possible.*

One of your Earliest Subscribers.—*The distance from London by railway to Manchester or Liverpool is exactly* 209½ *miles. When the Manchester and Birmingham line is opened the distance to Manchester will be shortened some* 20 *or* 25 *miles.*

Practical Geodesy, *by Butler Williams, C.E., &c.—A work under this title has just been published by Mr. Parker, West Strand. From the cursory examination which alone we have been able to bestow on it, we should think it likely to be of much value to the classes for whom it is intended, namely, surveyors and students. It is beautifully "got up."*

An Intending Purchaser *will find his first question answered by reference to the proceedings of the meeting, given in another page. For an answer to his second and third questions he must apply to the Secretary.*

*** Double price will be paid by our publisher for any of the following numbers of the *Railway Times*, in order to enable him to complete sets. For the year 1838—January 13th, 20th, 27th; February 3rd, 10th; March 3rd; April 21st; October 27th. For the year 1841—February 26th.

THE RAILWAY JOURNALS.

—o—

The three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES	**72,524**
Mining Journal	38,500
Railway Magazine	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, MAY 14, 1842.

It is to-day our painful to record the particulars of a railway catastrophe, far surpassing in its calamitous results any occurrence of a similar character that had previously taken place: we allude to the accident on the Versailles Railway, of which we supply details in another part of this paper. Even after the lapse of five days the exact number of lives sacrificed has not been determined, but it is unfortunately too well established, that not fewer than 80 individuals have fallen victims.

The *causes* of the accident are, up to the time at which we write, far from being fully developed. As usual, various speculations have been indulged in, many of them absurd enough; but before the real cause, or combination of causes, can be accurately ascertained—if, indeed, so desirable a result should ever be arrived at—a more searching inquiry than the interval has yet permitted, and a calmer deliberation than can be looked for in the excitement inseparable from so awful a visitation, must first take place. The Academy of Sciences, it will be seen from the particulars furnished by the journals, ascribe the accident to "a fatal concurrence of circumstances," the principal of which they deem the employment of a four-wheeled engine,* and the use of two locomotives for a single train. Whatever opinion may be entertained as to the comparative merits of four-wheeled and six-wheeled machines, it cannot fail to be remarked how strongly similar in its attendant circumstances this Paris accident is to that which recently occurred on the Brighton line, in respect of the conjoined working of an engine of each class. We refrain, however, from discussing this part of the subject until we have further and more authentic data before us, merely remarking that we decidedly object to the use of two engines under almost any circumstances, and think that in every case where a train is found to be beyond the power of one locomotive, it ought to be divided into two parts. No danger could arise from the nearly simultaneous starting of the two sections, the drivers of both being cognizant of their proximity.

* The engine described simply as "a four-wheeled engine," is, we understand, of the kind known as "*outside bearings*," a form which is wholly repudiated by the best makers of four-wheeled engines in this country, and which has been condemned by those who have recently advocated in our columns the use of four-wheeled engines. The engine, we understand, was also a very weak one.

Digitized by Google

But from whatever cause the accident may have originated, there can be no question that it was grievously aggravated by the circumstance that the doors of the carriages were locked, thus shutting out the means of escape after the first shock had been felt, and before the fire could have had time to exert its fatal effects. In denouncing this practice, the Academy have public opinion on their side, for, however unable to understand matters of engineering or mechanical construction, every one's common sense will show him how greatly the chances are increased against those who, on the occurrence of such a casualty as this, are imprisoned without power of self-release; and as to trusting to the usual offices of the attendants in the confusion of such an occasion, the French accident shows the hope to be altogether vain. The Directors of the Paris line are, however, not chargeable with the deplorable result of this arrangement, which is said to have been forced upon them and other Companies in consequence of some person having thrown himself from a carriage a year or two since for the purpose of committing suicide—just as if any precaution whatever could prevent madmen, who are weary of their life, from finding the means of destroying it. But, although thrust upon the French Company, we are sorry to say that there is a Company in this country who voluntarily adopted, and still persist in, this highly dangerous arrangement—we mean the Great Western Company. An excellent letter upon this point will be found in another column, and we sincerely trust that the warning supplied by the calamity at Versailles, will at once lead the Managers of the Great Western line to adopt the system common in other Companies. Better far that additional labour should be thrown upon the servants of the Company—a thousand-fold better that a roguish passenger should at times practice imposition with success—even if the present plan of the Great Western Company were more calculated to detect imposition than that usually followed, which we very greatly doubt,—better, we say, that any trouble or loss should be incurred, than that hundreds of persons should be exposed to the *risk* of so horrible an end.

We fear that this occurrence will, for a time, exert a most baneful influence upon the progress of the railway system in France. An indication not to be mistaken of the popular feeling is supplied in the fact that, on the night of the accident the presence of a regiment of the line alone saved the railway station from the fury of the mob. It is true that such parties as composed this mob are not likely to exert any great influence directly on the railway question; but, nevertheless, much injury may accrue indirectly, and the more so, as in France the *vox populi*—the clamour of the crowd—is at times omnipotent. One of their own journals says:—"What we deplore in this event, independently of the number of victims, is, that it will again awaken prejudices which had completely disappeared. Railway communication has not yet had time to become naturalised in France, and it cannot increase and continue without the favour of the public. In America and in England a railway accident turns to the advantage of the national foresight. It causes means to be sought after for defending mankind from the dangers necessarily attendant on every new invention. With us the mischief which occurs discredits, at the same time, science and the inventor." May the "discredit" be but temporary!

In the observations of another native journalist we fully agree:—"To the sentiments of melancholy and awe which pervade every heart are joined [says the *National*] bitter complaints. It is now, however, either too soon or too late to accuse. We shall wait until the facts are cleared up to examine where blame is due. But in the midst of the mournful accounts which reach us from all sides, it is at least pleasing to us to render homage to the zeal and devotedness which the inhabitants of Meudon, Bellevue, and the other neighbouring villages, exhibited. * * The troops also did their duty; and when the sad news was known, the Government did not fail to do what it could. This is the only consolation that we can offer, an exceedingly weak and inadequate compensation for the misfortune which has spread universal consternation in the capital. *The obligations imposed on Government by the death of so many victims are not confined to the mere cares of medical attendance. The public expects from the hands of justice an impartial and severe inquiry, which no consideration ought to prevent. Society would be exposed to a perpetual inquietude, if so many persons could thus disappear without the exact cause of the misfortune being known, and without the negligence being punished as it ought to be. We content ourselves with this reflection, but we shall make it our duty to bring it forward, if it should be forgotten.*"

We cannot suppose that the French Government will allow the matter to remain altogether unexplored, although, if it be true, as stated by the *Siecle*, that the authorities have refused to allow Mr. Locke (who, our readers are aware, is professionally connected with the Paris and Rouen Railway) to examine into the causes of the accident, we are not very sanguine as to the strictness or impartiality of any official investigation which they may think fit to institute. The pretext for declining to allow Mr. Locke facilities for an inquiry is said to be that "the Government Engineers were entitled to take the first steps in the matter"! This is carrying etiquette somewhat too far. The Prefect of Police appears to forget that not France alone, but every country into which railways have been, or may be, introduced, is deeply interested in having this affair probed to the bottom. It is to be hoped that Mr. Locke and other competent Englishmen who may be on the spot, will spare no pains to throw light upon the occurrence. If railway travelling is necessarily subject to accidents like this, the sooner we return to old habits of locomotion the better. But we do not believe that it *is* thus exposed, any more than that steam navigation must needs have its victims by scores, as in the case of the dreadful explosion at Baltimore, the news of which reached this country much about the same time as the notice of the accident at Versailles. Frightful as was the loss of life in both cases, the "discredit" of which our French contemporary speaks will attach to the railway system only; and yet, as we shall hereafter show, the destruction of life by steam-boat accidents has been far greater than by casualties on railways.

The proprietors of the London and Croydon Railway at their special meeting on Tuesday last (a full report of the proceedings of which will be found in another part of our present number), were all but unanimous in sanctioning the means adopted by the Directors of that Company, in conjunction with the South-Eastern Board, to effect an approach to the railway from the Grange-road; and in coming to this decision, we think they have taken a right view of their own interests, as connected with the accommodation required by the tributary lines. Mr. Levy, it will be seen, strenuously opposed the project, principally, it would appear, because it seemed to him to have originated in a desire to annoy and injure the Greenwich Company, and because in the event of the Directors of that Company acquiring a clearer insight into what is likely to be most conducive to the prosperity of their undertaking—which Mr. Levy, in common with ourselves, and we believe nine-tenths of the railway public, hopes and believes will shortly be the case—the expenditure incurred on this Grange-road approach would be utterly useless. Could we imagine for one moment that *spite* was at the bottom of the Croydon policy, we should at once denounce it; but when we hear the Chairmen of both the Companies who are associated in the scheme expressly and emphatically declaring that under no circumstances of arrangement with the Greenwich Company could sufficient accommodation be found at London Bridge for the expected traffic, let what price soever be paid for it—when we hear two gentlemen, by no means unacquainted with the local and general circumstances of the case, deliberately and repeatedly putting forth a statement like this, we feel bound to believe that a very different feeling than a desire to secure a temporary triumph over a neighbouring Company, however much the ill-judged measures of that Company may have conduced to such a result, is at the bottom of the present application to Parliament. Mr. Levy insists, that the station at London Bridge is nearer to the west end of the metropolis than the route by the Grange-road. It may be so (although taking, *not* Grosvenor-square, as Mr. Levy does, but Berkeley-square, as the centre of the fashionable district, we are inclined to think otherwise), but surely it will not be argued that, if the Greenwich Company were to consent to a *reasonable* amount of toll for the use of the mile and three-quarters of their line between the junction at Corbet's-lane and the London Bridge station, the Croydon Company could have any interest in diverting the passenger traffic from the city route, supposing the public to prefer it by reason of its shorter distance, or from any other cause. On the contrary, their own interest would lead them to consult the wishes of their customers in this respect as in other respects, and the result would be, supposing the charges to be equal by either route, that some would take the one, and some the other, according as it best suited their convenience or caprice. If, however, the Greenwich Company choose to counteract the alleged superiority of the line *via* London Bridge, by the amount of toll which they impose upon their tributaries, they must not feel surprised if a preference should be shown to the other; nor that the Croydon Directors should do what they can to afford equal accommodation to their customers, without subjecting *them* to an increase of charge, or themselves and their constituents to a serious and most unfair diminution of their legitimate gains. As respects the goods and cattle traffic expected on the long lines, we take it for granted that even Mr. Levy would not object to the formation of a *depot* at the spot in question, since it is manifest that such depot must be formed *somewhere*, and as the Chairman of the meeting of Tuesday very aptly remarked, *where* could it be effected more conveniently, or at less cost, than in the vicinity of Corbet's-lane?

We would fain hope, therefore, that further

Digitized by Google

reflection will induce Mr. LEVY to give up his threatened opposition to the measure now before the legislature, thus avoiding the unseemly spectacle of a Parliamentary contest between a Railway Company and one of the largest of its proprietors. Enough — far more than enough—of the Company's funds has already been wasted in these squabbles, where even success is disastrous; and as Mr. LEVY must be quite hopeless of gaining his object, and has already done enough to ease his own conscience of all participation in what he deems a profitless speculation, we put it to him, as a man of sense and a man of business, whether it would not be better to leave the matter where it stands.

With respect to the increased toll which, within the last few days, has taken effect, we trust that the Greenwich Board, some members of which are, we have been informed, sensible of the injury which the majority are inflicting, and seem disposed to take the means of perpetuating, upon their constituents—we trust, we say, that these gentlemen will reconsider their decision. Obstinacy in a wrong course, although often mistaken for honourable consistency, is the failing of weak minds. What shame need any one feel in confessing that experience has shown him the unsoundness of the views which in by-gone days he entertained? It is, as one of our standard authors expresses it, but admitting that he is wiser to-day than he was yesterday. Far be it from us to wish the income of the Greenwich Company diminished by a commutation of the toll. We are satisfied, however, that the very reverse would be the result—and with the guarantee offered by the Croydon Company, where is the risk? They would be but following the example of the CHANCELLOR of the EXCHEQUER, in the matter of the Government tax; and as we promised last week to draw some comparison between the toll and the tax, and as the Croydon Chairman alluded to it towards the close of Tuesday's proceedings, perhaps the present may not be an unsuitable opportunity of redeeming our pledge.

The Government had levied a duty upon railway passenger traffic which was, of course, intended to be imposed equally upon all Railway Companies, and this duty was fixed at the rate of 1-8th of a penny per mile per passenger. It was soon found, however, that while some Companies were able to obtain a rate of fare equal to 3d. per mile per passenger, other Companies could only obtain a rate of fare equal to 1d. per mile per passenger from the public, and that consequently the Government tax, which upon the former rate amounted to little more than 4 per cent., was equivalent to rather more than 12 per cent. upon the latter. The glaring inequality of the pressure of this tax has, therefore, become so apparent, not only to the parties themselves, but to the Government, that, as our readers are already aware, it has been abandoned by common consent, and there has been substituted for it a duty of 5 per cent. upon the gross passenger income of all the Companies, which leaves these Companies at liberty to obtain their incomes by such a rate of fares as shall be best suited to their circumstances.

Now, the case of the Greenwich Company is this. They have a line of railway, which is to be used in common by three Companies. One of these Companies has established charges equal to 3d. per mile per passenger in some instances, and another is anxious to establish charges equal to 1d. per mile per passenger in other instances; yet the Greenwich Company persist, against all reason, in levying the same toll upon both parties, and in all cases. The CHANCELLOR of the EXCHEQUER, in consenting to alter the mode of assessing his tax, from a fixed rate per passenger to 5 per cent. upon the gross income, does not expect to lose but to gain by so doing, although the nominal rate of his tax, as at present charged, amounts to nearly 24 per cent. on the gross income derived from some classes of passengers. All that the Croydon Company ask of the Greenwich Company is some such arrangement as this, by which the latter are to gain, and not to lose. Can anything be more reasonable? And what prevents the Directors of the Greenwich Company from seeing this affair in the same light as other people? Simply the "ingenious scheme" to which we last week alluded, as having been concocted by them or their advisers, for making the other Companies pay for the widening of the Greenwich Railway. They allowed their Solicitor to draw them into an expenditure of some 4,000*l.*, in a Parliamentary contest to obtain the power of charging a toll which is not worth 4,000 pence to them—which has been, indeed, a positive loss, since the pursuit of this *ignis fatuus*, a 4½d. toll, has blinded them to the superiority of a toll of 2d. to one of 3d. upon their present traffic, and has caused a diminution of their toll income of 2,000*l.* in the past year. This result was uniformly predicted to them by the Croypon Directors, during the Parliamentary campaign. Their language, at that time, was, "It is of no use for you to obtain the power of levying a toll of 6d. or 4½d., for the simple reason that we shall be able to prove to you that a toll of 3d. is more than is good for you—more than it will be for your advantage to impose." This, of course, makes it all the more mortifying to the Directors of the Greenwich Company; for nothing, we think, can be more plainly proved than that, as far as the advantage of a 4½d. toll is concerned, the whole of their 200,000*l.* has been thrown away. We do not say that on this account so large a sum has been vainly expended. On the contrary, everything that conduces to the convenience of the Companies using this railway must contribute to the advantage of the Greenwich Company itself, and it is more than probable that if this sum had not been expended, or at least a part of it, the whole traffic might have been lost to the Greenwich Company. But there is no doubt that a great mistake has been committed in confounding the *rate of toll* with the *amount of income* to be derived therefrom. Nevertheless, because this mistake has been made, and because considerable mortification awaits those who have persisted in making it against all argument and against all experience, is *that* any reason why the interests of the proprietors of two Companies, who have expended so large a capital upon their respective undertakings, should be sacrificed to a bigotted adherence of any set of Directors, to such a mistaken view of so simple a question? We think not, and we expect we shall have the public opinion with us. It would, we repeat, be as little for the public interest, as it would be to our gratification, that the Greenwich Company should not receive an ample return for the outlay which has been incurred. We have the prosperity of the Greenwich Company quite as much at heart as that of the other Companies who are to contribute to it, but we are satisfied that if this prosperity be ever achieved—if the income of the Greenwich Company shall ever be of such an amount as the proprietors could desire, it will be derived from such an extended use of its line by the public, that the average rate of contribution will be less, rather than more, than 2d. per passenger. Just in the same manner, do we expect that the 5 per cent. duty of the CHANCELLOR of the EXCHEQUER, which in some cases will not equal a rate of ¼ d. per passenger, will afford a larger return than the present rate of ½d. per passenger, which the right honourable gentleman has been wise enough to abandon. We recommend his example once more to those who, in the words of Mr. PARE at the meeting, may be termed "local Chancellors;" and if they do not follow it, all we shall say is, the sooner the proprietors take the affair into their own hands, the better it will be for all parties.

THE anniversary meeting of a body of individuals styling themselves "the Society for promoting the *due* Observance of the Lord's-day" took place on Monday last, in Exeter-Hall, in the Strand. The subject of "Sabbath desecration" by railway travelling occupied, of course, a very prominent place in the "Report" submitted on the occasion, and in the speeches of the various clerical and lay brethren who moved, seconded, or enforced its adoption; and one or two curious illustrations of the energy with which the puritanical crusade has been carried on were incidentally supplied; as for example, when the Reverend Mr. CLOSE, of Cheltenham—the same gentleman who objected to Sunday trains on the Birmingham and Gloucester Railway, as likely to bring the riff-raff of the terminal depots into the exclusive precincts of the fashionable watering-place which has the honour of his reverence's ministrations—boasted that, pending the struggle in the Gloucester Company, he had himself "posted letters to each of the proprietors, 500 in number, and proxy-papers were also sent, with an earnest request that they might be filled up and returned." Sir ANDREW AGNEW too, "their respected friend," as he is designated by the framers of the Report, figures in full character, although we are gratified to find that even he is compelled to admit that himself and friends cannot "command immediate success"—for which admission thanks be to the seasonable stand made by the proprietors of the Edinburgh and Glasgow Railway! Sir ANDREW may call, as long as he pleases, upon his "Christian friends" to put forth "more strenuous exertions ['for the suppression of the innumerable evils on the Lord's-day of which railway travelling is the exciting cause,'] *by all legitimate and prayerful means*, than heretofore," but we assure him and them that neither the "legitimate means" of the Report, nor the *il*-legitimate and illegal process of combining against the Railway Company, will avail. The sensible decision of the Edinburgh and Glasgow Company has given the death-blow to anti-Sunday-travelling cant in in Scotland, and if but one spirited proprietor in the other lines, as for instance the Glasgow and Ayr, and Glasgow and Greenock, would bring the question prominently forward, we have no doubt that his efforts would speedily be crowned with success.

It is not, however, with the view of noticing the vagaries of the Agnewites that we now allude to the Exeter Hall meeting, but to expose the means adopted by the prime movers in the matter to give to their sentiments a weight to which they are not fairly entitled. A petition to Parliament was of course agreed to at the meeting of Monday, *and this very petition is now exhibited day after day at the entrance to Exeter Hall for signatures!* Any

Digitized by Google

one who is cognizant of the composition of the "May meetings"—who knows that the same individuals seek for "excitement" during an entire month, by running after each and all of the godly demonstrations of which Exeter Hall is, at this season of the year, the scene—will at once see that the petition of the "Society" stands a very fair chance of being signed, in common with others which grace the same quarter, in duplicate or triplicate; and we ourselves can vouch for individual instances of this attempt at imposition. It is greatly to be desired that some one, with the requisite leisure, would undertake to analyse the signatures to the Exeter Hall document, in the same way as has been done with so much success in the case of the Edinburgh and Glasgow memorials. It is true there would not exist the same facilities for detecting forgeries as in the instance of an obscure locality; but we have no doubt that, upon even a cursory examination, thousands of names would be found attached to the petition twice, thrice—nay, even four or five times.

The "Committee of the Society," &c., have honoured the *Railway Times* by noticing it in the following terms in their Report. Our readers will doubtless recollect the series of letters referred to:—

"The Committee may mention here the service rendered to the cause of the Sabbath by the Rev. Mr. Young, of Clifton. The Editor of the *Railway Times*, a periodical extensively read by railway proprietors, having admitted into his paper a communication adverse to the Divine authority and perpetual obligation of the Lord's-day, challenged an answer. Mr. Young immediately accepted the challenge, and wrote an answer in a series of seven letters, which the Editor honourably admitted. The Committee will only say of these letters, that if the funds of the Society would have justified them in doing so, it would have given them the greatest pleasure to have printed them as a separate publication for general circulation; and that in Scotland they were considered so valuable, that Mr. Henderson, of Glasgow, printed a large edition of them at his own expense, which he widely circulated previous to the discussion, at the meeting of proprietors, upon the subject of opening the Edinburgh and Glasgow Railway on the Lord's-day."

Last week we extracted from a local paper a short paragraph respecting a fatal accident to a "youth, name unknown," on the Chester and Birkenhead Railway, caused by the head of deceased having come in contact with one of the bridges, while riding on the outside of a carriage. We have since seen in the *Liverpool Courier* a detailed report of the inquest held on the body of the sufferer, from which it appears that his name was Mr. George Thistleton, jun., a solicitor of that town, and that he had been to Chester races in company with several friends. The whole of the party, it was proved, were quite sober, and the precise circumstances of the accident have not been ascertained. It was shown by Mr. Yarrow, the Company's Engineer, that the relative height of the bridge and the carriages was such that, even if the deceased had been standing up on the guard's footboard, there were 11 inches to spare between his head and the bridge. The inference therefore is, that deceased had got upon the roof of the carriage when the collision occurred which ended so unfortunately for himself.

The verdict of the Coroner's jury acquitted the Railway Company of all blame, and except in so far as the Company's officers were culpable in allowing passengers to occupy so dangerous a position as that in which deceased was placed, we are disposed fully to concur in the decision. It was clearly shown by the evidence of the companions of deceased that they had been repeatedly cautioned before starting to keep their seats, and it was the neglect of this warning which led to the lamentable occurrence; but we cannot see why, instead of allowing the public to place themselves in such a situation, an extra carriage was not attached to the train, when it was found that there was an extraordinary influx of passengers, and we hope that this case will not be lost upon all other Railway Managements placed in similar circumstances.

Some considerable time ago, an officer of the London and Birmingham Company met with a similar accident, and more recently the same sad fate befel a guard upon the Croydon line; and if these parties, knowing well the position of the several bridges upon their respective railways, and the danger of quitting their accustomed positions were, nevertheless, destroyed, it behoves those who have the control of such matters, absolutely, and in every case, to prevent strangers from thus putting their lives in peril. It is with this object that we have deemed it our duty to draw attention to the case of Mr. Thistleton.

We gather from a letter which appears in a contemporary journal—a journal in which the accomplished Secretary is in the habit of displaying his literary talent, although blushing to find it fame—that the Directors of that renowned scheme, the Thames Haven Dock and Railway, have managed to embroil themselves with the Management of the Eastern Counties' Company. The matter in dispute would seem to have reference to the toll to be exacted from the Thames Haven Company for the use of the Eastern Counties' line from Romford to Shoreditch, and as the Eastern Counties' Directors do not seem disposed to accede to the terms of the Thames Haven people, they are rated accordingly. Now, without assenting to the "stigma of mis-management" which, according to the letter-writer (who professes to be a shareholder in the Eastern Counties' line!!) "the Eastern Counties' Direction has long *enjoyed*," we must confess that we think them very unreasonable in standing out for trifles, with such a Company as the Thames Haven. Will they not participate in the "cent. per cent." returns of Lieutenant Ambsinck? Surely they ought to court the good offices of such an ally. We really believe that the highest rate of toll which they ask for would not, if agreed to by the Thames Haven Management, produce in the next ten years more to the Eastern Counties' Company than if they were to carry the Thames Haven traffic for nothing from the time when that splendid project shall be completed to the end of the decade. That the project *will be* completed, Lieut. Ambsinck is quite satisfied, and who will venture to gainsay it?

But, "out of evil cometh good." The Eastern Counties' Directors, by their "avaricious grasping at gains *in posse*" (we quote from the letter-writer), have paved the way for the emancipation of the Thames Haven Dock and Railway from this, "to them, mischievous alliance." *There is to be an integral line to London* from Shell Creek, otherwise Thames Haven! Hear this, ye shareholders of the Eastern Counties', and reprobate the "pique, or folly," of your representatives! Already we see the "integral line" constructed, for how can Parliament withstand estimates so favourable as those of Lieutenant Ambsinck? The "cent. per cent." returns from Shell Creek can with equal truth be extended to the "integral line" to London, and if any vessel should venture to pass the "Dock," or any traveller decline to avail himself of the "Railway," whose fault will it be? Certainly not that of the Secretary, who, of course, has a right to assume that, on the completion of his stupendous scheme, the watery way of our noble river, and all the highways and byeways of Essex, from Shell Creek and Romford upwards, (the Eastern Counties' Railway included) will, at once and for ever, become utterly deserted.

The Liverpool and Manchester Railway Company have, during the present week, given notices to the owners of property on the junction line through Salford to Hunt's Bank, for the purchase of the land *before their present Act expires*. The Leeds Company have purchased the whole of *their* land, with the exception of one property, for which so exorbitant a price has been demanded that the case will go before a jury in the ensuing week. The present is a favourable time for purchasing, as house property of every description is much deteriorated, owing to the general distress and want of trade, and many houses are wholly untenanted. We may now expect that both portions of the junction line will be proceeded with simultaneously, in which case the whole may be completed in the course of next year.

We are informed that the Clarence Railway Company shipped in the week ending the 30th April last, 8,900 tons of coal at their staiths at Port Clarence in the river Tees, which is said to be by far the largest quantity hitherto shipped at that port in one week. It appears that the collieries supplying the Clarence line are in active operation, and several new ones opening out. The branches of this line being now all completed and in good order, there is a fair prospect of continued improvement in the revenue, and a great diminution in the expenditure. If this should be the case, it will be a gratifying circumstance to those shareholders who, amidst the difficulties they have had to contend with, have struggled on until their perseverance has been rewarded with success.

—o—

A correspondent states that the Dundee and Arbroath Railway accounts for the year ending 30th April, exhibit—

Receipts from passengers ..	£9,912	7	0
,, Goods	2,829	19	9
,, Parcels	600	5	3
			£13,342 12 0
Last year they were—			
,, Passengers ..	£10,424	11	8
,, Goods and parcels.....	2,477	10	6
			12,902 2 2
Surplus for this year.....			£440 9 10

Besides which, the Company have to receive 300*l.* certain for carrying the mail. There are few lines in the kingdom which will be more benefitted than this by the adjustment of the passenger duty, and when trade improves in the district, the returns must greatly increase.

—o—

It will be seen from our Parliamentary Report that most of the Railway Bills introduced during the present Session are now beyond danger, a large number of them having received the Royal Assent last night.

—o—

The following persons have travelled by the Brighton Railway during the present week:—Lady Lucy Pelham; Earl of Chichester; Honourable Miss

Digitized by Google

Maynard; Viscountess Hanover; Dowager Viscountess Myddleton; Sir Patrick Ross; General Sir Ralph Darling; Captain Kerrison; Captain Fane; Lord Alfred Hervey; Dowager Duchess of Beaufort; Lady Stanley; Mr. Wilbraham; Lady Fane; Lord and Lady Monson; Mr. Lawrence and Lady Jane Peel; Lord and Lady Lyndock; Lord Abinger; Honourable Mr. Scarlett.

—o—

The Hamburgh and Bergedorf Railway was to have been formally opened last Saturday, but the ceremony was, of course, postponed in consequence of the awful conflagration at that time raging in Hamburgh. A letter from Mr. Lindley, Engineer-in-Chief, has been received, in which he says:—

"Our railway should have been opened last Saturday. What an opening! The wreaths of flowers were all ready—the music and the cannon were prepared, and the flags—but all were lying about on the station neglected; and the only office of the railway was to carry the poor houseless multitudes, with their few savings, to the town of Bergedorf. Thus opened our railway! And perhaps this was a more sacred office than had it carried the great of a city to a feast."

The thanks of the police authorities have been publicly given to Mr. Lindley and his assistants, for their valuable services in checking the ravages of the flames. The mob had actually insulted and threatened these and other Englishmen, attributing to them the firing of the city!

—o—

RAILWAY OFFENCES AND OFFENDERS.

Francis James, formerly of the Eastern Counties' Railway police, was convicted at the Old Bailey, on Thursday, of obtaining from a watchmaker in Shoreditch, four watches, under pretence that he had been sent for them by Mr. Hall, the Manager, whereas his connection with the Company had previously ceased. We alluded to the offence at the time of its occurrence. He was sentenced to seven years' transportion.

On Monday, at the Brighton Petty Sessions, a man named Walters was charged with robbing the Railway Company of a quantity of iron-work. It appeared that the prisoner had been disabled during the formation of the line, and was placed in the situation of storekeeper to the Company. One of the railway policemen detected him burying the iron in a small garden allotted him by the Company, no doubt intending to remove it when convenient. An engineer identified the property. The prisoner, in defence, said he found the iron. The magistrates made some severe remarks on his ingratitude, and committed him for trial.

Recently, at the Loughborough Petty Sessions, William Elliott, a labourer in the employ of Mr. Bradshawe, farmer, of Barrow-upon-Soar, was charged, upon the information of Superintendent Unwin, of the railway police, with intruding on the Midland Counties' Railway in the above parish. The Barrow station-keeper said, he saw defendant walking on the line, a little in advance of a train, but on witness motioning for him to get out of the way, he did so, and climbed up the bank. The defendant said, he had been on the railway to drive off some lambs that had got upon it in consequence of the bad fence provided by the Company. The witness replied that, though he might have been for the lambs, there were none there at the time; and this was confirmed by Inspector Withers, who was on the roof of one of the carriages of the train. Fined 17s. 6d., including costs.

William Kinchin, a servant of the London and South-Western Railway Company, was on Monday week fined by the Southampton magistrates 10s., with 6s. 6d. costs, for being drunk on the previous evening. The local paper which notices the case does not state whether the man was on duty at the time or not.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVE-HILL RAILWAY (ROAD AND SHIPPING PLACE).

May 6.—Bill referred to the Ulster List, and Col. Powell (Cardigan), Mr. A. Cresswell (Northumberland), Mr. Savile Ogle (Northumberland), Mr. Childers (Malton), Mr. Ormsby Gore (Salop). Three to be the quorum of Selected Members, and the Committee to meet on Tuesday, 24th May.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.

May 13.—Mr. Speaker reported the Royal Assent to the Bill.

BOLTON AND PRESTON RAILWAY.

May 13.—Mr. Speaker reported the Royal Assent to the Bill.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

May 9.—Message from the Lords, that they have agreed to the Bill with amendments.

May 10.—Lords' amendments agreed to.

May 13.—Mr. Speaker reported the Royal Assent to the Bill.

DUNDEE AND ARBROATH RAILWAY.

Breviate of amended Bill:—

In the Bill as amended in Committee the power given to the Company to guarantee interest not exceeding 5*l.* per cent. upon the sums paid upon the new shares, is to be by a resolution to that effect, in which three-fourths in value of the proprietors, present at a meeting, or by proxy, shall concur.

The clause empowering the Company to order a reserved fund to be formed out of the profits, to be applied by the Committee of Management in liquidation of the debt, has been struck out.

A clause has been inserted for regulating the entry of transfers of shares, and a clause requiring all proxies to be lodged with the clerk two days at least before the meeting at which they are to be used.

The clause empowering the Company to borrow 10,000*l.* temporarily for works between Trades-lane and Caroline Port, has been struck out.

The clause contained in the former Act for the limitation of actions, and that empowering parties to make branch railways to communicate with the railway, have been repealed.

A clause has been inserted repealing the provision contained in the former Act for enabling the Company to purchase or obtain in feu-farm any parcels of land, buildings, or heritages, for purposes connected with the railway; and empowering the Company to contract with any persons willing to sell or feu-farm any lands or building, not exceeding 100 acres, for the purpose of erecting coal and lime yards, warehouses, and other conveniences, and roads to the railway.

A clause has been inserted for saving the rights of the Magistrates and Town Council of Dundee, and of the Trustees of the Harbour of Dundee.

May 13.—Bill read a third time, and passed.

GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY.

May 9.—Message from the Lords, that they have agreed to the Bill with amendments.

May 10.—Lords' amendments considered. Motion made, and question put, "That the said amendments be referred to the consideration of a Select Committee; and that they do report to the House what they shall think proper to be offered to the House thereupon." The House divided; Ayes 54, Noes 15.

Ordered, that the Committee on the Bill be the Committee; five to be the quorum.

Ordered, that the Committee have leave to sit and proceed, and to report to-morrow.

May 11.—Report from Select Committee appointed to consider Lords' amendments, brought up and read; amendments proposed by the Lords considered, and agreed to with amendments.

May 13.—Mr. Speaker reported the Royal Assent to the Bill.

GREAT NORTH OF ENGLAND RAILWAY.

May 6.—Bill read a third time and passed.

GREAT NORTH OF ENGLAND, (CLARENCE AND HARTLEPOOL JUNCTION) RAILWAY (No. 1.)

May 9.—Message from the Lords, that they have agreed to the Bill without amendment.

May 13.—Mr. Speaker reported the Royal Assent to the Bill.

LONDON AND BLACKWALL RAILWAY.

May 11.—Message from the Lords, that they have agreed to the Bill with amendments.

LONDON AND GREENWICH RAILWAY (No. 1).

Breviate of amended Bill:—

In the Bill, as amended in Committee, the proviso that the intended bridge should be constructed in a similar manner, and with the same extent of roadway as the existing bridge, has been struck out; the Bill reciting, that the Company have widened the railway by an iron bridge already constructed.

LONDON AND GREENWICH RAILWAY (No. 3).

May 9.—Bill read a second time and committed, and referred to the Committee of Selection.

May 12.—Bill referred to Mr. Greene, Mr. Barnard, and Admiral Dundas.

Committee to meet on Tuesday, 24th May.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.

May 9.—Message from the Lords that they have agreed to the Bill without amendment.

May 13.—Mr. Speaker reported the Royal Assent to the Bill.

STANHOPE AND TYNE RAILWAY.

May 13.—Mr. Speaker reported the Royal Assent to the Bill.

STOCKTON AND HARTLEPOOL RAILWAY.

May 9.—Bill reported; Report to lie on the table, and to be printed.

Report from the Committee:—

Colonel Rushbrooke reported from the Committee on the Stockton and Hartlepool Railway Bill, that they had examined into the several matters required by the Standing Orders to be proved before Committees on Railway Bills, and had agreed to the following Report:—

That it appeared to the Committee that the railway having been already made by a Joint Stock Company, and such railway being now in use, and having been inspected and approved of by the Inspector-General of Railways, under the direction of the Board of Trade, and the object of the Bill being only to incorporate such Company, and for the maintaining of such railway for capitalising the expenditure of the Company, and for raising a further sum of money, and the Bill containing no compulsory powers whatever for taking land, the whole of the matters required by the Standing Orders to be proved before Committees on Railway Bills do not apply to the present Bill.

That the railway so completed does not pass on a level any turnpike road, but it does so cross the following highways, viz., an occupation road at Greatham, leading to Marsh-house Farm; a road leading to Cowpen, and a road at New Stranton, constructed by the Company itself; but it appeared to the Committee that the level of the country where the crossings occur did not permit of their being carried over or under the railway without inconvenience to the public, and consequently, that the Standing Order relating to the mode of carrying public roads across railways might, in this instance, be safely and with propriety dispensed with.

The following petitions were referred to the Committee:—

1st. A petition from certain magistrates for the county of Durham attending the Petty Sessions held at Stockton-upon-Tees, in the said county, alleging that the railway crossed several public highways on a level, and that a public highway in the township of Stranton was thereby stopped up, and another road substituted in its place.

No parties appeared in support of this petition.

2nd. A petition from the Hartlepool Dock and Railway Company, under their common seal, alleging that the Bill contained divers clauses injuriously affecting their property.

The allegations of this petition were considered by the Committee, and counsel heard in support thereof, and amendments made, on which all further opposition was withdrawn.

3rd. A petition from certain proprietors of shares in the said Stockton and Hartlepool Railway Company, complaining of being made liable to certain expenses incurred in the construction of the railway.

No one appeared in support of this petition.

Colonel Rushbrooke further reported from the Committee, that they had examined the allegations of the Bill, and found the same to be true; and had gone through the Bill, and made several amendments thereunto.

THAMES HAVEN DOCK AND RAILWAY.

May 6.—Bill referred to Mr. Greene, Mr. Bramston, Sir John Tyrrell, and Col. Rushbrooke.

May 13.—Committee on Bill, Monday, 23rd May.

WARWICK AND LEAMINGTON UNION RAILWAY.

May 10.—Report further considered; amendments agreed to; Bill to be ingrossed.

May 11.—Bill read a third time; clause added; Bill passed.

YARMOUTH AND NORWICH RAILWAY.

May 10.—Report further considered; amendments agreed to; other amendments made; Bill to be ingrossed.

May 11.—Bill read a third time, and passed.

GREAT WESTERN RAILWAY—LOCKING CARRIAGE DOORS.

To the Editor of the Railway Times.

SIR,—The sad calamity which has taken place on the Paris and Versailles Railway, ought to call forth the strong protest of the public against the unwarrantable practice, adopted on the Great Western Railway, of locking up the passengers in the carriages. It appears that, but for this reprehensible custom, many of the sufferers on the Paris Railway would have escaped the awful death to which they were subjected. That the imprisonment in the carriages is contrary to the feelings of the majority of travellers I have had abundant proof, for I have scarcely ever met with an individual who has travelled from Bath or Bristol to London by the railway, who has not spoken with much indignation of the practice.

The pretence urged by the Directors or officers of that line, that the locking-up measure is for the security and safety of the traveller, is quite futile and absurd. Every person in possession of his faculties must be the best guardian of himself. When the railway officers have used the utmost endeavour to prevent accidents arising from the carelessness of their servants, and the imperfection of their machinery or roads, they have done all for which the public have a right to account them responsible. They may, through charitable and benevolent motives, give directions and cautions to their visitors, and for this they would deserve commendation, but they have not the shadow of right to incarcerate men and women capable of consulting their own safety, on the ground of taking care of their passengers.

But I conceive (and I believe my opinion is not a singular one) that there is another reason, besides the alleged one of *safety*, which occasions the odious practice. It is this, that it affords a greater facility of avoiding imposition. The carriages being locked, no one can enter without the presence and key of an officer, who of course calls for your ticket before admission is given. The ticket produced is a token that your passage-money is paid. And this being the grand consideration of the railway officers, there is no occasion for them to give themselves the further trouble of collecting the tickets at the end of the journey. They therefore take from you your only proof of having a right to travel. And it becomes requisite to fasten you up, as the only means of distinguishing between the traveller who has paid, and the dishonest intruder.

I should hope that the practice will henceforth cease, and that the Great Western will adopt the plan which is used on the Birmingham, and I believe on every other railway in the kingdom. The public cannot admit that the Directors of the Great Western possess greater philanthropy than other Directors. If they will not conform to the opinion which has been so often expressed, I trust that, by the interference of the Home Secretary of State, they will be compelled to allow her Majesty's subjects the exercise of that freedom which they are entitled to enjoy as much on the Great Western Railway as elsewhere in her dominions.

I am, Sir, your obedient servant,
A MAGISTRATE IN A WESTERN COUNTY.

London, May 12, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Among the numerous correspondents who have written recently upon the subject of the Great Western Railway and its future prospects, I am disappointed at not finding your quondam contributor "S. P.," of Birmingham, whose lucubrations last November, the result of a careful investigation undertaken for the especial benefit of a valued friend, but charitably given to the world at large through your columns to guard the unwary, resulted in a net proceeds for the half-year ending 31st December last, of 17,400*l.* less than nothing! I hope he is now engaged in a similar investigation for the benefit of his aforesaid friend, who cannot fail to place the most implicit reliance on his accuracy and judgment. Your correspondent "E.," of Bristol, whose estimate for the current half-year appears in your last number, seems to me to have arrived at a pretty accurate conclusion, although he and I differ a little in detail. From the receipts thus far I am inclined to think that, for the six months ending 30th June next, they will not exceed 306,000*l.*, to which add surplus in hand 31st December, 1841, 10,937*l.*,

Will give gross		£316,937
Deduct expenses 35 per cent.	£107,100	
„ Interest about	82,000	
„ Rents and tolls	27,000	
„ Dividend 8 per cent.	90,750	
		306,850
Leaving in hand only		£10,087

for depreciation of stock, against 10,000*l.* set apart for that purpose last half year. Let us then glance at the prospect for the last half of this year. In 1841, the receipts were, within a small fraction, 13,000*l.* per week; and taking credit for only a very moderate increase upon that from former sources, and a fair allowance for an additional 10 miles of the Bristol and Exeter line, an average of 14,500*l.* will not, I conceive, be extravagant. This

Will give gross		£377,000
Deduct expenses 33½ per cent.	£125,667	
„ Interest about	74,000	
„ Rents and tolls, 10 miles additional	38,000	
„ Reserve for depreciation	10,000	
„ Dividend at 4 per cent.	121,000	
		368,667
Leaving a surplus towards 1843, of		£8,333

In the foregoing statement I am not conscious of having estimated the probable receipts at more than the experience of the working of all the other great lines fairly warrants; and in taking 33½ per cent. for expenses upon the increased revenue, I believe I have rather exceeded than underrated what will prove to be the fact; if this view of the future should prove to be well founded, it is obvious that the shares, which are now at a higher price than the actual income warrants, are yet far below their intrinsic value.

I am, Sir, your obedient servant,
L. S. B.

Liverpool, May 10, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Can you or any of your readers explain the circumstance that, whilst from the last Report of the Great Western Company the total amount received from the shareholders appears to be 3,009,311*l.* 3s. 9d., the dividend is paid upon 3,025,000*l.*?

I am, Sir, yours, &c.,
A CONSTANT READER.

London, May 7, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—As a great admirer of the impartiality and usefulness of your journal, I venture to ask your insertion of the following facts. I received a box of ointment per train, *weight 2 oz.*, distance six miles, charge made, eight-pence. Yesterday I received a printed sheet of paper in a parcel, *weight 1½ oz.*, distance three miles, charge made eight-pence!

I have laid this before the Directors, but to no purpose. It cannot be wondered at that the shares of the above Company are at 53!

I am, Sir, yours, &c.,
AN EXPOSER OF ABUSES.

BIRMINGHAM AND DERBY RAILWAY.

To the Editor of the Railway Times.

SIR,—Several of your correspondents have complained of the non-payment of the dividend declared at the last half-yearly meeting. No expectation was then held out that it would be paid before June; and the reason of the delay I have understood to be, that the sums in hand have been employed in forwarding the new works. The delay is inconvenient to shareholders, especially to those who want to dispose of shares; but it is productive of no disadvantage to the Company, having on the contrary been a means of forwarding the works, whilst interest has been also saved.

I am, Sir, yours, obediently,
A. B.

May 11, 1842.

THE PROPOSED "DIRECT CHELTENHAM AND CIRENCESTER RAILWAY."

[From the *Cheltenham Free Press.*]

THE direct line would require a capital of 200 to 250,000*l.* only; its length would be 16 miles, 12 miles of which would require little else than common turnpike-road formation, and exclusive of the "permanent way" the cost would not exceed 6,000*l.* per mile; the remaining four miles would of course be much more expensive, as they would comprise a deep cutting and long embankment, forming an "incline" of 110 feet per mile, but without any tunnel, and the quantity to be excavated throughout the entire line would not exceed 1,200,000 cubic yards of rubble.

The depot is proposed to be at the "Clarence Hotel," where necessarily, all goods and passengers must change their carriages on their way to Gloucester, South Wales, Birmingham, and to all their adjacencies, not forgetting Bristol, this depot being the intended junction of the wide and narrow gauges.

The line *via* Stroud, or the "round about," requires a capital of 750*l.* to 1,000,000*l.* sterling, to complete from Kemble to Stonehouse, a distance of about 10 miles, which includes two tunnels of upwards of two miles in length, with heavy cuttings and extensive embankments.

The excavations from the cuttings alone would amount to 2,400,000 cube yards of rock, and that out of the tunnels 500,000 cube yards, and then come the masonry or brickwork!

The distance from hence to London, *via* Stroud, is about 10 miles further than by way of Cirencester, and to the latter place 17 miles, so that the expenses every journey, made by the inhabitants of Cheltenham, to Cirencester, would be doubled, and to London an increase of 8s. to 10s.

The direct line would preserve the travelling from South Wales, it would also ensure all the traffic north-west of Cheltenham, including Worcester, which, in case of the Stroud line being preferred, would not put on to the Great Western line at all, as a less expensive route would be taken through Birmingham. Besides these advantages many more might be quoted, almost *ad infinitum*, in favour of the line "direct," ensuring the fairest and surest investments of capital in England.

There is one thing more which ought not to be overlooked, which is the apparently simple occurrence of changing passengers and goods, at the Clarence Hotel station; it would induce thousands of the opulent merchants, factors, &c., from all quarters of the globe, to meet here to transact their business, and take their pleasure, it being a central position of all towns in England, and much avoured by nature, by offering great inducements.

GREAT WESTERN RAILWAY.—The side line at this station on the Great Western Railway is nearly completed, and it is probable that the luggage trains will shortly stop here. Within these last few days an agreement has been entered into between the proprietors of some free-stone quarries near Box, and the Great Western Company, for the conveyance of stone from Corsham to London. Fresh quarries are to be opened immediately, and a large crane, &c., erected. Special trains passed on Saturday and Monday with companies of the 85th regiment, ordered on the East India service.—*Bath Journal.*

The Berlin papers publish a resolution of the Prussian Council of State, authorising the projected railway between Berlin to the Rhine.

DISASTROUS ACCIDENT ON THE PARIS AND VERSAILLES RAILWAY.

A most disastrous accident occurred on Sunday last on the Versailles Railway, resulting in the death of a vast number of passengers. The French journals are filled with accounts of the awful calamity, which, although somewhat conflicting as to details, agree in the main points. The following abridged particulars contain the principal facts hitherto elicited. We have adverted to the accident in our leading columns:—

[From *Galignani.*]

All Paris was thrown into agitation on Sunday night and Monday by a dreadful accident which took place on the Versailles Left Bank Railway, which occasioned from 40 to 50 deaths, and three times that number of people to be seriously wounded. The great waters played at Versailles on Sunday, and consequently there was a great crowd of persons returning by the half-past 5 o'clock train. There were 17 or 18 waggons, with two engines before and one behind. The velocity was excessive, when between Bellevue and Meudon the axletree of the first machine broke, and stopping, the second ran over it, killing the stoker, and, breaking the first machine in pieces, spilt its fire on the ground. Instantly six or seven waggons were broken in pieces, and the rest, running over the live fire of the broken engines, burst into flames. It is the custom on the Left Bank Railway for the doors of the waggons to be closed, without any possibility of opening them, except by keys in the hands of the conductors. No conductors were forthcoming, and thus the inmates of three of the waggons were burned. The impossibility of identifying the calcined remains adds to the horror and uncertainty of the catastrophe. The next train which was coming up was stopped, and the passengers getting out, hastened to the scene, and beheld a pyramid of cars, whilst men with poles and hooks were labouring to rescue the burning bodies. There was no possibility of getting water in any abundance on the height.

When the fact became known, it was necessary to occupy the railway station in Paris with troops, to keep off the crowd. The remains of the bodies were transferred thither, whilst the wounded were brought to the Palace at Meudon, and to the adjoining houses. A great many names are mentioned of persons who have suffered, but it would be cruel to mention them without certainty as to the fact. M. Guisot went to Versailles by the half-past 5 o'clock train; the accident happened to that returning.

[From the *Moniteur.*]

The train of the left bank of the Versailles Railway, which left that town at half-past 5 o'clock, p.m., for Paris, consisted of 18 waggons—two open, three diligences, and 13 waggons of the second class. It was drawn by two engines. On its reaching a short distance beyond Bellevue, the axletree of the first engine broke, and the wheels becoming detached from the vehicle, the latter got off the rails, and placing itself across the road, was thrown on its side by the shock of the second engine. The latter, hurried along by its own impetus and that of the train, went over the first engine, and was followed by two open waggons, two of the second class, and a diligence, of which latter the front part got above the back of the carriages which preceded them.

The shock was dreadful; the waggons were smashed in pieces, and a great number of persons were killed and wounded. This misfortune was aggravated by a still more frightful circumstance. The fire of the first engine fell on the road, that of the second was soon added to it, and the coke, carried in the tenders, added fresh food to the fire. The first five carriages arriving over the furnace, were instantly ignited, and were almost entirely consumed with awful rapidity. The succeeding waggons stopped, and the travellers alighted from them. The consequences of this terrible misfortune were truly deplorable. Forty-three persons perished, and 50 were more or less dangerously wounded. On the first engine was, independently of the ordinary engineer and stoker, Mr. George (an Englishman), the Chief Engineer. On the second, besides the engineer and stoker, was one of the Directors of the railway. The administration of the establishment reckons among the dead Mr. George, the Chief Engineer; two other engineers, the stoker and guard; and the Director had his leg broken, and his shoulder put out of joint.

It was erroneously stated that one of the boilers had burst, but the boilers of both engines remained intact. As soon as the authorities became aware of the accident, the prefect of police repaired to the station of the railway to give the first orders, and procure every assistance. He afterwards proceeded to the spot, where he was joined by M. Jalon, the King's attorney at Versailles, and a great number of the physicians of the Paris hospitals, whose zeal on the occasion was admirable.

[From the *Moniteur Parisien.*]

Scarcely had the train quitted the Bellevue station than the axletree of the first locomotive, the *Mathieu Murray*, broke. The shock drove it off the rails, and it was instantly stopped. The second locomotive, which had all its power on, rose over the first, breaking it to pieces, and crushing the conductor and stokers. In the concussion it was also broken, and the fire and grease-boxes fell upon the ground. At the same moment the three first waggons were dragged upon the locomotives, and were broken to pieces. Most of the persons in these waggons were enabled to escape by throwing themselves out of the windows; but about 40, who were too much injured to follow the example, were burnt to death by the fire which had communicated itself to the waggons from the locomotives. The fourth waggon and those which followed did not share the same fate, but the passengers received severe wounds or contusions, and as soon as it was possible to ascertain the extent of the disaster, it was found that more than 50 persons were so severely injured that it was impossible to remove them on the instant.

It is related to us that at the moment when the train passed the portion of the road called Chemin des Gardes, near the Avenue de Meudon, and near which the accident happened, the rapidity was so great as to excite general notice, and the anxious look of the principal Engineer, Mr. George, the oldest and most careful on the road, seemed to predict what had happened. The cries of the victims were heard from the houses at a distance of ten minutes walk from the scene of the calamity; they were, however, of short duration, for before the inhabitants of the nearest houses could reach the spot most of the bodies were calcined, and the heat of the fire was so intense that the boathooks with which the remains were extricated became almost redhot. The intensity of the fire may be imagined from the fact that, amongst the first remains collected, the only portion having the appearance of forming part of a human body was the foot of a female with a half-boot upon it.

[From the *Siecle.*]

We have received the following account of the cause of this deplorable event:—"A few minutes after leaving the station at Bellevue, M. Milhau, one of the inspectors, who was on the second locomotive, perceived a slight sinking of the hind part of the engine before him, and immediately blew his whistle, to warn Mr. George, the Chief Engineer, who was conducting the train. Mr. George, at once, putting down the break, looked back to learn the cause of the signal. At the same instant the axletree of his locomotive broke, whether from any weakness in itself, or from some obstacle in the way, remains to be known, and the unhappy engineer was thrown to a distance of many yards, and killed instantaneously. M. Milhau was also thrown off by the concussion, and had one of his legs fractured and a shoulder put out. Two other engineers, who were on duty upon the engine, were killed."

[From the *National.*]

One of our friends, who has just arrived from Sevres, states that at 11 o'clock on Monday evening the adjoint of the Mayor of Sevres had ascertained 62 deaths. There were 16 wounded conveyed to the Chateau of Meudon, of whom two are since dead. There are several killed and wounded in the neighbouring houses. A considerable number of carriages are employed to convey the wounded to Paris, and we ourselves saw several brought by the steam-boat *Coureur*. In the course of the morning a number of fragments of human bones were collected on the spot, together with several watches and pieces of money. The conflagration commenced a little before 6 o'clock, and was not extinguished until 11. One of the rails was broken to the extent of four or five yards. Some frightful cases are mentioned. The Chief Engineer, an Englishman, named George, having rushed into the fire to open the doors of the waggons, was himself suffocated. At Sevres, Meudon and Bellevue, persons are to be seen in a state of distraction running and searching amongst the ashes to endeavour to discover their friends.

The Academy of Sciences could not remain indifferent on such an occasion. At a meeting called for the purpose, M. Cordier read, in the midst of the most profound silence, the report addressed by MM. Combes and Senarmont, engineers attached to the service of steam-machinery in the department of the Seine. Those gentlemen, on being apprized of the accident, repaired to the spot.

The report contains the following passage relative to the cause of the calamity:—"The accident is due to the fatal concurrence of circumstances, which are as many gross faults, easy to have been foreseen, and still more easy to have avoided, so that the future prosperity of Railway Companies is by no means compromised by this sad affair. The first cause of the accident was the employment of a locomotive with four wheels. It is essential that every carriage intended for service on a railroad should rest on six wheels at least, in order that if one of the axles should break the carriage should still rest on supporters, and continue its course. The second fault consists in the employment of two locomotives for a single train. The consequences of this arrangement are self-evident."

A third circumstance on which several members of the academy strongly insist is the precaution taken to lock the doors of the waggons, so that in such a case as that which occurred all escape was prevented, and the travellers were condemned to suffer all the consequences of the first accident. Another cause which had much influence on the catastrophe was the neglect to isolate the train from the locomotive, so as to prevent the shock occasioned by the sudden check to the speed with which they were proceeding.

"It is worthy of remark, that if all those causes had not existed together, and if only a single precaution had been taken, the accident would not have happened. If the first engine had been furnished with six wheels when its axle broke, it would not have lost its equilibrium. If a second locomotive had not been employed, the only consequence of the accident would have been a shock; and even admitting that the two first causes of the accident existed, had the doors of the waggons not been locked, a number of the passengers might have escaped the flames. In fine, the interposition of the elastic system would have saved the train, even if no other precaution had been observed.

[From the Paris Correspondent of the (London) *Globe* of Thursday.]

The report of there having been an engine behind the train, as is the common practice when there are a great number of carriages, is contradicted. If such had been the case the disaster would have been still more extensive, for other carriages would have been forced upon the heap of those destroyed, whereas the power of the second engine in front had only a limited, although, as it has proved, a very fatal range. A commission has been already or will be immediately appointed, to investigate the causes of the accident, as it is asserted that although the first engine had become very unsteady before it broke down, the axletree did not snap until the engine arrived at a curve or cross line, where the rails are

Digitized by Google

badly fixed, and that the axletree was broken by the derangement of the engine from this obstacle. This rumour is not generally credited, and the Report of the Engineers appointed to visit the spot does not seem to bear it out; but the public feeling is too much excited not to render investigation imperative. Up to this present moment the authorities have not received any positive information to warrant a belief that the accident was occasioned by any actual negligence on the part of the Company; but they have expressed a strong opinion against the employment, in future, of more than one locomotive at a time, and in favour of only six-wheeled locomotives being used, the four-wheeled engines being more unsteady in their action, and more dangerous in the event of the breaking of an axle. If there had been only one locomotive in the present case, the utmost injury that could have resulted would have been the shock from the sudden stopping of the train, and some severe contusions; whereas, the second engine having on all its power, and being checked in its course by the first engine, dragged with it into one pile several of the first carriages. It is considered highly propable that the Government will issue an order prohibiting the use, in future, of more than one engine, it being better to have a short train of carriages, and carry a smaller number of persons, than to enable a large number to go in the same train at the hazard of their lives. Another important question already under consideration, is the propriety of compelling Railway Companies to allow, between the locomotive and the first carriage containing passengers, a space of at least 50 yards, to be filled up by strong blank tenders, which, in the event of collision or other obstacle, would receive the first shock, and consequently, secure comparative security to the travellers. In all the railway accidents, it has been shown that only the first five or six carriages are liable to very serious injury; consequently it is the bounden duty of legislators to take care that this useful precaution be fully carried into effect. It is also suggested that the first passengers' carriage should be connected with these tenders in such a way that, on the shock being given to the tenders, a spring should immediately be called into action, and liberate the train, which could then receive no injury. In addition to this precaution, it is proposed that the first carriage should be made of strong wrought iron.

The medical gentleman who has been in the habit of attending the family of Mr. George, the Engineer, who was one of the first victims in this melancholy affair, assures me that he was a person of the most sober habits and steady conduct; the last man, in fact, who could have been guilty of any imprudence. Before he came to France he had a long railway experience in Lancashire and other parts of the North of England, and was considered a positive treasure by the Versailles Railway Company. He had trained nearly all the assistant engineers on this road, and was excessively strict as to their general conduct.

(From the Paris Correspondent of the *Morning Post* of yesterday.)

The painful interest excited by this melancholy event continues unabated, or, to speak more correctly, augments with each new afflicting detail; for every hour has shown that the accounts of the disaster, which were in the first instance founded upon public rumour, were not exaggerated as is usually the case, but were rather under the truth.

The *Gazette de France* of yesterday (Wednesday) evening, says it has been stated that the number of dead, including those in the hospitals and at their own homes, amount to at least 187. This at present may be an exaggeration, but from the many known to be in a precarious state, the estimate is likely ere long to be fully realised.

The *Messager* differs materially from the other journals as to the number of dead. It says (but we know not upon what authority) that, up to yesterday evening, it was only 45. The number of persons ascertained, up to this moment, to have been wounded is 56. Only five of the wounded remain at the chateau of Meudon. The first three waggons of the train contained about 100 persons, who were the sufferers by the disaster. The fourth carriage was a diligence, of which one of the conductors opened the doors and got out the passengers before the fire could reach them; but this could not be done with the three waggons, as they were shattered to pieces. The *Messager* contradicts the report that the locking of the doors of the carriages was the result of an order of the Prefect of Police.

The following results of the disaster is given by this morning's *Quotidienne*:—

"It was ascertained last night that 87 were dead, comprising those who expired in the hospitals, and, from the state of others who are injured, there is every reason to apprehend the number will be increased to upwards of 96."

The *Débats* states the number of dead to be much smaller than that given by some of the journals, but more considerable than the number stated by the *Messager*. According to the *Débats*, the number of deaths known up to yesterday evening was 59.

The *National*, in an article calling upon the Government to institute a rigid inquiry into the causes and circumstances of the accident, mentions some reports highly unfavourable to the Railway Company, as they declare that the *matériel* was in an imperfect and dangerous state. The *National* says it has been informed that the locomotive, the axletree of which gave way, was in a very dilapidated condition, and that Mr. George had observed he got upon it with repugnance. We are able, from a source upon which we can place the firmest reliance, to state that there is no truth in the observation ascribed to Mr. George, who, on the contrary, was with the train by his own wish, for, as General Superintendent of the Locomotives, he was not required to accompany any train except when he should consider his presence to be necessary. Whether, on the occasion in question, he was with the train because he had misgivings of the four-wheeled engine, and considered his presence to be necessary, remains to be ascertained. As to the state of the locomotive which was the immediate cause of the accident, we are assured by a scientific gentleman who examined the iron of the axletree after its rupture, that it was of the finest quality, and without the slightest appearance of a flaw.

The *Siecle*, after some general observations, speaking of the duty imposed on the Government by this melancholy affair, says:—

"The Government, which on this occasion, at least, has no other interest than the interest common to all, will no doubt not neglect any measure which may assure the safety of travellers. It will seek, we are convinced, in union with the illustrious scientific men who have already considered the question, the most efficient means of avoiding all chances of peril, all at least which it is possible to anticipate. For this purpose it is useful to receive information and advice from every person remarkable for knowledge of the subject or for great experience. We were therefore much surprised to learn that when Mr. Locke, the celebrated Engineer, who superintends the Rouen Railway, called on the Prefect of Police with one of his Directors to obtain an official authorisation to examine into the causes of the late accident, he was shown out, although certainly with great politeness, under the pretext that the Government Engineers were entitled to take the first steps in the matter. We cannot comprehend in what their mission would have suffered from the observations made by one of the men whose talent and experience they themselves hold in high esteem."

EXPEDITIOUS TRAVELLING.—The Rev. R. Newton stated on Monday last, at the Wesleyan missionary meeting, "that had it not been for the railroads, he should not then have had the honour of addressing so large an assemblage. He was at Manchester that morning between six and seven, and although he had taken time for refreshment since his arrival in this town, yet he was enabled to address them between three and four the same day." The distance, we believe, is 140 miles.—*Chelt. Chro.*

MANCHESTER AND BIRMINGHAM RAILWAY—FURTHER OPENING.

[From the *Manchester Guardian* of Wednesday.]

YESTERDAY, the second portion of this line—namely, from Stockport to Sandbach, 21 miles—was opened to the public, making the length now open from Manchester 26¼ miles. This being a substantial opening of the whole extent of the line proper (the distance from Sandbach to Crewe being only 4¼ miles, the whole of which is completed, and has been traversed by the engines), and yesterday's opening including also that of a new station at the Manchester terminus, Store-street, London-road, (the carriage ascent to which is from Dale-street), it appears to be a fitting time to notice the line and the Manchester station generally, in connection with the proceedings of yesterday.

We have described, in former notices of this line, the nature of the works between Manchester and Stockport, and therefore need not now revert to them. It will be sufficient to state, that ground was first broken on the line (in Ardwick) on the 14th September, 1838; that the line was opened from the Fairfield-street temporary station in Manchester, to Stockport (5¼ miles), on the 4th June, 1840; almost ever since which period the Company have been running 13 trains daily each way; and thus we come to the next epoch in the history of the line—the opening yesterday of a further length of 21 miles, from Stockport to Sandbach, and also the opening, both for the Manchester and Birmingham, and the Sheffield, Ashton, and Manchester lines, of the new and permanent station in London-road, Manchester. * * * * *

On Monday last, General Pasley, the Government Inspector of Railways, proceeded along the whole of the line in a special train, preparatory to the public opening yesterday. He was attended by Mr. Buck, the Engineer-in-Chief, and Captain Cleather, the Superintendent of the line, and traversed the whole length from Stockport to Crewe, stopping to inspect every viaduct, and taking copious notes of the general features of the works, the nature of the country, &c. We understand that he expressed the highest satisfaction at the completeness of the works, and their general solidity and strength. Indeed, he is said to have observed, that he had seen nothing to surpass it, and but one line to approach it, viz., the South-Eastern line. He also added, "I thought the South-Eastern line perfect, until I saw this." It is almost needless to add, that the General gave his opinion very decidedly as to the line being ready for opening, even through to Crewe, immediately. As, however, the Grand Junction Railway Company require the Manchester and Birmingham Railway Company not to open through to Crewe, till they are prepared to convey goods as well as passengers throughout, the thorough opening is postponed to an early day in next month (June), and in the meantime the line is opened to Sandbach for passengers only—the Company being thus enabled to try the working capacities of their locomotive engines along the line, and to familiarize their station clerks, conductors, guards, and other servants, with their duties, before the weight of the thorough traffic comes upon them. In the afternoon a party of the Directors and their friends traversed the whole length of the line, and partook of a collation in honour of the occasion.

Yesterday the Company started three trains daily each way between Manchester and Sandbach; those from Manchester at half-past seven o'clock morning, half-past one afternoon, and half-past six evening; those from Sandbach at eight o'clock morning, eleven forenoon, and five afternoon. On Sundays there will be but two trains each way; viz., from Manchester at eight morning, and six evening; and from Sandbach at eight morning, and half-past seven evening. All the trains stop at the intermediate stations between Manchester and Sandbach, of which there are seven, exclusive of Stockport; viz., Rushford, Cheadle, Handford, Wilmslow, Alderley, Chelford, and Holmes Chapel. The distances of each station from the two present *termini* and from Crewe, are the following:—

Digitized by Google

	Manchester. Miles.	Sandbach. Miles.	Crewe. Miles.
Manchester to	0	26¼	30¾
Rushford to	2	24¼	28¾
Stockport to	5¼	21	25¾
Cheadle to	8¼	17¾	22¼
Handford to	10¼	15¾	20¼
Wilmslow to	12	14¼	18¾
Alderley to	13¾	12¼	17
Chelford to	17	9¼	13¾
Macclesfield to	24	16¼	20¾
Holmes Chapel to	22¾	8¼	8
Sandbach to	26¼	0	4¾

Chelford is the station for Macclesfield, and a coach runs thence to the town, a distance of seven miles from the station. The journey by railway and coach is nearly an hour shorter than by coach from Manchester * * * *

In concluding this notice we must say, that the works generally, both along the line and at the stations, are of a very solid, substantial character; and that the rails from Stockport to Crewe appear as firm and well laid as those on any other line we have traversed. The Directors appear in every respect to have had utility and convenience chiefly in view in their arrangements; and they will doubtless resp the benefit of their exertions in the success of the undertaking, and the satisfaction of the numerous class of the community travelling by railways.

[We shall give in our next the conclusion of the sketch from the *Manchester Times* of the principal features of the route.—ED. R. T.]

RAILWAY ADJUDICATIONS.

THE QUEEN V. THE LONDON AND GREENWICH RAILWAY COMPANY.

Court of Queen's Bench, 6th May.—In this case a rule had been obtained calling upon the London and Greenwich Railway Company to show cause why a mandamus should not issue, calling upon them to purchase the whole of the property of the Messrs. Slee, connected with their vinegar manufactory, on the west side of Church-street, Bermondsey. The property consisted of a brewery and vinegar manufactory, the dwelling-house, occupied by Mr. N. Slee, the resident partner, with a garden attached to it, and five small cottages occupied by different tenants. It appeared that the extension line of the railway passed within 50 feet of the house, and a part of the garden occupied by Mr. Noah Slee. By the 47th section of the Greenwich Railway Act it was enacted, that inasmuch as premises might be deteriorated in value by the railway passing near it, any person having premises within 50 feet of the railway should have the power of compelling the Company to purchase such property so situated within 50 feet of the railway; and by the 46th section it was enacted, "That if the Company required to purchase any portion of certain property mentioned in a schedule annexed to the Act, the persons holding such land should not be required to sell such portion unless the Company purchased the whole."

The SOLICITOR-GENERAL, on behalf of the Company, showed cause against the rule, and contended that the Company were not compellable to purchase the whole property under the provisions of the 46th section. The Company were not desirous to take any part of it. But as the Messrs. Slee had called upon them to purchase all that portion within 50 feet of the railway, they were not bound to take more. The Company had made an offer without prejudice to take the whole of the dwelling-house and the garden attached, but they refused to take the manufactory. And he contended that the Company were justified in their refusal, inasmuch as the case did not come within the provisions of the 46th section, because the Company were not desirous of purchasing any portion of the property at all. He therefore submitted that the rule must be discharged.

Mr. THESIGER and Mr. ERLE, in support of the rule, argued that the Greenwich Railway Company, when they obtained their Act, entered into a contract with the public, who were proprietors of land over which the railway was to pass, and that they must be bound by that contract. Now it was a portion of that agreement that they should take the property within 50 feet of the railway, if the proprietors were desirous of compelling them to do so. It passed within 50 feet of one portion of these premises, and these premises constituting one manufactory were an entirety, and could not be severed any more than a house could be divided in two; and, therefore, it was submitted that the mandamus must go.

Lord DENMAN, in giving judgment, said that it was the opinion of the Court that the 47th section did not apply to this case, and that all that the Company could be compelled to do, was to purchase such portion of the premises as were within 50 feet of the line of railway, under the provisions of the 46th section. That the Company were willing to do, and it did not seem to him that the words of the Act were large enough to compel the Company to do more. The Company had offered to purchase the premises within 50 feet of the railway, and that was all that they could be called upon to do.

The other Judges concurred.—Rule discharged.

IN RE THE LONDON AND BRIGHTON RAILWAY.

Bail Court, May 9.—Mr. KELLY moved for a rule to show cause why a mandamus should not issue, commanding the Brighton Railway Company to complete a certain portion of their works, in conformity with the provisions of the Act of Parliament under which it was embodied. By the 66th and 67th sections of that Act, the Company was bound to carry its line, at the Shoreham terminus, from land belonging to Sir Isaac Lionel Goldsmid, and to complete it as soon as possible, with all convenient approaches. The line of railway, and the depot at its terminus, had been completed, but, to the total inconvenience of the public, the approaches to the latter had been left wholly unprepared. A correspondence had been had with the Company on this matter, in which, on its part, the alleged inconvenience was admitted to exist, and an excuse was offered that it had arisen in consequence of some differences between the Company and Sir I. L. Goldsmid, as to the mode in which the approaches in question should be made. This, however, was not a sufficient or satisfactory mode of meeting the complaint. The public had nothing to do with such private differences, nor did they afford any valid reason for a breach of the provisions of the Act, and the continued infliction of a great inconvenience.

Rule granted.

EASTERN COUNTIES' RAILWAY.—Mr. S. Turner, solicitor, appeared on Saturday last before the magistrates at Colchester Castle, to hear the decision of the Bench relative to the memorial presented them some time previously, from the inhabitants of the parishes of Aldham and Marks Tey, praying them to direct that the Railway Company should erect a bridge over North-lane in the parish of Marks Tey, instead of crossing the road on a level. We noticed the application in our last week's number, and it was then decided that two magistrates should view the spot, in Company with Mr. Bruff, one of the engineers to the Company, and make a Report to the magistrates on Saturday last. Mr. J. W. E. Green and Mr. T. J. Turner were the magistrates requested to view the spot; they did so on Friday, and they recommended the Bench to exercise their authority in the matter, and grant the prayer of the memorialists—as they (the magistrates) quite concurred that a bridge would be more safe and commodious to the public than if the line was allowed to cross on a level. Mr. S. Turner was then informed, that it was the unanimous decision of the magistrates that a bridge should be erected over the railway, at the spot in question, as they were aware of several accidents that had occurred when railways were allowed to cross on a level with the road. Mr. Turner said, the wish of the Bench should be complied with.—*Essex Mercury.*

RAILWAYS IN FRANCE.

THE Paris papers of Wednesday continue to be much occupied with the late accident on the Versailles Railway, the occurrence of which, at the time the question of railways is exciting much discussion in the Chamber of Deputies, is likely to produce some effect on their final decision. On Tuesday, Baron James de Rothschild, the principal shareholder of the Versailles and St. Cloud Railway, was examineds before the Committee on the Bill for granting pecuniary assistance to the Companies of the Versailles and Meudon, Strasburg and Basle, and Bordeaux and Teste Railways, for the purpose of giving explanations respecting the proposed union of the two lines; but in consequence of the catastrophe which has just taken place, M. de Rothschild merely stated that he referred the matter altogether to the decision of the Chamber. In the discussion in the Chamber on Tuesday, M. Thiers deprecated the endeavour to undertake so many railways at one time. He denied that France was so much behind Germany in its construction of railways, and he thought it would be much better to concentrate their efforts on one great line than to engage in various undertakings to the embarrassment of the national finances. The discussion was then adjourned.

EASTERN COUNTIES' RAILWAY—FALL OF A BRIDGE.

[From the *Chelmsford Chronicle* of yesterday]

YESTERDAY morning a fearful accident occurred on the works of the Eastern Counties' Railway, at Kelvedon, in the fall of a stupendous bridge, which was very near completion, occasioning the loss of one life, and injuring six other persons.

The bridge in question was situated on the north side of the high road, at the east end of Kelvedon. It consisted of three arches, the first being thrown over the road leading to Coggeshall, the second over the river, and the third joined up to the embankment at the Colchester end. The centre of the first arch was struck last week, and the road under it had been thrown open to the public. The clearing of the timbers from the other arches was completed on Monday, and a great number of bricklayers had been employed throughout this week in carrying up the parapets. The rails had been laid down, and the earth waggons were worked over it, to carry on the embankment at the east end. Yesterday morning there were altogether about 20 men employed upon it, when, about ten o'clock, the whole suddenly came down with a crash which sounded to the inhabitants of Kelvedon like a heavy peal of thunder. Fifteen or sixteen bricklayers who were upon the scaffolding, were hurled, with the bricks, timber, and earth, in all directions, some of them falling into the river; but, fortunately, they appear to have escaped with only a few bruises and lacerations. At the moment of the fall, however, a man named Thomas Elsely, a "tipper" on the embankment, was standing behind a loaded earth-waggon, at the edge of the last arch, and was consequently carried down in the fall, the earth-waggon falling on him, crushing and partially burying him in the rubbish. As soon as the confusion consequent upon the alarm of the terrific crash had subsided, prompt assistance was rendered to extricate him, but he was quite dead. Another man, an aged labourer, was got out from the mass of rubbish, and was found to have one of his legs dreadfully crushed; but prompt medical assistance being rendered it is hoped he may survive.

We are informed that the accident was caused by the wet state of the weather when the work was put together. In consequence of which the centres have been kept in for the last four months, by the direction of the Engineer-in-Chief, but were, in the course of the last week, eased by the contractor. The whole mass was at first a wreck, completely blocking up the road, but vast numbers of workmen

Digitized by Google

were employed in clearing away the materials, to make a way for passengers along the road, and afford a vent to the waters of the river, which were partially dammed up by the ruins. This was speedily effected, and both the road and river were restored to their former state. The damage is estimated at 2,000*l.*, which will fall upon the contractors, Messrs. Wythes.

Soon after the accident occurred, Mr. Braithwaite, the Engineer-in-Chief, was upon the spot, to take the necessary steps, and ascertain the cause of and remedy the calamity.

SINGULAR INCIDENT—A LOCOMOTIVE ARRESTED BY WORMS.—On the completion, a few days since, of the railway on the Tressel and Bridge over the Congaree Swamp and river, a general migration of the caterpillars of Richland took place towards the St. Matthew's shore. An army of worms, occupying in solid column the iron rail for upwards of one mile, presented, as was supposed, but a feeble barrier to the power of steam. A locomotive with a full train of cars loaded with iron, and moving at a speed of 10 to 12 miles an hour, was arrested notwithstanding at midway in the swamp by these insects, and through the agency of sand alone freely distributed on the drawing wheel, was it able to overcome them. It was a sanguinary victory, in which millions were crushed to death; though the caterpillars maintained their ground and enjoyed a triumph in resisting for a brief period even the power of the locomotive.—*Charleston Patriot.*

LLANELLY RAILWAY AND DOCK COMPANY.—59, Old Broad-street, London, May 12, 1842.—The Annual General Meeting of this Company will be holden at the London Tavern, Bishopsgate-street, in the City of London, on Monday, the 6th of June next, at One o'Clock precisely, on which occasion the said Meeting will be made Special, to elect two Proprietors as Members of the Committee of Management in the stead of William Gambier, Esq., resigned; and Jacob Sims, Esq., deceased. Also to make certain Bye-Laws, Rules, Orders, and Regulations for the government of the said Company.

By Order of the Committee of Management,
JOHN BIGG, Secretary.

CONTRACTS FOR WORKS.—WILSONTOWN, MORNINGSIDE, AND COLTNESS RAILWAY.—The Directors of the Wilsontown, Morningside, and Coltness Railway, are now ready to receive Tenders from Contractors for the execution of the following works, viz.:—

Morningside Contract, No. 1.—This Lot extends from the eastern termination of the Wishaw and Coltness Railway, to a point in the lands of Stane, parish of Cambusnethan, about 700 yards west of the Edinburgh and Ayr road, being in length, 4 miles 3 furlongs, or thereby, and includes the entire construction of this portion of the railway, and all the works connected therewith, together with the maintenance of the same for one year after the due completion thereof.

Knowton Contract, No. 2.—This Lot extends from the point above named, in the lands of Stane, to a stake numbered 125, and fixed in the lands of Crossfoot, parish of Whitburn, about 600 yards east of the Coltness Iron Company's Tramroad, being in length, 3 miles 3 furlongs, or thereby, and includes the entire construction of this portion of the railway, and all the works connected therewith, together with the maintenance of the same for one year after the due completion thereof.

Plans, Drawings, and Specifications of the Works, together with printed forms of Tender, may be seen on and after Monday, the 18th instant, at the office of the Secretary to the Company, No. 36, Miller-street, Glasgow, to whom all Tenders must be addressed, endorsed, "Wilsontown, Morningside, and Coltness Railway."

"Tender for Works, Contract, No.——"

No Tender will be received after Monday, the 16th day of May next; and the Directors do not bind themselves to accept the lowest Tender, nor will they be liable for claims from persons whose offers may not be preferred.

Glasgow, April 15, 1842.

TO RAILWAY COMPANIES, ENGINEERS, AND SURVEYORS.—A Young Man of respectable connections, aged 21, having received a liberal education in various branches of Civil Engineering, and lately been practically engaged for the construction of one of the principal Railways in the United States, wishes for a similar situation in this country, or in the office of a Civil Engineer, Surveyor, or Foundry, as Draughtsman, or in any other capacity suitable to his acquirements, respecting which he can produce testimonials from eminent parties with whom he has served.

Address (pre-paid), R., at Mr. Everett's, Newsvender, 14, Finch-lane, Cornhill.

SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—NOTICE is hereby given, That the TRANSFER BOOKS of this Company will be CLOSED on Thursday, the 19th inst., and will remain closed until after Tuesday, the 31st inst.

By order of the Directors,
JOHN WHITEHEAD, Secretary.

Railway Office, 10, Coleman-street, London,
May 3, 1842.

SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—THE HALF-YEARLY GENERAL MEETING of the Proprietors will be held at the London Tavern, Bishopsgate-street, in the City of London, on Tuesday, the 31st instant, at One o'Clock in the Afternoon precisely, to elect Three Directors in the room of the like number retiring by rotation, and on the general business of the Company.

JOSEPH BAXENDALE, Chairman of the Board of Directors.
JOHN WHITEHEAD, Secretary.

Railway Office, 10, Coleman-street, London,
May 9, 1842.

SOUTH-EASTERN (LONDON AND DOVER) RAILWAY.—OPENING FROM LONDON TO TUNBRIDGE.—The puble are respectfully informed that this line of Railway will be opened for the conveyance of passengers and parcels on Thursday, the 26th day of May, 1842.

The following will be the hours of departure until further notice:—

From London.
9 30 a.m., 11 30 a.m. | 2 30 p.m., and 5 30 p.m.
From Tunbridge.
7 45 a.m., 10 30 a.m. | 3 p.m., and 6 p.m.
Sundays excepted.

Full particulars will be given in the Time-tables, which will be published in a few days, and may be had at the London Bridge Station, and at any of Messrs. Horne and Chaplin's Offices.

By Order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, May 10, 1842.

CROYDON RAILWAY. — NOTICE TO PASSENGERS.—Passengers may be booked at Croydon and Sydenham to the Bank, by Railway to New Cross, and thence by Omnibus, by the following Up-trains:—

Morning.	Afternoon.
5 minutes past 9 o'clock.	20 minutes past 2 o'clock.
5 minutes past 10 o'clock.	20 minutes past 3 o'clock.

Omnibuses will return from Mr. Thomas Webber's, Confectioner, 81, Lombard-street, Mansion-house end, where places may be booked for any stations on the line of Railway at the following times:—

Morning.	Afternoon.
30 minutes past 10 o'clock.	50 minutes past 3 o'clock.
30 minutes past 11 o'clock.	50 minutes past 4 o'clock.

FARES.

Croydon.		*Sydenham.*	
1st Class	1s. 6d.	1st Class	1s. 3d.
2nd Class	1 3	2nd Class	1 0

R. S. YOUNG, Secretary.

May 13, 1842.

TO ARCHITECTS.—SEYSSEL ASPHALTE COMPANY, CLARIDGE'S PATENT, established March, 1838, for working the Mineral Asphalte Rock of Pyrimont Seyssel.

This valuable material has been extensively used since its first introduction into this country for the following purposes:—Foot pavements, public and other; in the carriage approach to mansions, garden walks, and terraces; the flooring of kitchens and other basement offices, also of coach-houses and stables, dog kennels, barn floors, cowhouses, piggeries, poultry-houses, tun-rooms and maltings; for roofing, covering of railway and other arches, the lining of under-ground cellars near rivers to prevent the ingress of the tides; also in covering the ground line of walls, to prevent damp rising, thereby rendering the basement stories in the worst situations both dry and warm. It is an excellent cement, as applied to docks, breakwaters, or walls built for resistance to the encroachments of the sea, lining of tanks, fish-ponds, and other hydraulic purposes.

Several extensive works have been executed by this Company for the Board of Ordnance and her Majesty's Commissioners of Woods and Forests. The Asphalte has been used at the Thames Tunnel, also at the London and Greenwich Railway, where it has been laid over a surface of 400,000 superficial feet, to prevent the percolation of water; at the Great Western, Birmingham, Midland Counties', South-Western, Brighton, and other railways; at the South Metropolitan, Highgate, and Nunhead Cemeteries.

The Asphalte of Seyssel is perfectly free from smell, and is not acted upon by the change of temperature.

Books of testimonials, with scale of prices, can at all times be had at the Company's depot.

J. FARRELL, Secretary.

Stangate, Surrey side of Westminster Bridge, April, 1842.

ARCHITECTS, BUILDERS, AND OTHERS.

For the purpose of securing the use of the genuine article, architects and others are particularly requested to insert in their specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "asphalte" or "bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

HAVRE AND ROUEN RAILWAY.—DIRECTORS IN ENGLAND

In London.	In Liverpool.
Sir John Easthope, Bart., M.P.	John Moss, Esq.
William Chaplin, Esq.	Charles Lawrence, Esq.

And Six Directors in France.

Engineer—JOSEPH LOCKE, Esq.

CAPITAL.

Given by the French Government.....		£320,000
Given by the town of Havre		40,000
Lent by the French Government at 3 per cent., the interest not to commence until three years after the time fixed by the law for the completion of the Railway. The Capital to be repaid in fortieths annually—the first fortieth to be payable ten years after the time fixed by the law for the completion of the works.....		400,000
To be paid by the Paris and Rouen Railway Company, in conformity with the law authorising the construction of that railway, and of which the French Government lends £160,000 at 3 per cent.		200,000
		£960,000
To be subscribed in Shares of £20 each, one-half of which will be allotted in France.....	£400,000	
One-half in England	400,000	
		800,000
		£1,760,000

Reserving power to borrow or raise in Shares, in case of need, a further sum of £200,000.

The length of the line is 58 English miles. Its object is to effect, by a continuation of the Paris and Rouen Railway, an uninterrupted railway communication between Paris and Havre, which is the port of the metropolis of France, and also the most important commercial port in that kingdom. Estimates of both the cost and the traffic have been made, which leave no doubt of an ample revenue on the comparatively small amount of Share capital. The term for which the law will be conceded to the Company is 99 years, the same as in the case of the Paris and Rouen Railway.

A deposit of £2 per Share will be required on the allotment being made; but it is not intended to make any further call until June, 1843, before which time the Paris and Rouen Railway will have been opened.

Applications for Shares may be made to either of the English Directors; or to Mr. T. S. Traill, at the office of the Paris and Rouen Railway Company, 4, Austin Friars, London; Messrs. Clay and Swift, Liverpool; F. T. Bircham, Esq., 15, Bedford-row, London; or to Alfred Morgan, Esq., South-Western Railway Office, Nine Elms, Vauxhall; of whom prospectuses may be had.

No application for Shares can be received after the 23rd inst.

FORM OF APPLICATION FOR SHARES.

I of request the English Directors of the Havre and Rouen Railway Company to allot to me Shares therein, and on such allotment being made, I hereby engage to pay the Deposit of £2 per Share, and to execute the Subscribers' Agreement when called upon.

Signature ——
Date ——

TO RAILROAD CONTRACTORS, IRON FOUNDERS, AND WHEELWRIGHTS.—140 Railroad Waggons, standing at Uffington Bridge, midway between Faringdon-road and Shrivenham, Great Western Railway Stations.

J. JOHNSON is instructed by Mr. C. S. Midly to Sell by AUCTION, (without the least reserve) on Tuesday, the 31st day of May, 1842, at Eleven for Twelve o'Clock *precisely*, 140 4-feet 8½-inch gauge railway waggons (for the convenience of purchasers they will be taken apart); the iron and wood work sold in separate lots. Being situated adjoining the Great Western Railway, and within 100 yards of the Wilts and Berks Canal, there is every accommodation for removing at a very trifling expense.

Catalogues may be had at the *Exeter Flying Post* and *Gloucester Journal* Offices; King's Head Inn, Cirencester; Crown Hotel, Faringdon; White Horse, Uffington; Green Dragon Hotel, Bishopsgate-street, London; and of the Auctioneer, Castle-street, Reading.

TO RAILWAY COMPANIES, ENGINEERS, CONTRACTORS, AND OTHERS.—Mr. R. K. DAVIS has been favoured with instructions to Sell by AUCTION, at Garraway's Coffee-House, 'Change Alley, Cornhill, on Friday, the 20th May, 1842, at Twelve o'Clock, in Three Lots—Three Locomotive Engines and Tenders, built by most eminent Engineers, who will guarantee and report to their being manufactured of the best materials, most substantially made, highly finished, and fit for immediate work.

Diameter of cylinders, 12 inches; length of stroke, 18 inches; diameter of driving-wheel, 5 feet, and adapted to the usual gauge of 4 feet 8½ inches, after the plan of the London and Birmingham Railway Engines. Well deserving the attention of any party or Company requiring Engines of great power and speed.

May be viewed at the manufactory of Messrs. G. and R. Rennie, by tickets only, which may be had by applying to Mr. R. K. Davis, Auctioneer, 68, Mark-lane.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.

—Eleventh Half-Yearly General Meeting of Proprietors.—At the Eleventh Half-Yearly General Meeting of Proprietors of the Cheltenham and Great Western Union Railway Company, held at the Board-room, Cirencester, on Tuesday, the 3rd day of May, 1842:—

CHARLES F. SAGE, Esq., in the Chair.

It was resolved—

First—That the Report of the Directors now read be approved and adopted, and printed for circulation among the Proprietors.

Second—That Mr. Whitcombe, Mr. Cripps and Mr. Lewis, be re-elected Directors of the Company.

Third—That the 254 Shares, the numbers of which have now been read, have the forfeiture confirmed.

Fourth—That a Dividend of 25s. per share be made, for the half-year ending the 31st day of May instant, out of the clear profits of the undertaking, and that the same be paid on and after the 24th day of June next.

Fifth—That the thanks of the meeting be given to the Directors for their indefatigable exertions.

C. F. SAGE, Chairman.

DIRECTORS' REPORT.

Nothing worthy of Report to the proprietors has occurred in the general management of this undertaking, since the general meeting held in October last.

In pursuance of the recommendations in their last Report, the Directors introduced a Bill into Parliament, at the commencement of the present session, having first submitted a copy of it to a meeting of the proprietors, specially convened for the purpose, who signified their approbation of its provisions.

This Bill met with a very determined opposition, in every stage of its progress through both Houses of Parliament; but your Directors have the satisfaction of stating that it has now passed through the Committee of the Lords, without any very important alteration.

The Directors, having thus secured, as they believe, powers calculated to provide the means of completing this important undertaking, through the aid and co-operation of Companies more or less interested in the result, will immediately apply themselves to the consideration of the best means of accomplishing that in which they consider the interests of the proprietors so deeply involved. By this Act, which will receive the Royal Assent in the course of a few days, the half-yearly general meetings of the Company will in future be held in the months of February and August, in compliance with a wish, which has been frequently expressed by the proprietors, that the accounts should be made up to periods nearer to the days of meeting than could be accomplished under the original Act.

The first general meeting under this Act will, therefore, take place in August next: but it will be the duty of the Directors to convene a special meeting in the meantime, and, with as little delay as possible, to consult upon the exercise of the important powers of the new Act, with a view to the welfare of the interests of the Company.

A further slip, which occurred in the Swindon embankment immediately after the last general meeting, and which it was feared would proceed to a serious extent, was arrested without any interruption to the traffic. This was necessarily attended by an increase of expenditure, beyond that which it had been assumed would be sufficient for the maintenance of this embankment. The whole, however, is now completed, and both lines will be in an efficient working condition in the course of a few days.

It will be seen, by the Appendix to the Report, that the total expenditure of the Company up to the 25th of December last, amounted to the sum of 462,576*l.* 19s. 2d. The subsequent expenditure to the 25th ultimo has been 40,397*l.* 1s. 9d.

The Directors have been disappointed in raising the amount required to meet the liabilities, by loans on debentures, and a further call became indispensable to meet the engagements falling due in the course of the next three months.

As the clear profits derived from the portion of the line which is completed will be sufficient to pay a half-yearly dividend of 25s. per share, the Directors recommend that a dividend to that amount be declared, payable on the 24th of June.

Mr. Whitcombe, Mr. Cripps, and Mr. Lewis, are the three members of the Board who retire, according to the provision of the Act of Incorporation; they are candidates for re-election at the present meeting, for which they are duly qualified.

C. F. SAGE, Chairman of the Board of Directors.

STATEMENT OF RECEIPTS AND EXPENDITURE, TO 25TH DECEMBER, 1841.

GENERAL ABSTRACT OF EXPENDITURE.	To June 24, 1841. £ s. d.	To December 25, 1841. £ s. d.	Total Expenditure. £ s. d.

MANLY VIGOUR: a Popular Inquiry into the Concealed Causes of its Premature Decline; with Instructions for its Complete Restoration, addressed to those suffering from the Destructive Consequences of Excessive Indulgence in Solitary and Delusive Habits, Youthful Imprudence, or Infection; with Remarks on the Treatment of Gonorrhœa, Gleet, Stricture, and Syphilis. Illustrated with Cases, &c.

By C. J. LUCAS & Co., Consulting Surgeons, London.

Published by the Authors; and sold by Brittain, 11, Paternoster-row; Effingham Wilson, 18, Bishopsgate-street; Field, 65, Quadrant, Regent street; Burgess, 28 Coventry-street, Haymarket; Huett, 141, High Holborn; and by all Booksellers in the United Kingdom.

"The best of all friends is the Professional Friend; and in no shape can he be consulted with greater safety and secrecy than in 'Lucas on Manly Vigour.' The initiation into vicious indulgence—its progress—its results in both sexes, are given with faithful, but alas! for human nature, with afflicting truth. However, the authors have not exposed the evil without affording a remedy. It shows how 'Manly Vigour' temporarily impaired, and mental and physical emasculation, produced by uncontrolled indulgence of the passions, can be restored; how the sufferer, who has pined in anguish from the consequences of early indiscretion—afraid almost to encounter his fellow man, can regain the vigour of health and moral courage. The work is written in a concise and perspicuous style, displaying how often fond parents are deceived by the outward physical appearance of their youthful offspring; how the attenuation of the frame, palpitation of the heart, derangement of the nervous system, cough, indigestion, and a train of symptoms indicative of consumption or general decay, are often ascribed to wrong causes; and instead of being the natural results of cougenital debility or disease, are the consequences of an alluring and pernicious practice, alike destructive to the mind and body."—*Bell's New Weekly Messenger.*

Messrs. Lucas and Co. are to be daily consulted from ten till two, and from five till eight in the evening, at their residence, No. 60, Newman-street, Oxford-street, London.

Country Patients are requested to be as minute as possible in the detail of their cases, as to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party. The communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application; and in all cases the most inviolable secrecy may be relied on.

IMPORTANT INFORMATION.—That excellent Ointment called the POOR MAN'S FRIEND, is confidently recommended to the Public as an unfailing remedy for wounds of every description, and a certain cure for Ulcerated Sore Legs, if of 20 years' standing; Cuts, Burns, Scalds, Bruises, Chilblains, Ulcers, Scorbutic Eruptions, Pimples in the face, Weak and Inflamed Eyes, Piles and Fistula, Gangrene, and is a specific for those Eruptions that sometimes follow Vaccination. Sold in pots, 13½d. and 2s. 9d. each.

Also, his PILULÆ ANTISCROPHULÆ, confirmed by more than 40 years' successful experience, as an invaluable remedy for that distressing complaint called Scrophula Glandular Swellings, particularly those of the neck, &c. They destroy all sharpness and acrid salts, open the obstructed pores, expel all the superfluous humours on the skin, and present one of the best alteratives ever compounded for purifying the blood, and assisting nature in all her operations. They are efficacious also in Rheumatism, and form a mild and superior Family Aperient, that may be taken at all times, without confinement or change of diet. Sold in boxes at 13½d. and 2s. 9d.

By the late Dr. Roberts' will, Messrs. BEACH and BARNICOTT (who have been confidentially entrusted with the preparation of his medicines for many years past) are left joint Proprietors of the "Poor Man's Friend," and "Pilulæ Antiscrophulæ," &c., with the exclusive right, power, and authority to prepare and vend the same.—The utility of these medicines is fully testified by thousands of persons who have been benefitted by their aid.

Beware of Counterfeits.—No medicine sold under the above names can possibly be genuine, unless "Beach and Barnicott, late Dr. Roberts, Bridport," is engraved and printed on the stamp affixed to each packet. Sold wholesale by the Proprietors, Beach and Barnicott, at the Dispensary, Bridport; by the London Houses; and by most respectable Medicine Vendors in the United Kingdom.

„ 190 „	224	3	0	4	0	5	0	6	0

And then the graduated scale for Tonnage.

The Rates of Conveyance between the undermentioned places and Bristol, are as follows:—

Chepstow, Newport, and Cardiff, 1 lb. to 7 lbs... 0s. 6d.
„ „ „ 7 lbs. to 14 lbs... 1s. 0d.
Bridgend, Neath, Cowbridge, and Swansea ..... } 1 lb. to 14 lbs... 1s. 0d.
Above 14 lbs., 1d. per lb.

Carts or Waggons will be in attendance upon the arrival of Packets or Sailing Vessels, by addressing an order to Mr. John Bland, Bristol; or to the Clerk of the Goods' Department, Great Western Terminus, Bristol.

Goods for Ireland or Wales are invariably forwarded by first Packet, unless otherwise directed.

N.B. Parties in London wishing to forward goods by the Great Western Railway, are informed that the undermentioned Offices are the only ones where they can be received on account of the Company, as follows:—

Bull and Mouth Inn, St. Martin's-le-Grand;
Ditto ditto Coach Office, Regent's Circus;
Moore's Green Man and Still, Oxford-street;
At the Company's Office, Princes-street, Bank;
And at the Paddington Station;
And in Bristol, at the Rummer Hotel Office, High-street;
Bland's Warehouse, Broadmead;
And the Railway Terminus, Temple Meads.

Bristol, April, 1842.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.: By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This is a work that we fear there exists too much need for, to cause us to hesitate to recommennd it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

"This work, *a seventh edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers, in London or Manchester, on the half-yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars explaining the peculiar eligibility of this Security, may be obtained at the Company's Offices, No. 43, Piccadilly, Manchester; or at the Office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb. 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3	0	0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1½ inch thick, per superficial yard	0	4	6
Paving pathways, granaries, warehouses, &c., 1½ inch thick, per square yard	0	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0	5	6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

EASTERN COUNTIES' RAILWAY.—TO BUILDERS.—Contract for Building the Chelmsford Station-house.—The Directors are ready to receive TENDERS for Building the Station-house at Chelmsford, the plans and particulars of which, and the conditions of the Contract, may be seen at the offices of the Engineer-in-Chief, High-street, Shoreditch, on and after Monday, the 16th instant. Tenders to be sealed, and addressed to the Directors of the Eastern Counties' Railway, High-street, Shoreditch, endorsed, "Tenders for Chelmsford Station," and forwarded on or before Monday, the 23rd of May, inst., after which day no Tender can be received. The Directors do not bind themselves to accept the lowest Tender.

By order of the Board,
A. BULKELEY, Secretary.

Offices, High-street, Shoreditch, May 7, 1842.

MANCHESTER AND LEEDS RAILWAY —MANCHESTER JUNCTION LINE.—CONTRACTS FOR WORKS.—TIME EXTENDED FOR RECEIVING TENDERS.—Notice is hereby given, That the Directors will meet at their Office, Clowes's-buildings, Hunt's Bank, on Monday, the 6th day of June, for the purpose of receiving Tenders for the completing the following Contracts:—

Contract No. 1.—The formation and completion of the Junction line from a point about 4 chains east of Collyhurst-lane to the east side of Lower Tebbutt-street, in the town of Manchester, being a distance of about 1,316 yards, including the formation of the excavations and embankments; the building of the arches over the reservoirs near Collyhurst; the bridge over Collyhurst-lane; bridges with iron girders, under St. George's-road and Cropper-street; retaining walls; drains; laying and ballasting the permanent way; and other works connected therewith.

Contract No. 2.—The formation and completion of the said Junction line, from the termination of the last Contract to the intended station at Hunt's Bank, being a distance of about 701 yards. This Contract consists principally of a viaduct containing several bridges, with iron girders, and crosses some of the principal streets in Manchester, as well as passing three times over the river Irk.

Plans and Specifications of the works intended to be let are now ready for inspection at the Engineer's Office, Palatine-buildings, Hunt's Bank, Manchester. Printed forms of Tender will be provided, which must be delivered properly filled up, at the Secretary's Office, Hunt's Bank, by Eleven o'Clock on Monday, the 6th day of June. No others will be attended to.

Parties tendering must attend personally, or by their agent, at Three o'Clock in the afternoon of the same day.

Engineer's Office, Manchester, May 17, 1842.

MANCHESTER AND LEEDS RAILWAY. TO IRON FOUNDERS.—The Directors are prepared to RECEIVE TENDERS for the IRONWORK included in the Contracts on the Manchester Junction Line, which are advertised to be let on the 30th May instant, separate from the rest of the work.

The ironwork alluded to consists of—

Cast-iron girders for bridge under Cropper-street.

Cast iron girders for a long bridge under St. George's Road.

Cast-iron girders for carrying the railway over Lower Tebbut-street.

Cast-iron curved ribs for carrying the railway over Blakely-street; span of opening being 63½ feet on the skew.

Cast-iron girders for carrying the railway over Long Millgate.

Drawings and Specifications will be ready for inspection at the Engineer's Office, Hunt's Bank, Manchester, on and after Monday the 16th May instant.

Printed forms of Tender will be provided, which must be delivered at the Secretary's Office, Clowes's Buildings, Hunt's Bank, Manchester, by Eleven o'Clock on Monday the 30th May; and parties tendering must attend, by themselves or agent, at Three o'Clock in the afternoon of the same day.

By order,
JOHN JELLICORSE.

Manchester, May 10, 1842.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—Notice is hereby given, That a SPECIAL GENERAL MEETING of the Birmingham and Derby Junction Railway Company will be held on the 2nd day of June next, at the Waterloo Rooms, in Waterloo-street, in Birmingham, at Eleven o'Clock in the forenoon, under the provisions of an Act passed in the present Session of Parliament, entitled, "An Act to enable the Birmingham and Derby Junction Railway Company to raise a further sum of Money," for the purpose of considering and determining upon the creation of New Shares in addition to the present capital of the said Company, and the nominal amount or value of such New Shares, and any special advantages in favour of or other regulations in relation to the same; and also for the purpose of authorising the said Company to borrow a further sum of money on Mortgage, under the provisions of the said Act. Dated at Birmingham, this 17th day of May, 1842.

The Chair to be taken at Twelve o'Clock precisely.

(Signed) HENRY SMITH,
Chairman of the Directors of the said Company.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS and NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

In one handsome quarto volume, with 17 splendidly executed Engravings, including a Railway Map of the United Kingdom, price £1 11s. 6d.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.

"No railway capitalist who studies his own interest, will remain long without it; it is a work of immense labour and research, rich in original and authentic information, and embellished to profusion with splendid engravings."—*Railway Times.*

"This is one of the most striking and valuable works that have lately issued from the press; the author handles his subject in that masterly style which proves his perfect acquaintance with the matters upon which he treats."—*Bath Chronicle.*

"Mr. Whishaw is a discriminating statician, and has a thorough acquaintance with his subject."—*Athenæum.*

"A faithful record of the rise and progress of the greatest modern result of the genius of man."—*Polytechnic Journal.*

"The completest view of railway statistics yet produced."—*Morning Chronicle.*

"A complete history of all the railways in the United Kingdom.—*Liverpool Mercury.*

"Full of sound practical information, derived from the fountain head itself."—*Observer.*

"A more complete and satisfactory account of the railway system of Great Britain could scarcely be devised."—*Courier.*

"Here the practised engineering skill of the author manifests itself."—*Manchester Courier.*

"It may be looked upon as a rare and precious acquisition to the practically scientific literature of the country."—*Manchester Times.*

"It is not the mere opinion of a theoretic man, but the result of a practical and talented engineer."—*Plymouth Herald.*

"Such a work, the product of a practical man, is clearly entitled to the distinctive term 'national.'"—*Hereford Journal.*

"A text-book on railways for the next half century."—*Maidstone Gazette.*

"We know of no work which ought to be so favourably received in Scotland at present."—*Perth Courier.*

"Developing a depth of principle, and a breadth and variety of details of well-digested facts, which nothing in the history of railways at home or abroad can possibly rival, far less surpass."—*Dumfries Times.*

London: Simpkin, Marshall, and Co.

BOLTON AND PRESTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the poweys of their Act, to receive TENDERS for the LOAN of MONEY on security of their undertaking, and of the rates and tolls arising therefrom, in sums of not less than £200, and for terms of 3, 5, or 7 years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at the Company's Office. The Tenders are to express the sums and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

TO RAILWAY DIRECTORS, &c.—WANTED, by a Person of respectability, a Situation as Manager of a Coaching or Goods Department, or both.

The Advertiser is conversant with Railway Management in all its details; has had ten years' experience on one of the most extensive lines in the kingdom; and can produce Testimonials from some of the most eminent Engineers and Managers of the day.

He is at present engaged in the same pursuit as a Manager, but is desirous of a more extensive field of operation.

Security for a Thousand Pounds, or upwards, if required.

Letters addressed, "To A. B., Box B 16, Post-office, Liverpool," will be immediately attended to.

May 17, 1842.

REPORT OF THE OFFICERS OF THE BOARD OF TRADE.

(*Continued from page* 513).

In consequence of the alarming accident of the 24th December on the Great Western, it has been thought right to institute several inquiries as to the precautions taken to ensure the safety of third-class passengers, and generally as to the effect which the greater extension of the system has had on the interests of the poorer classes. These inquiries are not yet brought to a conclusion, but some important information has already been obtained.

The following circular letter on the subject was sent to the different Railway Companies :—

Railway Department, Board of Trade, Whitehall, January 1, 1842.

Sir,—In consequence of the recent accident on the Great Western Railway, the Lords of the Committee of Privy Council for Trade have thought it their duty to ascertain whether proper precautions are taken to ensure the safety of the poorer class of passengers upon railways generally; I am, therefore, directed by their Lordships to request that the Directors of the —— Railway Company will furnish them with answers to the following questions :—

1. By how many and what description of trains in the course of the 24 hours are third-class passengers taken?

2 At what hours do such trains start, at what speed do they travel, and how long do they take to perform the journey ?

3. What is the construction of third-class carriages ? Specifying—

1. Whether provided with springs and spring buffers, the same as other passenger carriages?

2. Whether closed, partly closed, or open ?

3. Height of framing or panelling at ends and sides?

4. Whether any partitions in the body of the carriage, and if so, their height and position ?

5. How many passengers each carriage is constructed to carry?

6. Whether there are seats for the passengers, and if so, how arranged?

7. Whether third-class or other passenger-carriages go with trains partly composed of luggage waggons, are such carriages placed before or behind the luggage-waggons, and is such position invariably preserved, or is it altered according to the weight of the train, and other circumstances ?

I have, &c., S. LAING.

The Secretary of the —— Railway Company.

The returns to this circular are given in Appendix No. 7., p. 226.

The following table, which is as complete as the imperfect nature of the traffic returns made to the Board of Trade will permit of, shows the extent and nature at the third-class passenger traffic throughout the kingdom :—

TABLE showing the Nature of the Third-class Traffic on the different Railways of the United Kingdom.

Name of Railway.	No. of trains each way per day for third class passengers.	Nature of trains. *Note.* 'Mixed' denotes, mixed with passengers of other classes.	Average fare of 3rd class passengers per mile, from half yearly returns to July, 1841.	No. of 3rd class passengers carried in 6 months, from half-yearly return to July, 1841.	Average distance each travelled
			d.		
Arbroath and Forfar	4	Mixed	0.968	40,642	..
Birmingham and Derby	3	Ditto	1.25	..	..
Birmingham and Gloucester	4	2 passenger, 2 luggage	1.25	32,011	12
Brandling Junction	..	Mixed	1.06	287,179	..
Chester and Birkenhead	6	Ditto	0.82	100,233	12
Dublin and Kingstown	..	Ditto	1.	327,652	..
Dundee and Arbroath	..	Ditto	1.074	86,505	..
Eastern Counties'	8	Ditto	1.46	81,871	9
Glasgow and Ayr	4	Ditto	0.9	141,549	..
Grand Junction	1	Ditto	1.3	26,656	..
Great North of England	4	Ditto	1.33	..	..
Great Western	..	Luggage	1.183	12,620	..
Hull and Selby	..	Mixed	0.96	52,602	20
Lancaster and Preston	3	Ditto	0.9	31,852	13½
Leeds and Selby	5	Ditto	1.5	29,263	..
Liverpool and Manchester	..	Ditto	1.27	172,920	..
London and Birmingham	1	With 3rd class passeng. only	1.5	24,158	55½
London and Brighton	No. 3 Class	Mixed	Lowest fare 2.	..	..
London and Croydon	3	Ditto	1.03	18,937	..
London and Greenwich	..	Ditto	1.6	292,066	..
London and South-Western	1	Luggage	1.2	14,751	54
Manchester and Birmingham	12	Ditto	1.2	261,120	5
Manchester and Leeds	10	Ditto	1.37	321,981	11
Midland Counties'	2	Ditto	1.	78,252	..
Newcastle and Carlisle	No. 3 Class	Ditto	Lowest fare 1.5	102,886	..
Newcastle and North Shields	12	Ditto	1.25	297,210	..
North Midland	6	Ditto	1.	228,552	16
North Union	No. 3 Class	Ditto	Lowest fare 1.62	..	..
Northern and Eastern	2	Ditto	..	..	..
Preston and Wyre	4	Ditto	1.25	42,657	11
Sheffield and Rotherham	12	Ditto	1.	175,128	..
Ulster	..	..	0.75	155,945	..

It will be seen from this table, that in a great majority of cases third-class passengers are conveyed by the same trains as other passengers. In fact, the Great Western and London and South-Western Railways are the only lines upon which third-class passengers are conveyed exclusively by heavy luggage trains, and the Directors of the latter railway have signified their intention of discontinuing the practice immediately, and providing accommodation for third-class passengers in the regular passenger trains.

Upon the London and Birmingham Railway, third-class passengers are conveyed by a special train along with cattle, horses, and empty return waggons, but not with heavy luggage waggons.

Upon all other railways where third-class passengers are carried, they are taken by mixed trains along with other passengers, and are therefore exposed to no peculiar risk, except such as may arise from the construction of the carriages in which they are placed.

In all cases in which, from the returns made to this department, the construction of third-class carriages appeared defective, letters have been written recommending the adoption of buffer-springs, and an increased height of outside panelling, as suggested by the Inspector-General in his Report on the accident on the Great Western Railway. The Great Western, London and Birmingham, South-Western, and other Railway Companies, have at once acceded to their recommendations, and it is hoped that in future third-class carriages will be constructed with as much regard to safety as those of any other class.

From the returns made by the different railways, it appears that the following Companies are of opinion, that where luggage waggons are sent along with passenger trains, the waggons should be placed next the engine :—Arbroath and Forfar, Birmingham and Derby, Birmingham and Gloucester, Brandling Junction, Edinburgh and Glasgow, St. Helen's and Runcorn Gap, Midland Counties', Newcastle and Carlisle, North Midland, Stockton and Darlington.

The following Railway Companies place the whole of the luggage waggons behind :—Manchester, Bolton and Bury, Bolton and Preston, Great Western (until the late accident, since when the passenger carriages have been placed in a central position).

And the following place the luggage waggons partly before and partly behind, or have no settled rule, and place them either before or behind :—Great North of England (luggage seldom taken), London and South-Western (about to discontinue taking passengers with luggage trains), Manchester and Leeds, Sheffield and Rotherham (generally before).

Upon the following railways, heavy luggage waggons are never sent with passenger trains :—Glasgow and Ayr, Grand Junction, London and Birmingham, Liverpool and Manchester, Lancaster and Preston, North Union, Preston and Wyre, Sheffield and Manchester.

Until all luggage waggons intended to form part of passenger trains are constructed with buffer springs, axles of the best material, and in all respects as carefully as passenger carriages, there can be no doubt that, whether placed in the front or the rear of the train, they constitute an additional source of danger; in the former case from the increased risk of collisions, and of a break down from an axle giving way, or a part of the loading falling on the rails, as in the case of the accident in August 1840, on the Hull and Selby Railway; in the latter from the disastrous consequences which ensue from a sudden stoppage in front of the train, with a great weight behind, as in the case of the accident on the Great Western.

The only effectual remedy appears to be, that passengers should not be sent by very heavy luggage trains, and that where waggons of any description form part of a passenger train, they should be provided with buffer springs, and have wheels and axles of the best construction.

With regard to the extent of accommodation afforded to the poorer classes by railways, it will be seen from the foregoing table that a large third class traffic is carried on by most of the lines in the manufacturing districts of Yorkshire and Lancashire, in the coal districts of the north, and in Scotland. These lines are in a great measure dependent upon third class passengers, who are conveyed by all or nearly all the trains at fares averaging from 1d. to 1½d. per mile.

The following information respecting the nature of third class traffic upon the Manchester and Leeds Railway, for which we are indebted to Captain Lawes, the Manager of that line, will afford a fair exemplification of the effect of a railway in a densely-peopled manufacturing district.

The Manchester and Leeds Railway passes through or near 15 towns, between which there were formerly several carts, waggons, and vans passing every hour of the day and night, with manufacturing and market produce, of which the humbler classes could avail themselves at a trifling expense of money, and a considerable sacrifice of time. These are now almost entirely swept away, and the maket-people load one or more of the railway trucks among them, paying 3d. or 4d. per ton per mile for their goods, and in many instances less than 1d. per mile for themselves. The effect has been to bring a supply of fruit, fish, and vegetables within the reach of those who could never obtain them formerly, and to afford very great advantages to the market-people and towns.

In fine weather respectable tradespeople, clerks, &c., avail themselves of the third class carriages to a considerable extent; but the great bulk of the half a million of third class passengers who are carried on this railway in the course of the year are strictly the working classes, weavers, masons, bricklayers, carpenters, mechanics, and labourers of every description, some of whom used formerly to travel by carts, but the greater number on foot.

The fare from Manchester to London by railway and steam-boat *via* Hull is 14s., and many of the labouring classes avail themselves of this mode of conveyance, especially during summer. In one respect a remarkable use has been made of the facilities afforded by railway communication. On the occasion of several strikes, when there was a press of work, bodies of workmen have been engaged in London and carried to Manchester, and *vice versa*.

In the case of such a line as the Manchester and Leeds, there can be little doubt that the railway has been a great advantage to the poorer classes; and

Digitized by Google

It may be expected that the interest of the Directors will always prove a sufficient inducement to make them afford every facility for the development of an extensive third class traffic. But upon the long lines, which form the main lines of communication with the metropolis, and upon which there is a great through traffic, the case is very different, and the number of third-class passengers is inconsiderable. The whole number, for instance, of third class passengers carried on the London and Birmingham and Grand Junction Railways, between London, Manchester, and Liverpool, is less than the number carried by the Arbroath and Forfar Railway, and not a seventh part of the number carried between Newcastle and North Shields.

Upon these lines it may be questionable whether the interest of the proprietors will ever induce them to encourage the development of a third-class traffic. It is satisfactory, however, to find that there is a growing disposition among Railway Companies, thus circumstanced, to afford the accommodation of at least one train a-day by which the poorer classes may be conveyed at reduced fares. We are informed that the result of the experiment of running a third class train upon the London and Birmingham Railway has been very satisfactory, the persons who have availed themselves of it having been, with few exceptions, of a class who could not have afforded to pay second-class fares: and it is expected that the number of this class of passengers will greatly increase when the advantages to be derived from the great saving of time are more generally known. It is right, however, to observe, that the advantage to the third class passengers, in point of time, is often not so great as might be anticipated where the links of communication are formed by distinct lines. For instance, third class passengers from London to Manchester or Liverpool are detained at Birmingham from three in the afternoon till six next morning. It would be very desirable if, in such cases, arrangements could be made for securing to the public the same advantages which they would have had if the whole line of railway communication had been one undertaking, and under one management.

OPENING OF NEW RAILWAYS.

The following railways have been opened, or partially opened, for public traffic since the passing of the Act for regulating railways, after having been inspected by order of the Board of Trade:—

Date of opening.	Name of Railway.	Portion opened.
1840.		
October 30	Birmingham and Gloucester	Cheltenham to Gloucester, 6¼ miles.
December 14 ..	Great Western	17 miles.
December 15 ..	Birmingham and Gloucester	Camphill to Cofton, 8 miles; completing the line.
December 30 ..	Manchester and Leeds	8¼ miles.
1841.		
February 1	Bolton and Preston	9½ miles; single line of rails.
March 1	Manchester and Leeds	Summit tunnel, 1 mile 5 furlongs; completing the line.
April 21	Taff Vale	8 miles; single line of rails.
May 31.....	Great Western.....	13¼ miles.
May 31.....	Cheltenham and Great Western.....	13¼ miles.
May 31.....	Bristol and Exeter.....	32½ miles.
June 30	Great Western.....	12½ miles; completing the line.
July 17.....	Ulster	2¾ miles; single line.
July 12.....	London and Brighton	28¼ miles.
July 30.....	London and Blackwall	330 yards.
August 9	Northern and Eastern	7¼ miles.
August 17	Birmingham and Gloucester	Junction with London and Birmingham, 1¾ miles.
September 14..	London and Brighton	13 miles; completing the line.
	Stockton and Hartlepool	13 miles.
October 4.....	Ulster	12¼ miles; single line.
November 11 ..	Sheffield and Manchester.....	7¼ miles; single line of rails.
November 19 ..	Northern and Eastern	4 miles; single line.
November 26 ..	Gosport branch of the London and	
Closed again ..	South-Western	15 miles.
December 22 ..	Bolton and Preston	2¼ miles; single line.
	Total.....	179¾ miles of double rail. 46 miles single rail.

In addition to which, the Edinburgh and Glasgow Railway, length 46 miles, has been inspected, but found not ready for opening.

The Reports relative to the inspection of the first five of the above-mentioned lines, which were opened previously to March, 1841, are printed in the returns to the House of Commons made last session. The Reports on the remaining lines are given in the Appendix to this Report, No. 5, p. 8.

It will be seen from these Reports that one line, the Gosport branch of the London and South-Western Railway, was opened, notwithstanding a Report from Sir F. Smith, stating that, owing to the badness of the weather and the imperfect nature of some of the works, it would be more advisable to postpone the opening, and a recommendation from the Board of Trade to that effect; and that in less than a week's time after the opening it was found necessary to close the line again. It will also be seen that, in a great number of cases, too early a period for opening has been fixed; and it has consequently been found necessary to postpone it from time to time, and finally to appoint a time for inspection before the line was thoroughly completed, and so near to the time of opening as to make it a matter of the greatest difficulty for the Inspector to discharge his duty, and frequently to place the Board of Trade under the necessity of accepting a certificate from the Engineer or Directors of the Company of the completion of works which ought to have been finished before the line was reported to be ready for inspection.

In order to enable the Board of Trade to discharge the duty of ascertaining that no railway is opened until it is thoroughly completed, and in such a state as to warrant the belief that the public traffic may be conducted upon it with the ordinary degree of safety, it appears essential that some more definite power should be given, first, of requiring a sufficient period for inspection to elapse between the actual completion and the opening; secondly, of postponing the opening in case the Report of the Inspector should be unfavourable.

(To be continued.)

UNIFORMITY OF CLOCK TIME THROUGHOUT GREAT BRITAIN.

[From Mr. F. Osler's Lecture at the Birmingham Philosophical Institution.]

Now that railway travelling has become so universal in the kingdom, doing so much to annihilate *space*, the question of *time* became a matter of considerable importance, and he had long been of opinion that some plan must be adopted to prevent the errors and inconvenience of every town in the kingdom setting its clock to a meridian of its own, different to every other place out of the same longitude. To show the extent of the evil to which he adverted, it would perhaps be sufficient for him to state, that there was a difference of 25 min. 28 sec. between the times at Dover and Falmouth; that is to say, when it was noon at Falmouth, it was 25 min. 28 sec. past noon at Dover. There was nearly a minute difference in time between the east and west of London, and about a quarter of a minute difference between the east and west of Birmingham. The Railway Directors had endeavoured to remedy this defect by keeping London time at all their stations; but there was this great inconvenience attending it, that all persons who resided west of London were in great danger of being too late for the trains. On all the time-tables of the Great Western Railway an endeavour was made to remedy this difficulty by printing the correction for longitude. It occurred to him a year or two ago, that it would be a very excellent plan if Government would recommend the adoption of one uniform time throughout the kingdom; and he was happy to find that his friend Mr. Dent had turned his attention to the same subject, and he quite agreed with him that they ought to adopt one meridian as a universal standard and call it "British time." Happening to mention this subject to his friend Mr. Rowland Hill, as a matter of some importance in connection with the Post-office department, he informed him that he had received a letter from Captain Basil Hall, in 1840, on this very point; and as it embodied all that he (Mr. Osler) could say respecting it, he would, with the permission of the audience, read the letter to them. The lecturer here read the letter of Captain Basil Hall. The idea of the adoption of a general standard for time throughout Great Britain originated with the late Dr. Wollaston, who suggested that all the Post-office clocks throughout the different counties should be kept at London time, a measure which he considered might be very easily accomplished, and which would greatly simplify all those arrangements of the Post-office in which time was included as an element. He proposed to regulate all the Post-office clocks in the kingdom by means of the time brought from London daily by the mail coach chronometers; and he had no doubt that, ere long, all the town clocks, and eventually all the clocks and watches of private persons, would fall into the same course of regulation; so that only one expression of time would prevail over the country, and every clock and watch indicate by its hands the same hour and minute at the same moment of absolute time.

RAILWAYS IN FRANCE.

The Chamber of Peers assembled on Monday in their Committee rooms for the purpose of electing a Committee to report on the Railway Bill, brought up from the Chamber of Deputies. This Bill contains—first, a general classification of the lines intended to be constructed; second, a system of execution which imposes on the departments traversed by those railways the payment of two-thirds of the value of the ground to be purchased. It likewise enacts that the Government shall pay the remaining third, together with the expense of the embankment, the execution of works of art and stations, leaving the costs of fixing the rails and the *materiel* to the charge of the Companies who shall undertake to complete them. Third, the allocation of funds amounting together to the sum of 126,000,000f., applicable to the following sections:—

	Francs.
From Strasburg to Hommartin	11,500,000
From Dijons to Chalons	11,000,000
From Marseilles to Avignon.....	30,000,000
From Orleans to Tours	17,000,000
From Orleans to Vierzon.....	12,000,000
From Paris to Lille	43,000,000
For sundry expenses	1,500,000
	126,000,000

The entire plan consists of seven vast lines of the first order, setting out from Paris, and leading, 1st, to the Belgian frontier through Lille and Valenciennes; 2nd, to England by one or several points on the coast, to be hereafter determined; 3rd, to the German frontier, through Strasburg; 4th, to the Mediterranean, through Lyons, Marseilles, and Cette; 5th, to the Spanish frontier, through Bordeaux and Bayonne; 6th, to the Atlantic Ocean by Nantes; 7th, to the centre of France through Vierzon, with a prolongation to be hereafter determined, with a branch to Bourges. And of two lines of the second order from frontier to frontier directed; 1st, from the Mediterranean to the Rhine, through Lyons, Dijon, and Melhouse; 2nd, from the Mediterranean to the Atlantic Ocean, through Bordeaux, Toulouse, and Cette.

MANCHESTER AND BIRMINGHAM RAILWAY.

[From the *Manchester Times.*]

We lately* described the general features of the country through which the railway passes as far as Alderley Edge, and we said sufficient of this interesting locality to show that to the curious traveller, to those who have an eye for all that is great and beautiful in nature, as well as to those bent on recreation merely, it will have attractions, when the opening of this railway shall have given cheap and more ready access to it, during the summer months, which no other place within a reasonable distance of Manchester possesses. We have not by far exhausted the objects of interest which attract attention on the Edge and its vicinity; we might accompany the reader, or rather lead him, to the Holy Well, and rehearse some of the interesting traditionary stories for which it, like the hidden cavern in the rock, is held in awe by the inhabitants of the neighbourhood. We might also speak of Stormy Point and Saddle Bole; but we have the journey to Crewe yet to accomplish, and our time and space will not admit of longer delay. We may mention that the Holy Well is attained by descending an easy winding path leading from the plantations on the south-easterly side of the beacon. It consists merely of two small stone troughs placed under the overhanging rock from which the water filters into them. The water is beautifully clear, but insipid; yet, notwithstanding our guide's commendation, "that it is the best in all Cheshire for mixing with gin or brandy!" we cannot disguise a suspicion that there are times of the year when the roots of the hollies (the trees by whose thick foliage the well is shaded) which cling round the rock, and, having found a lodgment in its crevices, must give a taste to the water, and destroy its purity. The rock above it is one of those spots we mentioned last week as giving such a splendid view of the surrounding country, and is on this account partly, and partly on account of its vicinity to the well, and being well shaded from the sun, selected by pic-nic parties to assemble upon for refreshment. A few rude seats have been constructed under the spreading trees which crown this elevated place, and it is altogether well adapted for the purpose. Before leaving the Edge we may here revert to the fact we have before taken occasion to notice incidentally, that some 30 years ago a Company were induced to bore here for copper, cobalt, and lead, and a smelting furnace was erected with a view of establishing permanent works here; but a short trial led to the conviction that the ores were not found in sufficient abundance to render the working profitable. Traces of the miners' presence may be found on several different parts of the Edge, and in one place in particular the wide mouth of a cavern where they have bored to some depth seems to have attracted the curiosity of visitors to explore its hidden mysteries. Some of these visitors have had the curiosity to provide themselves with candles apparently, which, if they have afforded no other gratification, have furnished them with the means of inscribing their names, with the smoke from the burning wicks, on the rock which forms the roof of this subterranean place. The cavern is ornamented at the mouth, and for some yards down the incline, with circular pillars, formed of the rock, which have been probably left as a means of supporting the roof, by the workmen who excavated here for the sake of the ore. Alderley Edge will, on these accounts, have some attractions for the geologist as well as for the ordinary traveller. We have been told there is also a fine development of the red sand-stone formation somewhere in this vicinity, which will be an object of interest to the geologist.

We resume our journey along the line of railway. Leaving Alderley Edge behind, and bending our course towards Crewe, the next object of attraction is the neat little church of Alderley, with its lowly and unpretending tower, situated about a quarter of a mile to the east of the railway, and built of a greyish stone, which gives to its time-honoured walls an appearance of rusticity in keeping with the adjoining landscape. Without staying to notice it further than to observe that its walls have weathered the storms of some six centuries, we leave it with its handsome rectory-house peeping from behind across the rich glebe, and pass on to Soss Moss Hall, situated but a little further on, and also to the east of the line. This is an ancient brick and timber mansion, formerly the seat of the Wyches, of Davenham, a family once of some note in Cheshire, but now, we are told, it is the property of Lord Stanley, of Alderley, into the possession of whose family it fell somewhere about the middle of the last century. It is at present the residence of Mr. Randle Baskervyle. In the back-ground of the landscape is Alderley Park, but the hall is not seen from the railway.

About three miles or three miles and a-half from the Alderley station we come to the commodious station erecting at Chelford. The village of Chelford lies about a quarter of a mile from the line, to the east, and the road from Knutsford to Macclesfield, which runs through the village, crosses the line at a considerable elevation, close by the station. Macclesfield is situated at a distance of only about 7 miles from this station, and Knutsford is distant 4½ miles.

The line leaves Chelford on a slight embankment, and the ride is pleasant, but the country is too thickly wooded to give an extensive prospect from the carriage windows. Here we pass near Astle Hall, formerly the seat of the Astles, but at present the residence of John Dixon, Esq.,; and a little further on to the right of the road from Middlewich to Macclesfield, which here crosses the line, is Withington Hall. Old Withington was formerly a seat of the Fittons, subsequently of the Baskervyles, from whom it descended to the Gleggs of Gayton, in Wirrall, and a member of the latter family (John Baskerville Glegg, Esq.,) now occupies the Hall, which is a spacious and handsome modern erection surmounted by a dome. Withington Hall is about half-a-mile to the east of the railway, and about two miles beyond Chelford station. We soon afterwards cross the river Peover, on a noble viaduct of 10 arches, which from its elevation gives a splendid view down the vale to the east, and we catch a glimpse of Mow Cop, Shutlingalow Hill, and of Cloud End, near Congleton, on the verge of the horizon; but to the west the prospect is confined, by the high banks and woody nature of the country, to the tortuous windings of the river. The Peover is a very inconsiderable stream, and in its deep valley here assumes the appearance rather of a ravine than of a water deserving the mere dignified appellation of river. It runs through Over and Nether Peover a short distance from here, but Peover Hall, the seat of Sir H. M. Mainwaring, Bart., though only about a mile to the west of the viaduct, is not seen from the railway. Near the line not far from hence is Jodrell Hall, the residence of Egerton Leigh, Esq. It is situated on Blackden Brook, upon which the railway emerges from a deep cutting of nearly half-a-mile in length, beginning near to the Peover viaduct. This is about 3 miles from Chelford. About a mile further on, to the west of the line, Goostrey church is seen, and not far from here the line passes near to Twemlow Hall. Twemlow Hall, formerly the seat of the Croxton family, and subsequently of the Booths, is now the residence of Thomas Booth, Esq. It is a very ancient mansion, situated on an eminence overlooking the vale of the Dane. A little more than half a mile further we come to one of the greatest works on the line—we speak of the noble viaduct across the Dane, near Holmes Chapel.

Reverting for a moment to the part of the line over which we have just passed, we may just observe that it runs through a locality, like that of Wilmslow, fraught with deep interest to the antiquary—one of the old Roman roads being supposed to have run through this neighbourhood from Kinderton Camp. Many traces of it are said to have been found in the neighbourhood of Old Withington, Twemlow, and Chelford, in the shape of old tumuli, Roman urns, &c., and it is supposed to have crossed the river Peover near Chelford. A Roman urn is said to be in the possession of the Stanley family, many years since found at Birtles, through which place the road after leaving Chelford would probably pass.

The river Dane, over which the line passes near Holmes Chapel, and which rises near the junction of the three counties of Derbyshire, Staffordshire, and Cheshire, at the Three Shire Mears, has here attained a considerable width. It runs through a deep vale, though the steam itself is but shallow, and consequently the railway has to be carried over it at a considerable elevation. The viaduct consists of 23 arches of about 69 or 70 feet span each, and consequently is nearly the third of a mile in extent. The height, from the surface of the water to the parapet, is about 95 feet. It is a fine substantial erection, chiefly of brick, but having stone for the basement, string courses, and parapets. The contractors by whom it was erected are Messrs. Tomkinson and Holme, of Liverpool, the builders of the Stockport viaduct. A noble prospect down the vale, in either direction, will be obtained here from the carriage windows. Near to the viaduct, on the west, is the Hermitage, the residence of the Rev. John Armiestead, rector of Sandbach.

The little town of Holmes Chapel lies about a quarter of a mile to the right or west of the line, a few hundred yards beyond the viaduct. The town is famous for nothing that we are aware of except its old church, surrounded by a row of stunted and disfigured elms, and the miserable accommodation of its inns.

Beyond Holmes Chapel, the next place of any note through which the line passes is Bradwell. Bradwell, or Bradwall, was the seat of a family of the same name as far back as the time of Edward III., but subsequently it passed to the Venables or Vernon family, in whose possession it continued down to the beginning of present century. The Hall, which for many years past has been the residence of John Lathom, Esq., M.D., of London, is situated only a few hundred yards east of the line, but owing to the depth of the cutting through which the railway here passes it is not discernable from the carriages. The line passes for several miles through this estate. On the same side of the line, a little beyond, is Elworth Hall, another ancient mansion, once in the possession of the Bradwalls. It is now the residence of John Plant, Esq., in whose family we are told it has been for a couple of centuries past; and on this part of the line also we pass near to another noble mansion—Brereton Hall, built, as the date over the door informs you, in 1586; and near to it was once situated the famous mere immortalised by Drayton, who, in reference to an ancient legend that, when an heir of the family was about to die, an omen generally appeared in the form of some huge tree cast up from its bed, says—

——— "that black ominous mere
Accounted one of those that England's wonders make,
Of neighbours, Blackmere named; of strangers Brereton lake;
Whose property seems farre from reason's way to stand,
For neare before his death that's owner of the land
She sends up stocks of trees that on the top doe float;
For which the world her first did for a wonder note."

Bagmere, however (its proper name), is no longer gifted with these prophetic powers: it has long since been drained and turned into pasture land.

About four miles from Holmes Chapel we come at Booth-lane Head, under the road leading from Middlewich and Holmes Chapel to Sandbach, where a commodious station is erecting. The line here is in a deep cutting, so that Sandbach will not be seen from the carriages. This ancient town lies east of the railway about a mile. Though out of sight, however, we may be permitted to make a passing observation, and especially we may mention—as an object of curiosity which those who have seen never forget to speak of—its old Saxon crosses, the inscription on one of which it used to be said "required the reader to be hung heels upwards to decipher!" We may suppose the saying originated from the letters being inverted. If they were difficult to read on this account, we may conceive they have become much more so on account of being

* See *Railway Times*, April 30.

Digitized by Google

much defaced, but the inscription is pretty faithfully handed down by memory, and as we shall have excited curiosity we may as well give a copy of it:—

"In Sandbach in the Sandy Ford,
Lieth the ninth part of Dublin's hord;
Nine to, or nine fro,
Take me down, or else I fall?"

There is an old story, popular hereabout, that the former part of the verse referred to a sum of money hid in the neighbourhood, and it is supposed to have been found near the ancient ford alluded to. Sandbach, however, is not alone famous for its ancient crosses, but is mentioned by one of our old historians as celebrated for its "nappe ale"—"our ale here at Sandbach [he says] being no less famous than that at Derby for a true nappe, and I have heard men of deep experience in that element contend for the worth of it, that for true dagger stuffe it should give place to none." It is well for the traveller perhaps in these teetotal times that he can pass a place noted for such potent beverage at railway speed!

The part of the line we have just passed over, especially the locality between Booth-lane and Elworth Hall, like the part of the country through which the railway crosses previously, has been the subject of much antiquarian research, on account of the many memorials said to exist of the presence of the Romans here in past ages, and some curious facts relative to it are mentioned in the able History of Cheshire, given by Mr. George Ormerod.

From the Sandbach station, the line runs for a considerable distance through a heavy cutting, from which it emerges near a place called the Rookery, where it for a short distance runs parallel and ultimately crosses the Grand Trunk Canal. From thence to the end of the line (about three miles) the only objects of interest we notice are Bradley Hall, an old brick and timber mansion of the Elizabethan order of architecture, and a noble embankment of two-thirds or three-quarters of a mile in length, which from its altitude gives a fine view of the country. This embankment commences at the Rookery, and in some places is from 40 to 50 feet high. In the course of the embankment we come to a noble viaduct over the river, the Wheelock, consisting of seven arches, near the little village of Elton. The prospect on either side the embankment stretches for many miles, giving a view of the Shropshire and Welsh hills on one side, and of the Cheshire and Staffordshire on the other. Amongst the latter are particularly distinguishable the eminence near Congleton, called Mow Cop, and further to the right, almost in the direction the railway points, Wolstanton (or, as it is singularly called by the people thereabout for shortness,—Hooseton)—its fine church spire clearly distinguishable even at this distance; and Talk-o'th'-Hill. If the reader should have occasion to travel in the night along this line, he will also have a view to the east of the railway of the new iron works opened near the Potteries, in Staffordshire, by Lord Robert Grosvenor, and also those of Mr. Tomlinson, to which the eye will be readily guided by the red glare of their furnaces.

We have now arrived at Crewe, however, where the line gently curving to the left runs up alongside the Grand Junction, and here, for the present, ends our journey.

The total length of the line from Manchester to Crewe is 30 miles and 54 chains; from Stockport to Crewe, rather more than 25 miles.

The Company are erecting a commodious station at Crewe, with sheds for carriages, &c., nearly opposite the premises of the Grand Junction. Speaking of the line at the time we went over it, (Saturday week) we may say that it was generally in a state of forwardness, the permanent rails being laid on the greater part of the line, except in a few places, for short distances, where the embankments were heavy, and even there one line was ready in a few days afterwards, so as to allow the Directors to take a trip over with an engine and train. The workmanship has all been executed, seemingly, in the best manner, and there is generally an appearance of solidity and breadth both about the cuttings and embankments, which gives a character of respectability and permanence to the works. We were told that engines had been employed on the principal embankments, in drawing the soil, and they had consequently been frequently subject to a heavy weight, and will not be likely, now completed, to slip or give way to any extent.

We have, in the course of our notice of different portions of the line, mentioned the magnitude of the principal viaducts as accurately as we could arrive at their dimensions when passing over the line itself. The section of the works in the offices of the Company varies slightly, and for the sake of accuracy we shall go over them again. According to the sections in question, the viaduct across Ladybrook consists of seven arches, each 30 feet span; the Dean viaduct, ten arches of 30 feet span each, and two of 18½ feet span; the Bollin viaduct, nine arches each of 49 feet span, and 65 feet high; the Peover viaduct, nine arches, each 40 feet span, and 70 feet high; the Dane viaduct, twenty-three arches, each of 63 feet span, and 88 feet high from the bed of the river to the level of the railway; the Wheelock viaduct, seven arches, of 34 feet span each, and 50 feet high from the bed of the river. In mentioning these, we are not in possession of sufficiently accurate particulars of the viaduct over the Blackden brook (near the Peover;) but though this is accounted one of the smaller works of the kind on the line, it has not been accomplished without difficulty, the right of road having to be preserved across it, and consequently the viaduct runs at a sufficient height to clear both.

The inclines on the railway are extremely slight. The line leaves Stockport on an ascent of 8 feet in the mile, or 1 in 660, through the tunnel, which is 297 yards long. This is succeeded by an ascending incline of 12 feet in the mile for about 40 chains. The two succeeding inclines are of 6 feet and 12 feet in the mile, both on the ascent, and are succeeded by 133 chains of level road, beginning near the Dean viaduct and continuing to Wilmslow. Beyond this the line again ascends, and we have an incline of 6 feet per mile (or 1 in 880) for 184 chains. At Nether Alderley we have the first descent, the incline from thence being 14 feet per mile for about 100 chains, and is succeeded by a short incline of 4 feet per mile, or 1 foot in 1,320. The line runs on a level over the Peover for a distance of 130 chains, and then there is a further descent of 8 feet per mile for 80 chains; 40 chains of 10 feet per mile, and a further incline for 130 chains, still descending, of 16 feet per mile (or 1 in 330) which brings us across the Dane viaduct to near the station at Holmes Chapel. Here there is an incline of 20 feet per mile (or 1 foot in 264) for 40 chains, which is the heaviest gradient, with one exception, on the railway between Stockport and Crewe. The exception is a descending incline which occurs between the Rookery and the Wheelock, where there is a length of 95 chains inclining 20 feet per mile again. The principal of the other gradients between Holmes Chapel and Crewe are two ascents of 10 feet in the mile. The last 37 chains, running into Crewe, are on the level. The heaviest gradient, it will be seen, does not approach the Sutton incline on the Manchester and Liverpool line, and therefore, it may be presumed, will offer little obstacle to the speed which it may be desirable to attain on the journey. Indeed so trifling are these inclines when seen by the unpractised eye, that it is probable the reader in traversing the whole length of line on foot would not detect a single portion of it which he could positively assert was not a dead level.

Of the towns on or near the line beyond Stockport there are few of any note as regards traffic, if we except Macclesfield and Congleton; the former being about 7 miles distant from the line at Alderley or Chelford, and the last-mentioned town about the same distance from the line at Holmes Chapel. The Company, it was stated at the last meeting of the proprietors, had engaged with a coach proprietor to coach the distance between the nearest station and Macclesfield at reasonable fares, and in a reasonable time. Of the traffic to Congleton we have heard nothing said, but it is probable, if worth anything, there will be some similar mode of conveyance opened in conjunction with the Company.

From the notice we have now given of the line, and in our late number, it will be seen that the vales of the Dean, Bollin, Dane, and Wheelock, and the eminence of Alderley Edge, present views of the principal scenery on either side it, the character of a great portion of this part of the county being level, and two thickly wooded for extensive and commanding landscapes. Though flat and uninteresting in many parts, however, Cheshire has latterly been a county in which invalids have often sought refuge from the impure atmosphere of our crowded towns, and the new railway will doubtless offer additional facilities to those bent on "rusticating" for a short time in that quarter. It has generally been noted for healthfulness and longevity, if that were any recommendation, and an historian, writing of it about two centuries back, says:—"The healthfulness of the climate is such that they (the inhabitants) need little physic, for when any of them are sick, they make but a posset and tye a kerchief on his head, and if that will not amend him, then God be merciful to him!" And again: "The people live till they be very old—some till they be grandfathers, their fathers being living—and some are grandfathers before they be married!" Preferring that the grave historian should himself be consulted for the meaning of this last assertion of his, we now come to the end of our preparatory notice of the opening of the "Manchester and Birmingham Railway."

GREAT WESTERN RAILWAY.—The travellers on this line will be glad to learn that immense numbers of men are now employed on it, from Bristol to near Paddington, in many instances appearing at every mile or two, investigating, correcting, and repairing even the smallest sinkings or irregularities that may have resulted from the newness of some of the works, earth or embankments, or from the late severe and very trying winter. And they are particularly attending to projecting stones in cuttings—removing those, for instance, between Bristol and Bath heretofore *propped* up, and entirely removing some partial landslips; cutting drains for land-springs, &c.; all useful and commendable works, and proper to give the completest confidence to travellers. The traffic on this line has rapidly and surprisingly increased. The last weekly return gave the amount 11,958*l.*, and the previous one 11,033*l.* The third-class carriages on the Great Western Railway (goods train) are now made on an improved and more comfortable plan. The sides are four feet high, and with doors on each side, so that they are better closed, and protect passengers from high winds.—*Oxford Herald.*

—o—

NEWCASTLE AND NORTH SHIELDS RAILWAY.—The Directors, with their usual attention to the accommodation of the public, have formed a footpath from their station at Shields through fields leading to the New Quay, thus not only affording an agreeable walk, but considerably shortening the distance for the numerous parties from that part of the town and South Shields travelling by this railway.—*Newcastle Courant.* The mail-bags to and from Newcastle will hereafter be conveyed by the railway. This alteration, which was to commence on the 6th inst., it is expected will gain an hour in the delivery of the letters in that town and neighbourhood. There will be two mails a day from Newcastle and North Shields, and bags will be left and taken up at Carville and Howdon.—*Newcastle Chronicle.* A commodious store-house is in course of erection at the Percy station, North Shields, to warehouse corn and other merchandize, arriving by the Newcastle and Shields Railway. This depot was much required, and will prove a great convenience to the collieries, and persons in business near the locality.—*Gateshead Observer.*

PROPOSED RAILWAY ACROSS MORECAMBE BAY.

(From the *Cumberland Pacquet*).

THE projected west coast line of railway from the banks of Morecambe Bay to Whitehaven is being prosecuted with more vigour and determination than is generally we believe credited. In the course of the past week two gentlemen from London were in this town conferring with the leading inhabitants of the place on the subject, and possessing themselves of such information as may aid them in carrying out the grand scheme. We may state that they are very sanguine of the final accomplishment of the measure, and that too at no distant period; whilst on the other hand they are equally confident that the projected line from Lancaster through the mountain passes of Westmorland will never be accomplished. Admitting the practicability of constructing a line in that direction, the sum required for its accomplishment would be so enormously great, that they regard it as next to impossible that it could ever be raised. This is precisely what we have all along contended; and still further, we maintain that during snow storms any railway over Shap Fells would be impassable for many days in succession, and, therefore, could never be relied upon as the great mail line of communication between the English and Scotch capitals. With regard to the coast line our opinion has long been before the public, and we may remark that it has undergone no change. The face of the country over which the line is laid down is level, free from engineering difficulties, and consequently a railway would be easily constructed at a very moderate cost. Thus much until we come in contact with the sea at Duddon, and those sands are so very narrow that we apprehend there would be no great difficulty or uncertainty in forming an embankment across them. And then again with regard to local traffic upon the line, it would be immense, whilst that upon an inland line might be set down a blank. Hitherto all the advantages are in favour of the coast line, but the great drawback has yet to be stated, and if there be no other mode of surmounting the difficulty than that which the projectors and advocates of the scheme point out, it is, in our estimation at least, even more fatal than the obstacles we have enumerated against the Shap Fell line. We hardly need observe, that the great stumbling block on the coast line is the crossing of Morecambe Bay; and though Mr. Hague, in his wild and visionary theories, set the task at naught, we suspect there are greater difficulties in the way of its accomplishment than was ever dreamt of in his philosophy. Mr. Stephenson, it is true, pronounced the crossing of the bay practicable, but it must be borne in mind that his crossing was several miles further up the bay than where Mr. H. offered to go across. * * * The mode of crossing the bay contemplated by those who are at present urging forward the great undertaking, and which we cannot but regard as fatal to it as a national line, or as *the* line of communication with the north, is this: steam vessels are to be used in crossing the bay from Pile to Fleetwood, and to be so constructed that the whole train—engine, tender, trucks, carriages, and luggage vans—may be run on board, and steamed across the bay, which under ordinary circumstances may be accomplished in about an hour and a half. Having thus reached Fleetwood, the whole train is to be launched upon the Fleetwood and Preston line, and so proceed to its destination—the work of embarkation and debarkation to occupy no more than some four or five minutes at the utmost. Such is the way in which this not unfrequently turbulent arm of the sea is proposed to be crossed, and which, to our minds at least, is fatal to the project as an efficient line. In addition to the obstacles which present themselves in the mere crossing of an estuary under such circumstances, it must be borne in mind, that for several hours every day, owing to the state of the tide, the bay is not navigable, a circumstance we apprehend which would operate as another formidable drawback to its ever becoming the leading mail line between England and Scotland. Having thus briefly glanced at the present views and intentions of the great advocates of the measure, we will drop the subject until next Tuesday, merely observing in conclusion, that the persons at present engaged in the matter entertain not even the remotest doubt but that the project will be ultimately accomplished.

(From the *Whitehaven Herald*).

The merits of the coast line of railway have been so frequently discussed, that it can hardly be necessary to enter upon them at the present time. It is admitted on all hands that there never was a railway projected in England, of the same length, so free from engineering difficulties, or which could be more easily and expeditiously executed, or at less cost, if we except the crossing of the estuary at Duddon. It is admitted again that the traffic of all kinds would be immense; whilst the only objections of any weight that have ever been urged against it were the cost of crossing the Duddon, and the impossibility of embanking Morecambe Bay. Now, with respect to the former, it is generally understood and believed in well-informed quarters, that the Duke of Buccleugh, the Earl of Burlington, and Lord Lowther, have entered into an agreement to embank the Duddon at their own expense, sharing, no doubt, the vast tract of land that will thus be reclaimed. Should the report of this agreement be correct, one of the objections to the proposed line will be at once removed; and even should no such agreement have been entered into, the sands at Duddon are so narrow and the bottom so firm, that, in the opinion of the most experienced engineers, neither the cost nor the difficulty would be great in running an embankment across them.

With respect to Morecambe Bay, it is proposed, as our contemporary has stated, that steam-vessels of a peculiar construction shall be used in crossing it; but it is not proposed, as he says, that "engine, tender, trucks, carriages, and luggage," shall be run on board, and steamed across the bay. Those carriages only which contain luggage and goods are to be so run on board. The passengers will cross in steamers in the usual way; whilst the water will be considered as the terminus for the engines on each side, whence they will return north and south with the trains proceeding in those directions. The luggage carriages are to be steamed across in order to avoid the trouble, delay, and inconvenience that would arise to passengers, had their luggage to be transferred from one vehicle to another. Piers will be so constructed on both sides of the water, that passengers may embark and disembark with the greatest facility.

Yet, still our contemporary fancies he sees, in this mode of crossing the bay, two disadvantages "fatal to the project as an efficient line." We say he *fancies* he sees these disadvantages; for, as his objections are founded on erroneous data, his conclusion must be equally so, and we are glad that we have it in our power to set him right. In the first place, he says, "it must be borne in mind that for several hours every day, owing to the state of the tide, the bay is not navigable." Now, we must inform our contemporary, that in that part of the bay where it is proposed to cross there is seldom less than SIX FEET of water, even in summer, at the lowest ebb; and that it must be a very low tide indeed when the steamers cannot cross at *low water*—such an one as will not probably occur more than once or twice in a year. He is also mistaken as to the time in which it is expected the steamers will be able to cross the bay: it is calculated they will be able to accomplish the voyage in *three-quarters of an hour*, and not an hour and a-half.

It will thus be seen that the great objection to the coast line of railway, namely, the difficulty of crossing Morecambe Bay, is in a great measure obviated, if it be not altogether removed; and when we state, on what we consider to be good authority, that an engineer employed by the noblemen we have mentioned, is at present surveying Duddon Sands, and that a Bill for their embankment is intended to be introduced into Parliament simultaneously with the Railway Bill, we think our readers will agree with us, that there is now a reasonable prospect that this great undertaking may at no very distant day be brought to a completion.

The question is not, in our opinion, whether the coast line of railway is or is not free from objections, but whether another line more free from objections can be pointed out. The question is clearly one of comparison; and as the Lune line appears to be given up as entirely hopeless, the choice must of course be made between the West Cumberland line and that proposed to be carried over Shap Fells. It is between these two competing lines that the House of Commons will be called upon to judge, and, for our own part, we have no fear of the result. The many difficulties to be surmounted in constructing the Shap line—the enormous sum that would be required to complete it—the improbability of such a sum being raised—these are considerations which force themselves upon the mind of every one, and will no doubt have due weight with the House of Commons. In short, we consider that the coast line has every conceivable advantage over the other, and have no doubt whatever that it will be *the* line finally adopted.

THE LATE ACCIDENT ON THE VERSAILLES RAILWAY.

[From the Paris Papers of Monday.]

ON Friday morning were deposited and arranged with the minutest care, in one of the rooms belonging to the registry of the tribunal at Versailles, a great number of articles taken from the ashes of the late fire—such as gold, silver, and copper money, watches, spectacles, rings, brooches, gloves, handkerchiefs, shawls, umbrellas, parasols, canes, &c. Many are in a state of fusion, others blackened by the fire, and otherwise much damaged.

Out of 27 bodies which remained exposed in the cemetry of Mont Parnasse on Friday, five were recognised before it was closed for the night. They were M. Paul de Gioville, of the rue Tronchet, who was discovered by his brother General Montgarde; M. Lepontois, of Lorient; M. Lepontois, of the rue St. Andre des Arts; M. Auguste Lems, jun., of the Place Belle Chasse, and a young woman named Edzer, of the rue de la Vielle Draperie. There have been two more deaths at the hospitals—viz., a Mme. Vaillant, in the rue de Bretagne, and M. Serus, who was registrar of the justice of the peace at Toulon.

The engineer who was thrown to a distance by the commotion of the locomotives in the late accident, and whose name has not been given, was Hector Guerpin, a youth of 18. He was in the second locomotive, and was thrown amongst the waggons which were on fire, but was rescued by some young men who were at hand. He was, however, deprived of reason by the shock that he had undergone. Owing to the care and attention of the medical men who have attended him, he has recovered his reason, and is now able to relate the circumstances of the horrible catastrophe of which he was a witness.

A journeyman locksmith escaped (says the *Globe*) unhurt, but his mind was so affected by the shock, that, since his return to the workshop, his reason has departed, and he has not uttered a single word. He works on continually, doing as much in one day as he formerly did in several.

The locking of the doors of the carriages on the Versailles and Meudon Railway has been discontinued, and handles have been attached, which the passenger can turn at will, so as to facilitate escape in case of danger. Between the locomotive and the first carriage containing passengers are placed carriages containing baggage, and all the locomotives have six wheels.

In consequence of the accident, the Saint Germain and Versailles Company has taken fresh measures for adding to the precautions already observed in the service of the railway. The number of locomotives hitherto in use has been 45 with six wheels, and six with four. The council has decided on suppressing the latter until the doubt which has been raised as to their safety shall be cleared up. The Company has written to Marshal Soult, requesting him to authorise the head Engineer of the Company to enter into communication with

Digitized by Google

the Committee of Artillery "to examine, in union with them, into the best means of adding, if possible, fresh improvements to the various objects used on the line, particularly the axletrees of locomotives." A new steam-whistle of a peculiar sound has been added to all the engines, to give intimation to the conductors when to tighten the breaks, in order to stop the trains, or diminish their speed. Goods and luggage, which hitherto were attached to the end of the train, are for the future to be placed between the waggons and the tenders. Although the private regulations of the Company for fixing the rate of speed may be considered as efficient, as 9,064,364 persons have been carried on the line since its opening without any case of death or severe injury having occurred, yet, as a prudential measure, a diminution in the rate of going has been prescribed. The most watchful attention has been commanded for the breaks and the *materiel* in general, and the strictest care has been ordered to be paid to keeping it in perfect condition. In the present state of excitement it may be well to observe, that there have been conveyed on the Belgian lines from May, 1835, to December, 1841, 11,702,676 travellers, and that, out of this great number, only two persons have perished in actual railway accident. The distance passed over in Belgium was, in 1840, 295,296 leagues, and, in 1841, 362,157; making a total of 637,433 leagues. On the St. Germain and Versailles line the number, in 1840, was 126,746 leagues, and, in 1841, 154,863, giving 282,609 leagues in all. This gives for the Companies in the two countries a distance of nearly a million of leagues for the two years, and a transport of passengers almost amounting to 21 millions since the opening of the lines.

The Minister of Public Works has, upon the recommendation of the Commission on Steam-engines, just ordered the following provisional measures relative to railways:—

Art. 1. The use of four-wheeled locomotives for the transport of passengers is interdicted.

Art. 2. The placing at the head of a train, before the locomotives, either a four-wheeled tender, or any other kind of four-wheeled carriage, is prohibited.

Art. 3. Locomotives must always be in front of the trains, and never behind. This order is never to be departed from except for the arrangements (manœuvre) in the neighbourhood of stations, and in cases where a train being stopped by an accident the locomotive in aid may be brought from behind, if there be no crossing to permit its passing in front. In these two special cases the rate of speed of the train must never exceed 20 kilometres (about 12½ English miles) per hour. In all cases it is interdicted in an absolute manner to place a passengers' train between two locomotives, one acting in front and the other behind.

Art. 4. Until a better means of diminishing the effect of shocks and collisions shall have been ascertained and prescribed, there must always be at the head of each train composed of five carriages, at the utmost, at least one carriage without passengers, and at least two when the number of carriages in the train exceeds five.

Art. 5. The passengers' carriages are not to be locked.

Art. 6. The Railway Companies are to have registers of the state of service of all their locomotives. Upon these registers, which are to be constantly kept open, there shall be a special description of each axletree; and by the side of the number affixed to each, with the date of its being first brought into use, shall be inscribed an account of its service, and the work it has to perform.

Art. 7. An order of the Prefect shall fix for each railway the minimum of the interval which is to elapse between the departure of two consecutive trains. These orders are to be submitted for the approbation of the Minister of Public Works.

Art. 8. Upon the Paris and Versailles railway, on the right and left banks in coming from Versailles to Paris, the rate of speed at no part of the line shall exceed ten metres per second, or 36 kilometres (about 22½ miles English) per hour.

Independently of the above measures, which are to come immediately into operation, the Minister of Public Works has charged the Commission on Steam-engines to inquire.

"1st. Whether from Versailles to Paris, and generally on strong inclinations, it would be proper to permit the use of more than one locomotive at a time; and in cases where it may be permitted, to ascertain the conditions to which such permission should be subject.

"2ndly. To inquire into the means which may be proper to prevent the projection of the burning matter from the locomotives."

A special Commission is also about to be appointed immediately, to make inquiries and experiments.

"1. As to what improvements may be made in the manufacture of axletrees for locomotives, on the changes which these axletrees undergo from use, and the time after which it is requisite or desirable that they should be replaced by new ones, and the proofs they ought to be subjected to. 2. On the means to be employed in lessening the risk and effects of shocks and collisions on railways.

[From the Paris Papers of Wednesday.]

Chamber of Peers, Sitting of May 17.—The President took the chair at half-past one o'clock.

The order of the day was the explanations demanded respecting the police of railways.

Prince de la Moscowa—The Chamber, in authorising the explanations which he had demanded, respecting the deplorable event that had lately afflicted the capital, had shown that it participated in the interest which actuated him. He was of opinion that the lamentable disaster at Meudon was of such a nature as to be worthy of being brought before the notice of the Chamber, for he felt convinced that it would not let any occasion escape of manifesting its sympathy for the cruel misfortune which had struck so many persons. He was aware that the Government had ordered an inquiry to be instituted, but nothing had, as yet, been communicated to the Chambers. Nothing had been done to calm down public opinion, nor to quiet the alarm which the late catastrophe had excited. He did not mean in the most remote manner to place the responsibility of that event on the Government; yet, when the regulations which it had published respecting railways were examined, it was impossible not to see that a vast number of matters had been altogether omitted. Thus, all their apprehensions seemed to be directed towards preventing the explosion of boilers. Nothing was said about axletrees, nor the modifications which iron might be subject to after long use. It had been long known that on lines where small curves were impracticable locomotives with three axletrees were far preferable to others. Not a word of this was spoken of in the regulations. How did it happen, also, that nothing was said about interposing between the locomotive and the train some elastic substance, which, on a sudden stop, might deaden the shock. There was a point, too, on which the Company and the police were opposed to each other—he alluded to the shutting of the doors outside. Last year, in consequence of an unfortunate event, the Prefect of Police gave an order, which was adopted by the Left Bank Company, whilst the other line to Versailles refused to acquiesce in the order. What could be said of a regulation determined on with so little consideration, and abandoned with so much levity? He thought that the advantages and disadvantages of this practice were worthy of the most mature consideration. All that he had heard on railway subjects tended to prove that the police regulations were incomplete and inadequately studied. Full attention had been paid to the police of diligences, as if the score of persons shut up in a public vehicle on common roads were of more importance than the six or seven hundred in a railway train. He conceived that a Bill ought to be introduced on the subject, and the Government seemed to be of the same opinion, as the Minister of Public Works had in the other Chamber declared that the subject of railway regulations was under consideration. All the accidents which had occurred in steam navigation had proceeded from the boiler bursting, but on railways such a case was unknown, and yet all the regulations had been enacted to prevent explosions. It being, therefore, indubitable that railway regulations were incomplete, he requested the Government to declare what it intended doing on the subject.

The Minister of Public Works.—A dreadful disaster has cast a sort of stupor over the people's minds, and placed a number of families in affliction. The Government had not thought that any immediate and official communication in the Chamber was demanded of the subject, but it had considered it to be its duty to order at once all the prudential measures to be adopted that experience could suggest to prevent similar accidents. He could with truth declare that, since the day of the fatal accident, the Government had not ceased a single moment to give their utmost solicitude to the question. They did not conceal from themselves with how many difficulties the subject was attended, and it appeared to him that those difficulties were esteemed too lightly when the Government was called on to offer explanations. The Hon. Minister here entered into a history of the progress of steam power since its introduction into France in 1803, and of the different means of safety adopted from time to time, down to the present day. The greater part of the Chamber, said he, in continuation, were more or less exactly informed of the numerous measures of precaution which were employed in the construction of steam carriages, and the organisation of the railway service. Independently of the active surveillance exercised by the local authorities, a head engineer proposed by the central administration was attached to each railway, to see in person that every necessary care was given to the various branches of the service. As to the late sad accident, he had to state that a strict inquiry was then going on respecting it. It would not, he thought, be proper to enter into detals, which might exercise some influence on the decisions of justice should civil actions be instituted. The very moment the event was known the inquiry had been ordered; it had gone on since without intermission, and he seized on that occasion to declare that nothing could exceed the zeal and devotedness exhibited by the magistrates, who were called on to arrive at the facts, and to ascertain the causes of the accident. The sad catastrophe alluded to would be a salutary warning to the Company, and the Chamber could not doubt but that they would profit by it. After long and laborious discussions certain measures had been proposed by the Company to him which he had published. These were of a provisional character undoubtedly, but it was necessary to provide for the cases that seemed most urgent—for those, in fact, which the state of the public mind required. As to the several points which the Prince de la Moscowa had touched on, they should be replied to in succession. And, first of all, was it useful to have the waggons shut or open, so as to leave travellers at liberty to go out when they pleased? The late event seemed to decide in favour of the negative; and yet it must be evident to every one that the facility of passengers opening the doors at their own pleasure was attended with danger. A medium should, therefore, be adopted, whereby, while the risk of accident during the passage might be guarded against, there should be the utmost promptitude afforded for giving egress in cases of need. The point was undergoing examination, but had not been yet decided upon. The next question, whether engines with four wheels should be used, was still under investigation and undetermined. In England and America these locomotives were still in use, but from the late accident having arisen from the breaking of an axletree, the general impression was that they ought to be discarded. Whether trains ought ever to be drawn by more than one locomotive was a question deserving the most serious inquiry, and was under the most minute and accurate consideration. There was no intention of deferring a decision to an indefinite period, for he felt that a most heavy

Digitized by Google

responsibility rested upon him. He might, however, say that he entertained hopes of preventing a recurrence of such serious disasters as that they had to lament. A fourth question as to the distance of time between the departures of the several trains was likewise under consideration. In reply to an observation from the Viscount Dubouchage, that no answer had been given to the question whether the Prefect of Police had not issued an order to the Paris and Versailles Railway Company to keep the doors of the waggons fastened, but which had not been complied with, the Hon. Minister stated that a passenger having got out of one of the vehicles, and thereby caused himself considerable injury, it it had been recommended to the Company to keep the doors fastened to prevent the recurrence of such accidents. As the Company took every precaution to prevent persons from leaving the carriages while in motion, they thought it unnecessary to comply with the advice of the Prefect, who did not issue any positive order.

Prince de la Moscowa observed, that he had every reason to believe that such an express order had been sent to the Paris and Meudon Directors.

The Minister of Public Works replied, that he was not aware that any such order had been given.

Prince de la Moscowa repeated that he had positive information of the fact.

The matter then dropped.

"ACCIDENTS ON RAILWAYS," *NOT* RAILWAY ACCIDENTS.

On Tuesday, an adjourned inquest took place at the King's Head Inn, near Tunbridge, on the bodies of the two excavators, named Richard Williamson and George Davis, who lost their lives on the South-Eastern Railway. It appeared that on Monday evening week the unfortunate men got upon some waggons going to Tunbridge. The train, which was drawn by one engine, consisted of ten or eleven carriages, the chief of which were filled with earth and sleepers. On the arrival of the train at Marlpit-hill bridge, a sudden stoppage took place, which caused several of the sleepers to slip off the waggons, and on the train proceeding, many of them were thrown off the line, down an embankment, with great violence. Williamson was crushed to death, and Davis was so dreadfully injured that he died in a few hours. Another man had both his legs frightfully fractured, and was in a deplorable condition. The Jury returned a verdict of "Accidental death."

Yesterday week, an inquest was held on the body of Thomas Elsley, aged 40, killed by the falling of Kelvedon bridge, on the line of the Eastern Counties' Railway. Mr. Brown, an engineer on the line, said the bridge was built under his superintendence. It was on the north side of the road leading into Kelvedon, and consisted of three arches—the first thrown over the road leading to Coggeshall, the second over the river, and the third joined the embankment; it had been erected three months. He was upon the bridge and under it the day prior to the unfortunate occurrence, and, from the examination he made of the works at the time, found it perfectly sound. The centres had only been removed from it a week or 10 days. There was a slight subsidence of the crown of the fallen arch, but not so much as is usual with bridges of that span, it being within an inch. He attributed the accident to the late wet weather. It was usual on the completion of bridges to remove the centres within 10 or 12 days after, but in this instance they were allowed to remain four months. The jury returned a verdict of "Accidental death."

On Wednesday morning the London up mail train from the north, on its arrival within two hundred yards of the Parkside station, on the North Union Railway, passed over the body of Thomas Griffith, a bargeman. On examination, it was discovered that the deceased had been dead some hours, that the body was cold and stiff, and bore evident marks of more than one train having passed over it. Deceased and others had been drinking at the Bull's Head public-house, in Golbourne Dale, and left there between ten and eleven o'clock. They were all the worse for liquor. The deceased loitered behind the rest of the party, and they saw nothing of him after they passed the bridge over the railway on the Lowton road. The embankment at this point of the railway is full eight or ten yards above the railway on each side, and it is well fenced so as to prevent parties trespassing. It was near this place the deceased body was found, and in case he got upon the railway on parting from his companions, no fewer than two luggage trains, in addition to the mail, must have passed over him. His hat and shoes were picked up at different places, and the sand on the railway bore evident marks of the deceased having been dragged a considerable distance.

An accident, we regret to say, attended with a fatal termination, occurred at the Glasgow terminus of the Glasgow and Greenock Railway on Saturday, about mid-day. One of the men employed in the coke house, it appears, was coming out of this place when a waggon was being run into it, and the entrance being narrow, he placed himself in a perpendicular position, close to the wall, to avoid its coming in contact with his person; but owing to an inclination of the waggon towards that side of the entrance, some part of it canght hold of him by the face and breast, and he was so severely lacerated that he survived only an hour after the occurrence of the accident. The deceased was a young man, his name was Fitzgerald, and he was from the county of Monaghan, Ireland.—*Glasgow Courier.*

RAILWAY PLEASURE EXCURSIONS.

LONDON AND SOUTH-WESTERN RAILWAY.

The success which last year attended the experimental pleasure-trip on the South-Western Railway has induced the Directors to enter into new and improved arrangements for renewing their previous exertions for the recreation, amusement, and improvement of the health of their fellow-citizens. Accordingly, the first of a series of these "excursions," or pleasure trips, intended to take place in the course of the present season, came off (to adopt a sporting phrase) on Monday morning last. The company left the Vauxhall terminus in four second-class carriages, drawn by the *Crescent*, engine precisely at half-past 7 o'clock, and with only three stoppages (to take in water) the train performed its journey in 2 hours and 20 minutes. The passengers were immediately escorted on board the steamer, the *Princess Victoria*, which has recently been purchased from the Commercial Steam-packet Company by a body of gentlemen resident in Cowes and Southampton, in conjunction with others connected with the South-Western Railway Company, which was in readiness at the pier to receive them. This steamer, since the change in her owners, has undergone considerable repairs and alterations. She, with all the disadvantages of the tide being against her during the whole of the day's voyage, was enabled, under the skilful management of Captain Gooderidge, the Commander of the *Lady de Saumarez* Jersey steam-packet, to maintain an average speed of 11 knots an hour. Precisely at 10 o'clock she got under way, and proceeded down the Southampton waters, past Cowes, Hurst Castle, Yarmouth, and Lymington, to the celebrated Needles, which form the western extremity of the Isle of Wight. Up to this moment the waters were "as smooth as glass," and the voyage was regarded with the highest delight by all on board. The vessel soon completed her cruise round the far-famed island, passed Portsmouth, and reached the pier at Ryde. Then, again, she entered "smooth water," and shortly before 8 o'clock all the party took footing at Southampton. The only casualty which happened was one of the engineers performing, through his own carelessness or stupidity, the operation by the aid of the piston rod, of amputating one of his fingers at the first joint. A medical gentleman on board promptly lent his professional assistance, and no serious apprehension were entertained as likely to result from the accident. But "on shore once more," the passengers re-entered the railway carriages, and were in motion on their return to Vauxhall, precisely at five minutes past eight o'clock, arriving without the least "let or hindrance" at the Vauxhall terminus by 12 minutes past 10 o'clock, thus performing the distance of 78¼ miles in 2 hours and 7 minutes. To recapitulate, then, what mechanical science and British capital and labour have in this instance been shown to have accomplished in respect of steam locomotion, we may mention that, according to Captain Gooderidge's calculation, the course he was compelled to steer, owing to the state of the tide, was 115 miles; this, added to the distance performed by railway, namely, 157 miles, makes a total of 272 miles, accomplished within the space (including stoppages, &c.) of 14¼ hours. On the whole, the trip was truly delightful, and when more generally known will, we doubt not, be highly popular with the public.

To the Editor of the Railway Times.

Sir,—As you will no doubt give an account in your next paper of the trip to Southampton and round the Isle of Wight, I hope you will make a few remarks on the extravagant charges made by the steward for provisions. I think the Directors cannot be aware of the charges made, which, if continued, will most assuredly prevent the excursion becoming so popular. A more delightful excursion cannot be made than that of last Monday.

The dinner was a cold one, and the charges made to myself and friend, were—

For luncheon—Bread and cheese and quart of stout ..... 3s. 6d.
Dinners—Cold meat, no vegetables or stout..... 8s. 0d.

On board the Margate and Ramsgate boats we should have paid for the same refreshments, 2s. and 5s.

I am, Sir, your obedient servant,
HENRY WATSON.

Wimbledon, May 18, 1842.

The Liverpool and Manchester Railway Company are running third class trains this week for the accommodation of the holiday folks at Manchester. The fare is half-a-crown each way, and the passengers are supplied with plenty of standing room.—*Liverpool paper.*

"The Rail" *v.* "The Road."—A narrative by a Portsmouth coachman, now in good health:—"I have lived to see the Portsmouth mail coach put on, and I have lived to see it taken off. Except one coach, I have lived to see all the London coaches put on, and it seems as if I should live to see them all taken off; though at one time there were ten up and ten down every day, and one three times a week. These coaches, if only half filled, must have taken 176 passengers every 24 hours, to and from Portsmouth. The one coach, when I was a boy, was two days and one night on the road; it went to Guildford the first day, where the passengers slept for the night, and went into London next day. The turnpikes were not then finished. The mail was brought by a man or boy on horseback; I brought it from Petersfield, and got into Portsmouth at two in the afternoon. After that a diligence was put on; that carried three passengers, and sometimes went empty. Then Mr. Palmer put the mail coach on, that carried four; prior to which, the way of travelling was on horse with a guide—the guide went to bring the horse back. As for going on foot 'twas not safe, there were so many foot-pads about; and there was not a public house between Halfway-house and Mousehill but what had five or six saddle horses ready for passengers to ride on the way to and from London and Portsmouth. After the roads were made good, it was thought a great feat for a man riding with an express to go up to London and back in a long summer day; now it is to be done in nine hours. Oh! these railways! Besides having ruined the road, what will the farmers do with their hay, oats, and straw?—T. S."—*Hampshire Telegraph.*

EDINBURGH AND GLASGOW RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL general meeting of the shareholders in the above undertaking was held in the Company's office, Glasgow, on Tuesday, at one o'clock, to consider the expediency of exercising, and if thought expedient to exercise, the powers conferred on the Company by an Act passed in the present session of Parliament, intituled, "An Act to amend the Acts relating to the Edinburgh and Glasgow Railway, and to grant further powers to the Company of proprietors," in so far as regards the raising of additional capital, and the creation or disposal of new shares in the stock of the Company; JOHN LEADBETTER, Esq., in the chair.

The CHAIRMAN said, the meeting was aware that the Company had recently obtained an Act enabling them to increase their capital, which was rendered necessary from the additional cost of finishing the line. The Directors, anxious for the interests of the shareholders, lost no time in taking into their consideration the best means of distributing the new shares; and to enable the shareholders to judge of the matter before the meeting the Directors had printed and circulated a plan which they considered the most advisable, and the smallness of the attendance to-day convinced him that the proposals had been favourably received. The Directors had, indeed, received one or two letters from distant shareholders, suggesting something different from what had been adopted by the Directors, but as these letters had been written under an imperfect view of the provisions of the Act, the Directors had not considered it expedient to adopt the suggestions. The Directors, however, would be glad if any of the gentlemen present could suggest a plan more likely to be acceptable and beneficial to the great body of shareholders than the one already before them. The Directors had no hesitation in agreeing to the plan suggested in the circular, and it appeared that their friends at a distance had already approved of it, and he had no doubt were already acting on it, for he found that the new shares were selling in London and Liverpool at a premium of about 2*l*. In these circumstances it would be advisable not to alter the proposed plan unless it were found that there was something materially wrong.

The following plan was then read by Mr. Bannatyne:—

1. That this meeting do now hereby resolve, in terms of the Act 5 Victoria, cap. — sec. 2, to raise, in addition to the present capital of the Company, the sum of 225,000*l*. of capital, by creating 18,000 new shares of 12*l*. 10s. each.

2. That the said sum of 12*l*. 10s. shall be called by five instalments, as follows:—3*l*. on the 1st July, 1842; 2*l*. on the 2nd Sept. 1842; 2*l*. 10s. on the 10th January, 1843; 2*l*. 10s. on the 4th April, 1843; 2*l*. 10s. on the 14th June, 1843. That interest, at the rate of 5 per cent. per annum, shall be allowed on all calls paid in advance; and interest, at the same rate, shall be charged on all arrears of calls.

3. That the said new shares shall be apportioned among the shareholders of the Company as registered at this date, in the proportion of one new share for each old share held by such shareholders, and shall be offered to them by letter, in manner pointed out in the said Act.

4. That such new shares shall not vest in and belong to the said shareholders, unless they shall, within one month after such offer, accept thereof in writing, and pay the afore said calls at the dates when they respectively fall due; and in the event of the failure of any shareholder to accept the said shares as aforesaid, or to pay the said calls at the said dates, or within the month after they shall respectively fall due, or in the event of such shareholder being incapacitated, or under legal disability, the Directors are hereby authorised, unless some cause shall be assigned for such failure which appears to them satisfactory, to dispose of the shares appropriated to such shareholders, for behoof of the Company, in terms of the Act, and that notwithstanding scrip shall have been issued as after-mentioned.

5. That scrip shall be issued for the said new shares to any shareholder who shall have paid up all the calls on the old shares for which he is at present registered, on his applying to the Secretary, and producing the certificates of his said shares, at any time after the 24th day of May current; provided such shareholder shall have also paid the first call of 3*l*., and any other calls which may be then due on his new shares, with interest.

6. That certificates of proprietorship in the said new shares, shall, at any time after the said 24th day of May current, be given to any shareholder who shall not desire to take such scrip, and who shall at the time of such application have paid, or shall then pay, all his calls on the new shares held by him, provided such new shares shall not have been already disposed of by the Directors as before mentioned.

7. That where scrip has been issued for new shares, no certificate of the proprietorship thereof shall be given, except upon production and re-delivery of such scrip to the Secretary, and upon payment of all the calls thereon, and except such shares shall not have been disposed of by the Directors as before mentioned.

8. That the scripholder or proprietor of every new share now created, if not so disposed of, shall be entitled to participate in any dividend of the Company's profits, to be declared out of the traffic of the railway to be carried on subsequent to the 1st July next, in proportion to the amount of calls which shall have become due, in respect of such shares, at the date of balancing the books of the Company.

9. That this meeting do now agree to borrow, in terms of section 8 of the said Act, and authorise the Directors to procure on loan, at such rate of interest, and for such a period of time as they shall see it expedient to fix, the sum of 75,000*l*., either in one or more parts, and empower and authorise them to mortgage the said undertaking for such loan or loans, in terms of the Acts of Parliament relating to this Company.

Bailie ROBERTSON—I think the proposed resolutions cannot fail to be universally satisfactory to the shareholders, and they are an additional proof among the many of the very great attention which has always been paid by the Directors to the interests of the shareholders and the prosperity of the establishment. I hope, therefore, they will be unanimously agreed to, and I now move their adoption.

Mr. LEECHMAN seconded the motion, which was unanimously agreed to.

The CHAIRMAN said, the Directors, in drawing up the plan, were exceedingly desirous of consulting the benefit of the Company, and to have the new shares equally distributed among the present shareholders; and he was much gratified at finding their plan so generally approved of.

Bailie ROBERTSON moved the thanks of the meeting to the Directors for their excellent arrangements, and their admirable attention to the interests of the Company.

This was seconded by Mr. Wingate, and carried by acclamation.

Mr. LEADBETTER, on behalf of the Directors, returned thanks. They were peculiarly gratified to find that in their efforts properly to discharge their duties, they had met with the approval of the shareholders. It had been suggested to him that while met he should state generally that the Act which the Company had obtained, besides enabling them to create a new stock, conferred upon them some additional and important powers, which he trusted would be beneficial to the shareholders. The Directors had most happily come to an understanding with their Edinburgh friends, and by the present Bill the constitution of the Company was placed upon such a footing as would entirely obviate those difficulties which, some time ago, had arisen in the management of the establishment. By the new Act the Board of Directors had the entire control and management of the Company's affairs; they might appoint such Committees as they saw proper —and they might delegate to these Committees whatever powers they thought necessary. Thus he hoped continued harmony would be maintained, at least so far as it was possible for legislative powers to promote and secure it. It was, therefore, most satisfactory to him and his brother Directors, who had for a time been placed in a situation of great difficulty and delicacy with their Edinburgh friends, that all parties had cordially concurred in the present arrangements. In addition to this they had got a valuable relaxation of those restrictions which were imposed upon them in the first Bill in reference to the carrying trade by the opposition of the Canal Companies; and upon the whole the provisions of the new Bill were most important for the interests of the undertaking, and he hoped everything would now go on harmoniously. He might add that there was still retained a qualification as to the Directors. Three of them must be resident in Edinburgh or within 20 miles of it; four of them resident in Glasgow or 20 miles of it; and the number of Directors is reduced from 24 to 15. The meeting then adjourned.—*Glasgow Constitutional*, May 18.

BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY—SPECIAL REPORT.

THE Committee of Directors having deemed it necessary, for the protection of the interests of this Company, to oppose the Bill introduced into Parliament this session by the Cheltenham and Great Western Company, think it right to lay before the proprietors, by means of a special Report, a statement of the grounds of their opposition, and of the results which have been attained.

The provisions of the Bill which chiefly demanded the interference of this Company were—

1. The extension, for three years, of the period within which the Cheltenham and Great Western Company were empowered to re-purchase a moiety of the line between Cheltenham and Gloucester.

2. The power to extend the railway further into the town of Cheltenham than this Company's present station.

3. The extension of time for completing the line, so far as related to the portion between Gloucester and Stonehouse.

With respect to the first ground of opposition, it must be borne in mind, that under the provisions of a former Act founded on an agreement between the two Companies, the Cheltenham and Great Western Company were entitled to re-purchase the moiety of the line between Cheltenham and Gloucester, provided their whole line from Swindon to Gloucester were completed by the 21st of June, 1845.

By the Bill of this session they attempted to extend this time to the 21st of June, 1848.

The Directors, considering that such extension of time would be a violation of agreement, calculated to inflict a serious injury upon this Company, gave it their strenuous opposition, and enforced the insertion of the following proviso:—

"Provided that nothing in this Act contained shall empower the Cheltenham and Great Western Union Railway Company to re-purchase their interest in the portion of the line between the depots at Cheltenham and Gloucester, otherwise than upon the conditions, and within the period, agreed upon between that Company and the Birmingham and Gloucester Railway Company, and provided in their said secondly recited Act."

Thus, unless the entire railway from Swindon to Gloucester be completed by the 21st of June, 1845, the whole of the line between Cheltenham and Gloucester vests permanently in the Birmingham and Gloucester Company.

In this latter event, provision is made for the use of this part of the railway by the Cheltenham and Great Western Company, or other Company subsequently forming a communication with the Great Western Railway (rails of the wider gauge being laid down at the expense of such Company), subject to the regulations of the Birmingham and Gloucester Company, and with a right of appeal to the Board of Trade as to such regulations, and also as to the terms on which such use shall be exercised.

With respect to the second ground of opposition, the Directors, feeling that if the Cheltenham and Great Western Company were empowered to make for their own exclusive use an extension line into Cheltenham, the Birmingham and Gloucester Company would be placed in a most disadvantageous position, contended for and obtained clauses securing to this Company the use of any such extended line, (rails of the narrower gauge being laid down at this Company's expense,) subject to the regulations of the Cheltenham and Great Western Company, with a right of appeal by this Company to the Board of Trade as to terms and regulations.

Provision is also made for the protection of this Company's present station at Cheltenham, which under the powers sought for might have been materially interfered with, and likewise for securing to this Company a convenient site for an additional station in Cheltenham, in the event of the extension line being made.

With respect to the third ground of opposition, the Directors, considering the early formation of the line between Gloucester and Stonehouse highly important to the interests of this Company, as an

Digitized by Google

essential part of the line of communication between Birmingham and Bristol, opposed the extension of time for completing that portion of the railway, and succeeded in limiting the period for its completion to the 21st June, 1846, instead of the 21st June, 1848, as proposed in the Bill.

By this statement the proprietors will perceive that the Directors did not hastily or unnecessarily enter upon this Parliamentary contest; and without over-estimating the importance of its results, the Directors feel that they have successfully fulfilled their promise to the proprietors at the last general meeting, that "they would take the necessary steps for protecting the interests of the Company."

C. R. MOORSOM, CHAIRMAN.
THOMAS BEILBY.
A. W. DANIEL.
CHARLES STURGE.
H. B. TYMBS.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—This undertaking is in an unprecedented position, viz., a decreasing revenue in passengers and goods traffic—an expense in working greater in proportion than any other line—the stock of the Company at 50 per cent. discount—a Management hostile to the necessities of the trade—a system found to be an entire failure, and which, if persevered in, must be ruinous to the value of the property, and destructive to the expectations and convenience of the trade. Why does this continue, would be generally asked? To explain this bondage of the proprietors requires a somewhat lengthy history; yet, briefly speaking, it has arisen thus:—Much dissension, some 18 months since, existed in the Board of Management—carried to such an extent as to vote each other disqualified to act as members. A great struggle arose for the ascendancy, which the weak party accomplished by stratagem, in recommending the proprietors to invite the present Chairman to join the Board, who adopted a new system of management styled Executive, and which has been in force nearly 18 months, to the professed regret of many, and to the real regret of all, even of the requisitionists themselves.

The last general meeting was a very angry one, with a declared dividend of 30s. The next will produce more disappointment; and to whatever extent it may prove, without the power of remedying the abuses from this known cause. A very strong and general feeling has been shown in this proprietary on the question of Sunday travelling, and a very large number of proxies are held by the party who took the present Chairman as an instrument for their protection in the Board, against any resolution that may be proposed for running Sunday trains. I feel as strongly against Sunday travelling as any other proprietor, and I feel equally so against our mismanagement; and my present purpose is to express a wish, that proxies for such a question may not be placed in the hands of Directors or their connections, but in those who can use them on the question intended, and with discretion on others.

I remain, Sir, yours, respectfully,
A SHAREHOLDER.

Liverpool, May 16, 1842.

BIRMINGHAM AND DERBY RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, "Superintendent," has no right to say that I *pretend* to tell your readers that there is an "*increase* of 20*l.* *more* for the week ending April 16, this year, than the corresponding one of last." Supposing his statement as to the mails to be founded on fact, I might have written, and did write, in ignorance of the fact. It is an important point, and I will speak of it presently. In the meantime I must observe, that, supposing the statement true, it is no contradiction of my statement, which, both in form and substance, is literally and strictly true. Your correspondent does not say an increase of *what*; but I have a right to assume that he speaks of that which I was speaking of, namely, the reported weekly returns of traffic for corresponding periods of last year and this; and though "he must tell me that I am not correct," I affirm that, for anything yet shown to the contrary, I was perfectly correct in the statement which I made. It is impugned by the language of your correspondent, but not by the fact he states. I spoke of the *returns*, and I had nothing to guide me but the reports in the *Railway Times*, and the Reports of the Company. The latter explicitly state an error of excess in the returns amounting to 1,989*l.*, which ought of course to be deducted. But say nothing of any omission, your correspondent has shown nothing contrary to my statement; for a difference in the principle on which the returns are made shows no error in the returns themselves. He may have done well in showing a *counter-balancing* fact, (and, had he written in a suitable style, I should have thanked him for so doing), but this does not affect the truth of the former statement. I showed the necessity of *correcting* the weekly returns, arising from an admitted *error*—he gives a reason, arising from *other* considerations, for making an *addition* to them, which, though very material, is a totally different thing. For convenience, and with reference to ultimate results, I will call his addition a *correction* (though it is not so in the sense that mine was), but the necessity of a second correction is no proof that a first was wrongly made; his correction without mine would lead as much to error as mine without his, and, as I think I shall be able to show, more so.

I had previously no reason for thinking that there was any alteration of system in making the returns so as to include the payments for the mails from the 1st of July last. I supposed they had always been included. But your correspondent may know the fact; and I feel bound to admit, on comparing the sum of the returns with the half-yearly Report, that his statement appears to be, in part at least, well founded. I say in part, because either from the returns including the payments for the mails with which the half-year commenced, and the additional payment afterwards obtained being subsequently added, or from some other cause, his statement is not in accordance with the results; the published returns, with the addition of 2,220*l.* 8s. 8d., exceeding by several hundred pounds the total amount of the receipts as shown by the Report. I cannot, with strict accuracy, bring out the results, because I do not know whether Railway Companies make up their accounts for the 26 weeks, of which the last days fall within the half year, or from the 1st day of January to the 30th day of June; and if (as I suppose) in the latter mode, I have no means of exactly ascertaining the amount due to the fractions of the broken weeks. In the former case the total amount of the returns was 28,518*l.* 2s. 5d., and adding 2,220*l.* 8s. 8d., and deducting 1,989*l.* 18s. 3d. (the amount of discovered error in the traffic in goods), we have 28,748*l.* 12s. 10d., instead of 28,067*l.* 4s. 8d., the amount of the actual receipts for passengers, horses &c., parcels, merchandise, and mails; which would lead one to suppose that a part only of the 2,220*l.* 8s. 8d. ought to be added. If instead of the 26 weeks we take the 25 entire weeks ending June the 26th, and a proportionate part of the returns for the broken weeks, the difference would be rather greater, the amount according to the returns being then (302*l.* 7s. 8d. + 27,458*l.* 7d. + 791*l.* 17s. 6d.) 28,552*l.* 5s. 9d., instead of 28,518*l.* 2s. 5d.

The total actual receipts for the half-year (exclusive of 84*l.* 10s. 2d., the balance of mileage account for carriages, and 47*l.* 12s. for wharfage, which are inserted separately from the stated amount of "traffic," and, I take for granted, are not included in the weekly returns), being 28,067*l.* 4s. 8d., the returns ought to have shown that amount only, instead of which they show 28,518*l.* 2s. 5d. at the least; from which it still appears that they were in excess by at least 450*l.* 17s. 9d., and that, after all, my correction *alone* would have led to an error on the *right* side, whilst your last correspondent's correction, even after allowing for mine, would lead to an error on the *wrong* side, by making them appear *deficient*.

He, I suspect, is much better acquainted with the mode of making up railway accounts than I am, and my statements are still open to correction. In the meantime, as a careful comparison of the returns with the Report still shows an excess of 450*l.* 17s. 9d., I feel myself justified in making a deduction from the former of 17*l.* 6s. 9d. a week; and, adopting this correction, I now "give in my next report" with the utmost particularity your correspondent can reasonably "hope" for, seeing that I have not the means of being "more particular," and find the last return exceed that of the corresponding week of last year by 78*l.* 1s.

If you, Sir, at the close of each half year, would give in the *Railway Times* the sum of the weekly returns of the different railways, it would be useful to many of your readers, and tend to prevent or to correct mistakes.

I am, Sir, your obedient servant,
INSPECTOR.

May 12, 1842.

RAILWAY COMMUNICATION WITH SCOTLAND, &c.

To the Editor of the Railway Times.

Sir,—Being one of the proprietors of the Edinburgh and Glasgow Railway, I have had an application to subscribe to the proposed line to Dunbar. I should therefore wish to take this opportunity of making a few observations upon the subject of the eastern line down to Scotland. I think the line on that side of England is very much injured by the number of small Companies that there are. It is about 180 miles from Rugby to Darlington, and in that distance you pass over the railways of four different Companies, averaging about 45 miles to each, and then there is to be a fifth Company from Edinburgh to Dunbar, and I suppose a sixth from Dunbar to Newcastle, and I had almost forgot the seventh between Newcastle and Darlington. What is the consequence? Why, that the through traffic is so badly managed that persons are much longer in going down to Scotland by this line than they ought to be. If there had been one Company only, with a line of railway from Rugby to York and Leeds, without taking that expensive line between Chesterfield and Derby, but going the direct line from the Trent Bridge to Chesterfield, the whole thing would have paid well; as it is, the shares of the Midland Counties' and North Midland are at a great discount; and what is worse, it has been a great injury to the railway system generally. But what would it be best to do under existing circumstances? I would beg to suggest in the first place, that each Board of Directors should appoint two Directors from their own Board, who should have the management of the *through trains* between *Rugby* and *Darlington*; and when the line is extended, that the same system should be followed up. The trains which ought to perform the journey between London and Darlington *comfortably* in 11½ hours, are generally nearer 14 hours; and the night mail, which is the fastest of them all, reaches Leicester in 4 hours (being at the rate of 25½ miles in the hour), and is 8¼ hours going the remaining 162 miles, which is about 19 miles in the hour, (of course the time is lost by stopping so long at Derby and York).

In the second place, if a Company were formed for making a line of railway the whole way from Newcastle to Edinburgh, I for one should be disposed to take shares in it, for if it only paid a moderate interest upon the subscribed capital, it would so benefit the North Midland and Midland Counties' that it would pay me in that way; but I would advise the projectors of such a line to take care that it should go by that route which will be the cheapest, and not to take the least notice of any other towns except Newcastle and Edinburgh, and not to mind going a little round to avoid a tunnel or great cutting. If the Grand Junction Railway

Digitized by Google

had been made by any other line than what it has, if the Engineer had said it was important that it should pass by such towns as Newcastle-under-Lyne, of course it would have been much more expensive, and would never have paid the large dividends that it has done.

Allow me, Sir, before I end this letter, to add, that I hope this summer will not pass by without some scheme being set on foot for extending the Great Western Railway past Gloucester, and along the coast of South Wales to Milford Haven. That is not only allowed by all sea captains to be one of the best harbours in the kingdom (a far better one than Liverpool), but it is the nearest harbour to the ports of the south of Ireland as well as to America. And as there is so great a coalfield in South Wales, there is no doubt that, if there were a railway to that place, it must of necessity become one of very great trade.

I am, Sir, your obedient servant,
C. H. F.

RAILWAY COMMUNICATION WITH FRANCE.

To the Editor of the Railway Times.

Sir,—Seeing that the Directors of the South-Western Railway are making every effort to get possession of the public mind by advertisements, &c., pointing out the great advantages, and more particularly "being the direct route to Paris and the Continent generally," I beg to ask, through the *Railway Times*, for the information of their proprietors, what traffic they expect when the South-Eastern Railway is opened? And why I ask this question of them is to guard their shareholders from being taken by surprise, and to prevent discontent among them.

As the immense advantages, &c., have been tolerably well trumpeted forth, I here point out the disadvantages, namely, the South-Eastern is about the same length as the South-Western, but look at the sea! Consult the map, and you will find, from Dover to Calais is about 21 miles, and from Southampton to Havre is 34 leagues, or 102 miles, that being the nearest point on the French coast touchable from Southampton.

I am Sir, yours, &c.
ANTI-PUFF AND GREAT ADMIRER.
May 16, 1842.

THE WEST INDIA PACKET STATION—SOUTHAMPTON OR DARTMOUTH?

To the Editor of the Railway Times.

Sir,—In the *Railway Times* of last Saturday, it was stated that a body of gentlemen connected with the west of England, consisting of a great many members of Parliament, had waited upon the Lords of the Treasury, and the Admiralty, on the packet question; their object being to get Dartmouth appointed as the port of arrival and departure of the West India mails, agreeably to the recommendation in the Report of the officers appointed to survey the coast. All hope of Falmouth continuing to be the packet station seems therefore abandoned; and the efforts of those interested in property in the south-west of England, and in the Great Western Railway, are exclusively directed to get Dartmouth substituted for Southampton.

If, in selecting a packet station, the interest of the nation at large is to be consulted in preference to that of individuals, there can be no doubt how the question will be decided; for Southampton is greatly preferable in every point of view to Dartmouth. Taking London as the real point of departure and arrival of the mails, the simple question comes to be, whether the mails, the passengers, and goods, can be conveyed between the West Indies and London with greater speed, economy, and convenience to all concerned, by way of Dartmouth or by way of Southampton. And, in considering the question, let us give all the advantage to Dartmouth to which it can ever expect to be entitled. Let us suppose the Great Western Railway completed as far as Exeter; for beyond that point, in the direction of Dartmouth, the paucity of population, and the uneven nature of the country, precludes its further extension.

Now, from Dartmouth to Exeter we have a distance to travel by coach over a very uneven road of between 30 and 40 miles, and which will take at least 4 hours; from Exeter to London we have 190 miles of railway travelling, which with stoppages cannot take less than 9 hours; making 13 hours in all. On the other hand, the additional time a West India steam ship (if not taken out of its direct course) will take in reaching Southampton instead of Dartmouth, will be about 8 hours; and from Southampton to London, a distance of 73 miles by railway, 3 hours more; making 11 hours in all. In addition, therefore, to the saving of expense, we have a saving of time of two hours in favour of Southampton, supposing there was no other cause of delay. But it is probable that railway trains will not start above one-half as frequently from Exeter for London, as they do from Southampton; and hence a further saving of time may be expected to arise in favour of Southampton.

For the convenience of passengers, and for economy in the transmission of goods and parcels, Southampton is so obviously superior to Dartmouth as to require no comment. Dartmouth has a very limited population, is very deficient in hotel accommodation, and is one of the dirtiest narrow-streeted towns I have visited in England. Owing to the hills rising from the very water's edge, it is unsusceptable of extension or architectural improvement. In traversing the town, instead of having something like level streets to walk along, you are frequently obliged to travel up and down narrow, dirty, winding staircases, and this description is not to be understood in a hyperbolical, but in a literal, sense. If passengers were obliged to land at Dartmouth, besides the great additional expense of travelling to London beyond that of travelling from Southampton to London, they would suffer great detention; for it is not to be expected that more than one day-coach could be regularly supported between such a place as Dartmouth and Exeter. In short, it is obvious, that though Dartmouth were fixed upon as the port of arrival and departure for the West India mail packets, the passengers and goods would continue to be landed on arrival, and put on board on departure, at Southampton, so that the Great Western Railway proprietors could not profit materially thereby. Besides, if the steam-packets be obliged to call at Dartmouth to land or receive the mails, the detention and deviation from their direct course will be at least equivalent to three hours loss of time for each call. And notwithstanding this detention, it is probable that the passengers on an average will arrive sooner in London by way of Southampton, than the letters they had previously landed at Dartmouth.

There is no question of Dartmouth being a safe harbour; but even in this point of view it can claim no superiority over Southampton. The Southampton waters, in addition to being spacious and completely protected by the Isle of Wight from everything like a heavy sea, afford as safe an anchorage, and are more accessible in stormy weather, than the narrow creek of Dartmouth. Besides, handsome and extensive docks are now in progress of formation for the accommodation of shipping at Southampton, and there is no space for the construction of such at Dartmouth. For these reasons it is obvious, that if Government appoint Dartmouth as the packet station, it will only be regarded as a gross job, vainly intended to favour private interest, and prejudice that of the public.

I am, Sir, yours, &c.,
A GLASGOW CITIZEN.
Glasgow, May 12, 1842.

THE LATE ACCIDENT ON THE VERSAILLES RAILWAY.

To the Editor of the Railway Times.

Sir,—The accident on the Versailles Railway has naturally called attention to the management of railways in England. The locking up of the carriages is a cause of danger so palpable and evident, that I apprehend the Great Western Company will no longer be able to continue the practice they have hitherto followed.

There is, however, another practice from which the danger to be apprehended is far greater, and more appalling. If the Versailles train had not been drawn by a second engine, the carriages would not have been thrust into the fire of the first engine; there would have been a concussion, and nothing more. This practice is also persevered in on the Great Western Railway. A second engine is occasionally added on all parts of the line when the train is heavy; and on coming through the Box tunnel from Bath, there is I believe always a second engine. It is perfectly true that this is the part of the line in which additional power is most wanted; but it is equally true that it is the part of the line in which a second engine is the most dangerous. Your obedient servant,
MELETES.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

To the Editor of the Railway Times.

Sir,—From your notice of the meeting of the shareholders of this Company on the 3rd instant, it appears that the Chairman, Mr. Sage, denied the truth of a report mentioned by Mr. Hale, that the original construction of the Swindon embankment was an experiment of the Engineer, and had cost 26,000*l.* to reinstate.

I beg to put the question to Mr. Sage in another form—what would have been the additional amount of contract had proper soil been used for the embankment at its original formation, and what has been the cost subsequently incurred for its reparation? I believe much less than 6,000*l.* would have been sufficient to make a solid embankment in the first instance, and I believe the subsequent cost to the Company for repairing the defects has amounted to little short of 30,000*l.* I also wish to remind Mr. Sage that he pledged himself at the previous meeting to communicate in May the outlay incurred, and I have no doubt this gentleman had prepared himself with the necessary information, if the shareholders had thought it a matter of the slightest interest to have made the inquiry. Mr. Sage expressed himself anxious that the Engineer should have fair play. I regret that he did not express equal anxiety for the unfortunate shareholders of the Company. He states, with considerable satisfaction, that the cost of the line had not exceeded 26,000*l.* per mile. If he will, however, have the goodness to refer to the fourth half-yearly Report, of the 2nd November, 1838, he will find Mr. Brunel's *revised* estimates state the cost per mile at 15,971*l.*, exclusive of extra works, which extra works, I suppose, means such casualties as the failures of the Swindon embankment.

The original number of shareholders was 7,500. About 2,000 were subsequently admitted at 20*l.* per cent. discount, and the present number appears to be about 5,200, so that in reality more than one-half have been annihilated. 80*l.* has been paid up, the remaining 20*l.* already anticipated, and when the whole 100*l.* has been drawn from the pockets of the shareholders, they will probably receive during the existing seven years lease to the Great Western 2*l.* 10*s.* per cent., depending, however, upon the security of the Swindon embankment.

I am, Sir, your obedient servant,
AN ORIGINAL SHAREHOLDER.
London, May 17, 1842.

CAERSTRAY, May 12.—The works on the iron railway from this town to the French frontier are carried on with the greatest activity, and advance rapidly, so that we are persuaded that they will be completed next month. Equal activity is observed on the French territory towards Lille, for we are assured that the works are carried on every evening by torch light.

The *Cologne Gazette* of the 14th inst. states that the Vienna and Raab Railway was opened on the 5th inst. as far as Gliggnitz, in the midst of a vast number of spectators.

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

2. *Minus* toll to London and Birmingham 17*l.* 18s. 3d.
3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.
4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*
5. Receipts include the Northern and Eastern toll, &c.
12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)
14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 98*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half year's traffic, amounts to 130*l.* per week.
15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.
17. The 39*l.* 7s. 7d. from goods, &c. is for toll only.
18. Ten per cent. is the maximum dividend allowed by the Company's Act.
19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 16s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.
20. The dividend is from the opening, and on the old shares alone.
21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic:—Receipts from passengers (2,599), 88*l.* 15s. 8d.; goods, 34*l.* 7s. 5d.—Total, 123*l.* 3s. 1d.
22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.
23. Capital of 993,200*l* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.
24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the 'dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.
25. Including Toll, &c., from Sheffield Company.
26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.
27. The 4,707*l.* 3s. 9d. are the receipts after deducting omnibus charges, and payments to other Companies.
28. The receipts for goods, &c., include, carriages, 52*l.* 16s. 9d.; horses, 30*l.* 6s. 6d.; dogs, 3*l.* 17s. 6d.; parcels, 24*l.* 15s. 9d.; cattle, 57*l.* 2s. 0d.; corn, 6*l.* 8s. 0d.; heavy goods, 44*l.* 3s. 3d.; coal and lime, 85*l.* 19s. 4d.—Total, 917*l.* 8s. 4d.
31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 2,600,000*l.* The details of the receipts are as follows—Passengers, 2,469*l.* 9s. 1d.; carriages and horses, 141*l.* 8s. 11d.; parcels, 174*l.* 18s. 8d.; mails, 50*l.* 5s. 9d. merchandise, 1,983*l.* 2s. 3d.; minerals, 222*l.* 8s. 10d.; cattle, 113*l.* 5s. 2d.—Total, 4,197*l.* 18s. 8d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 121*l.* 7s. 4½d.
32. The receipts are after deduction of Liverpool and Manchester toll.
33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.
34. The capital of 538,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).
35. The returns are inclusive of Manchester and Birmingham toll.
37. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

Dublin and Kingstown Railway.—*Week ending May* 10, 1842—*Receipt from passengers (number of passengers, 31,287), 787l. 10s. 10d.*

Brandling Junction Railway.—*Week ending May* 7—*Receipt from passengers (number of passengers 9,964), 266l. 17s. 9d.; goods, coals, &c., 539l. 0s. 1d.; total 806l. 17s. 10d.*

London and Greenwich Railway.—*Week ending May* 12—*Receipt from passengers (number of passengers 25,649), 780l. 0s. 6d.*

TO CORRESPONDENTS.

A. R. S. *(Strathmore.)—There was no engine* behind. *We agree with our correspondent in deprecating the use of an engine in such position.*

Great Western Railway.—*Several letters have been received to the same effect as those which we elsewhere give. We beg our correspondents to accept our thanks, although we cannot publish their several communications.*

W. L.—*We feel much obliged to our correspondent for his suggestions.*

A L. & B. Shareholder *is informed that we cannot notice his communications to other journals. We think, nevertheless, that it would be well if his suggestion were carried out at the next meeting, and that some one would "move for copies of the correspondence between the Company and the Secretary of the Post-office."*

Diogenes *was anticipated.*

A Traveller.—*We have this week devoted all the space we can spare to the subject of his communication, but should he wish it, his letter shall appear next week.*

R. T.—*We think so, but he must use his own judgment. The error, he will see, has been rectified.*

Expositor's *"names and dates" relative to the Brighton Railway contractor, have been received, and shall be forthcoming in due time. He will see that the affair has been adverted to by another correspondent.*

Guilelmus *is essentially wrong in his calculations, and if we have leisure in the meantime, we shall show him next week that he is so.*

York and North Midland Railway.—*The last dividend was paid in February. This in answer to a correspondent of last week.*

E.—*We are much obliged, but cannot notice the paltry trick referred to. We are not aware that any such meeting is intended.*

Another Midland Counties' Shareholder *in reply to* A Midland Counties' Shareholder *inserted last week, came to hand too late for our present number. It shall appear in our next.*

A Regular Subscriber.—*We do not think that the* fall *arises from either "cause." We have attended to the addition suggested.*

K. W. *in favour of locking railway carriages, shall appear next week.*

Traffic Returns.—*Our correspondent* Senex, *is assured that the total amount printed was that rendered to us under the signature of the Secretary, and if our correspondent will try again, he will find that our calculations were correct. While on the matter of these returns, we beg to state that the Companies would greatly oblige us by forwarding the amounts from passengers and goods in the form of our Table. It would be a still further obligation if, before transmitting the returns,* ALL *of them would calculate the amounts "per day," and "per week," and give "the corresponding week of 1841." The time and labour necessary for this task, although trifling in individual instances, are in the aggregate very considerable.*

We wish all our correspondents would write legibly, upon one side only of the sheet, and not use the thin paper now becoming so fashionable. The additional postage would not be much, and a vast deal of needless trouble to us and our printers would be avoided.

*** Double price will be paid by our publisher for any of the following numbers of the *Railway Times*, in order to enable him to complete sets. For the year 1838—January 13th, 20th, 27th; February 3rd, 10th; March 3rd; April 21st; October 27th. For the year 1842—February 26th.

THE RAILWAY JOURNALS.

THE three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES	**72,524**
Mining Journal	38,500
Railway Magazine	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, MAY 21, 1842.

A LETTER appeared in our last number calling attention to certain differences rumoured to have arisen between the Directors of the Manchester and Birmingham and Grand Junction Railway Companies with reference to the working of the traffic of the two lines, and we are sorry to find that there is too much foundation for the reports alluded to. The following would seem to be the brief facts of the case—or quarrel, as unfortunately it may almost be termed:—

When the famous Extension scheme was defeated, and the line to Crewe agreed upon, certain arrangements, afterwards made into a contract, were entered into between the two Companies. By these, the Manchester and Birmingham Company were to have the power of using the Grand Junction line south of Crewe, on payment of a moderate toll, thus being protected against any imposition on the part of their allies. The terms were, that when the Manchester and Birmingham Company should be prepared to carry all the traffic now carried by the Grand Junction Company, the latter would surrender such traffic, and give up their Manchester station; and it is stated that the Grand Junction Company are ready to fulfil *their* part of the compact. It is further said, that the Grand Junction Directors have offered to work all the Manchester and Birmingham trains south of Crewe along with their present trains, on the following terms:—First, at what the service may cost the Grand Junction Company with only a small profit, to be decided by arbitration; or, secondly, for a less sum than arbitration shall determine that it would cost the Manchester and Birmingham Company themselves. These terms, however, have, it is understood, been declined by the Manchester and Birmingham Company, who have indeed offered to join the Grand Junction with some of their trains; but, reasonably enough, the answer has been, that the Grand Junction must have *all* the trains or *none*.

Such we believe to be a faithful outline of the present position of the question. Our readers will naturally ask, what can induce the Manchester and Birmingham Directors to persist in a course which is so obviously detrimental to their own interests. It is to preserve what they are pleased to term the *independence* of the Company, and in pursuit of this phantom they appear content to incur the expense of two establishments and two trains to do the work of one! We can scarcely be-

Digitized by Google

lieve that these Directors, some at least of whom are men of business and experience, can have seriously and candidly considered what it is they are doing in this matter. Are they prepared to run trains throughout to Birmingham with 3 or 4 Manchester passengers—for we understand the number is frequently not greater; are they prepared to risk the danger of two trains scampering along to meet *one* London train at Birmingham, or leaving Birmingham to suffer a delay of perhaps half an hour to one of them to allow the other to go a-head, when both might travel safely, speedily, and economically together? Are *they* satisfied to incur increased expense, or will the *proprietors* be willing to accept diminished dividends, because, forsooth, the "independence" of the line may be compromised, or, in other words, because there may be a foolish jealousy between the partisans of two neighbouring towns? We cannot believe the proprietors to be so blind to their own interests as not speedily to interfere. Their undertaking has cost far too much to allow them to trifle with the results of working.

In the meantime *another* party must suffer from this conduct of the Manchester and Birmingham Board—namely, the public. To say nothing of the inconvenience, there will in the first place be the double danger; and, should common sense not speedily regain its sway, there will, moreover, probably be a *rise of fares* to meet the double cost of running two trains when one would fully suffice! These dissensions among contiguous Companies are really very much to be lamented, as furnishing to the public strong grounds of complaint, and to the legislature of interference. Boards of Management seem frequently to forget that they preside over bodies of *public carriers*, and that they ought to have but two objects in view—the greatest public convenience, and the largest private profit. If their constituents do not choose to enforce a system of policy which shall secure the latter, it is at least the duty of Parliament, who conferred upon them their corporate privileges, to look after the former. And if self-interest is insufficient to avert external interference, by rendering it unnecessary, Railway Companies must not feel surprised that it should be attempted.

We trust we shall not have occasion to revert to this subject.

We have received several letters inquiring to what purpose the money to be paid by the South-Eastern to the Brighton Company, for the cost of the line between the Croydon Railway and Redhill, is to be applied.

We would gladly answer the inquiry if we were not circumscribed within certain limits, to which the Brighton Committee of Investigation, from their taciturnity on the details of accounts, have restricted us. We have, however, still ringing in our ears the positive declaration of the Chairman that this sum, whenever or if ever it were paid, would have to be divided among the shareholders, as the Directors would not require it for the purposes of the railway. If by this declaration the capability of the South-Eastern Company to meet this payment were admitted, then its appropriation would be correct; but when it is known that the Chairman of the Brighton Board has repeatedly expressed his firm conviction that the South-Eastern Company could not, and never would, be able to pay the amount required of them, he was not justified in holding out to his co-proprietors the delusive hope of a return to them of a portion of their capital. If, however, there was a reasonable prospect of this sum being paid, then the Brighton Company ought not to have committed themselves, as they have done, to the public, by the issue of loan notes convertible into stock at a discount of 20*l.* per cent. The time will nevertheless shortly arrive when the truth of this declaration will be tested, and we trust it will prove more correct than others made by the Managers of the Brighton Company.

We have looked with some attention into the provisions of the Act by which this question is governed, and the result of our reading is as follows:—In the first place, the Brighton Company are required to keep separate and distinct accounts of the cost of constructing such part of the line as forms the subject of purchase. The question then arises, have such accounts been kept? We answer no; for if they had been so kept, the necessity of preparing them at this time would not exist. Why, then, is the Resident Engineer of that district at present engaged in making them out? What would be thought of a merchant seeking to establish a claim before a British jury on books or accounts expressly manufactured some four or five years after the transactions to which they refer have passed by? Can the South-Eastern Company, without doing an act of injustice to themselves, adopt such accounts as a matter of course? They cannot. The Directors, as men of business, must and will be satisfied that the accounts are just and proper, that they have been kept in the terms and spirit of the Act of Parliament, and that they are properly vouched.

In the second place, the South-Eastern Company are required within a certain time to give notice to the Brighton Company of their intention to purchase the line in question. This notice, as appears by the half-yearly Report of the South-Eastern Company in November 1839, was given, although the Brighton Company make no admission, nor condescended to inform their proprietors, thereof until January, 1842.

In the next place, the South-Eastern Company are required (after the line has been completed, and not before) to give two months' notice of their intention to pay the amount due by them in respect of the cost of such line, and upon such notice being given the Brighton Company are within one month to furnish, to the satisfaction of the South-Eastern Company, the accounts required to be kept as aforesaid; and in case the South-Eastern Company shall be dissatisfied with such accounts, they must, instead of paying the amount claimed to the Brighton Company, invest the same in consols, there to remain (as the lawyers say) "*pendente lite*," and from such investment being made, the line in question immediately vests in the South-Eastern Company, without even the formality of a conveyance from the Brighton Company.

Here then, if report be true, is a fine and fertile field for litigation, provided accounts have not been kept by the Brighton Company. It is quite clear that in such a case the costs of the litigation ought to fall on the Brighton Company.

We have been led to these remarks in consequence of a rumour which has reached us that the South-Eastern have given notice to the Brighton Company of *their intention to pay, on the 19th of July next*, the amount which may be claimed of them in respect of this intended purchase. The sum named by the Brighton Company at various periods as the cost of this part of their line, has gradually advanced from 200,000*l.* to 350,000*l.* or 400,000*l.*, thus demonstrating the practical excess in the engineer's expenditure of 75*l.* to 100*l.* per cent. on the cost of 6 miles of railway!

In addition to this piece of information, which must prove equally interesting to the South-Eastern as to the Brighton proprietor, we have heard that the South-Eastern Company, anticipating the difficulty attendant on the settlement of these accounts, are making daily purchases of stock, so as to be in a condition to meet any contingency that may arise. We congratulate the South-Eastern proprietors on the aspect of their affairs, and venture to express a hope that the straightforward and manly conduct of their Directors will achieve for this undertaking that support and encouragement to which it is justly entitled.

While on the subject of the South-Eastern Railway we may mention, that General Pasley inspected the line on Thursday last, and, we have reason to believe, expressed in the strongest terms his extreme satisfaction with the condition of the line, and all its appointments. It will be opened to the public on Thursday next.

Mr. Wilson Patten has given notice that after the recess he intends calling attention to the Standing Order of the House of Commons which imposes on the promoters of Railway Bills the necessity of giving notices in the months of February and March, instead of October and November, the period fixed for other Bills of the same class. We shall, of course, feel gratified should the honourable member succeed in removing an obstruction from the course of railway enterprise—or anything which bears the semblance of an obstruction—and in truth, whatever necessity may have existed at the time these Standing Orders were framed, for keeping in check the insane spirit of speculation which had found a vent in all sorts of impracticable and profitless schemes, there is now little reason to fear that railway bubbles will captivate the public, or needlessly occupy the attention of the legislature. The season for baseless projects of this class has gone by, and even undertakings of intrinsic merit languish from lack of that support which some years ago was lavished indiscriminately upon whatever assumed the name (for frequently it was but the name) of the popular mania of the day. If it was desirable *then* to discourage the concoction of railway schemes, it is *now* much more desirable to foster and extend them. The dearly bought experience of the last few years in respect of those undertakings which were fortunate enough to secure legislative sanction, has, it would seem, virtually put a stop to all further enterprise in the same field, and if by such a motion as that of which he has given notice, Mr. Patten can to any extent revive the spirit of speculation, he will deserve well of the public, who are sure to be gainers by the spread of the railway system, whatever may be the result to its immediate promoters.

But although we heartily wish success to the proposition of Mr. Patten for assimilating Railway Bills to other (so-called) Private Bills in the House of Commons, it would be absurd to affect any very sanguine expectations of good from such a measure, however fully or however speedily carried out. In fact, we are not inclined to ascribe to any of the regulations of Parliament—how annoying or unnecessary soever some of them may be—much of that apathy with which new railway projects are at the present time regarded,

Digitized by Google

The causes lie deeper far, and of these the principal and most generally operative are the alarm and disgust which have been excited by the gross and glaring *mistakes* of Engineers—mistakes (if such they may be termed) which seem but to become the *more* gross—the more glaring—at the moment when it might reasonably have been anticipated that experience would have reduced them to a minimum. We have no doubt that the flagrant instance of the Brighton estimates—framed too after a vast deal of information had been purchased at the cost of other Companies—will do much, very much, to retard the progress of incipient railway schemes. When it is found, that upon a route which session after session was in daily dispute, and respecting which gentlemen presumed to have a competent knowledge of their profession, protested that they knew all that possibly could be known—when it is found that upon such a line the Engineer's estimates have been well nigh trebled, *and no adequate cause shown for the increase* (for THAT is the main point), and when it is known that even now, when the line has been brought into operation, the total cost of the undertaking cannot, by the Engineer himself, be determined within hundreds of thousands of pounds (we speak advisedly), what wonder is it that prudent men, men who look for money's worth for their money, should decline embarking in any speculation of the kind? The plan now is to allow parties who *still* put faith in estimates of cost to subscribe to novel undertakings, and then, when the day of disappointment comes, as come it must, and the shares of the Company fall below perhaps their legitimate value, to step in and participate in whatever benefits may thereafter be derived. So incredulous have the public become, and not without good cause, in the matter of engineering calculations of cost, that we greatly doubt whether any extensive scheme will be undertaken for years to come, which does not originate in, and is pressed forward by, considerations of local advantage. We question, indeed, whether the most successful of existing railways would at this moment find favour with capitalists at large, were it now for the first time brought forward. It is satisfactory to know that the local appreciation of railway benefits (if we may be allowed the phrase) is daily gaining strength, and that self-protection is forcing upon the serious attention of not a few districts the policy of advancing along with their neighbours, in the improvement of the means of internal communication. Here again, however, the chilling effect of engineering ignorance or engineering dishonesty is felt, and those stand aloof who otherwise would have rendered aid, fearing to put the smallest faith in the statements of profitable return so confidently put forth. It is worthy of remark, that in no one instance of importance, so far as we are aware, have the calculations of probable *revenue* been over-stated. On the contrary, the actual result has in general as much exceeded the original estimate, as the original estimate of cost has fallen short of the final expenditure; and it is fortunate for the proprietors that such should have been the case, for had it been otherwise most of the railways would have proved utter failures.

The evil effects of inadequate estimates extend much further than to the undertaking immediately and directly concerned. One engineer thinks himself blameless because Mr. So-and-so has equally or in a greater proportion exceeded *his* calculations, the truth being that both may be equally culpable, or there may exist reasons of palliation or excuse in the one instance which are not applicable to the other. Again, it is a very common mode of reasoning with engineers to say, that such and such a line has cost 30,000*l*., or 40,000*l*., or 50,000*l*. per mile, whereas *theirs* will cost but 25,000*l*. or 20,000*l*. They forget that the 50,000*l*., in the one case, may be more in accordance with the expectations of traffic than the 20,000*l*. in the other—that the one district may properly afford the larger expenditure, while even the reduced cost may be, so far as the proprietors are concerned, ruinous in the other. Besides, self-evident as is the proposition, it is too generally overlooked in practice, that extravagant expenditure in construction entails upon the undertaking a burden which it can never shake off. It is very well to say that because the traffic of *that* line which has been constructed for so many thousand pounds per mile is just half as much as the traffic of *this*, therefore, the cost of the latter may fairly be made double that of the former. In such case both may return a satisfactory profit, but it should be remembered that had the one line been made on the same economical principles as the other, the return would in that case have been doubled. And when we find so much anxiety professed to keep down the working expenses of railways, we cannot help regretting that a similar zeal was not evinced in an earlier stage. Not that we would discourage the study of economy at any time or under any circumstances; but when, as in the instance of the North Midland Company, we see the effects of the cheese-paring reductions which, by taking a shilling from the weekly wages of a policeman or a porter, produce an aggregate sum of 400*l*. or 500*l*. a-year, and reflect upon the thousands, and tens of thousands, which *might* have been dispensed with in the original formation of that line, it is impossible not to feel anxious that future Companies should benefit by lessons of the past. If they do not so benefit, the responsibility be on the heads of the projectors and Managers!

We repeat that, although wishing well to Mr. PATTEN'S motion, we do not anticipate much practical benefit from its success. No really good undertaking was ever yet strangled in its birth by the regulations of Parliament as they now exist, however much it may suit the projectors of hollow and worthless schemes to ascribe to legislative obstructions those results which *we* attribute to the better sense of the speculative and monied public.

THE railway pleasure-trips have just commenced for the season, and we trust that this new field for affording rational and healthy recreation to the community will be increasingly cultivated. The excursion by the South-Western Railway on Monday last promises, we are told, well for future demonstrations of the same kind. We are anxious that other metropolitan Railway Companies should follow the example thus set. There is not one line radiating from the metropolis which does not present attractions of some sort or other, and it is not less the interest and policy than it ought to be the wish of the several Managements to offer the utmost facilities for bringing such attractions within reach of the public. In acting thus they will best consult their own immediate interests, and promote the success of the Railway System generally. It is probable that not much actual and direct pecuniary profit would result from such occasions being multiplied, but a vast amount of collateral benefit will be secured if the public thus become familiarised with the superiority of railway locomotion—if they find that Railway Companies are not the grasping, grinding, *monopolists* that their enemies depict—and if by a slight sacrifice the cause of domestic and social happiness is promoted, by exciting in the breasts of the poorer classes of society a relish for any kind of relaxation which has a tendency to supersede the sottish propensities of crowded localities. It is one of the most promising signs of the times—and as such we hail it—that these pleasure excursions are so extensively patronised, and nothing will give us greater pleasure than to record their success as the season advances. Some lines more than others possess peculiar facilities for the *encouragement* of these pleasure-trips, and we cannot doubt that the Managers of *all* of them will cheerfully and warmly second whatever efforts may be made in the attainment of so desirable an object as the healthful amusement of the great mass of the community.

Might it not be worth while to represent to the CHANCELLOR of the EXCHEQUER the propriety and policy of foregoing the passenger tax on occasions like these? If the Railway Companies are content to supply accommodation with little or no profit to themselves, assuredly Government might dispense with the accustomed impost. In a thousand forms benefit would accrue to the State, by making the parties thus treated better men and better citizens; and although it is alleged that "private vices are public benefits," and that the Administration has a direct interest in conniving at, if not encouraging, the debasing practices of the gin-palace and the ale-house, we are satisfied that with men of principle, such as now direct her Majesty's councils, a consideration of this kind would have no weight, and that to contribute to the gratification—if but for a day—of so large a proportion of their fellow-subjects as might, under proper regulations, enjoy the benefit of railway excursions, would prove in the highest degree satisfactory to them as Christian statesmen and men of benevolent feeling.

WE have inserted, in another part of our journal (among other communications on the same subject), a letter on the Toll Question, signed with a Greek character. To attempt to controvert what we must in courtesy call the arguments of the letter referred to, would be a work of supererogation; but it contains some statements so loosely made, and with so little regard to truth, that we must take the liberty of pointing out the real facts.

It is asserted that "the Croydon Company agreed to pay a stipulated toll." This is not the case. The agreement was all on the other side. The Greenwich Company agreed to charge NOT MORE than "a stipulated toll," if the Croydon Company should use their line, then already constructed; and this agreement the Greenwich Company afterwards violated by charging a toll of 4½d. There is nothing whatever in the agreement expressed or understood as to the *necessity* of such use by the Croydon Company. Again, it is asserted that "Parliament insisted on the Greenwich Company embarking a large additional capital in new works." It was not so. All that Parliament said was, that the Brighton and other traffic should not come on the line as it was; and the other Companies offered to incur the outlay themselves, and promised to charge the public no more than 3d., but the Greenwich Company *insisted* on their right to lay out, not 200,000*l*., but 100,000*l*, (for this is all that the

Digitized by Google

line has cost, the rest being expended on station room for the exclusive use of the Greenwich Company), and asked for a toll of 6d. upon the public.

It is further asserted, that this 4½d. toll was the result of "a solemn contract," which sets at rest "the legal right." Nobody disputes the legal right; but as to the "solemn contract," there was no contract at all, for the Croydon Company protested, from first to last, against the imposition of this toll as unjust and impolitic, and one which they never would, and never could, pay upon their then number of passengers.

Moreover, it is stated in the letter, that "by this Act [of Parliament] the Croydon Company is a consenting party to that toll [the 3d. toll] being charged, with 1½d. in addition to this very 3d." This is a mistake. We remember to have published a part of the speech of Mr. AUSTIN, the Croydon Company's counsel, as quoted by the Chairman of that Company at one of the general meetings, in which he, Mr. AUSTIN, stated that the Company had retired from the Parliamentary Committee upon the express ground that they would be no parties to the imposition of any additional toll. Nothing can be more strong than the protestations on this point.

Once more, it is asserted that "if the Croydon Company should be actually ruined by this toll, it MUST be PAID." This assertion, we think, will answer itself.

The allegation, that it is the duty of the Croydon Company "to throw all possible traffic on the Greenwich line," whether it suits their own purpose or not, is too puerile to deserve notice.

The gracious intimation that the Greenwich Company "may," some day, "of its own mind, and for its own interests, consent to a modified reduction of some kind," is both condescending and amusing; and the assertion afterwards, that "passengers, if they can be gulled into stopping at New Cross, would be just as soon driven slowly along" four miles of road as along three miles, is equally edifying.

But for the channel through which this letter reached us, we should not have noticed it at all in this part of our journal, but have left it to speak for itself. The forbearance exhibited in the closing exhortation to the Greenwich shareholders is particularly noticeable. Why not insert at once a clause in the new Bill, that the Croydon, South-Eastern, and Brighton Companies shall charge such fares as shall be most beneficial to the Greenwich Railway Company, and that the carriage doors shall be kept locked till the trains arrive at London Bridge?

The Toll Question has been much mystified; it is purely one of commercial expediency. The strict legal rights of the two parties resolve themselves into this: that the one may charge a prohibitory toll; the other a prohibitory fare; or not carry at all.

Equitable rights there are really none. The Greenwich Railway was planned and commenced before the Croydon Railway was projected; and as it was so planned and commenced, it was proceeded with and completed after the Croydon Railway was projected; the Greenwich Railway was consequently planned and completed without reference to, or being influenced by, the Croydon Railway. The mere construction of the Greenwich Railway can therefore give the Greenwich Company no equitable claim on the favour or consideration of the Croydon Company.

On the other hand, the Greenwich Railway being planned and partly formed, the Croydon Company projected their railway, certainly without any assumption or pretence that their object or desire was to benefit the Greenwich Company. The Croydon Company merely stipulated for a way-leave at a certain rate, and constructed their railway. The construction of their railway, under such circumstances, could not possibly give them any equitable claim on the Greenwich Company for favour or assistance.

The toll agreement carried matters no further. The Croydon Company said, limit your maximum toll, and we will construct our railway to join your railway; the Greenwich Company agreed to limit their maximum toll, and the Croydon Company made their railway to join the Greenwich Railway; but there was nothing in that agreement, either expressed or implied, which equitably called upon either party to assist the other.

Neither does the enlargement of the Greenwich Railway give that Company any equitable claim on the Croydon traffic. The House of Commons having decided that the safety of the public required that the Greenwich Railway should be widened, the Greenwich Company offered to widen their railway, if the Croydon Company would *consent* to pay an additional toll. This was declined. The Greenwich Company, nevertheless, did widen their railway, although the Croydon Company formally protested against the additional toll, and gave them distinct notice that they should avoid, as far as they could, the payment of such toll. Surely the enlargement of the Greenwich Railway, under such circumstances, cannot impose upon the Croydon Company any obligation to promote the interest of the Greenwich Company.

The two parties being, then, equitably unfettered, the only question for each is, what to themselves would be the most profitable course. If the one insists upon his legal right to charge a high toll, the other will fall back upon his legal right to charge a high fare; and the one will get no toll and the other no fare. Both, therefore, of necessity must concede something of their strict legal right, or nothing will be obtained by either.

Surely, under such circumstances, men of business would meet and come to some arrangement, or they would appoint friends to meet for that purpose. It behoves those Directors who hope to stand well hereafter, to be prepared to prove their readiness to abide by such an arbitrament.

THE terrible accident on the Versailles Railway still occupies to a large extent the attention of the French journals, although very little that can be depended upon has yet been ascertained with respect to its causes (and scarcely even its consequences) beyond the particulars which we published last week. It is generally believed, however, that over-speed had a strong influence in producing the sad catastrophe.

Meanwhile the authorities have issued various orders for the future guidance of Railway Companies. These will be found specified in another page. The use of four-wheeled engines is interdicted, as well as the employment of an engine *behind*, except in special cases. *The passenger trains are not to be locked.* The speed too is restricted, and several regulations are issued with respect to the condition of the locomotives, and the intervals between succeeding trains. In this country the promulgation of such orders without legislative authority would cause no small surprise; but, perhaps, in the present position of France with reference to railways, some sort of absolute control in these matters is desirable. A Special Commission is immediately to be appointed to make a variety of inquiries and experiments, and it is to be hoped that some permanent improvements in railway locomotion will be the result of their labours.

LAST week, in alluding to the junction of the Manchester Railways, we stated that certain claims for compensation in respect of property required by the Manchester and Leeds Company would this week be submitted to a jury. This has accordingly been done, and the results, which will be found stated in another column, strikingly confirm the valuation of the Company's officers. It will be seen that *a member of Parliament* CLAIMED 2,678*l.*, and was AWARDED 1,557*l.*, being just 10*l.* less than the offer of the Company! We had hoped to hear no more of such claims as this.

THE following particulars with reference to the Greenwich Railway will be found interesting:—

—o—

WE understand that General Pasley, the Inspector-General of Railways, has examined the additional works on the Greenwich line, and reported that they have been constructed to his entire satisfaction.

—o—

To show how anxiously railway engagements are sought after we may mention, that a recent advertisement brought, *in one day*, upwards of SEVENTEEN HUNDRED applications, the salary offered being extremely moderate.

—o—

THE following persons have travelled by the Brighton Railway during the present week:—Mr. Lyall, M.P.; Viscount and Viscountess Bernard; Lady Wyatt; Captain Wyatt; Lady Charlotte Sturte; Lord and Lady Stanley; Sir John Trollope; Miss Talbot; Sir John and Lady Boileau; Earl of Bandon; Marquis of Downshire; Captain Wood; Lady Fane; Lady Taylor; Sir Edward and Lady Kerrison.

—o—

AT a recent meeting of the London Statistical Society, a paper was read by Mr. Weld, on "Accidents upon Railways." It appears to have been principally an abridgement of the late Report of the Officers of the Board of Trade. The *Athenæum*, in referring to the occasion, says:—"A long discussion ensued, and it was proposed that a comparison between the accidents arising from railway travelling, and those proceeding from stage-coach conveyance, should be made, if possible; with a

Digitized by Google

view to which *Viscount Sandon suggested, that a return might be called for in the House of Commons, of all the inquests held by coroners, from which might be selected those resulting from stage-coach accidents;* and thus, as far as the deaths went, the comparison would be complete." We hope the suggestion of the noble Viscount will be acted upon.

—o—

A MEETING is called at Evesham, for Monday next, "of all parties locally interested in the establishment of a line of railway from the Vale of Evesham, to join the Birmingham and Gloucester Railway at Eckington."

—o—

THE *Kentish Observer* of last week says:—

"We have great pleasure in stating that, through the zealous exertions of the Vicar of Ashford, the Rev. Thomas Wood, a room has been licensed by the Archbishop of Canterbury, as a temporary chapel, for the use of those persons who are employed on the Dover Railway. The chapel was opened for the first time on Sunday last, and it was truly gratifying to see it crowded as it was. We may add, that the example set to the workmen by the Engineer, and other leading individuals now resident in and near Ashford, and employed on this line, cannot fail to produce very beneficial results."

RAILWAY OFFENCES AND OFFENDERS.

AT Marylebone police court, on Tuesday, John Booth, late an inspector of police on the London and Birmingham Railway, was remanded till this day, on a charge of robbing the Company. Mr. Bedford, superintendent of the railway police, stated, that on the 4th of June last he gave a written order to Mr. Kerr, one of the Company's cashiers, to pay to the prisoner the sum of 96*l.* 7*s.* 6*d.* This amount he received, and it was his duty to have handed over certain monies to different inspectors, for the settlement of the constables' wages; he, however, paid over 13*l.* to the inspector of the first district between London and Watford, and on the same day absconded, taking with him the remainder of the money. It further appeared, that since he quitted London he had taken a trip to and from America, and that the person who captured him on the previous day had formerly been a constable in the London and Birmingham Railway Company's police.

Last week John Riley, of Bradford, was convicted by the Bench of Magistrates, at Halifax, in the penalty and expenses of 30*s.*, for obstructing the officers of the Manchester and Leeds Railway Company when in the execution of their duty, and refusing to quit the station (Elland) on being requested.

RAILWAY SAVINGS' BANK.

[From a correspondent—*Delta.*]

IT is proposed that a savings' bank be instituted under the above designation—that it be regularly constituted as other establishments of a similar nature—that it be open to all persons employed in railways in any part of the kingdom—that a better rate of interest be allowed than that generally allowed by savings' banks—that it be the same as allowed by the Windsor and Eton Bank, viz., 3*l.* 8*s.* 5*d.* per cent.—that depositors be subject to similar rules and regulations as other savings' banks; the bank to be bound in like manner—that the Secretaries for the time being of the different metropolitan railways be the trustees, &c.—that the Accountants of the said railways be the Committee of Management—that deposits be received by the Accountants of the different provincial railways, and forwarded to the Committee of Management at such times as may be agreed upon—that the profits at the end of the year be divided among the depositors in such manner as shall be determined—that the Committee of Management be allowed a small per centage upon the profits, for their services—and, that the Directors of the various railways be respectfully requested to lend their aid.

The following table, showing what certain weekly payments in a certain number of years will amount to, will point out the advantages to be derived from such an institution; it was formed by the Windsor and Eton Savings' Bank:—

TABLE.

Years.	1s. per week.	1s. 6d. per week.	2s. per week.	3s. per week.	4s. per week.	5s. per week.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

THE SOUTH-EASTERN RAILWAY OFFICIAL MAP AND SECTIONS.

WE notice with much pleasure that Mr. Jobbins had just completed a very elaborate and beautiful Map of the South-Eastern District of England, for this Company, to show their extensive undertaking.

The map exhibits the entire counties of Kent and Middlesex, and nearly the whole of Sussex, with portions of Surrey, Essex, Bucks, and Berks; the whole of the cities, towns, and villages, turnpike and other roads, as well as the water communication, through the parts of the kingdom above enumerated; in addition to which, a large part of France is embraced, so that those who consult it will be able to calculate what amount of distance from any part may be traversed in connection with the railway stations in a given time.

The sections of the lines of railway accompany the map, and they are given entire, with the various tunnels, cuttings, and embankments, together with the amount of rise and fall in the different portions of the lines, and the length of the level and inclined parts.

The labour bestowed upon the map has been immense, and we do not hesitate to pronounce, that for accuracy, and perspicuity, it cannot be surpassed. We know no class of persons, either resident in, or travelling through, the district, to whom it will not be useful, whilst its price brings it within the reach of all.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

LONDON AND BLACKWALL RAILWAY.

May 13.—Lords amendments agreed to.

LONDON AND CROYDON RAILWAY (GRANGE-ROAD APPROACH), (No. 2).

May 13.—Report Friday, 20th May.

SAUNDERSFOOT RAILWAY.

May 13.—Message from the Lords that they have agreed to the Bill without amendment.

THAMES HAVEN DOCK AND RAILWAY.

May 13.—Petition of the Eastern Counties' Railway Company against the Bill; referred to the Committee on the Bill; counsel ordered.

LONDON AND SOUTH-WESTERN RAILWAY DIVIDEND.

To the Editor of the Railway Times.

SIR,—The traffic on this line from January 1st to May 14th, a period of 20 weeks—

Amounted to	£95,482
For the next 6 weeks, to complete the half year, I calculate, with the receipts of the Gosport branch, an average of 8,000*l.* per week will be taken	48,000
	£143,482
From which deduct working expenses, and interest on all the Company's loans, 50 per cent.	71,741
	£71,741
Add for pier dues, as per former statements	250
Balance in hand last half-year	8,750
Total	£80,741

If a dividend be declared on the *whole* number of shares, 46,200, of 35*s.* per share, it will require 80,850*l.* That the Company might, if they would, divide 35*s.* I have not the least doubt, and I hope the proprietors will support any motion to that effect which may be brought forward at the next general meeting.

There was an excess of about 3,000*l.* charged in the item "mileage duty," in the last Report, which fairly was chargeable to the half-year ending June 30, 1841, and this amount will more than make good the sum required for a dividend of 35*s.* per share.

If it be supposed that 50 per cent. is not sufficient to allow for working expenses and interest, I would remind your readers that in the case of the London and Birmingham line the per centage for the last half-year was only 45*l.* 3*s.* 3*d.*, including 14,643*l.*, or about 3*l.* 8*s.* 3*d.* per cent., *reserved for depreciation of locomotive stock*, &c. &c. I therefore fully expect to find the South-Western expenses reduced below the limit now under consideration this half-year, and that in all subsequent Reports we shall see an approximation to the outgoings of other well regulated railways,

Our prospects are now very gratifying as to the concern being capable of yielding handsome dividends, and if the expenses can be kept down, we shall never again reduce the dividend to 30*s.* per share.

I am, Sir, your obedient servant,
A PROPRIETOR.

On Friday morning a lady left by mistake a reticule, containing upwards of 100*l.*, on the desk of the railway station-house at Kirkintilloch, and immediately afterwards proceeded by the 7 o'clock train to Glasgow. She missed her property almost immediately after the carriages started, and getting out at Bishopbridge, went back to Kirkintilloch by the 9 o'clock train from Glasgow. On entering the station-house, her money was immediately delivered up, having been out of her possession not more than half an hour. It appears that the reticule had been found by the porter, named Wm. Downes, and by him handed to the person in charge at the station.—*Glasgow Courier.*

LONDON AND BRIGHTON RAILWAY—GUINEA-HUNTERS.

To the Shareholders of the London and Brighton Railway Company.

BROTHER SHAREHOLDERS,—It would be difficult to adduce stronger proof how deeply interested is the world generally in the matter of Railway Directions, than that offered us by the great variety of remarks and suggestions put forth of late in the letters of the *Railway Times*, in reference to this very important subject; but, though many are the plans submitted, few are those suggested by Directors themselves—and they are almost the only persons, besides the other officials attending a Board, who can really offer any very practical information of the working of the system.

It is a matter of surprise to those who are ignorant of the characters and situations of the sort of persons who but too often constitute a Board of Direction, how such wanton follies are committed, and how such enormous sums are lavished, in the execution of the duties imposed on them. A closer inspection, however, of the magnifying glass will speedily bring to light monstrosities hitherto unobserved.

The original organization of a Railway Board is usually effected by some two or three active "men of straw," whose sole object is to draw together, for their own purposes, such men of consequence or figure in society as they have been able to flatter into delusive hopes of ultimate personal advantages, either as landowners interested in the undertaking, as needy and not over-conscientious members of Parliament, or as baronets of broken-down expectations, whose several rank and position in the world help to glaze the forthcoming prospectus of the undertaking. These men are chiefly useful as decoys, or in Parliamentary canvass, and of that needful class of intermediate agents, who enable the conscientious member of the Parliamentary Committee to afterwards "call God to witness that neither directly nor indirectly have they sanctioned or committed bribery." But the Bill once passed into law, and the original projectors of the scheme having associated to themselves a *quantum suf.* of City men—thick-and-thin partizans of their own—the what is called Provisional Direction is broken up, and the Sir Mathew Pumpkins of the list left to their own resources, while the affairs of the Company fall into the hands of a body of men (either merchants, brokers, or Jews,) not always, I fear, of the highest character for integrity; and these are they whom I designate "Guinea-Hunters," in reference to their avocation of running from Board to Board (sometimes to as many as four or five in the day), where they hurry over business, in one hour, which would reasonably require thrice that time to be effectually performed in, where they squander away thousands in summary ill-digested arrangements with contractors and landowners, and where, after inserting their names in the book, eating their luncheon, and writing a note or two on private business, they become entitled to the customary fee of attendance. Now, Gentlemen, as these Guinea-Hunters are pretty generally known to each other as men having no ugly scruples about *Tuum* and *Meum*, not having any interest in the concern they belong to but that which has reference to the aforesaid fee, or the playing into their own hands, or those of their fellow-Directors, in the supplying to the Company the materials in which they traffic, it results that, on all occasion of election, it is the interest of such men to bring into the Direction colleagues of their own guinea-hunting stamp, while it is equally obvious that economy is just the last virtue *they* are likely to practise who indirectly, if not directly, benefit by every fresh expenditure of the finances entrusted to their care. But this is not the worst evil to be endured. Here, at least, something is given in return for the proprietors' money. Though the oil be dear, the iron expensively supplied, the coal above the market price, and so on, with all the thousand needed and unneeded wants of a railway establishment, which are thus ruinously purchased, still there is something to show for the outlay. But the chief objection to this guinea-hunting qualification is that which arises from the hurry and inattention at these meetings, consequent on each member having made up his mind to spare only one hour or so (as may suit his convenience) to the transacting of business often requiring a clear day's deliberation—occasions, in fact, when tens of thousands are to be disbursed, or not. It is not uncommon to hear men, who know the true value of doing things in an off-hand way, complain, when cool deliberate disquisition is attempted, that long speeches impede the business of the day; the fact being, that two-thirds of the Direction (at least all the guinea-hunting men) are intently engaged in watching the room clock, anxiously expecting the arrival of the particular hour which is to find them seated at another Board, writing their names down in another book of attendance, or being fined if absent therefrom. It is all very plausible and ear-catching, for men who are desirous of obtaining credit (if they have no worse motive) for being very ready business-like men, to talk of the great evil of all Boards composed of a number of members, and the loss of time consequent upon the delivery of so many opinions; but the real fault is not in the many heads—for "there is both wisdom and safety in the many"—but in this, that these members, being chiefly busy in guinea-hunting, cannot spare sufficient time to consider any subject brought before them, and therefore deprecate all inquiries or arguments which bring them to "a check" in their more profitable chase. Besides, who amongst you, brother-shareholders, is such a dolt, or so dead to his own interests, that he cannot comprehend how worse than useless must be the services of any Director whose mind and attention (if occupied at all beyond the guinea hire) are distracted with the party-coloured affairs of three or four different Companies? Just as well might you expect a Prime Minister to hold all the situations of Government employ with equal success—being as good a Chancellor of the Exchequer as Commander of the Forces—as active a Minister for Foreign as for Home affairs, and so on. The idea is ridiculous. Any man, to make his services truly useful, must necessarily confine his attention, for a definite number of hours each day of his life, to his duty; and as there are, unfortunately for these guinea-hunting gentlemen, but 24 hours in the day, part of which custom has allotted to sleep (though it is generally admitted that these goldfinders are usually pretty wide awake), it amounts to a clearly demonstrable fact that, if a certain portion of each day be indispensably necessary to the due discharge of each separate duty, he who has many and varied calls on his time and attention cannot conscientiously or effectively administer to many masters.

Now, Gentlemen, if this be a fault as regards an individual Director, how doubly dangerous to your interests must be the having entrusted your affairs to the more immediate guidance of a Chairman, who is not only a Director of some half-dozen other Companies, but who is actually Chairman or Manager as well of three or four of these concerns. On the one hand, it often happens in such cases that the interests of the different Companies to which a Director may belong will clash; on the other, the welfare of one concern is sacrificed to the gain of a third; and this brings me to the main object of my letter, which is to point out to you the absolute madness, the insensate folly, of going on year after year submitting to such maladministration of your affairs, to call it by no harsher name; in longer permitting, in fact, anybody to hold the situation of Chairman of your Company who, like the present one, not only is a Director in many others, but who is besides at the head of several Directions as well.

To be an efficient Chairman of a Company, such as yours particularly, requires the whole time and energies of an active, disinterested individual, who will cheerfully consider his duty a pleasure, and make the affairs of the Company his child and his hobby, by rendering it his whole undivided attention. Such a one will for ever be on the line or about it, passing from station to station, with an eye over all things, and a remedy (a ready and cheap one) at hand for every emergency; while no salary that you could reasonably confer on a good servant would be too great for the services of such a Chairman. Now, Gentlemen, is it not notorious that the avocations of the individual at the head of your concern are as multifarious as those of Caleb Quotem? Does any one pretend not to know, that he already not only belongs to at least half-a-dozen other offices, but that in many he is the Managing Director, to say nothing of the half-a-dozen other Companies whose ephemeral existence has only been known to the world through those prospectuses where his name has figured as Chairman. The two last—the Worthing and the Horsham lines, bastards of the Brighton road—being thrown upon the parish for maintenance, fortunately for their putative fathers, perished as soon as they were born—of a weakness in the chest, it is rumoured.

Which of you, gentlemen, I ask, being a landowner or merchant, would engage as bailiff or foreman of your works, or as head clerk for the superintendence of your business, a man known to you as serving, at the same moment, three or four other masters? Why do you usually insist upon his being your servant, and yours only? Why; but because you know that he cannot faithfully, and *de bon cœur*, serve two masters; because you know that his whole time and attention must be devoted to a single purpose to enable him to be thoroughly acquainted with your business, as well as to be friendly and exclusively attached to your interests, and which he cannot be, were he the best of men, if he be engaged in several distinctly different pursuits.

Now, if this be the case (and I contend it is) in minor business concerns, is it not as palpable as noon-day that in a great Company, where several millions of money are under the control of a few gentlemen appointed to carry out a speculation in which great expenses are to be incurred, and where (as is now well ascertained to be a fact) nothing but the most economical and well-adjusted management of all its departments can render us the least hope of a dividend being forthcoming, perhaps for years—is it not palpable, I repeat, that if you would rescue your concerns from the fearful atrophy into which they have fallen, that to continue to entrust them to the charge of one who has not the time, if he had even the ability, to devote himself exclusively to your interests, is perfect madness? Do you not comprehend how indispensably necessary it is, that he who is Chairman of your Company must be a man of energy, honour, and disinterestedness?—that he must be your servant, and yours only, and that he must not only adapt his whole time and attention to your service, but must be a person peculiarly fitted, by his natural habits and his turn of mind, to this particular and very peculiar position—a man, in fact, of ready resources and ingenuity? It is a mistake of the grossest kind to suppose that mere city men, plucked from a desk where they have passed half their lives, are qualified for Managing Directors of a vast undertaking like the Brighton Railway, stretching 50 miles through a country where hundreds of policemen and officials are scattered up and down the line, all requiring constant supervising and instructing, and where multifarious party-coloured duties call for the experience of those used to difficulties and command—of men of the world unused to the tricks of trade, uninfluenced by those associations which are unavoidable among city men, connected as they are directly or indirectly with each other in commerce, and which must always be fatal to the economy of a railway. Much has been said of the bland suavity of your Chairman's address; but I am of opinion (though I know it is a common feeling among Directors in general that no one is fit to be Chairman of a Company who has not the talent or manner to address a meeting), that when a concern is well and satisfactorily managed, there needs no great quantity of varnish to gloss it over with; that this bland suavity, alias "soft sodder," is admirably useful in turning aside the indignation of shareholders at the mismanagement of their property; but when this indignation is just, I doubt of the Company having been benefitted

Digitized by Google

by its being turned away. "Good wine needs no bush," and well-ordered Companies require no French polish to glaze over defective patches. Be alive and stirring, therefore, brother shareholders, if you would institute a better state of things, and my next shall contain the remedy; but, above all things, come not to the meeting to be fooled, nor to butter or to be buttered with the ridiculous and fulsome compliments between the shareholders and the Directors, which but too often seem to form the chief business of these meetings; be not bamboozled with the common hackneyed slang of rogues about the loss of time. Call your meeting at 10 o'clock, and sit till you have well debated the questions before you, be it until eventide. I do not pretend to be a prophet or a conjuror; I am but a plain man, and hate all dishonesty. I do but address your common sense, and I trust you have enough to teach you how to choose your own servants. I am, Gentlemen,

A BROTHER SHAREHOLDER IN THE BRIGHTON LINE.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—The question of "What *has* become of the money?" has been so many times reiterated among the shareholders, that the truth begins to ooze out by degrees, and to stand forth to the confusion of those who have kept it back. How, let me ask, is it that in some contracts fortunes have been made by men who are far from being practical men, while others have been obliged to recede from the same works, although well aquainted with the matter they have on hand? How is it that casualties and contingencies have been paid for so lavishly on some contracts, while on others there has not been a *single* allowance for any contingent expense under which the contractor has been suffering? It has universally happened that the favourites and intimates of some of the engineers have walked off with a heavy profit, while many who, with honesty of intention, have held aloof from them, have been obliged to put up with the losses they have incurred, and be content (like the shareholders) to bury their money in the chalk of Surrey or the clays of Sussex. I do not mean to assert that the selection of engineers by Mr. Rastrick was made with any dishonest intention, but that some of them were raw and inexperienced, and incompetent to fulfil the duties allotted to them, is incontrovertible, * * * *; and this can at once give an answer to the question—"What *has* become of the money?" In some cases the "lucky" contractors who have made a bad bargain have been allowed to substitute a "day job" for contracted "piece-work," and have pocketted immense sums, while their neighbours, not being "fly to the move," have been obliged to stand to the letter of their contract, and to meet unforeseen expenses in the best way they could. I can mention a contract where No. 2 and No. 3 were let to a man at an exceedingly low price who had but little means to carry them through, having been but a short time before almost, if not quite, pennyless. Unable to fulfil his engagements, he became insolvent; and now mark the issue. At that period he had 600 or 700 men at work under him, and the Engineer suffered him to alter his contract, and agreed to allow him (I believe) 4s. per day for all hands he employed, thus giving him an inducement to spin out the work to the utmost, and by the profit on the labour, and the exercise of the "truck system," to realise a handsome fortune in a short space, which he did; for, on his decease, which took place eighteen months after his insolvency, his executor proved his property to be worth 25,000*l.*, the whole of which was realised from the "day job" which had been allowed to supersede his losing contract; and, if I am rightly informed, his executor was an engineer employed on the line. A contractor in Sussex, below the Clayton tunnel, whose tender was at first refused, as being far below the sum at which the work could be done honestly, but which was afterwards accepted, boasted of the "job" he was making, and of having presented horses to one of the officials on the line for private use. This man's contract for removing earth was made at the rate of 11½d. per yard, and the nearest offer to him was 15½d., which a practical and experienced man asserted was the lowest price at which he could afford to do it, and yet at this low figure the contractor, from contingencies, managed to finger a considerable sum out of his bargain.

How is it the engineers have not made a fresh contract with those men whose works have given way—embankments, for instance, where the base has been formed of materials not calculated to bear the pressure of the superstructure, and keep up the foundation? Instead of this, as in contracts 12 and 13, day work has been substituted in the same way as I noticed in contracts 2 and 3, and this has cost the Company immense sums. Why are not the proprietors up and stirring, and why do they not insist on employing practical and scientific men, instead of theoretical ones—men who know what the work is, and how to perfect it? By this they will save the unusual and extraordinary outlay to which they are subject, by employing only men who have education alone, and not practice nor abilities. Why do not the shareholders insist on sending men they can depend on to make a practical survey, and get a Report from such men of the state of the line, and not put faith in the Report of the principal Engineer, who, with two or three Directors, goes from station to station throughout the works at a rapid rate, and knows and sees as little of the real state of the line as common passengers in a mixed train?

How is it that the private contracts for work now to be done on the line are *not left open to competition?* A Sussex contract was left by the contractor who, I believe, was a civil engineer, and who had some contracts on the South-Eastern line, but not finding the respectable Engineer, Mr. Sims, so pliant as Mr. Rastrick and his colleagues, was very happy to return again to this line, where he was allowed to take a private contract. The fact is, Mr. Sims was too practical a man to allow a profit of ten or twelve thousand pounds to be made from one contract.

That men have played into each others hands, in order to reap the golden harvest before them, is without a shadow of doubt, and thus has the money been most lavishly squandered. It is not from mere report that I write, but from a strict acquaintance with the barefaced and unblushing facts which are daily coming out respecting the mismanagement of this expensive railway. Well might "Diogenes" impute to Mr. Parsons the saying, that "there is more to tell;" there is indeed much more to tell, and of a nature to astound many of the unsuspecting shareholders—and out it shall come, and that right shortly, in a manner which shall show "where the money is gone," and what the unforeseen contingencies are which have made the outlay likely to amount to 3,000,000*l.*, instead of the original estimate of 1,100,000*l.*

You have done your duty, Sir, as a fair and impartial man, and honestly investigated the affairs of the speculation, and I trust you will give me a place in your columns; and as I have once, and at last, determined to lay before the public a few facts in this system of mismanagement, nothing shall stop me until I have shown up in full relief the gross and lavish expenditure which has been entailed on the Company.

I am, Sir, yours, obediently,

ALKALI.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, "Spectator," is a silly coxcomb, and does not know how to spell infinitesimal, and cannot therefore be supposed to understand the feelings of the gentlemen who direct this undertaking. They are not, I assure you, influenced by such paltry motives as a love of lucre or a desire of gain; they are actuated by far higher and nobler views. They run cheap trains to Croydon to accommodate the public—the *snobs* of Croydon; and they run dear trains to Brighton to accommodate the aristocracy of that fashionable watering-place—the *nobs* of Brighton. The mere money result to the proprietors is a very secondary and unimportant consideration.

I am, Sir, &c.,

JUSTICE.

Brighton, May 16, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have read with astonishment the leading article in your last week's paper regarding the disputes between the Croydon and Greenwich Railway Directors. Excuse me for saying so, but the whole statement is a plausible argument for the loosest morality. You wish many passengers carried on both lines, and carried cheaply, and to effect this object you would break down the property of the Greenwich Railway Company in order to support that of the Croydon Company, and you suggest to the Croydon Company the wickedness of deceiving Parliament, and breaking faith with the Greenwich Company, in order to get a new railway entrance into London.

An article in your paper must have, and it ought to have, a general influence over the community interested in railways. But you can not desire to be looked upon as the abettor or promoter of dishonest views, or breaches of faith, in order to keep up the prices of particular shares.

Examine how the case really stands, and I will defy you to do otherwise than blame the Croydon Company alone.

What is the first act of the latter Company? To make a solemn written agreement with the Greenwich Company to pay a toll of 3d. per passenger for passing over the Greenwich line. Can you, for a moment, advocate that the Croydon Company has the least right to have this toll altered or reduced—a toll fixed by itself, irrespective of long or short distance passengers? Because the Croydon Company is like a big baby now crying its eyes out in placards and advertisements, with a view to attract commiseration, can any man of business listen for a moment to any appeal from it, to have this toll of 3d. lowered because it is not enabling sufficient profit to be made for the Croydon Company's coffers? Upon whose capital should profit fairly be made? Surely, upon the capital first in possession of the ground, the most adventurous and boldest of the capitals invested—the capital to which the Croydon Company agreed to pay a stipulated toll. If this be not sound doctrine, we shall find a trader borrowing, by agreement, money from a bank at 5 per cent., asking a return of interest at the end of a year, because he has been unable in the depression of trade to make a sufficient profit to his mind under the charge of such a heavy rate of interest. Indeed, the question will not bear discussion. The Croydon Company must cheerfully pay the 3d. toll, or if it does not, it would grumble at paying its own acceptances.

Is the additional toll now charged by the Greenwich Company of 1½d. per passenger a toll of which the Croydon Company can upon any better moral principle resist the payment? Certainly not. Parliament insists on the Greenwich Company embarking a large additional capital on new works. That Company submits to the pressure, and agrees to spend 200,000*l.*, but asks a 6d. toll in return instead of the 3d., and will not make the expenditure upon any other footing. The Croydon Company resists this 6d. rate, and Parliament, after hearing the protracted discussions of both parties, adjudicates finally, and fixes upon an additional toll of 1½d., or of 4½d. in all, per passenger to be paid by the Croydon Company, and upon the footing of this solemn contract the Act of Parliament passes which sets the question at rest of legal right. Is the Croydon Company to be at liberty afterwards to kick at and revile this increased toll, and get an influential paper like the *Railway Times* to sanction

Digitized by Google

its wicked opposition? Why, if the Croydon Company should be actually ruined by this toll, it must be paid. It is nothing to the Greenwich Company whether the Croydon Company's shares are to keep up their price or not. A toll has been contracted to be paid, and it must be paid; and the Croydon Company, on the Act of Parliament passing, became more than ever bound to the 3d. toll; for by this Act it was a consenting party to that toll being charged with 1½d., in addition to this very 3d. Let its shares fall in price, if they must, in consequence of this bargain; but kept the bargain must be, honestly and sacredly; and if the Greenwich Directors dare to give way to the present system of bullying, before they have had the fullest experience of how this high toll works, they will be guilty of grossly betraying and sacrificing the interests of the shareholders preferent and non-preferent.

The conduct to be adopted by the Croydon Company is plain if it desires to be guided by honesty and good principles. Let it throw all possible traffic on the Greenwich line, and make its tolls such as travellers ought to pay to be remunerative, and no more. A rise of 1½d. in each toll over and above the fair rates of toll, such as the Croydon Company at first fixed, is all that it can justifiably add to its charges to passengers; and Parliament alone will be then to blame for this addition of 1½d., and neither of the Companies can be at all assailed. The Croydon Company has no justification, on being charged an additional 1½d. for the particular reason of the great increased expenditure ordered by Parliament on the Greenwich line, to add one farthing additional to any one of its rates beyond the 1½d. If it does, and it is doing so, this arises from its desire to make a violent plunge from morality to immorality, and to try and put the Greenwich Company in the wrong towards the public, and to knock down the Greenwich Railway property rather than let the Croydon Railway stock or shares fall any lower. All its attempts will be futile when the facts are known and understood; and the sooner its Directors travel in the path of rectitude, the better for the real interests of the Company under their management.

The Greenwich Company, when it sees what can be produced by the fair and unrestrained operation of a 4½d. toll, may, of its own mind, and for its own interests, consent to a modified reduction of some kind. *But the time to be chosen for this purpose rests with the Greenwich Company alone*, and it must set at defiance all the impotent threats and noise of the Croydon Company, and its co-adjutors. The public will see justice done in the end, and so will you, as a public journalist, or your character is greatly belied.

I have every reason to think that the measure in Parliament for an approach from New Cross to the Grange-road is an insidious attempt to acquire land for a branch railway, under the semblance of obtaining it for a mere road approach; and I think so, because for goods and cattle the approach well-known as the Greenwich turnpike-road, is the best possible of all approaches to the New Cross station. And in reference to passengers, if they can be gulled into stopping at New Cross station instead of being taken forwards to London Bridge, they would be just as soon driven slowly along the Greenwich road and through Southwark into London, as slowly along the Grange-road and through Bermondsey into London. If, therefore, the new approach is of no use to passengers, and if it be not wanted for goods or cattle, it is quite certain that in seeking for it there is some covert design; and, mark my words, Greenwich shareholders, and be on the alert—this is the beginning of a new railway from New Cross into London. Nip the scheme in the bud! Insert a clause in the Act that neither the Croydon, South-Eastern, nor Brighton Railway Companies, shall ever use the approach as a railway, or countenance any application to Parliament to make it a railway, and your interests will be partially protected. But be on the look-out if you wish to preserve your property from the ruin which threatens it—from the machinations of Companies who wish to take advantage of your expenditure, and to swamp your capital, in order to fig up to high market prices that which they have embarked subsequently to your enterprising and adventurous spirit leading the way.

I have to apologise sincerely for the length of this communication, and I hope it will lead you, while you protect the public, not to advocate the pecuniary interests of any particular Company committing breaches of contract.

I remain, Sir, your most obedient servant,

Δ

London, May 12, 1842.

THE TOLL QUESTION—GREENWICH AND CROYDON RAILWAYS.

To the Editor of the Railway Times.

Sir,—Being unfortunately a considerable shareholder in the Greenwich Railway, I have been induced to pay great attention to the controversy between the two Companies respecting their interests in the relative difference between high and low fares, and I admit my interest and feelings were at the commencement of the controversy entirely enlisted on the side of the Greenwich Company; but as the correspondence and controversy have advanced new lights have broken in upon me, and I now am not ashamed to confess that my original opinions have been materially changed—not that I blame the Greenwich Company in endeavouring to procure as large a toll from the different Companies as they can for the use of their railway, but I differ from them in *the means* which they take to bring about so desirable a result, and for these reasons—

1st. The Croydon Railway being only a *pleasure railway*, and it now appearing to me that the public can only be induced to make use of it in sufficient numbers to make a profitable return (the railway having now been open, I believe, three years, and only *one* dividend of 6s. 8d. per share paid) for the expense of working it, but by being charged low fares. If so, how can the increased toll of the Greenwich Railway be paid by the Croydon, if the original fares, subject to the lower and original toll, never produced more profit to the Croydon Company than 6s. 8d. per share in three years?

2nd. The Croydon Company, I should think, like any other commercial Company, will not charge low fares, unless they can procure their fair share of profit by so doing.

3rd. The Croydon Company will charge high fares, and so diminish the traffic of the railway, if, in so doing, it should be found to suit their interest best, to the great injury of the Greenwich toll; and then, if such should not answer, they would have *no alternative* but to give up the traffic short of Croydon altogether, and so give up the working of their line.

Now, for the above reasons, although the Greenwich Company have expended so large a sum of money in adding to their line, I do not see how they can *compel* the public to make use of the Croydon Railway, but by enabling the latter Company to offer the great inducement, as above stated, of *low fares*; for whether the Greenwich Railway cost *one thousand* or *one million*, the public, as they cannot be compelled to make use of it, will not, as it now appears to me, care one jot.

But I wish, as one greatly interested with the Greenwich Directors, respectfully to suggest to them how desirable it would be for the *two* Companies to work amicably together, instead of endeavouring to force a large profit by means of large tolls, which, for the above reasons, I think *cannot be done*. And how much pleasanter it would be for them to ascertain by experiment, or otherwise, in conjunction with the Croydon Company, the problem of *what fares* will produce the maximum of *profit to each*, than as at present to endeavour to enforce a high toll, which they must know as men of the world will never be consented to, unless it would be equally beneficial to the Croydon. The present contest, I think, is lamentable, as it must be equally injurious; and as the Croydon Company appear to offer fair terms for *trial*, where can be the injury to the Greenwich Company in giving them the opportunity of finding out the fares, which, as I have said before, will procure for each the maximum of profit? But I believe, Sir, you will agree with me that it is useless now to repine at what is past; and the good sense of the Directors will be shown, not in vainly endeavouring by a selfish legislation to grasp more than they can attain, which will surely fail, but to forget what has hitherto occurred, and trying by unanimity to do the best they can, by affording the Croydon Directors the opportunity so urgently sought by them, and which, if successful, *must be beneficial to both Companies*.

I am, Sir, your humble servant,

A. B.

May 16, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—So much has been written and said about the Greenwich toll payable by the Croydon Company, that I fear nearly every one is tired of the subject; nevertheless, I will thank you to insert the following remarks:—

When the Greenwich Company was projected, it was not only intended as a railway to Greenwich, but to be a trunk line for all the railways to the south. Unfortunately, like most other railway undertakings, its original estimate was greatly exceeded, and owing chiefly to their having had to pay enormously for land and compensations (the first half-mile passing through a dense mass of houses)—and which, if it had to be done again, could not be effected cheaper—and when additional capital was required, the "sweetener," that they would have the tolls from the long lines, was always brought forward to induce the shareholders to subscribe.

After many vexatious delays, it was announced as finished, but at a cost of 730,000*l*.!!!

The Directors then entered into an engagement with the Croydon Company to charge 3d. for every passenger that passed over the line to and from Corbett's-lane, which is about 1¾ miles. Now, as the Greenwich had the power of exactly 9d., and as that portion (being the London end) must have cost 250,000*l*. per mile, this surely was not too much.

All was well, until an unforeseen difficulty arose in Government not deeming the accommodation sufficient for the public safety, and it was found absolutely necessary to widen that portion of the railway that the other Companies would pass over.

The Greenwich agreed to do this, but said, as it would cost 200,000*l*., they must raise the toll to 6d. Now, without entering into the merits of the question, it is sufficient to say, that after a severe Parliamentary contest, the Government decided that 4½d. was a fair and equitable toll. This decision ought to have settled the question; but such was not the case, for the Croydon Company immediately said, that they must raise their tolls; and shortly after their fares were increased from 1s. 3d. and 1s. 9d. to 1s. 6d. and 2s. This was in anticipation of the 4½d. toll; and when the new line was completed, they stated the necessity of a still further increase of 3d. per head, and it is now 1s. 9d. and 2s. 3d.; thus charging the public 6d. extra, because the Greenwich charge them 1½d.

Many negociations have passed between the two Companies, but I will only notice two. One was for the Croydon Company to pay the Greenwich 17½ per cent. on their gross receipts; and as the Chairman of the Croydon has published what they intended to have charged if the Greenwich Company had accepted any one of their propositions, we find only 4d. was to have been paid by a third-class passenger from New Cross, which would have been in those instances three-farthings a passenger for the Greenwich Company. This would also have induced many of the Deptford passengers to go by the Croydon line from New Cross, so that where the

Digitized by Google

Greenwich now get 6d. they would in that case receive ¼d.

The other was, that as the Greenwich now received about 4,000*l.* per annum from the Croydon traffic at 3d. per passenger, they would receive 6,000*l.* at 4½d.—but the fares being raised by the Croydon, it could not amount to so much—that cheap fares would bring more passengers, and that they would get more income at 3d. than 4½d.; therefore they would lease the tolls for five years at 6,000*l.* per annum.

What would the Greenwich gain by this arrangement? Surely, if the Croydon Company had meant to induce the Greenwich Directors to accede to their proposal, they would have guaranteed them not less than 6,000*l.* per annum at 3d., *and the benefit of what it might amount to, if more.*

The Croydon Company are now applying to Parliament for leave to build a station near Corbett's-lane, and which must be prejudicial to the Greenwich interests, but I have that confidence in our Government that as they compelled the Greenwich to spend 200,000*l.* to make the line available, they will not allow an injustice to be done.

The Croydon Company now charge 1s. 10d. to the Dartmouth Arms, because the Greenwich charge 4½d. toll, but they say, "If the Greenwich will reduce their toll to 3d., we will only charge 1s. 3d." I would ask, then, whatever the motives of the Croydon Directors may be for doing this, are they acting fairly towards the public?

In conclusion, I beg to observe that the Greenwich Company are only doing what the wisdom of Parliament, after mature deliberation, authorised them.

I remain, Sir, your obedient servant,
A LOVER OF FAIR PLAY.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have before me a placard of the Croydon Directors wherein they state that, instead of lowering the fares as they had anticipated doing, they are compelled to raise them. Now, Sir, although I do not wish them to be lowered, as the Greenwich Company charge an addition of 1½d, yet, as the Directors said it was their intention, let them keep the fares at the old price, then they will be doing what they anticipated.

There is also a discrepancy in their list of fares; for instance, in the bill before me, (I send it to you,) the fares are put down as follows:—

	s.	d.	s.	d.
From Croydon to London	2	3 and	1	9
Now from Croydon to New Cross is	1	0	0	9
New Cross to London	1	0	0	9
Total	2	0	1	6

Surely this is not right, as the Directors will find to their own cost. The shareholders of the Croydon had better look after it, as the Brighton Company only charge 2s. and 1s. 6d. as before.

I am, Sir, your obedient servant,
G. GREEN.

Austin Friars, London, May 18, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Those kind-hearted correspondents of yours who occasionally put themselves to the trouble of demonstrating to the shareholders of the Great Western Railway Company the very deplorable nature of the property in which they have invested their money, are, I am inclined to think, not quite so disinterested as they would wish the world to believe. Having, as I naturally suppose, with the fox in the fable, had their own tails cut off by being caught in a trap, they are wishful to palm off their own appearance, to the rest of their brethren, as fashionable; or having, in more plain language, got out of their shares, are desirous to raise a panic amongst the present holders, by attempting, by false reasoning, to show that there will be a falling off in the dividends, and are anxious to anticipate as early as possible—yea, even before the summer has yet commenced—the dark months of autumn and winter, when the said shares will again, no doubt, be to them the best investment possible. This game, I should suppose, has been played too often to frighten the most timid to a sacrifice of his property at anything like present prices. Perhaps it may be unreasonable to anticipate any greater dividend for the present half-year than was received the last; but, without stretching figures to distortion, a 7½ dividend may be looked for, for the latter half of the present year.

The cost for tear and wear, on this substantially formed line, will be considerably below the ordinary average for this item; and as the Company's own coke-ovens at Bristol will be completed in the course of two or three weeks from the present time, when they will be enabled to supply themselves with that article at a much lower rate than they have hitherto been compelled to pay, I doubt not of seeing the working expenses speedily reduced to 30 per cent. upon the receipts.

In making comparisons, too, with the London and Birmingham line, they seem to overlook the fact that that line, prior to its through opening, had an enormous feeder in the Grand Junction line, which had for a considerable period been successfully in operation, bringing them in direct communication with Liverpool, and through it with Ireland, with Manchester, and all the great manufacturing districts, and with Preston, forming the most speedy and direct communication with Scotland. All this description of collateral resources have yet to be developed for the Great Western line. Let the Exeter Railway, which I am happy to see is so fast progressing towards completion, and also the Cheltenham Union line, whose further extension I trust will not now be much longer delayed for want of means, be once fairly opened for traffic, and I doubt not of seeing the Western line, in a profitable and commercial point of view, take the same permanent station which it now most unquestionably does in an engineering light. But without waiting for these contingent advantages, I am willing to back my opinion against any of your desponding correspondents for a moderate sum, that during the present summer, say prior to the end of September, the Great Western Railway Company will receive, for the conveyance of goods, passengers, &c., or what is usually comprised in their weekly traffic returns, 20,000*l.* a week. An intimation that this offer is accepted will meet prompt attention from one who begs to subscribe himself,

A PERMANENT HOLDER OF GREAT WESTERN RAILWAY SHARES.

May 12, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—A correspondent in your journal of the 7th instant, under the signature of "L.," remarks, that if the receipts of the Great Western should progress agreeably to the law which obtains in railway statistics, it will, at the same period of its existence, produce the same splendid results as the London and Birmingham.

I am a shareholder in the Great Western, residing at a considerable distance from it, and should be greatly indebted to any gentleman that would communicate, through the medium of your valuable journal (for the information and encouragement of distant shareholders) the grounds on which the same great prosperity may be expected for the Great Western.

I am chiefly anxious to know whether there are any sources of traffic yet un-developed, or whether the increase may be expected from the improvement of the present receipts only.

To us who have purchased at a premium, it will be a source of great satisfaction to be able, on well founded grounds, to anticipate such results.

I am, Sir, your very obliged servant,
S. W.

May 16, 1842.

P.S. I should be glad to know whether the traffic from Ireland increases rapidly; also, if it is expected that there will continue to be a great improvement in that especially.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Allow me to notice, briefly, the letter of "L. S. B.," in your last number. "L. S. B." estimates the gross receipts for the current half-year at 306,000*l.* But the

Actual receipts up to May 8, are	£201,385
To which add 14,000*l.* per week for the remaining three weeks in May, calculated upon an increase of only 10 per cent. on the average of April, though May usually produces 15 per cent. more than April, say	42,000
And for the five weeks in June, 15,400*l.* per week, calculating upon 20 per cent. increase upon the receipts of April, though June usually averages 25 per cent. more than April	77,000
Total gross receipts	320,385
Surplus of last half of 1841	10,937
Total	£331,322

"L. S. B.'s" estimate, for the last half of 1842, is also, in one or two particulars, erroneous. He calculates the interest at 74,000*l.*, but it will be about 88,000*l.*; the rent, &c., which he puts down at 38,000*l.*, will be about 35,000*l.*; and he has, I think, much under-rated the probable gross receipts at 377,000*l.* In place of his estimate I submit the following, founded upon the experience of other lines:—

Gross receipts from 52½ weeks, at 15,102*l.* per week		£400,207
Deduct expenses, at 33 per cent.		132,066
		268,141
,, Rent and tolls	£35,000	
,, Interest	88,000	
,, Depreciation fund	10,000	
		133,000
		135,141
,, Dividend at 8 per cent. per annum		121,000
Surplus		£14,141

I am, Sir, your obedient servant,
L.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your paper of the 30th ultimo, you did me the favour to insert a few figures relative to the receipts on the Great Western Railway, in reference to the dividend likely to be declared at the next half-yearly meeting. As a shareholder in that undertaking, I am sorry to say, notwithstanding the remarks of several of your correspondents in the *Railway Times* of Saturday last, that my calculations lead me to the conclusion that a dividend at the rate of 6 per cent. cannot fairly be declared out of the profits of this half-year; and I am strengthened in this conviction by a careful review of the following figures, from which it will appear that unless there be taken, from the 8th of May to the 30th of June, the weekly amount of 18,025*l.*, the sum from which the last dividend was declared will not be equalled. Bearing in mind the remarks of that able and upright Railway Director, Mr. Pease, who says he places "little reliance on the statements of Railway Boards for the first eighteen months or two years after the opening of lines," let us look a little into the case as it stands in reference to the Great Western. In the first place, we find there is already a deficit in the receipts of 38,425*l.* on the last eighteen weeks. Then one of your correspondents reminds me that there is an additional charge to come on this half-year of 8,000*l.* for interest. This makes 46,425*l.* And it must not be forgotten that during the past winter considerable damage has been done to the works on different parts of the line by the inclemency of the weather, the expense for repairing which, if not carried to the capital account, must necessarily fall on the revenue account, and thus diminish the amount applicable to the dividend. Besides, was there not a serious loss sustained by the lamentable accident at the Sunning Hill cutting? All these expenses must be charged somewhere, and certainly their proper place is in

Digitized by Google

the present half-year's account. But this is not all; it is well known that the maintenance of the permanent way, for a considerable portion of the line, did not come in the last half-year as a charge upon the Company, but was borne by the contractors, according to their agreement, for twelve months after the completion of the several contracts. A part of such charge will now fall upon this half-year's account; and it further appears from this that the statement of disbursements put forth at the last half-yearly meeting was not a *bona fide* statement of the real expenses that will be chargeable on the railway. And if the rumours be correct which are now generally whispered, that application will be made at the next meeting for powers to raise a considerable additional capital, I think my misgivings as to the permanence of the 6 per cent. dividend are not entertained without some real foundation. VIGIL.

Bristol, May 12, 1842.

Amount of half year's receipts to 31st Dec. 1842		£337,352
—or per week		£12,975
Receipts from January to May 8th, 128 days, 18 weeks and 2 days		200,844
— per day, 1,561*l.*, or per week		10,927
Weekly deficit	£2,048	£136,508

2,048 × 18 = 36,864 minus on the last 18 weeks—136,508+53; the remaining number of days to close the present half year will require a daily receipt of 2,575*l.*, or 18,025*l.* per week for the next seven weeks and four days.

Now, I again ask, is it probable that any such sum will be realized?

MANCHESTER AND LEEDS RAILWAY —COMPENSATION CASES.

In pursuance of the execution of the powers of their Act, and of the determination of the Directors to proceed forthwith to extend the line to Hunt's Bank, the Company directed a warrant to the sheriff, to summon a jury to inquire into, and assess damages &c., in a number of cases, respecting property upon the site of the line. The sheriff issued his precepts about the 3rd instant, and on Monday last the inquiries were commenced, at the Coach and Horses Inn, St. George's-road, before William A. Hulton, Esq., the sheriff's assessor, Mr. Wilson, the under-sheriff, and a respectable jury. There were 45 precepts issued, commanding as many inquiries; being the total number of cases in which the land, &c. had not been purchased by the Company at the date of the precepts. But we understood that since that time, in a great proportion of these cases, the claimants have agreed to accept the terms offered by the Company, so that there remain now only about five or six cases for inquiry. One case occupied the whole of Monday, from 10 in the morning till 7 in the evening. In that case Edmund Buckley, Esq., M.P., claimed, for a plot of land adjoining Cropper-street, including the street, 2,385⅔ square yards, the sum of 994*l.*, being 5d. a yard at 20 years' purchase; for the buildings thereon, 175*l.*; for deterioration to the portion left, at the rate of 1½d. a yard, on the one side, 421*l.* 12s. 6d.; on the other, 200*l.*; total, 1,790*l.* 12s. 6d. For another plot of land on the north side of St. George's-road, 523 square yards (at 6d. a yard, 20 years' purchase), 261*l.* 10s., and for deterioration to a portion thereof left (3d. a yard, at 20 years' purchase), 70*l.*; making the total claim, in respect of both plots, 2,678*l.* 12s. Mr. Buckley's counsel was Mr. Monk; attorneys, Messrs. Slater and Heelis. Mr. Brandt and Mr. Foster appeared for the Railway Company, whose Law-clerk, Mr. Brackenbury, conducted their case. The land in question was subject to two chief rents, which were thus involved in this inquiry, respecting which, however, there was no difference between the two parties; and it was agreed to take both at 24 years' purchase; one of 20*l.* 19s. 9d. amounting to 503*l.* 14s., and the other of 2*l.* 4s. to 52*l.* 16s. It was also agreed on both sides to take the value of the buildings at 175*l.* The jury had to assess the value of the chief rent, and to apportion Mr. Buckley's interest therein. The Company, previously to the inquiry, offered Mr. Buckley, for his interest, subject to a portion of the chief rent, the sum of 1,567*l.* 9s. 6d. After the evidence of several surveyors and valuers on both sides, the jury gave a verdict for the whole of 1,700*l.* 8s. 4d., from which they deducted 143*l.* as the ascertained value of the proportion of chief rent, making the net sum awarded to Mr. Buckley 1,557*l.* 8s. 4d.; just 10*l.* less than the offer of the Company.

The second case was taken yesterday, and the jury were to assess the value of about 1,400 square yards of land, covered with cottage property, in the neighbourhood of Preston and Blackburn-streets, St. George's-road, belonging to Josh. Livesey, Esq., of Stourton Hall, Lincolnshire, and his lessees. In this case the principal question and difficulty was between the Company and the lessees, arising out of the amount of chief rents, which, by sales made subsequently to that of Mr. Livesey, had been created to a considerable amount, varying from 8d. to 11d. per square yard. The Company refused to give anything like these amounts; contending that the land was not worth more than 4d. the yard. The same counsel were engaged on behalf of the Company; Mr. Greene appeared for some of the claimants; Mr. Monk for others. The whole morning was spent in discussing the legal rights of the several claimants, and the mode in which the jury were to consider them. During the afternoon evidence was given on both sides, by surveyors and valuers, as to the value of various portions of the property. The claims of the lessees complicated the inquiry, and to some extent perplexed even the jury, who thrice considered of their verdict before it was finally delivered. Its terms would only puzzle our readers, but the substantial result may be briefly stated. The aggregate amount of the claims of the owner and the lessees of the property was 3,743*l.* 8s. 6d. The Company made no formal offer, owing to the legal difficulty of dealing with the several claimants; but their surveyors and valuers estimated the total value and damage at 2,210*l.* 12s. 6d.; and the total amount of the verdict was 2,165*l.* 3s.; being 45*l.* 9s. 6d. below the valuation of the Company's surveyors. This inquiry occupied the Court from 10 o'clock in the morning until half-past 9 o'clock last evening.—*Manchester Guardian*, May 18.

EASTERN COUNTIES' RAILWAY.—The works of the Eastern Counties' Railway are steadily progressing, and bets have been laid that the whole line will be open for passengers by the 1st of October next; but reflecting on the chances of unfavourable weather and other contingencies, we very much question the practicability of effecting so early a completion of the line. Among the contingencies the recent fall of the bridge at Kelvedon must cause some delay. At Chelmsford the erection of the viaduct over Duke-street is going on, though not very rapidly; but the bridge across the river is fast advancing to completion. At Widford, the arches over which the high road is to pass are in a very forward state. The traffic between Brentwood to London is on the increase. On Monday morning last the first up train averaged upwards of 500 persons to London. At present Brentwood is deriving great advantages from the line terminating at that town, as it forms a focus to which persons from all parts of the county repair. On Sundays there is a great influx of visitors from London. On Sunday last the town was crowded with strangers and the number was so great that two special train were put on the railway.—*Essex Standard.*

EDINBURGH AND GLASGOW RAILWAY.

On and after MONDAY, 2nd MAY, and until further Notice, PASSENGER TRAINS will depart both from EDINBURGH (Down) and from GLASGOW (Up), at 7, 9, and 11, a.m., and 3, 5, and 7, p.m.

First-class elegant Coupe Carriages, holding three persons, run with the 11 and 3 o'Clock Up and Down Trains.

Fares.—First class, 8s.; (Coupe, 10s.); Second-class, 6s.; Third, 4s. Children between 10 and 14, half fares; under 10, free, if with a person paying full fare.

Carriages, 30s., 20s., and 15s, according to size; Horses, 12s. each; Horse Box, containing 3 Horses, 33s.

Sunday Trains run from each end at 7½ a.m., and 5½ p.m.

Goods' Trains now run from each end at 5 and 6 o'Clock a.m. The former in 2½ hours, with Goods only; the latter carrying also Third-class Passengers, in Second Carriages at 2s. 6d. Time, 3¼ hours. Additional Goods' Trains shortly.

Goods taken up in Edinburgh, Glasgow, and Leith; and all Orders promptly attended to. Office in Leith, at No. 10, Shore, on and after 25th May; and till then, at A. M'Dougal's, Bernard-street.

The Rates vary from 7s. 8d. to 18s. 4d. per ton.—(See Table.) Intermediate Rates in proportion. Goods requiring extra dispatch may generally be sent by the Passenger Trains. For farther information, apply to Mr. Pearce, Goods' Manager, Glasgow Station.

The Company will not be responsible for Luggage, unless booked and paid for, according to its value. Quantity to go free 56 lbs.

Time reckoned by the Railway Clocks.

STIRLING.

Passengers booked to and from Edinburgh Glasgow and Stirling, by the 7, 11, 3, and 5 o'Clock Trains from each end.

Coach Parcels delivered on the arrival of the 7, 11, and 3 o'Clock Trains. But Express delivery may be insured within an hour after the arrival of any Train by extra payment of 1s., if so marked on the parcel.

RATE, including delivery at Edinburgh, Glasgow, Falkirk, and Linlithgow:—Not above 14 lbs., 6d. each; from 14 lbs. to 28 lbs., 9d.; from 28 lbs. to 56 lbs., 1s.; from 56 lbs. to 84 lbs., 1s. 6d.

Omnibuses are advertised to run to and from Alloa, Kincardine, Dunfermline, &c. Other arrangements are in preparation.

By order of the Directors,
H. G. WRIGHT, Secretary.

Glasgow, 30th April, 1842.

*** All previous Notices withdrawn.

THE POLLOC AND GOVAN RAILWAY COMPANY is desirous of borrowing, on the authority of their Acts, 11 Geo. 4, cap. 63, and 1 and 2 Will. 4, cap. 58, the Sum of £20,000, on the security of a first and only assignment of the whole Railway, Property and Revenues, in the manner provided by the said Acts.

Tenders for such Loans, which may be for Sums of not less than £300, for a period of not exceeding five years, may be addressed to the Company's Office in Glasgow; or to C. and H. Mac Rae, Stock Brokers, 57, Moorgate-street.

May 18, 1842.

A GENTLEMAN of Steady and Business-like habits is desirous of obtaining the situation of Superintendent under a Railway Company. He would prefer employment on the Liverpool and London line, or upon some branch road in connection with it. The Advertiser would be willing to act in any other respectable capacity under the Directors of a Railway Establishment, as he flatters himself he would be found an acquisition.

A highly respectable reference in London will be given.

Please address (if by letter, pre-paid,) to W. F., at the Office of the *Railway Times*.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton-street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition of* which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

MANLY VIGOUR: a Popular Inquiry into the Concealed Causes of its Premature Decline; with Instructions for its Complete Restoration, addressed to those suffering from the Destructive Consequences of Excessive Indulgence in Solitary and Delusive Habits, Youthful Imprudence, or Infection; with Remarks on the Treatment of Gonorrhœa, Gleet, Stricture, and Syphilis. Illustrated with Cases, &c.

By C. J. LUCAS & Co., Consulting Surgeons, London.

Published by the Authors; and sold by Brittain, 11, Paternoster-row; Effingham Wilson, 18, Bishopsgate-street; Field, 65, Quadrant, Regent street; Burgess, 28 Coventry-street, Haymarket; Huett, 141, High Holborn; and by all Booksellers in the United Kingdom.

"The best of all friends is the Professional Friend; and in no shape can he be consulted with greater safety and secresy than in 'Lucas on Manly Vigour.' The initiation into vicious indulgence—its progress—its results in both sexes, are given with faithful, but alas! for human nature, with afflicting truth. However, the authors have not exposed the evil without affording a remedy. It shows how 'Manly Vigour' temporarily impaired, and mental and physical emasculation, produced by uncontrolled indulgence of the passions, can be restored; how the sufferer, who has pined in anguish from the consequences of early indiscretion—afraid almost to encounter his fellow man, can regain the vigour of health and moral courage. The work is written in a concise and perspicuous style, displaying how often fond parents are deceived by the outward physical appearance of their youthful offspring; how the attenuation of the frame, palpitation of the heart, derangement of the nervous system, cough, indigestion, and a train of symptoms indicative of consumption or general decay, are often ascribed to wrong causes; and instead of being the natural results of cougenital debility or disease, are the consequences of an alluring and pernicious practice, alike destructive to the mind and body."—*Bell's New Weekly Messenger.*

Messrs. Lucas and Co. are to be daily consulted from ten till two, and from five till eight in the evening, at their residence, No. 60, Newman-street, Oxford-street, London.

Country Patients are requested to be as minute as possible in the detail of their cases, as to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party. The communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application; and in all cases the most inviolable secresy may be relied on.

SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—NOTICE is hereby given, That the TRANSFER BOOKS of this Company will be CLOSED on Thursday, the 19th inst., and will remain closed until after Tuesday, the 31st inst.

By order of the Directors,
JOHN WHITEHEAD, Secretary.

Railway Office, 10, Coleman-street, London,
May 3, 1842.

SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—THE HALF-YEARLY GENERAL MEETING of the Proprietors will be held at the London Tavern, Bishopsgate-street, in the City of London, on Tuesday, the 31st instant, at One o'Clock in the Afternoon precisely, to elect Three Directors in the room of the like number retiring by rotation, and on the general business of the Company.

JOSEPH BAXENDALE, Chairman of the Board of Directors.
JOHN WHITEHEAD, Secretary.

Railway Office, 10, Coleman-street, London,
May 9, 1842.

THE SOUTH-EASTERN (DOVOR) RAILWAY.—An Elaborate MAP and SECTION of this LINE, published under the direction, and by authority of the Company, is now ready. It embraces the whole of the South-Eastern District of England, and the north-east coast of France. Price, coloured, on one large sheet, 7s.; and in a case, on linen, 12s. 6d. It may be had in various mountings.

T. R. Jobbins, 3, Warwick-court, Holborn; J. Weale, Architectural Library, 59, High Holborn; and Bell and Wood, 186, Fleet-street, London; and at the Company's Booking Office; and the *Railway Times* Office.

LONDON AND BIRMINGHAM RAILWAY.—FINAL CALL OF £10 ON THE £25 SHARES.—The Directors of the London and Birmingham Railway Company having resolved that a THIRD or FINAL INSTALMENT of £10 per Share, payable on or before the 11th of July, 1842, should be called for on the £25 Shares of this Company, the Proprietors of such Shares are hereby required to PAY, on or before the appointed day, to any one of the under-mentioned Bankers, the sum of £10 on each of their respective Shares, viz.:—

London—Messrs. Glyn and Co., 67, Lombard-street; or at the Office of the Company, Euston-square.
Birmingham—Messrs. J. L. Moilliet and Son; or the Birmingham Banking Company.
Liverpool—The Bank of Liverpool.
Manchester—Messrs. B. Heywood and Co.; or the Bank of Manchester.

The Bankers have been severally instructed to charge Interest, at the rate of 5 per cent. per annum (according to the provisions of the Act of Incorporation), on all sums which shall be tendered after the 11th July.

GEORGE CARR GLYN, Chairman } Of the Board of
J. F. LEDSAM, Deputy Chairman } Directors.
By order,
R. CREED, Secretary.

May 13, 1842.

LONDON AND BIRMINGHAM RAILWAY.—ALTERATION OF TRAIN.—The Public are informed, that on and after the 1st of June next, the TIME OF DEPARTURE of the present TWO P.M. TRAIN from London will be CHANGED to HALF-PAST ONE o'CLOCK; and that a corresponding alteration will be made in the Time of Departure of this Train from every Station at which it now calls between London and Birmingham.

The Grand Junction Company having appointed a Train from Birmingham, in connection with the above-mentioned Half-past One o'Clock Train, passengers, horses, and carriages may be booked through by it from London to Lancashire.

By Order,
R. CREED, Secretary.

Office, Euston Station, May 19, 1842.

LOCOMOTIVE ENGINES, &c.—WANTED by 1st March, 1843, Twenty-four Six-wheeled Railway Engines and Tenders, to be delivered at any convenient Port in England, Ireland, or Scotland. No Contract will be made for less than Six Engines.

Further Information may be obtained by addressing J. W. W., *Gazette* Office, Doncaster.

RAILWAY CLERKS, ENGINEERS, AND STOKERS.—The services of Six respectable Young men are required as SECOND CLERKS in Railway Stations abroad. A knowledge of French or German language, and acquaintance with the routine of railway business, would entitle applicants to a decided perference. Salary, £85 yearly, and house rent free. Security to the amount of £300 will be required.

Address (by pre-paid letter) J. W. W., *Gazette* Office Doncaster, before the 1st of June. Office agents need not apply.

ENGINEERS AND STOKERS.—WANTED by the 1st of January, 1843, Six Enginemen and Twelve Stokers, to work Railway Engines abroad; wages 48s. per week for Engineers, and 30s. and 27s. weekly to First and Second Stokers. Half full wages allowed in case of illness or accident *while on duty*. Engineers must have worked railway engines three years, and Stokers must have been on engines 18 months. They must all be able to *read and write*. The competency, sobriety, and general character of Applicants will be thoroughly scrutinised.

Address, pre-paid, J. W. W., *Gazette* Office, Doncaster.

TO RAILROAD CONTRACTORS, IRON FOUNDERS, AND WHEELWRIGHTS.—140 Railroad Waggons, standing at Uffington Bridge, midway between Faringdon-road and Shrivenham, Great Western Railway Stations.

J. JOHNSON is instructed by Mr. C. S. Medly to Sell by AUCTION, (without the least reserve) on Tuesday, the 31st day of May, 1842, at Eleven for Twelve o'Clock *precisely*, 140 4-feet 8½-inch gauge railway waggons (for the convenience of purchasers they will be taken apart); the iron and wood work sold in separate lots. Being situated adjoining the Great Western Railway, and within 100 yards of the Wilts and Berks Canal, there is every accommodation for removing at a very trifling expense.

Catalogues may be had at the *Exeter Flying Post* and *Gloucester Journal* Offices; King's Head Inn, Cirencester; Crown Hotel, Faringdon; White Horse, Uffington; Green Dragon Hotel, Bishopsgate-street, London; and of the Auctioneer, Castle-street, Reading.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, and Extensive and Valuable MANUFACTORY for the Construction of Steam-Engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON-WORKS, Aberdeen.

These Works occupy nearly four acres of freehold ground, at a very moderate feu duty or ground rent, and are situated at Footdee, in the populous city of Aberdeen, within 300 yards of the Harbour Quay.

The Engines, Boilers, and Machinery of several of the large class of steam ships, have been wholly constructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The foreign and coasting trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the steam trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.

Immediately adjoining the Iron-works, and belonging to the same proprietors, is an extensive Rope, Sail, and Felt work, which will also be disposed of, either with or without the Iron-works, as may be agreed upon.

To a party desirous of engaging in the building and equipping of steam or sailing vessels, the construction and repairing of Steam-Engines, Sugar-Mills, and General Machinery, these Works, from their local situation and peculiar facilities within themselves, will be found particularly well adapted.

The whole of the buildings are substantial, commodious, and suitable for the respective trades carried on within them. The machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.

In the meantime, the work will continue to be carried on in all its branches, and orders executed as usual.

A Plan and Specification of the premises have been printed, which may, with all particulars and further information upon the subject, be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W.S., Edinburgh, or Messrs. Jopp and Shand, Advocates, Aberdeen, in whose hands the title-deeds of the property are.

TO ARCHITECTS.—SEYSSEL ASPHALTE COMPANY, CLARIDGE'S PATENT, established March, 1838, for working the Mineral Asphalte Rock of Pyrimont Seyssel.

This valuable material has been extensively used since its first introduction into this country for the following purposes:—Foot pavements, public and other; in the carriage approach to mansions, garden walks, and terraces; the flooring of kitchens and other basement offices, also of coach-houses and stables, dog kennels, barn floors, cow houses, piggeries, poultry-houses, tun-rooms and maltings; for roofing, covering of railway and other arches, the lining of under-ground cellars near rivers to prevent the ingress of the tides; also in covering the ground line of walls, to prevent damp rising, thereby rendering the basement stories in the worst situations both dry and warm. It is an excellent cement, as applied to docks, breakwaters, or walls built for resistance to the encroachments of the sea, lining of tanks, fish-ponds, and other hydraulic purposes.

Several extensive works have been executed by this Company for the Board of Ordnance and her Majesty's Commissioners of Woods and Forests. The Asphalte has been used at the Thames Tunnel, also at the London and Greenwich Railway, where it has been laid over a surface of 400,000 superficial feet, to prevent the percolation of water; at the Great Western, Birmingham, Midland Counties', South-Western, Brighton, and other railways; at the South Metropolitan, Highgate, and Nunhead Cemetries.

The Asphalte of Seyssel is perfectly free from smell, and is not acted upon by the change of temperature.

Books of testimonials, with scale of prices, can at all times be had at the Company's depot.

J. FARRELL, Secretary.

Stangate, Surrey side of Westminster Bridge, April, 1842.

ARCHITECTS, BUILDERS, AND OTHERS.

For the purpose of securing the use of the genuine article, architects and others are particularly requested to insert in their specifications "The Seyssel Asphalte, Claridge's Patant," and not merely "asphalte" or "bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

LLANELLY RAILWAY AND DOCK COMPANY.—59, Old Broad-street, London, May 12, 1842.—The Annual General Meeting of this Company will be holden at the London Tavern, Bishopsgate-street, in the City of London, on Monday, the 6th of June next, at One o'Clock precisely, on which occasion the said Meeting will be made Special, to elect two Proprietors as Members of the Committee of Management in the stead of William Gambier, Esq., resigned; and Jacob Sims, Esq., deceased. Also to make certain Bye-Laws, Rules, Orders, and Regulations for the government of the said Company.

By Order of the Committee of Management,
JOHN BIGG, Secretary.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.

In connection with the above lines of Railway, Places can be secured by

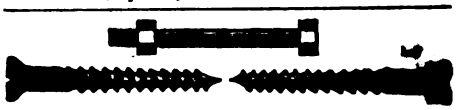
PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3	0	0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1½ inch thick, per superficial yard	0	4	6
Paving pathways, granaries, warehouses, &c., 1½ inch thick, per square yard	0	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0	5	6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.



Mill Wall, Poplar, April, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

CROYDON AND GREENWICH RAILWAYS.

"CROYDON RAILWAY FARES.

"NOTICE having been received from the Greenwich Railway Company, that on and after May 10, 1842, an additional toll will be demanded for every passenger carried by this Company over the Greenwich Railway, the Directors regret to announce, that they are therefore compelled to abandon at present the hope they have always entertained of conveying passengers to and from the London Bridge Station at a greatly reduced scale of fares. The toll of Fourpence-halfpenny per passenger, thenceforth payable for the use of one mile and three-quarters of the Greenwich Railway, is so disproportioned, not only to a lower, but even to the present scale of fares, that the Directors are placed under the painful necessity of increasing, instead of diminishing, the charges to the public. In resorting to this alternative, they are not insensible of the inconvenience to which passengers will be thereby subjected, and they beg to give their assurance that every facility will be afforded to those passengers between Croydon and New Cross who may desire to extend their journey from the latter place to the several parts of the metropolis, by omnibuses or otherwise.

"By Order of the Board of Directors,

"April 29, 1842. "R. S. YOUNG, Secretary."

IN ANSWER.

ANY ONE reading the Advertisement, in juxta position with this, by the Croydon Company, would be led really to believe that it is owing to the additional toll of 1½d. per passenger, payable to the Greenwich Company for persons passing along their line to and from London Bridge, that the public are deprived of the advantage of a "greatly reduced scale of fares." But what is the fact?

As soon as it was decided by the Committee of the House of Commons in 1840, that the Greenwich Company should widen their line, and make a station for the safety and accommodation of the Croydon, Brighton, and Dover traffic, and an additional toll of 1½d. per passenger should be granted to them in remuneration for their so doing, the Croydon Company *raised their fares* 3d. per passenger, on the 5th June, even before the Bill was passed.

On the 10th instant (May), when the widened line was opened for the use of the Croydon, Brighton, and Dover traffic, the Croydon Company were for the *first time* called on to *pay* the additional toll of 1½d. a passenger, and they immediately made *that* the pretext for raising their fares a *second time* 3d. *a passenger*, making altogether a fare of 6d. a passenger more than they charged in the month of June, 1840, notwithstanding they only pay to the Greenwich Company 1½d. a passenger more than they did before they raised their fares.

With what justice, then, can the Croydon Company charge the Greenwich Company with being the cause of their raising their fares?

CEMENT.—MOST IMPORTANT and VALUABLE INVENTION.—To ARCHITECTS, ENGINEERS, CONTRACTORS, BUILDERS, MASONS, PLASTERERS, and the Trade, and also to SHIPPERS. The Patent STUCCO PAINT CEMENT, surpassing every article hitherto introduced, possesses the following extraordinary and valuable properties:—remarkable adhesiveness, fixing most tenaciously to the smoothest surfaces (even to glass). It is perfectly impervious to wet or damp. The more it is exposed to the atmosphere the harder and more durable it becomes. It is perfectly free from any of the caustic qualities of lime, and it may therefore be painted upon as soon as dry, as it is impossible that it can vegetate or change colour, nor can it be affected by frost or heat, or crack, chip, or peel off. To merchants and shippers it must form a most important item of commerce, as it will keep for any length of time as fresh as delivered from the manufactory. With regard to price, it is cheaper than any other cement, and its lasting qualities render it a fortune to builders and others investing capital in building speculations.

The Patentees have appointed Messrs. Mann and Co., 5, Maiden-lane, Queen-street, Cheapside, their sole Agents, at whose warehouses any quantity may be had. Specimens may be seen, and every information afforded.

FIFTEEN Valuable, Young, Sound, CART HORSES, HARNESS, &c.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on FRIDAY, June 3, 1842, at One o'Clock, Fifteen fine-shaped, active, young, powerful CART HORSES, the property of a Contractor, which have been employed on the London and Brighton Railway, sold in consequence of the Contract on which they have been working being nearly completed.

Colours.—Bays, Browns, Blacks, and Greys.

☞ The above are worthy the attention of Brickmakers, Contractors, Wharfingers, Wholesale Warehousemen, Brewers, Distillers, Corn and Coal Merchants, &c., being remarkably powerful and active, from constant work, and for unreserved Sale.

On view, and catalogues had, two days before the sale.

NORTHERN AND EASTERN RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Proprietors of this Company will be held at the London Tavern, Bishopsgate-street, on Wednesday, the 15th day of June, at Two o'Clock precisely, for the purpose of determining the manner in which the Shares in this Company which have been forfeited shall be disposed of; the Act of Parliament leaving it discretionary with the Directors to adopt either public or private contract. Also, for the purpose of discussing the propriety of putting out, in such manner as may be then agreed upon, the remaining Shares of this Company, over which the Company have control, without sale. And in the event of such decision being come to as will enable the Directors to issue all the remaining Shares, to determine the propriety of proceeding forthwith in the execution of the Railway to Ware.

WILLIAM CRAWSHAY, Chairman.
WILLIAM BOURNE, Secretary.

Shoreditch, London, May 25, 1842.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

	£	s.	d.
Bitumen prepared for cement, per ton	3	0	0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1½ inch thick, per superficial yard.....	0	4	6
Paving pathways, granaries, warehouses, &c., 1½ inch thick, per square yard	0	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0	5	6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

LONDON AND SOUTH-WESTERN RAILWAY.—WEEKLY EXCURSIONS.—On every Saturday during the Month of June, Excursion Tickets will be issued at Nine Elms, for Southampton or Gosport, and back to London. First-Class Carriages 28s., Second-Class 16s.

Each Ticket, which is not transferrable, will free the Passenger from and to London during the same or two following days to that of its issue.

By Order,
ALFRED MORGAN, Secretary.

Nine Elms, May 27, 1842.

London: Simpkin, Marshall, and Co.

TO RAILROAD CONTRACTORS, IRON FOUNDERS, AND WHEELWRIGHTS.—140 Railroad Waggons, standing at Uffington Bridge, midway between Faringdon-road and Shrivenham, Great Western Railway Stations.

J. JOHNSON is instructed by Mr. C. S. Medly to Sell by AUCTION, (without the least reserve) on Tuesday, the 31st day of May, 1842, at Eleven for Twelve o'Clock *precisely*, 140 4-feet 8½-inch gauge railway waggons (for the convenience of purchasers they will be taken apart); the iron and wood work sold in separate lots. Being situated adjoining the Great Western Railway, and within 100 yards of the Wilts and Berks Canal, there is every accommodation for removing at a very trifling expense.

Catalogues may be had at the *Exeter Flying Post* and *Gloucester Journal* Offices; King's Head Inn, Cirencester; Crown Hotel, Faringdon; White Horse, Uffington; Green Dragon Hotel, Bishopsgate-street, London; and of the Auctioneer, Castle-street, Reading.

REPORT OF THE OFFICERS OF THE BOARD OF TRADE.

(*Continued from page* 537).

REVISING OF BYE-LAWS AND REGULATIONS.

The subjoined Report will afford the best explanation of the course which has been pursued, and of the principles upon which the Board of Trade has acted in the discharge of the duties imposed upon it by the Act for regulating railways:—

Report to the Right Honourable the Earl of Ripon on the Bye-Law jurisdiction of the Board of Trade.

Railway Department, Board of Trade, Nov. 10, 1841.

My Lord,—A power of making bye-laws or regulation, and of imposing penalties for their enforcement, is invariably given to Railway Companies by their Act of Incorporation. The usual provisions are—

1. That the Company shall have power to make "bye-laws, orders, and rules for the good government of the officers and servants of the Company, and for regulating the proceedings and reimbursing the expenses of the Directors, and for the management of the undertaking in all respects whatever."

2. That the Company shall have power to make "regulations for regulating the travelling upon and use of the railway, and for, or relating to, travellers and carriages passing upon the railway, and the mode and means by which, and the speed at which such shall be moved or propelled, and the times of their arrival and departure, and the loading or unloading thereof, and the weights which they shall carry, and the delivery of goods and other things which shall be conveyed in or upon such carriages, and also for preventing the smoking of tobacco, and the commission of any other nuisance, in or upon any such carriages or in any of the stations of the Company, *and generally for regulating the passing upon, using, or working the railway, or in anywise relating thereto.*"

In both cases the Company is empowered to impose fines on non-observance of such bye-laws or regulations to an amount which varies from 40*s.* to 10*l.*, but is generally fixed as "not exceeding 5*l.*" In some cases it is provided that these penalties may be recovered summarily before two justices, and that offenders may be seized by officers of the Company without a warrant, so that the power of imposing penalties involves a power of summary imprisonment.

In the first of the clauses above referred to, it is usually provided that such bye-laws as therein mentioned shall be made at *general or special general meetings;* but the latter power, viz., that of making regulations, is vested in the Directors, who are authorised to act in the name of the Company. The distinction between "bye-laws" and "regulations" has been generally overlooked, and the terms indiscriminately applied; but it is evident, from the above clauses, that "bye-laws" are, strictly speaking, "rules for the internal management of the Corporation, which can only be made or altered by a general meeting of its members," while "regulations" are "rules to be observed by the public using the railway," which may be made or altered by the Directors.

In most of the early Railway Acts the exercise of the extensive powers thus given to Directors was left in a great measure irresponsible, the only check being a clause which provides that the bye-laws and regulations shall contain nothing contrary to the provisions of the Act, or to the law of the land; but in the more recent Acts it was generally provided that the bye-laws and regulations should be sanctioned by the magistrates at quarter sessions, or by the judges at assize.

In 1839 the subject was investigated by the Select Committee of House of Commons on Railways, who reported "that it would be far better for the sake of establishing as much as possible one uniform system, and for duly protecting the general liberty of the subject, that some supervising authority in the nature of a Board should be established, to which all bye-laws should be referred, and which might have the power of sanctioning all necessary regulations, and annulling such as were not justified by the peculiar circumstances of the case, or by the general interests of the community."

This recommendation was carried into effect by Lord Seymour's Act, the 3 and 4 Vic. c. 97, which vests a general supervision over railways in the Board of Trade. The 7th, 8th, 9th, and 10th sections of this Act enact—

1. That copies of all existing "bye-laws, orders, rules, regulations, which *impose penalties for their enforcement upon persons other than servants of the Company,*" are to be laid before the Board of Trade within two calendar months after the passing of the Act, or to become void.

2. That no such bye-laws, &c., made after the passing of the Act are to be valid until two months after they have been laid before the Board of Trade, unless approved of by the Board before such period shall have elapsed.

3. That the Board of Trade may at any time disallow any such bye-law, &c., either before or after it has come into operation.

4. That all provisions of local Acts requiring bye-laws, &c., to be sanctioned by justices or any other authority, be repealed.

The first step taken by the Railway Department under this Act was to issue a circular, calling on all Railway Companies to make returns of their bye-laws and regulations. Thirty-four Railway Companies made returns of bye-laws and regulations, and 43 either made no return, or made a return that they had no bye-laws or regulations within the terms of the Act. The returns consist of regulations (there are, strictly speaking, no bye-laws requiring the sanction of a general meeting) relating to a great variety of matters, but reducible into two classes.

1. Regulations relating to matters of local detail, such as the local traffic of coal and goods waggons upon the railway.

2. Regulations of a public nature relating to passengers. The latter commonly provide that passengers must take out tickets before taking their seats, and impose penalties on persons who fail to deliver up their tickets when required, or who ride in carriages of a higher class than that for which they have paid, or who proceed beyond the destination for which they have paid. They also very frequently impose penalties on smoking, intoxication, offensive conduct towards other passengers, obstructing the servants of the Company in the discharge of their duty, and damaging or defacing the Company's carriages.

There is no reason to believe that the practical operation of these regulations is generally speaking oppressive, but many of them are objectionable in point of form, and there is almost a total want of uniformity among those of different Railway Companies. With regard to the first class of regulations, which are of a local nature, it would be obviously impossible to enforce any great degree of uniformity or legal accuracy; and I would submit to your Lordship that, unless in cases of manifest illegality or insufficiency as regards the public safety, it will be sufficient to interfere when complaints are made by parties interested.

The other class of regulations, however, which affect the public generally, appear to call for the exercise of the powers vested in this department in order to introduce, as far as possible, a correct and uniform system. Hitherto no attempt has been made at a general revision of the regulations submitted to the Board of Trade, for several reasons, among which may be mentioned—

1. The necessity of acting with great caution where interests of such magnitude are involved.

2. The more pressing importance of attending to questions connected with the public safety occupying the whole time of the Railway Department. And

3. The difficulty that presented itself in the way of carrying into effect the recommendation of the Committee as to establishing an uniform system, owing to more than half the Railway Companies in the kingdom having made no returns.

The action of the Board of Trade has been, therefore, confined to a revision and provisional confirmation of such new regulations as were from time to time submitted, with a request that they might be immediately considered, in order to avoid the delay of two months, which would otherwise elapse before they acquired validity.

Several sets of regulations have been thus confirmed, with such modifications as appeared indispensable, but with no attempt to introduce any great degree of accuracy, until prepared to revise the regulations of all Railway Companies upon an uniform system.

With a view to a more general revision, I now proceed to offer the following suggestions for your Lordship's consideration:—

The principal objects of the regulations affecting passengers are—

1st. To enforce the ticket system, and to protect the Company from fraud.

2nd. To enforce such discipline as is required for the comfort of the travellers, and the protection of the Company's servants in the discharge of their duty.

The extent and nature of the passenger traffic upon railways, make it indispensable, in order to check fraud on the part both of the public and of their own servants, for Companies to adopt the ticket system, which requires fares in all instances to be prepaid, and tickets given to the passengers, which are considered as the sole vouchers for the payment of the fare, and are collected from the passengers before they leave the trains or stations.

The only objection to this system is, that tickets are frequently lost on the journey, and thus passengers, who have *bona fide* paid their fare, are liable to be confounded with persons fraudulently attempting to evade payment. Some Companies, the Grand Junction for instance, in order to spare the public this inconvenience, collect the tickets before the train starts, although by so doing they incur a certain risk of being defrauded by persons travelling beyond the destination for which they have paid their fare. By far the most usual practice, however, is to collect the tickets at the end of the journey, before the passengers leave the carriages.

It appears to me that it would be improper, considering the magnitude of the interests at stake, to interfere with existing arrangements for the sake of protecting a few persons who, after all, have their own negligence to blame.

I think, therefore, that the principle should be admitted that Railway Companies may require passengers to take out tickets, and may require such tickets to be produced and given up on demand, or the fare to be paid. In no case, however, should the regulation be so worded as to confound the *mere inability to produce a ticket with fraud, and to make it the subject of a penalty.* The Board of Trade should also require, as a condition of allowing the regulation which requires payment of fare on non-production of ticket, that proper instructions should be issued to the servants of the Company, giving a discretionary power to some officer at each station to remit the payment of the fare, when satisfied that the ticket has really been lost, and making it imperative to investigate promptly every case where the ticket is said to have been lost; and if the assertion proves to be true, to return the extra fare. The instructions should also state that the power of summary apprehension is to be exercised with great caution.

If the principles above stated meet your Lordship's approval, I would suggest the following as standard regulations:—

PROPOSED STANDARD REGULATIONS.

1. No passenger will be allowed to take his seat in or upon any of the Company's carriages, or to travel therein upon the said railway, without having first booked his place and paid his fare.

Each passenger booking his place will be furnished with a ticket, which he is to show when required by the guard in charge of the train, and to deliver up before leaving the Company's premises, upon demand, to the guard, or other servant of the Company duly authorised to collect tickets.

Each passenger not producing or delivering up his ticket as aforesaid, will be required to pay the fare from the place whence the train originally started.

2. Every person *attempting to defraud* the Company, by riding in or upon any of the Company's carriages without

Digitized by Google

having previously paid his fare, or by riding in or upon a carriage of a higher class than that for which he has booked his place, or by continuing his journey in or upon any of the Company's carriages beyond the destination for which he has paid his fare, or by attempting in any other manner whatever to evade the payment of his fare, *is hereby subjected to a penalty not exceeding 40s.*

As regards the prevention of smoking and other nuisances, and the maintenance of proper discipline, the chief points to be attended to are, that the regulations should be uniform, and not inconsistent with the provisions of Acts of Parliament.

Those at present in force are frequently defective in one or more of the following respects:—

1. Mixing up cases of misconduct *by which danger is occasioned*, with cases which occasion only annoyance or inconvenience, the former being already provided for by Lord Seymour's Act.

2. Imposing absolute penalties, instead of penalties which may be mitigated at the discretion of the justice who tries the case.

3. Want of uniformity, the penalty in some cases attaching in the first instance, in others only upon persisting in the offence after warning to desist; in some cases being a fine, in others expulsion from the Company's premises.

The following are suggested as standard regulations:—

1. Smoking is strictly prohibited both in and upon the carriage and in the Company's stations. Every person smoking in a carriage is hereby subjected to a penalty not exceeding 40s., and every person persisting in smoking in a carriage or station, after being warned to desist, shall, in addition to incurring a penalty not exceeding 40s., be immediately, or, if travelling, at the first opportunity, removed from the Company's premises, and forfeit his fare.

2. Any person found on the Company's carriages or stations in a state of intoxication, or committing any nuisance, or otherwise wilfully interfering with the comfort of other passengers, and any person obstructing any of the Company's officers in the discharge of their duty, is hereby subjected to a penalty not exceeding 40s., and shall immediately, or if travelling at the first opportunity, be removed from the Company's premises, and forfeit his fare.

Note.—Persons wilfully obstructing the Company's officers, *in cases where personal safety is concerned*, are liable, under the 3 and 4 Vic., c. 97, s. 16, to be apprehended and fined 5*l.*, with two months' imprisonment in default of payment.

3. Any person wilfully cutting the lining, removing, or defacing the number plates, breaking the windows, or otherwise damaging any of the Company's carriages, is hereby subjected to a penalty not exceeding 5*l.*, in addition to payment for the damage done.

Several Railway Companies have regulations limiting their liability in regard to passengers' luggage, the purport of such regulations generally being, that the charge made for passengers does not extend to luggage, and that the Company will not be answerable for luggage unless booked and paid for.

Such a regulation may be reasonable when the practice of booking luggage is really carried out, and proper facilities are afforded to the public for complying with it. Railway Companies, like coach proprietors or other carriers, may refuse to take charge of luggage unless booked, or otherwise given over to their servants in conformity with the general rules which they have found it necessary to lay down for conducting their business. But the case is different when, as frequently happens, the regulation respecting booking is a dead letter, and the general practice is to take charge of passengers' luggage without requiring it to be booked. In this case the regulation in question is nothing but a notice, the legal effect of which is very doubtful, and which, if the Directors think it advisable to issue, they ought to issue as a notice, and not in the form of a regulation requiring the approval of the Board of Trade.

The Carriers' Act distinctly provides, that no general notice shall limit the liability of common carriers with regard to objects other than those enumerated in the Act, and the proper rule appears to be, that although Railway Companies may refuse to take charge of passengers' luggage unless such reasonable regulations as they find it necessary to lay down are complied with, yet that if they do actually take charge of such luggage, they incur the ordinary common law liability of carriers, subject only to the limitation of the Carriers' Act.

The same principles apply to regulations limiting the Company's liability as regards carriages and horses. This is sometimes done by refusing to carry carriages or horses, unless the owner will sign a special agreement exempting the Company from all liability.

This is clearly illegal as regards the general liability, Railway Companies being bound like other carriers by the common law to undertake the carriage of all articles offered to them unless there is some reasonable ground for refusal, and it is only allowable to the extent of guarding against any extraordinary risk arising from the nature or value of the object, unless a proper insurance is paid. In the case of carriages, it is generally admitted that there is no ground for charging any insurance; but in the case of horses, it appears fair that the Company should not be responsible for accidents arising from the viciousness or restiveness of the animal; and that they should not be responsible for more than a fair average value, unless the horse has been entered as of extraordinary value and a reasonable insurance paid.

Should your Lordship approve of the principles above stated, they may be applied generally in all cases where bye-laws or regulations are referred to the Board of Trade for approval, and opportunities may be taken of suggesting the standard regulations for consideration with a view to the gradual introduction of an uniform code.

I have, &c.,

S. Laing.

The views stated in this Report having met with your Lordship's approval, have been acted on with regard to the revision of bye-laws and regulations, and the proposed standard regulations have been adopted by several Companies. On the whole, 17 sets of new regulations have been submitted to the Board of Trade for revision since the passing of Lord Seymour's Act, viz.:—

1840.
September 5th, Arbroath and Forfar.
September 23rd, Birmingham and Gloucester.
October 10th, Hartlepool.
December 7th, Ardrossan.
1841.
January 23rd, Garnkirk and Glasgow.
February 1st, Birmingham and Derby.
March 9th, Hull and Selby.
April 3rd, Newcastle and Carlisle.
June 17th, Northern and Eastern.
July 16th, London and Brighton.
October 30th, North Union.
November 12th, Sheffield and Manchester.
December 11th, North Midland.
December 8th, Hartlepool.
December 10th, Edinburgh and Glasgow.
December 23rd, Birmingham and Gloucester.
December 24th, Brandling Junction.

The details relating to the revision of the first five of these sets of regulations are published in the Parliamentary Return of last session; those relating to the remaining 12 are given in the Appendix, No. VIII. p. 244.

It will be seen that the suggestions made by the Board of Trade have been uniformly attended to, and that the proposed standard regulations have been already adopted by the following Companies:—North Midland, Edinburgh and Glasgow, Birmingham and Gloucester, and Brandling Junction.

Similar suggestions will be offered to other Railway Companies as opportunities arise, and there is every to believe that in a short time an uniform code upon all matters of regulation affecting the public at large will be generally adopted.

In two instances, representations have been made to this department, to the effect that Railway Companies were in the habit of enforcing an illegal regulation requiring parties who sent carriages or horses by the railway to sign a special agreement, exempting the Company from all liability for loss however occasioned. Letters were written to the Companies, pointing out the illegality of such a course, except so far as might be necessary to protect themselves against extraordinary risk arising from the nature or value of the object, and the result was, that the regulation as regards carriages was entirely withdrawn, and as regards horses, modified in conformity with the principles above stated.

(To be continued.)

BIRMINGHAM AND GLOUCESTER RAILWAY.

Proceedings of the Institution of Civil Engineers. January 11.

An Account of the Permanent Way of the Birmingham and Gloucester Railway. By G. B. W, Jackson, Grad. Inst. C. E.

The object of this railway is to afford a direct communication between the western and the midland counties of England. The communication describes the course of the line until it reaches Cheltenham, where it joins that which was formerly called the Great Western and Cheltenham Railway, which terminates at Gloucester. Its length is 54 miles. The prevailing inclination is 1 in 300; but on the "Lickey" incline, near Bromsgrove, the rise is 1 in 37 for a distance of 2½ miles, in ascending which the trains are worked by American locomotives, in addition to the usual train engines. The northern portion of the railway appears to lie on the new red sandstone; then passes to the oolitic formation, on which it terminates. In the former, the principal cuttings are through marl, some of which is exceedingly indurated, and troublesome to work. The principal strata of the latter system are blue and yellow clays. Near Cheltenham, the shifting sand frequently rendered sheet-piling necessary in passing through it. The waters of Droitwich and Cheltenham were found to possess a saline quality, which rendered them unfit for the use of the engines; that from the surface sand near Cheltenham is, however, extremely good.

The building materials employed on this line were—the sandstones of the Lickey and Forest of Dean, the lias of Norton and Wadborough, and the oolites of Cheltenham and Bredon, together with brick, for which earth was readily procured throughout.

The cuttings and embankments, with the details of the permanent way, are severally described. The surface width is 30 feet. In the formation of embankments and cuttings, the usual methods appear to have been adopted. In the former, the slopes vary between 3 and 2½ to 1; in the latter, between 2 and 1½ to 1.

In cuttings, there is a system of drainage beneath the ballast, consisting of longitudinal drains on either side of the line, connected by cross spits, all of which are filled up with broken stones. The rails are supported by chairs and intermediate saddles, which rest on longitudinal balks; and these are bolted to transverse ties. On embankments, whose height exceeds five feet, the cross spits, longitudinal balks, and saddles, are all dispensed with.

The length of the bearings, the weight, dimensions, &c., of the iron and wood work, with the manner of putting them together, are then noticed.

The timber employed was American pine and English beech or larch. The various prices are enumerated of the materials and labour for the permanent way, of which the average cost per mile amounted to 5,430*l.* The present condition of the line is stated to be good, and its general working to have been perfectly satisfactory, since its opening in June, 1840.

Annexed is a description of an artificial ballast obtained by burning clay, which was employed where the country did not afford natural ballast. Its expense slightly exceeds that of the ordinary ballast; blue clay burnt in kilns was found to answer the purpose best, but it does not appear to form a successful substitute for gravel. The results of experiment show it to form a very imperfect drain. The author states that he has always observed the quality of this ballast to suffer in proportion with the quantity of lime contained in its composition.

The paper is accompanied by four drawings, illustrating the construction of the permanent way.

South-Western Railway.—It will be seen on our advertising columns that a novel and very excellent scheme of "excursions" has been begun by that Company.

BIRMINGHAM AND GLOUCESTER RAILWAY—PROPOSED EVESHAM BRANCH.

[From the *Worcestershire Chronicle*, May 25.]

On Monday a meeting was held at Evesham, for the purpose of ascertaining the sentiments of parties locally interested in the proposed branch railway from Evesham to the Birmingham and Gloucester Railway at Eckington. It was at first intended to hold the meeting at the Crown Inn, but it was subsequently thought it would be more convenient for it to take place in the Town Hall. Accordingly, between three and four o'clock, about 150 persons were assembled in that building, among whom were T. White, Esq. (Mayor), Dr. Beale Cooper, Jas. Ashwin, Esq., Richard Ashwin, Esq., J. Thomas, Esq., W. Soley, Esq., B. Workman, Esq., Oswald Cheek, Esq., Rev. J. Harling, Rev. — Brown, Rev. — Benville, W. Byrch, Esq., Francis Holland, Esq., N. Hartland, Esq., S. B. Haynes, Esq., A. Martin, Esq., A. New, Esq., Caleb New, Esq., M. B. Cooper, Esq., John Shekell, Esq., N. Izod, Esq., T. N. Foster, Esq., Richard Gibbs, Esq., John Gibbs, Esq., C. Best, Esq., George Eades, Esq., D. G. Johnston, Esq., (of the firm of Roy and Co., London); George Oldaker, Esq.; Messrs. Kinsey, Hall, Humphries, A. H. Wright, Fairhead, J. Smith, Hill, Moore, D. Hughes Burlingham, Jonathan Hughes, G. Agg, &c. &c.

The Mayor took the chair on the motion of Mr. T. N. Foster, after which

Henry Stephenson, Esq., (Secretary to the London Provisional Committee), read the advertisement calling the meeting.

W. H. Chambers, Esq., R.M.S. (one of the London Committee), then called upon the Secretary to read the minutes of a Committee meeting held in London on the 20th instant, at the office of Messrs. Roy, Blunt, Johnston, and Walton, Solicitors to the Provisional Committee.

Mr. Stephenson accordingly read the minutes, which were to the effect that a deputation comprising W. H. Chambers, F. Marriott, and R. Banner, Esqrs. (three of the Provisional Committee), D. G. Johnston, Esq. (Solicitor), John Addison, Esq. (Engineer), and H. Stephenson, Esq. (Secretary), should be forthwith requested to convene a meeting at Evesham, of all parties locally interested in the establishment of a line of railway from the Vale of Evesham to join the Birmingham and Gloucester Railway at Eckington. It was also decided at that meeting that 50 shares should be the qualification for the London Direction.

Mr. Chambers then rose and expressed his regret that he was the only member of the London Committee present, explaining why Messrs. Marriott and Banner was absent, the one being unfortunately connected with the town of Hamburgh, and compelled to remain in London in consequence of letters he had recently received from that ill-fated town, and the other having also a valid reason for being absent. Mr. Chambers then read a letter from Edward Rudge, Esq., dated from London, to the effect that he was a warm friend to the proposed undertaking, and had become a shareholder; though he was unable to be present. Mr. C. then called upon the Engineer to read his Report, which would put the meeting in possession of the necessary information.

Mr, Addison, in compliance with this request, then read his Report, which was necessarily of a very elaborate and statistical character, consequently we shall merely lay a brief summary of its contents before our readers. His first object had been to ascertain the amount of traffic likely to come upon the proposed line, and this, after minute inquiries, he could confidently state would amount, in round numbers, at the lowest estimate, to 11,000*l.* per annum. Having made all his preliminary inquiries and calculations, his next step, in February, 1841, was to wait upon the Directors of the Birmingham and Gloucester Railway Company, who agreed to patronise the project if it were taken up by the parties locally interested. Then Mr. Roy and himself waited upon Captain Moorsom, who also expressed himself in its favour, both as to its local and general advantages, and also as to the engineering facilities for the construction of the line. Having pointed out the line of country through which it was proposed to run, from Bengeworth to Eckington, (the distance being 8 miles and 30 chains), Mr. Addison next gave the estimated cost, which, in round numbers, was 70,000*l.*, pledging his word that contractors would be found very willing to undertake the work for the sums which he had set down, and giving it as his decided opinion, that, if carried out, it would become one of the most successful lines in the country. Previous to sitting down, Mr. Addison mentioned one or two facts, to show how necessary it was for them to do something towards establishing railway communications with other towns. The Birmingham and Gloucester Railway Company had lately made an arrangement collieries at Clay Cross, at 14s. 6d. per ton, and no doubt it would be had at Evesham for the same to supply coal at Cheltenham, from the Derbyshire sum, if this line were constructed. Again, there was a line of railway which, though it might not be much talked of in Evesham, was in almost everybody's mouth in London — he meant George Stephenson's line from the junction of the Derby and Birmingham at Hampton to Cheltenham — and which, as it would run within 2 or 3 miles of Evesham, would annihilate their traffic altogether, and thus cause the ruin of the town. We should add that Mr. Addison showed that the gradients were peculiarly favourable, and that the line of country offered great facilities for the construction of the line.

Mr. Chambers then rose to address the meeting, in doing which he said that, having in the earlier part of his life been in the Royal Engineers, and acted as military surveyor of Chatham lines, (where he had seen far more extensive works than he had witnessed on any railway), he might, perhaps, be permitted to express an opinion upon the proposed line, and he must say that a more easy or level one he never had seen, and he certainly did not think that its cost would exceed the sum mentioned by Mr. Addison. As to the risk, they should bear this in mind—the people of London, though by no means unwilling to benefit others, were speculators, and too good judges to venture their money unless there was a good chance of a return. Then, again, they would be supported by the Birmingham and Gloucester Company, and though that body was not in a very flourishing condition at the present time, theirs would very likely be one of the best lines in the country when it was extended to Bristol. The meeting best knew the situation in which Evesham was with respect to the transmission of their garden produce to Birmingham and other large towns, and how important it was that it should be conveyed to its place of destination with the least possible loss of time. At present they had to take their produce to market, but if they had a regular conveyance by railway, they would be double gainers, for they would not only be able to send it muck quicker, but they would consign it to agents or salesmen, as was done in London, and thus save the time and cost of a journey. Let them look at the article of coal. In Evesham they paid 18s. 6d. per ton, whereas at Cheltenham it would be had at 14s. 6d. Then, again, the Birmingham and Gloucester Directors would support this line, and if the meeting decided in its favour, the deputation would go to Birmingham and receive their final answer. Of the whole cost, Evesham and its neighbourhood was only called upon to subscribe one-seventh, which was the usual sum expected to be taken by a district locally interested; and he might state that the Birmingham and Gloucester Company would undertake to work the line, paying the shareholders (who would be the lessees) at the rate of 5 per cent. upon their outlay—thus the town of Evesham would have all the advantages of a railway, and good interest for their capital. Having referred to the case of the Aylesbury Branch Railway, and stated that if it had not been formed that town, instead of enjoying its present state of prosperity, would have been completely pauperised, Mr. Chambers dwelt upon the enormous prices which garden produce fetched in London, and upon the probability of the Evesham gardeners coming into competition with th metropolitan growers if the project were carried out, and concluded by requesting the meeting to form a local Committee to co-operate with the Committee in London.

After a few minutes had been spent in conversation,

B. Workman, Esq., rose to propose a motion which he anticipated would not meet with the least opposition, because he thought one and all must be convinced that, if they had a railway to Eckington, it must be beneficial, inasmuch as they would have a communication with the chief existing lines in the country. (Cheers.) It was no longer a question whether they should have railways, for railways *were* in existence, and it behoved them to consider whether their borough should be isolated from the rest of the country as Worcester had been. (Cheers.) The staple trade was the produce of their gardens, and, owing to the existence of railways, there was now so much competition that it was with difficulty that they could contend against it in places where they formerly stood unrivalled. A branch railway would reinstate them in their former proud position, consequently he was sure they would agree with the resolution that the projected line was entitled to their warmest and most active support. They would remember that one strong feature in the proposal was, that, notwithstanding the difficulties with which they had to contend, the Birmingham and Gloucester Railway Company would secure to the shareholders of the proposed line 5 per cent. upon their outlay. It appeared to him that it might be carried out with very little expense to the inhabitants of Evesham, for though *some* support was asked from the borough, there was so much capital in the country that there would be no difficulty in getting the rest of the money directly it was required, for it might be had at once. Surely there were 100 among them who would take a 20*l.* share; and, suppose they were sure to lose it, the loss, considering how greatly the borough would be benefitted, would not be a very serious consideration. Mr. W. concluded by calling upon some gentleman to second the motion.

After a pause,

Mr. Martin said he would second it.

The Rev. Mr. Benville said that he also would second the motion, not because he thought it was a duty the town owed to themselves but to their neighbours. They were bound to support their neighbours, and if they did not the town would be entirely lost. Putting it upon the high ground, then, that they ought to support their neighbours, he would gladly second the motion.

Dr. B. Cooper agreed that a railway was wanted, but he thought they ought to propose such a line as would not damage their neighbours. If this line were agreed to, it would not only knock down the house which he had built for the minister, but also come so near his own door that the effect would be to drive him out of the borough. At his time of life, when he wanted quiet and repose, it was not pleasant to be compelled to seek a new residence, ane he thought he ought not to be turned out. He had some time ago supported a line to Spetchley, and would do so again, but, for the reasons stated, he could not support the present plan.

Mr. Workman explained that it was not absolutely necessary to adhere precisely to the plan, and instead of carrying the railway on Doctor Cooper's property, the terminus could be quite as eligibly placed in the Quaker's Piece, which would be so far from the Doctor's residence as not to cause him the least annoyance: besides, it would be less expense, for the line would not only be a little shorter, but they would avoid the necessity of crossing a lane and a water-course.

Dr. Cooper said, he ought to do the deputation the justice to say that they had called upon him that morning, and had behaved in a very gentlemanly manner. He thought they had no power to deviate from the plan, but if they had, and would place the terminus in the situation pointed out by Mr. Workman, then he would have no objection to the project.

Digitized by Google

Mr. Chambers thought it would be the best place for the terminus, and would guarantee that it should not come nearer to Dr. Cooper's residence.

Mr. Addison said, no doubt the Spetchley line was very favourable, but the question was, would the Evesham people lay down 130,000*l.* to make it; for no one in London would subscribe a farthing towards it, and the Birmingham and Gloucester Company would support no other line than that which was now proposed. The branch to Worcester would doubtless soon be made, and that would increase the importance of the proposed line to Evesham. It was possible that, if they did not decide upon a line, they would have the line from Hampton which he had mentioned, and let that be once established, and they would never get one to Evesham, for no legislature would ever grant a Bill under such circumstances.

Mr. T. N. Foster would gladly have seconded the motion, had it not been so specifically in favour of the line to Eckington, for he could not but think that a line to Ashchurch would be better, as it would give them the opportunity of sending their garden produce to Cheltenham and Bath. Still, if Mr. Addison told them that his line was the better one, he must succumb.

Mr. Addison observed that a line to Ashchurch would make the distance to Birmingham 6 miles more.

Mr. Foster—Yes, but then it lessens it to Cheltenham and Bath.

Mr. Addison—Aye, but where does the best part of your produce go to? (Cries of "Birmingham! Birmingham!")

Mr. Foster—But Eckington is not a first-class station.

Mr. Addison—I will undertake that it will be made one; it must be, on account of the mail.

Mr. Foster—I do not oppose your plan, but we must consider the interests of Upton and Pershore, as well as those of our own borough. There being no opposition, the motion was considered as carried unanimously.

Mr. Haines, in a brief speech, then moved the appointment of a local Committee.

Mr. Best having seconded the motion, it was carried.

M. T. N. Foster proposed a vote of thanks to the gentlemen from London, for the manner in which they had brought the business before the meeting, being assured that they were much indebted to them, however the project might terminate.

James Ashwin, Esq., having seconded the motion, it was agreed to.

Mr. Chambers acknowledged the compliment in a brief speech. The greater part of his life had been spent abroad in the public service, but wherever he was, love of country had been predominant in his breast. That feeling still continued, the prosperity of his country was at his heart, and anything he could do to benefit it he did most willingly.

Thanks were then voted to the Mayor by Messrs. Thomas and Agg, and duly acknowledged, after which the meeting broke up.

Modern Travelling.—The daily papers announce, by advertisement, the establishment of a stage-coach communication between Cairo and Suez! Here is the march of civilisation. But a few years since it was supposed that camels or dromedaries, from their power of enduring thirst, could alone traverse those arid plains, and penetrate the solitude of the desert. Now we have hotels established at regular intervals, with relays of horses, and a coach running, which performs the journey regularly in about 18 hours. The announcement at the close of the advertisement is amusing—"Refreshments and provisions supplied in the desert at very moderate charges."—*Athenæum.*

RAILWAY PLEASURE EXCURSIONS.

BIRMINGHAM AND GLOUCESTER RAILWAY.

The members of the Mechanics' Institution, accompanied by their friends to the number of 600, proceeded, by special train, on Thursday morning to Birmingham. They left shortly after six o'clock, and did not reach their destination till eleven. This delay was occasioned by the Railway Company having put on one engine only for a great part of the way, although Mr. Higgs, on the part of the passengers, had contracted for two. The arrangement was, that in the event of the number of carriages not exceeding 14, one engine only was to be employed, but should the number exceed 14, an extra engine was to be put on at the expense of 10*l.* There were 22 carriages in all, but one engine only was employed for a great part of the way going and returning. The inconvenience sustained in consequence was much aggravated by the rain which fell in course of the journey to Birmingham, but more especially on the return. It rained heavily during the 4½ hours the train was on the way; and when it is considered that not fewer than 300 persons were exposed in open carriages, the condition in which they arrived may be easily conceived. They reached Gloucester about half-past 11 o'clock. As was to be expected, the rain operated most unfavourably on the enjoyment of the party at Birmingham, but it being "fair day," there was no want of indoor amusement. The Botanical and Horticultural Society had engaged the Town Hall for an exhibition, and the Committee had very liberally arranged that such of the party as chose would be admitted at half-price. Many availed themselves of the offer, and witnessed not only the splendid exhibition of plants and flowers, but heard occasional performances on the magnificent organ. Some fine strawberries, green peas, and other vegetables were included in the exhibition. The Museum was also an object of attraction, but the general impression was that less care was bestowed upon the room than formerly. One improvement, however, had been effected since last year—the anatomical specimens had to be sought for in another apartment. If the circumstance of the fair operated favourably in one respect, it was not without its disadvantage, for the workshops were closed; but every facility was afforded by Messrs. Collis and Co., Jennings and Co., and some others, to view their splendid show-rooms. As the day advanced the weather improved, and numbers availed themselves of the opportunity to ascend the tower of St. Philip's church, from the summit of which a fine view is obtained of the surrounding country. The new Roman Catholic Cathedral was also an object of attraction, and the greatest courtesy and liberality were displayed by the persons in charge of the edifice in gratifying the curiosity of the strangers.—*Gloucestershire Chronicle*, May 2.

NORTH MIDLAND RAILWAY.

The lovers of pleasure had a fine opportunity of enjoying themselves on Whit-Monday, through the spirited exertions of the Directors of the North Midland Railway Company, by a special train being sent to Sheffield from Derby, where a great treat was afforded the holiday people of this town, not only in viewing that great emporium of trade, but having an opportunity of visiting the Botanical Gardens. Yesterday another special train was despatched from Sheffield to Derby, bringing a great number of persons principally for the purpose of visiting the Arboretum. The train consisted of 16 carriages from Derby, and was conveyed to Sheffield by two engines; every carriage being quite full. On its return it numbered 27 carriages, and part of the way was worked by three engines. Yesterday a special train was also despatched from Derby to Nottingham, when a large company of "Teetotalers" visited that place, and were joined by a great number of others, who hold a festival at this period annually in this district.—*Derby Mercury.*

On Monday, in consequence of an arrangement between the Committee of the Botanical Gardens and the North Midland Railway Company, an opportunity was afforded to the inhabitants of Leeds and Derby, of visiting this town, and seeing the Gardens, which now present all the aspects of springtide beauty. The badness of the times, however, appears to have deterred many from availing themselves of the offer, as there were not more than 500 people from those places by the pleasure trains, of whom little more than half found their way to the Gardens. Their attention appears to have been attracted in the town, which was thronged the whole of the day by the processions of the various Sunday schools, and the parades of the holiday people. On Tuesday an opportunity was afforded to the inhabitants of Sheffield to visit the towns of Matlock and Derby, on the same terms, but it does not appear that the people availed themselves of it to any great extent. In these trips the passengers were furnished with the tickets to secure their return, and despatched by the ordinary trains, a provision which, although it deprives the affair of all those imposing appearances which attract attention and admiration, is, nevertheless, highly proper, especially when we take into consideration the recent and alarming accident in France, which was greatly attributable to the length of the train.—*Sheffield Independent.*

Whitby and Pickering Railway.—The annual meeting of the proprietors of the Whitby and Pickering Railway Company was held at the railway office, Whitby, yesterday week; T. Fishburn, Esq., in the chair. The officers for the ensuing year were appointed, which are the same as those of last year, with the exception of Charles Sanders, Esq., of Sneaton Castle, and Mr. Bird, of Pickering, who were elected Directors in the place of Messrs. Robert and John Campion. Mr. Wm. Thompson submitted the annual Report, which was ordered to be printed. We are glad to learn that the Whitby and Grosmont Lime Company have resumed the burning of limestone at the tunnel, which is the means of greatly increasing the traffic on the line—the demand for limestone being such as to cause constant employment. The branch road from the tunnel to the dales is now in progress as far as Egton-bridge, which, when completed, will be extended to Glaisdale and Danly End. The general utility of this road is universally admitted, hence we trust the yeomen of the locality will liberally promote this desirable undertaking.—*Yorkshire Gazette*, May 21.

A Locomotive in Distress.—A somewhat ludicrous circumstance occurred on Sunday to a party who had made a trip with an engine and tender, on the Manchester and Birmingham Railway, from this town as far as Crewe. They started early in the afternoon, taking dinner at Crewe; and having enjoyed the creature comforts of this world, they prepared to return in the evening. They came at a confident speed to Sandbach; but at Holmes Chapel, billy became somewhat uneasy; at Chelford he began to lag; at Alderley he grunted; and near Wilmslow he groaned and made a dead halt! Not a peg would he stir—stupid as a mule. The party in their extremity held a "council," an investigation into billy's grievances and complaints was duly entered into; when lo! and behold! it was discovered that all the water was consumed, and that the vital principle of locomotion on the "rail" was extinct. To get up steam without water was a problem too difficult even for a modern reformer to solve—and they consider themselves no bird's meat. Here then was a regular "fix," as Jonathan would affirm. They awaited, in prayer and supplications, the possible arrival of another engine, when towards midnight an engine and tender were despatched hence in the utmost alarm in quest of the distressed *crewesers*, whistling all the way, at the very top of the steam. They were however luckily relieved from their dilemma somehow near Wilmslow without any accident.—*Stockport Advertiser*, May 12.

THE LATE ACCIDENT ON THE VERSAILLES RAILWAY.

Academy of Sciences, Paris—Sitting of May 16.—This sitting was almost exclusively occupied with a discussion on the means of preventing, by the adoption of precautionary measures, the recurrence of accidents on railways. The chief points to be considered were—1st, the comparative advantages and dangers of four-wheeled and six-wheeled locomotives; 2nd, the number of locomotives proper to be applied to trains, and the mode of placing them; 3rd, the advantages and inconveniences of large and small trains; 4th, the distance which should be left between the locomotives and carriages for passengers; 5th, the rupture of axletrees, their frequency, their causes, and an account of the accidents which have resulted from them on the different railways in England.

M. Delessert opened the discussion by reading a letter from one of the Directors of the London and Birmingham Railway, on the late deplorable accident near Meudon. This gentleman attributes the accident to the excessive rapidity of the train. As to four-wheeled locomotives, it is far, he says, from being proved that they are more dangerous than those with six wheels, and, in his opinion, undue haste has been exhibited in condemning the use of them: It results, he says, from an attentive comparison of these two sorts of machines, from repeated experiments on both, and particularly from an exact examination of the accidents which have occurred on lines where six-wheeled locomotives were used, as well as on that from London to Birmingham, where four-wheeled locomotives alone are employed, that these latter appear to have the advantage as far as safety is concerned. This result may easily be understood, adds the writer, when the enormous weight of six-wheeled locomotives is considered, being at least a third heavier than the others. This weight is a leading cause of the breaking of axletrees, and in such case the locomotive is more apt to get off the rail, and is not kept up, as is generally supposed, by the four wheels which remain. If the small pair of wheels in front or rear fall, the large wheels in the centre, being deprived of flange, do not present the advantages which are attributed to them, and cannot retain the locomotive on the rail. If, on the other hand, the axletree of the large wheels gives way, the distance which exists between the front and hind wheels, in a machine of so much length, causes the wabbling motion and derangement which tend, particularly on curves, to drive the machine off the rails. Besides, in case of accidents, the shocks are much greater with large locomotives, and the operation of stopping the train much more difficult to be executed. It is not on account of security, adds the letter, that six-wheeled carriages were introduced, but in order to gain more power. In fact, they are rejected at present by a vast number of engineers. If an estimate were to be made of the accidents which have occurred on the various railways where one or the other system is adopted, the conclusion would be come to that the number is much less on the London and Birmingham Railway, where four-wheeled carriages are alone used, than on all the rest. The number of passengers on this railway amounts for 10 years to some millions. During that time there have been 120 or 140 grave accidents, of which about the sixtieth part were fatal. "I should have wished," said M. Delessert's correspondent, in conclusion, "to prohibit the use of locomotives joined together; for there is no doubt that the danger is increased when two machines are attached to a large train. But it has been found impossible to adhere to this measure; the wants of the service requiring more waggons than could be drawn by a single locomotive. The passengers, however, are constantly separated from the steam-engine by a waggon filled with parcels and goods."

After the reading of this letter, M. Perdonnet, formerly an engineer of the Versailles and Meudon Railway, and who is said to have been recently charged with the re-organization of the service, and the adoption of all possible precautionary measures to prevent the recurrence of accident, was permitted to read a long paper on the points under consideration by the Academy. In this paper M. Perdonnet, after a preamble, says, "four-wheeled locomotives are much less subject to get off the rail in curves, which must be considered a great advantage. When the front axletree breaks, as occurred the other day, the locomotive with four wheels falls and gets off the rail; but the six-wheeled engine, in a similar case, does the very same, and it arises from the circumstance of the portion of the weight of the machine which rests on the axletree being almost always preponderant. What proves how little Stephenson, the ablest locomotive manufacturer in England, reckons on the middle and hind axletrees in a six-wheeled locomotive to support the machine in case of the front axletree breaking, is, that he suppresses the ledge of the wheels of the middle axletree, and thus renders the getting off the rails inevitable should the front axletree break. Six-wheeled locomotives, in certain cases, when the rails are curved, can rest on only four-wheels, the two others being, as it were, suspended in the air. In this case they often break the rails by their enormous weight, which, in its turn, becomes a new cause for getting off the rails. Four-wheeled locomotives always rest on four, or at least on three points, and, as they are much less ponderous, the pressure on the rail is less. And, therefore, it is generally acknowledged that the breaking of the axletree is more frequent in six-wheeled locomotives than in those with four. A proof of this is, that on the London and Birmingham Railway, where four-wheeled locomotives are exclusively employed, and on the Manchester and Liverpool line, where both sorts are used, accidents are neither more frequent nor more disastrous than where six-wheeled locomotives alone are made use of. If, therefore, some engineers prefer six-wheeled locomotives, it is not by any means because they are attended with less danger. It is because they are more powerful, and, on that account, more suitable in certain cases, such as steep ascents. Also, because engineers consider them as requiring less repairs and less fuel." On the question of connecting two locomotives, as was the case on the Meudon and Versailles line, by placing the weaker one, with four wheels, in front, M. Perdonnet says:—"Admitting that four-wheeled locomotives are quite as safe as those with six wheels, and allowing them, above all, the advantage of being less dangerous in the curves, it was natural that on the left-bank line, where curves are frequent, the four-wheeled locomotive should be placed most undoubtedly in front, in order that the train might be guided more safely. This was recommended by Mr. George himself, who was a clever engineer, and the reason which we have just assigned, powerful as it is to justify this mode of placing the locomotives, is not the only one that may be assigned. The effort at the moment of departure ought to be gradual—weak at first, in order to stretch the chains which unite the waggons, and greater afterwards, to drag on the train. It is proper, therefore, that the locomotive in front should be the weaker one." On the important question, as to whether large or small trains ought to be preferred, M. Perdonnet adds:—"The use of several locomotives to draw large trains is general on a great number of railways, and I am not aware that, up to the present time, any grave inconveniences have been felt from the practice. We must allow, first of all, that the momentum of a large train is greater than that of a smaller one, and therefore an accident, in the first case, is more grave than in the other. But the question must not be examined in a single point of view. If large trains are in this respect more dangerous, there are cases in which they offer more security. On the railways in the neighbourhood of Paris, the use of small trains following at short intervals would, on fete-days, be nearly impossible, for time would be wanting to execute the shifting at the stations. Besides, this sort of service would increase the chances of accident. On the Versailles line large trains leave every half hour, so that small ones should set out every quarter. If any delay occurred in the progress of one of those trains, that which followed might overtake it. An accident sufficiently grave occurred in this way on the St. Germain line, at the Asnieres station, in consequence of the trains starting every quarter of an hour. Considered in another point of view, large trains appear to be attended with less danger than the small ones; for, suppose that a train of thirty waggons be drawn by three locomotives, should the axletree of the second or third break, it is possible that the first might continue to drag on the two others, and the passengers would have merely to sustain a shock. If, on the other hand, the great train be divided into three each, drawn by one locomotive, should an accident occur to the machine, a certain number of passengers must necessarily suffer from it. M. Elie de Beaumont has asserted, that with double locomotives, there are double causes of accident. Undoubtedly there are double causes, but there are also twice the number of waggons pulled on, and the passengers on the one-half of the train placed behind run no danger whatever in case of the locomotive getting off the rails. If the train were divided and the locomotives separated, there would be for the second half of the train, separated from the first, and drawn by the second locomotive, just as much danger as for the first. That learned person has also stated that it is difficult to make two locomotives work in unison. But a perfect harmony is not necessary; and, besides, if, as M. de Beaumont says, machines are not intelligent, engineers are, and they regulate and control their machines better than postillions govern their horses. A second machine could, however, in certain cases, I confess, impede the motions of the first, but in other cases it gives assistance. Suppose, for instance, that an obstacle were suddenly seen on the road, it would be more easy to stop the train with two locomotives than with one, for a double force is at the engineers' disposal. The impulsion of a train might be mastered by two machines, though one might be ineffectual. In conclusion I declare, that four-wheeled locomotives are not more dangerous than six, and that they are more steady in their mode of going; that, when a six-wheeled and four-wheeled locomotive are used together, the latter ought to be placed in front; and that large trains do not expose passengers to greater danger than small ones multiplied, but their speed ought to be moderated." The remaining part of the paper read by M. Perdonnet is devoted to an inquiry as to the precautions necessary to prevent accidents. M. Perdonnet notices three points, which had already been discussed by the Academy; first, the use of a sort of hook or drag to impede the motion, and, in case of accident, unconnect the train; second, the propriety of rendering the wood of the carriages incombustible; and, third, the addition of waggons without passengers, and filled with inert matter, before and behind the train. The first two points are but slightly glanced at; on the third, M. Perdonnet says, "such a measure would be very onerous for railway proprietors who have to convey merchandize, and where the railway declinations exceed certain limits. In such case the practice would augment beyond measure the dead weight." The objection of M. Perdonnet is founded on the expense to Railway Companies of carrying a dead weight: but it strikes us also that a dead weight would increase the momentum of a train on a descent, and would therefore be dangerous to passengers with an otherwise heavy train. Such danger can only be avoided by having short trains. After the reading of this paper, M. Bosquillon made some observations on the changes which malleable iron undergoes by use and time. He stated that after a certain period it becomes crystalised and brittle, more especially when exposed to sudden shocks and the influence of vibration. It has been frequently remarked (he said) that the axletrees of locomotives which have been a considerable time in use suddenly snap and show a crystalline appearance, similar to cast iron. He therefore proposes that the axletrees should be carefully examined from time to time, in order to ascertain the molecular change of the internal parts of the metal. The business terminated with the reading of a letter by M.

Digitized by Google

Arago, from Mr. Manby, the English engineer, corroborating many of the facts and inferences alluded to above.

The following appeared in the *Mechanics' Magazine* of last week, in a letter to the Editor, who thus introduces it:—

"We conclude by earnestly inviting the attention of our readers to the very sensible and impressive letter which follows, on the subject, from Sir George Cayley, to whom the public are already indebted for a very able *Essay on the Prevention of Railway Accidents*, as well as many valuable practical suggestions for the purpose, and whose opinions have the recommendation of being not only those of a gentleman of well-deserved eminence in the scientific world, but of one whose rank in society gives assurance of their being promulgated solely with a view to the public good."

'Sir—It is obvious that if some more efficient precautions respecting railway conveyance than those at present in use be not adopted, we shall be subject occasionally to such sweeping and horrible catastrophes as have occurred near Paris, in which, at one fell sweep, from 80 to 100 persons have been killed under circumstances too shocking to dwell upon; for of those who witnessed the miserable reality, several have been deprived of reason. But although we may choose to avoid allowing our imaginations to particularise these horrors; yet it will not permit us to draw a veil over the broad fact, that when we travel per railway we place ourselves within the range of a similar result. This state of things has a twofold evil attending it; nervous and timid persons are absolutely prevented from using this mode of conveyance; and the great mass who venture upon it, travel under a painful sense of the danger they incur. It is impossible perfectly to exclude all risk from this or any other mode of conveyance; but it is equally absurd and wicked not to have the most rational means of preventing these accidents enforced upon the Railway Companies by law. Other modes of conveyance are nearly put down, and very soon none of her Majesty's liege subjects will be left any choice in their means of conveyance; and the question is, whether their lives are to be thus continued in jeopardy (when ready means are at hand to prevent it, or at least to reduce it within the ordinary chances of life and limb,) or that Companies monopolising the means of conveyance, are to be put to a reasonable expense in being compelled to adopt such means as will prevent nine-tenths or ninety-nine-hundredths of these horrors? If Government be not permitted to interfere with private property vested in these Companies, for the purpose of protecting life, and that property is thus made to outweigh the value of life, it is full time that this noble invention should be taken entirely into the hands of the Government, and thus ripened into safety, clear from the mammon of money making. To avoid expense, the Companies are obliged to fence themselves round with every barrier to prevent the introduction of those improvements, which experience or invention has suggested; but it is in vain for these parties seriously to pretend that *all* these matters are visionary schemes and below their practical notice, though very possibly *many* may be so. I will put the case thus:—it has been suggested over and over again, by many persons, and in various ways, that besides the usual buffers to each carriage, some general system of elastic matters should to a great extent intervene between the head of the train and any obstacle it may meet to stop its course. Nothing can, to common practical sense, be more obvious than this; yet nothing has been done by Railway Companies respecting such an arrangement, which, in fact, would cure nine-tenths of the head and front of the offending.

'However, this would not alone meet every case; let us take, for instance, that which has just occurred near Paris. Had some general system of buffers intervened between the engines and the head of the train of waggons, the accident would, it is true, have been prevented; and the French suggest that, to answer this purpose in future, the first five or six waggons should remain empty to be ready for *smashing*, and to save those loaded in the rear. This is but a rude mode of effecting the purpose, but it points out the public opinion as to the general buffing principle, and ought to teach a lesson to Railway Directors. Had these general buffers, however, preceded the engines, they would not in this case have been efficient, as the broken axletree of the leading engine would still have upset the train. But had the engine been provided with six wheels, or been so constructed as to rest on a foot or sledge made to sustain the carriage on the rail when any wheel may fail, as has long ago been suggested, then the catastrophe would have been prevented. These sledge feet accompanying every wheel, and suspended an inch above the rail, until the wheel breaks, ought to be a *sine quâ non* in all railway carriages; the cost would be trifling and the safety great.

'It has also been suggested that there is no necessity for the train to take the same risk as the official parties working the engines, on whose conduct the safety mainly depends, and from whose neglect most accidents occur. The engine will pull the train with equal effect when a cord of from 50 to 150 yards intervenes; and this might be lengthened or shortened at pleasure to suit curvatures on the line by coiling it round a drum. Suppose a train of carriages to be so constructed that each carriage is furnished with a drag on its wheel, which is always in action, excepting when the tension of the cord from the engine becomes sufficient to give motion to the train, and lift the drags; in this case, so long as the engine continues on its course, it pulls the train freely after it without any friction from the drags; but, the instant the engine becomes stopped or upset, the drags are all at work and the train is brought to rest in a few yards without overtaking the engine or any risk of accident. Some minor arrangements will be necessary in this mode of drawing trains; but the general features of the case are obvious enough, and may readily be brought into use.

'It is not my object to go further into these matters at present than may be sufficient to point out how obviously common sense is at variance with railway practice; and how essential it is that the former, pleading for life and limb *versus* money and monopoly, should prevail. I do not blame the Directors of Railway Companies; they are placed in authority by parties subscribing their money with no other view but to make the most interest they can of it, and with their delegated authority, they could not appropriate any part of their funds to the mere charitable purpose of saving life. But this places them in a painful and false position as respects society at large, now that railway conveyance has become the order of the day. Safety, it may be said, is ensured by its being one element in gaining passengers, but increasing monopoly of conveyance leaves no choice, and whatever be the hazard, we must either rest stationary or take it; hence, the same profits arise to the Companies whether they improve upon the means of safety or not.

'Many excellent plans for signals have been invented, and want little to perfect them into the means of almost ensuring safety, from collision with trains or other obstacles. One especially, first suggested by Mr. Curtis, which ensures either one mile in advance of each signal post being totally free from obstacles—or if not free, erects the signal for danger night and day in immediate view of the approaching train.

'These matters I have named either *can* or *cannot* be done; if they can, great safety will be the result; and I think the public has a right to know from first-rate engineering authority, clear from all interested parties, and by the test of experiment, under such authority, whether these or any better means can be applied to prevent the death's-head and cross-bones becoming the appropriate crest for railway carriages. 'I am, Sir, &c.,

'GEORGE CAYLEY.

'Brompton, May 13, 1842.'"

The *Gazette des Tribunaux* says:—"From the inquest taken at Versailles, it results that it had been the uniform practice, whenever two engines of different powers were used on the same journey, to place the strongest first, and in this position the *Matthew Murray* and the other engine were placed when they ran from Paris to Versailles; but, on turning them there for the return of the train to Paris, the *Matthew Murray* accidentally got placed as the leader, and this was not remarked until it was too late to transpose them."

FOUR-WHEELED AND SIX-WHEELED ENGINES—ACCIDENT ON THE VERSAILLES RAILWAY.

To the Editor of the Railway Times.

SIR,—It was not my intention to have occupied your columns with any further observations on the different descriptions of locomotive engines; but as the appalling accident on the Versailles Railway has so painfully excited public attention on the subject of railway travelling, I beg to offer some remarks on that accident, as it materially bears upon the questions which have recently been so fully discussed in your pages.

The Report made to the French Government by MM. Combes and Senarmont, engineers of mines and steam-engines for the department of the Seine, although containing internal evidence that they are but little acquainted with the peculiarities in construction of the different descriptions of locomotive engines, nevertheless gives some important information on the accident. The principal part of the Report is given in the following extracts:—

"The train which left Versailles between half-past 5 and 6 o'clock in the evening, was drawn by two locomotives; one of small size on four wheels in front of the train, followed by its tender, the other a large engine on six wheels, made by Sharp and Roberts, came next with its tender; and after these came the carriages with the passengers.

"At 45 metres (50 years) beyond where the departmental road No. 40, otherwise called *Pave des Gardes*, crosses the railway on a level, the fore axle of the small locomotive broke at the two ends, near the collars, close to the enlarged parts which go into the naves of the wheels. This axle fell on the road between the two lines of rails. It was still there this morning. The fracture of the iron is lamellated with large crystals (*lamelleuse a larges facettes*). The diameter is 9 *centimetres*, 3½ inches.

"The locomotive deprived of its axle and fore wheels, nevertheless, continued its course, and there is no appearance of its tearing the ground before the point of the departmental road. Here the interior flange of the outer rail received a blow which has bent it. The locomotive again went on 20 metres (22 yards) further, and it struck at 65 metres (71 yards) beyond the place where the axle was left on the ground, the southern slope of the cutting, at the bottom of which the railway runs in a line with the departmental road. This locomotive was still in the cutting this morning, at the foot of the slope. The crank axle of the driving-wheels was broken at the angle of the crank (*brise en un point*), and seems to have yielded to the strain upon it.

"The tender which followed the small locomotive was broken by the shock. The large locomotive on six wheels, which followed, was thrown over across the road; the furnace bars turned on the side of the small locomotive in advance; the smoke-box was beaten in, and also the covering of one of the cylinders; the axles and wheels of this locomotive were separated; and the axles were bent, but not broken. The tender of the large locomotive was broken by the shock. The boilers of both engines remained uninjured, and without fracture. The external projecting parts, as the valves, were alone broken."

After describing the effects of the concussion on the carriages, the Report concludes as follows:—

"It is evident to everybody that the small locomotive at the head of the train was the origin of the accident, and that the use of such engines should be prohibited by the Government. The breaking of axles is frequent enough on railways, but they do not habitually give rise to serious accidents with engines on six wheels."

In this Report there is no mention of the plans of construction of these engines, beyond a description of the number of wheels. I cannot, therefore, consider that the gentlemen who report upon this accident have previously devoted much of their attention to the peculiarities which exist in the various descriptions of locomotive engines, otherwise they would not have treated the question simply as a matter to be decided by the number of wheels, while there are other circumstances quite as important which they wholly omit to notice. The four-wheeled engine, which is stated to be the cause of this accident, was an old engine, and was

Digitized by Google

upon the construction of the old four-wheeled engines formerly used on the Liverpool and Manchester Railway, having outside bearings and framings. This description of engine is entirely repudiated by the advocates of four-wheeled engines; and it appears by the returns made to the Board of Trade last year, that there are only 10 engines of this description now in existence in England, and these are used either for the conveyance of goods, or on lines where the rate of travelling is so limited that no danger is likely to occur. The evils of the system of outside bearings in producing fractured axles have been so fully discussed in your pages that it is unnecessary again to enter into the matter; and experience fully proves the superiority of inside bearings by the working of the four-wheeled engines made on that construction, and by the comparative absence of broken crank axles, in the six-wheeled, which have been altered to make the bearings on the cranks inside, instead of outside. No instance of a broken fore axle has, I believe, occurred to a four-wheeled engine with inside bearings, and but very few even to six-wheeled engines; and to neither class has it ever before occurred to have the fore axle and wheels break away from the engine while running, as was the case in the recent accident at Versailles.

It has been so repeatedly urged in favour of six-wheeled engines, that if one axle break the engine has still four wheels to run upon, and therefore cannot fall, that it appears to be now almost taken for an established fact that such is really the case. Experience clearly proves that the breakage of a crank axle to a six-wheeled engine with outside bearings immediately disables the engines, while by the same mode of proof, we find that four-wheeled engines with inside bearings will run safely for many miles with fractured cranks, and in no instance have they failed in carrying the train on for a considerable distance. It is desirable to ascertain what would be the effects on a six-wheeled engine, if it met with a similar accident to that which occurred at Versailles to the four-wheeled engines. Now we find that this engine travelled 71 yards beyond the place where the axle fell, before it actually ran into the ground. But we must add to this distance the space which the engine passed over during the fall of the axle; that is, between the instant of its parting, and its reaching the ground: because it is obvious that this must have occupied an appreciable space of time, and during this time the end of the engine must have been unsupported, if the wheels and axle separated from the engine at the same instant, which, from the Report, I take to be the case. According to the law of falling bodies we shall find that, if the wheel were 4 feet high, and the axle therefore 2 feet from the ground $\frac{16{\cdot}08 \times \sqrt{2}}{\sqrt{16}} = 5{\cdot}748$ feet per second will be the rate of descent, with which the axle would fall; and therefore it will reach the ground in ·348 of a second. But as the falling axle partakes of the motion of the engine, which moves at the rate of about 30 miles per hour, or 44 feet per second, it will not fall at the spot where the fracture took place, but at the spot where the engine will be, ·348 of a second afterwards; and this we shall find to be 15·3 feet in advance of the former spot. Now adding this 15 feet to the 71 yards formerly mentioned, we shall find that the engine ran 228 feet after it ceased to be supported by the fore axle and wheels. Let us now see what would happen to the six-wheeled engine. In an engine of this kind, weighing 15 tons, the fore wheels will bear about 2 tons more of the weight of the engine than the hind wheels. But if the fore wheels and axle, weighing about 1 ton, should suddenly break away from the engine, the front end would preponderate over the other by about 1 ton; that is, the engine would balance itself on the centre or driving-wheels, with the exception of a preponderance of 1 ton on the front of the engine. Now reckoning the centre of gravity of the engine to be 4 feet from the ground, and that the after-end of the engine weighs 3 tons, and the fore-end (deprived of its wheels and axle) weighs 4 tons, then $\frac{16{\cdot}08 \times \sqrt{4}}{\sqrt{16}} \times \frac{4-3}{4+3} = 8{\cdot}04 \times {\cdot}1428 = 1{\cdot}148$ feet per second will be the rate at which the heaviest end of the engine will fall towards the ground; and as the bottom of the smoke-box is only about 20 inches from the ground, it will take just 1·4 seconds of time before it reaches the earth. And as the engine travels 44 feet per second, it will only run 61⅔ feet before it strikes the ground, though we have seen that the engine at Versailles ran 228 feet under the same circumstances.

It must be observed, however, that several causes will combine to modify the velocity of descent in both cases; for if we calculate the time of descent of the four-wheeled engine in the same way as we have done with the six-wheeled engine, we shall find that it would only have run rather less than 30 feet before it struck the earth, if it had not been sustained by some counteracting causes. The principal causes which modify the velocity of descent in both classes of engines, are the re-action of the steam as it passes through the escape pipe in the chimney, which forces the fore end of the engine downwards; and the counteracting effect of the draw-bolt which attaches the tender to the engine. In both forms of engines these modifying circumstances are the same; and therefore we arrive at the irresistible conclusion that if the fore wheels and axle of an engine, either on four or on six-wheels, separate from the engine while in motion, the engine must inevitably fall to the ground, and the difference in the time of descent would be almost inappreciable. Such an accident, however, never before occurred; and had the engine at Versailles been constructed with inside bearings, it is almost certain it would not have occurred in the present case.

It yet remains a problem what will be the effect on a four-wheeled engine, with inside bearings, if the fore axle break; for of about 250 engines of this description now employed in this country, none has ever yet met with such an accident. The question, however, is likely to be very soon decided; as Messrs. Bury and Co., the inventors of this plan of engines, have, I understand, proposed to some of the Railway Companies to run an engine with the fore axletree cut in two, and to convey by it a train of luggage waggons, for a distance of 20 or 30 miles, at the speed of 30 miles an hour. This experiment, of which I entertain no doubt of the success, appears to be fully warranted by the present state of public feeling on the subject of railway travelling; and as it must be acknowledged to be an *experimentum crucis*, it will no doubt allay any anxiety which the decision of the French Government to prohibit provisionally, and until all doubts are cleared up, the employment of four-wheeled engines is calculated to produce on the minds of timid persons. It is, I think, perfectly clear that this decision of the French Government has been made without the knowledge, either on their own part or that of their engineers, of the peculiarities which distinguish the different descriptions of locomotive engines, and of which, it must be observed, the French engineers generally possess but very little information.

I am, Sir, your obedient servant,

CHARLES HOOD.

Earl-street, May 25, 1842.

Death of Mr. Samuel Seaward.—We lament to have to record the death, on the 11th inst., of this eminent practical engineer. Few establishments in this country have contributed more to the progress of steam navigation than the firm of Messrs. Seaward and Capel, of which the deceased was an active partner. Mr. S. Seaward was a Fellow of the Royal Society, and a Member of the Institution of Civil Engineers, in the proceedings and welfare of which he latterly took a most lively interest.—*Mechanics' Magazine.*

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—It is evident that your correspondent "Alkali" is as well aware of the practices upon this line of railway as I am myself. The affair which he alludes to, on Contracts Nos. 2 and 3, is known to all in its immediate neighbourhood, and the remark has been continually "Thank goodness I have no money in the Brighton line to be dealt with in so gross a manner as this!" What! Allow the contractor freedom from his responsibility, and then let him execute the work *by the day*, and be the *keeper of his own time*, without any real check on the part of the Company!! Surely, if this be so—and which everybody down the line knows to have been so, and which the Company's accounts (bad as they have been represented to be) must prove to have been so—some downright knavery must have been practised by some one or other. I tell you distinctly, Mr. Editor, that the estimate made by Mr. Locke need not have been exceeded to any material extent, if common skill had been displayed in the mode of executing the work, and common honesty had been observed by all parties.

You may easily account for the contractor upon Nos. 2 and 3 contracts realizing 25,000*l.* in the space of a year and a half (having been previously insolvent), when you are told that he was allowed to employ all his men by the day to the amount of 800 or 1,000, with 100 horses daily, with no effective check upon either the number of horses or men, or the days or hours that they worked. It is also a well-known fact that the contractor's gangsman has been repeatedly heard to tell the men not to hurry themselves, for it was Company's work, and they might take it easy. Indeed, any indifferent person passing by, would make the remark, that "surely the men are not at work by the grate, or there is no one to look after them," for not above 1 in 10 would be seen at work at one time. If the Resident Engineer had had to pay these men out of his own pocket, he would not have allowed such a course of proceeding, and the inference therefore is, either that he was totally unfit for his situation, or that the contractor had made himself so agreeable to him in some way or other that the interest of the shareholders was quite forgotten in the pleasing delirium of mind which this contractor had produced in the Engineer. Since the death of the contractor, his brother, who was before a mere ganger to him, and used to tip the earth-waggons, has been employed in his stead, and is now, from being a common labourer, about to take a farm of about 500 acres, which will require between 3,000*l.* and 4,000*l.* to pay for the valuation, and to carry it on. This, it will be remembered, has been created since this time last year, the only sum left him by his brother being 800*l.* out of the aforesaid 25,000*l.* Can the shareholders wonder any longer how their money has gone?

Will not all this sort of thing, which most assuredly must come out before the summer is over, induce the railway world to adopt some more efficient check over their officers than they have hitherto had? I trust that, for the sake of example, upon these matters being made apparent, a total change will be made in Directors, Engineers, Solicitors, &c., which will induce the shareholders to feel that confidence in the Management which is necessary for the proper conduct of a large concern like the London and Brighton Railway.

The total absence of anything like defence from the charges brought against the Directors and their officials prove how crafty they are, because they know very well if they were to begin anything like a justification, a multitude of evidence would be brought forward against them, which has hitherto been kept back, but which will be forthcoming at the proper time.

I am, Sir, your obedient servant,

EXPOSITOR.

Digitized by Google

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Very great merit attaches itself to you for the able manner in which you have advocated the cause of the shareholders in this wretchedly managed concern, but it strikes me that unless some of the influential and principal shareholders bestir themselves, no good will ever be achieved; for if men are so wilfully blind to their own interests as not to take cognizance of the system hitherto carried on by the Directors, it is not to be supposed that these men will of themselves forego the advantages they continue to possess, from the want of moral courage on the part of those chiefly interested. Why do not the shareholders endeavour to find out the hiding-place of the late Secretary? *For be assured the Directors never will*, inasmuch as it would not be agreeable were he to divulge the "secrets of the prison-house;" and he *could* a tale unfold which would astound the weak-nerved sufferers, and not a little startle those of stronger mind. The enormous expenditure, beyond the legitimate expenses in making the railway, may yet be accounted for if only decisive steps be taken.

ARGUS.

Brighton, May 25, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Whilst you very properly exert yourself to expose the perfect unfitness of the Directors of the Brighton Railway to have the control of any concern of the kind, for which the thanks of every one of the shareholders are due to you, you will, I trust, guard yourself against being made a tool of for malevolent or Stock-Exchange purposes. The concern ought to have been one of the very best of its kind; but with even the very disgraceful expenditure which has taken place, a traffic of 4,000*l.* per week, under proper management, and after deducting 40 per cent. for expenses, will pay 5 per cent. on the capital expended, as you may readily ascertain. Let us, therefore, use every exertion to get an efficient body of Directors—men of business and experience, in whom confidence can be placed, and who, if we cannot look to 12 or 15, will at least obtain us 5 or 6, per cent.

I am, Sir, yours, respectfully,

ANOTHER SHAREHOLDER.

May 26, 1842.

P. S. Why do not the influential shareholders call an extraordinary meeting for the purpose?

[In a letter signed *Alkali*, which appeared in our journal of last week, there occurred the following passage:—

"That men have played into each others hands, in order to reap the golden harvest before them, is, without a shadow of doubt, and thus has the money been most lavishly squandered. It is not from mere report that I write, but from a strict acquaintance with the barefaced and unblushing facts which are daily coming out respecting the mismanagement of this expensive railway. Well might 'Diogenes' impute to Mr. Parsons the saying, that 'there is more to tell;' there is indeed much more to tell, and of a nature to astound many of the unsuspecting shareholders—and out it shall come, and that right shortly, in a manner which shall show 'where the money is gone,' and what the unforeseen contingencies are which have made the outlay likely to amount to 3,000,000*l.* instead of the original estimate of 1,100,000*l.*"

Mr. Parsons having represented to us that the sentence in which his name is mentioned, had been construed by some parties as involving an imputation on his character—an imputation which *Diogenes* wholly disclaimed—we communicated on the subject with *Alkali*, and in a note which we have since received from that gentleman, he says, "*I beg to state that I had no intention of alluding to Mr. Parsons personally, when I quoted the observation of Diogenes. I did not suppose Mr. Parsons to be acquainted with the facts I adduced, or at all privy to the extraordinary outlay alluded to.*" We are quite sure that no one who knows anything of Mr. Parsons could for a moment have deemed him chargeable with anything unbecoming an honest man and a gentleman.—ED. R. T.]

BRIGHTON AND SOUTH-EASTERN RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have read with much pleasure the article in your last number, on the position in which the Brighton and Dover Companies are placed as to each other, relative to the 12 miles of railway which have been constructed by the Brighton Company, and which are to belong to the two Companies equally, on the Dover Company paying one-half of the cost of construction. When we look at the miserable figure the Brighton Directors have cut with their constituents, at the immense excess of cost beyond the estimate on the construction of the whole line, and at the disgraceful manner in which their accounts have been kept, coupled with the fact, that the *alleged* cost of construction of the 6 miles which are to belong to the Dover Company has sprung from 200,000*l.* to double that amount, it is to be expected that every nerve will be strained by the Brighton Board to make the Dover Company pay pretty handsomely for their share of the 12 miles.

The Brighton Directors have shown a very decided inclination to be strict with the Dover Company as to the *mode* of payment, and I hope the Dover Board will in return be equally strict in requiring the Brighton Board to *make out a good title* to what they claim. As a Dover shareholder, it is with unmixed satisfaction that I see in the chair of our Board of Directors a gentleman so well qualified in every respect to cope with the Brighton Directors. The manly straight forward manner in which he has uniformly acted (presenting an agreeable contrast to the conduct of some others similarly situated), and the talent and business-like habits which he has proved himself possessed of, have entitled him to our entire confidence; and while we are in such hands I think we have no reason to be under any alarm.

Doubtless the Brighton Directors have been hugging themselves with the idea that the Dover Company would not be able to raise the wind; and perhaps they have given out that they should want double what they first talked of with a view to frighten our Directors, and induce them to give up the six miles altogether; but I suspect they will find that the Dover Company will have much less difficulty in finding the money than the Brighton Directors will have in proving what they are really entitled to. Considering the disgraceful state of their own accounts, as I have said before, the strictest proof should, and I have no doubt will, be required, and the most searching investigation gone into. As you justly observe, the Directors ought unquestionably now to be prepared with their accounts, and the fact of their not being so is an additional reason, and a very strong one, why the account which has still to be made up should be looked at with great suspicion, and every item thoroughly sifted.

I remain, Sir, your obedient servant,

A DOVER SHAREHOLDER.

May 24, 1842.

SAFETY OF RAILWAY TRAVELLING.

To the Editor of the Railway Times.

SIR,—Much has been said about the fearful extent of railway accidents, but I think you will agree with me that sufficient credit is not given to those who have the management of railways for the excellence of those arrangements by which the general proceedings are regulated, and owing to which the amount of mischief is so small, when considered in connection with the amazing extent and almost incredible range of railway traffic.

From a statement that I have made of the distance travelled by passenger trains on the following lines, viz., Great Western, Birmingham, Grand Junction, Birmingham and Derby, Midland Counties', Manchester and Leeds, South-Western, and Brighton, it appears that the daily distance is 10,508 miles, weekly 68,506 miles, monthly 274,026 miles, and yearly 3,562,338 miles!

It appears by the Parliamentary returns, that during the whole of the last year (1841) the number of persons injured on these lines amounted to 56, of whom 22 were killed (9 of them having perished at the slip on the Great Western, 24th December). This shows an average of one person injured in about 64,000 miles traversed, and one killed in about 162,000 miles traversed. The number of passengers conveyed on these lines during the same period amounted to about 4,600,000; the average of persons injured being one in 82,000, and of persons killed one in 210,000.

Surely these facts require no comment, as they present undeniable evidence of the skill and care that must be exercised to produce such a result.

May I request the favour of your inserting this statement, which will present the subject in a new light to many of your readers, and probably incline them to think more justly of measures that are often subjected to severe and unmerited censure.

I am, Sir, yours, &c.,

SUBSCRIBER.

Lambeth, May 20, 1842.

"LOCKING IN" ON RAILWAYS—GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Would it not be as well, before you and "A Magistrate in a Western County" endeavour to alarm the public, and commence an attack on the Great Western Railway Company, that you examine more minutely into the circumstances of the late frightful accident in France?

As a subscriber, and approver of much of your writing, I take leave to differ with you respecting your assertion that "the accident was grievously aggravated by the circumstance that the doors of the carriages were locked, thus shutting out the means of escape." If you and your correspondent would but take the trouble to re-peruse the various reports in your own columns, you would find, that all agree in the fact of the instantaneous smashing of the waggons and carriages, by which, and which *alone*, such a fearful loss of life ensued. One report distinctly states, that of the carriage next to the ones smashed the "conductor opened the doors and got the passengers out." Let me ask, then, of what avail would have been the egress by the doors—even if unlocked—of the carriages smashed? I maintain, therefore, that these doors being locked did not contribute, in the most remote degree, to the calamity. I will confess myself an advocate for "locked doors" from what I have seen of railway travelling, and my opinion has been confirmed by the many individual accidents which have occurred from passengers too hastily taking advantage of the outlet of an unlocked door. Some portion of the public press have also advocated the same, and, if I mistake not, a jury have recommended it. Now, should we ever be so unfortunate on the London and Birmingham, or any other railway (allowing their doors to remain unlocked) to have an accident, however in itself trifling, occurring at the moment of the passing of another train (which is not impossible), let me here ask how frightful would be the results of the passengers rushing out as they do upon the opposite line? I trust, therefore, that the Directors of the Great Western Railway will not be induced to alter their present system. I shall rejoice to hear that "Mr. Locke, and other competent Englishmen [at your suggestion], will spare no pains to throw light upon the occurrence," especially upon that incomprehensible part of the rapid conflagration which ensued; also upon the strength of the build of those carriages so speedily smashed to pieces.

I remain, Sir, your obedient servant,

K. W.

Wanborough, Wilts, May 19, 1842.

"LOCKING-IN" ON RAILWAYS—GREAT WESTERN RAILWAY.

THE following letter appeared in the *Morning Chronicle* of Monday. It is from the pen of the well-known and witty Canon of St. Paul's:—

SIR,—It falls to my lot to travel frequently on the Great Western Railway, and I request permission, through the medium of your able and honest journal, to make a complaint against the Directors of that Company.

It is the custom on that railway to lock the passengers in on both sides—a custom which, in spite of the dreadful example at Paris, I have every reason to believe they mean to continue without any relaxation.

In the course of a long life I have no recollection of any accident so shocking as that on the Paris Railway—a massacre so sudden, so full of torment—death at the moment of pleasure—death aggravated by all the amazement, fear, and pain which can be condensed into the last moments of existence.

Who can say that the same scene may not be acted over again on the Great Western Railway? That in the midst of their tunnel of three miles' length] the same scene of slaughter and combustion may not scatter dismay and alarm over the whole country?

It seems to me perfectly monstrous that a Board of 10 or 12 monopolists can read such a description, and say to the public, "You must run your chance of being burnt or mutilated. We have arranged our plan upon the locking-in system, and we shall not incur the risk and expense of changing it."

The plea is, that rash or drunken people will attempt to get out of the carriages which are not locked, and that this measure really originates from attention to the safety of the public; so that the lives of 200 persons, who are not drunk and are not rash, are to be endangered for the half-yearly preservation of some idiot, upon whose body the coroner is to sit, and over whom the sudden death man is to deliver his sermon against the Directors.

The very fact of locking the doors will be a frequent source of accidents. Mankind, whatever the Directors may think of that process, are impatient of combustion. The Paris accident will never be forgotten. The passengers will attempt to escape through the windows, and ten times more of mischief will be done than if they had been left to escape by the doors in the usual manner.

It is not only the locking of the doors which is to be deprecated, but the effects which it has upon the imagination. Women, old people, and the sick, are all forced to travel by the railway; and for 200 miles they live under the recollection, not only of impending danger, but under the knowledge that escape is impossible—a journey comes to be contemplated with horror. Men cannot persuade the females of their family to travel by the railway; it is inseparably connected with abominable tyranny, and perilous imprisonment.

Why does the necessity of locking both doors exist only on the Great Western? Why is one of the doors left open on all other railways?

The public have a right to every advantage under permitted monopoly which they would enjoy under free competition; and they are unjust to themselves if they do not insist upon this right. If there were two parallel railways, the one locking you in and the other not, is there the smallest doubt which would carry away all the business? Can there be any hesitation in which timid women, drunken men, sages, philosophers, bishops, and all combustible beings, would place themselves?

I very much doubt the legality of locking doors and refusing to open them. I arrive at a station where others are admitted; but I am not suffered to get out, though perhaps at the point of death. In all other positions of life there is egress where there is ingress. Man is universally the master of his own body, except he chooses to go from Paddington to Bridgewater: there only the *habeas corpus* is refused.

Nothing, in fact, can be more utterly silly or mistaken than this over-officious care of the public; as if every man who was not a Railway Director was a child or a fool. But why stop here? Why are not straight-waistcoats used? Why is not the accidental traveller strapped down? Why do contusion and fracture still remain physically possible?

Is not this extreme care of the public new? When mail coaches first began to travel 12 miles an hour, the outsides (if I remember rightly) were never tied to the roof. In packets, landsmen are not locked in the cabin to prevent them from tumbling overboard. This affectionate nonsense prevails only on the Great Western. It is there only that men, women, and children (seeking the only mode of transit which remains) are, by these tender-hearted monopolists, immediately committed to their locomotive prisons. Nothing can, in fact, be so absurb as all this officious zeal. It is the duty of the Directors to take all reasonable precautions to warn the public of danger—to make it clear that there is no negligence on the part of the Railway Directors; and then, this done, if a foolhardy person choose to expose himself to danger, so be it. Fools there will be on roads of iron and on roads of gravel, and they must suffer for their folly; but why are Socrates, Solon, and Solomon, to be locked up?

But is all this, which appears so philanthropical, mere philanthropy? Does not the locking of the doors save servants and policemen? Does not economy mingle with these benevolent feelings? Is it to save a few fellow-creatures, or a few pounds, that the children of the West are to be hermetically sealed in the locomotives? I do not say it is so; but I say it deserves a very serious examination whether it is so or not. Great and heavy is the sin of the Directors of this huge monopoly, if they repeat upon their own iron the tragedy of Paris, in order to increase their dividends a few shillings per cent.

The country has (perhaps inevitably) given way to this great monopoly. Nothing can make it tolerable for a moment but the most severe and watchful jealousy of the manner in which its powers are exercised. We shall have tyrannical rules, vexatious rules, ill temper, pure folly, and meddling and impertinent paternity. It is the absolute duty of Lord Ripon and Mr. Gladstone (if the Directors prove themselves to be so inadequate to the new situation in which they are placed) to restrain and direct them by law; and if these two gentlemen are afraid of the responsibility of such laws, they are deficient in the moral courage which their office requires, and the most important interests of the public are neglected.

I am, Sir, your obedient servant,
SYDNEY SMITH.

May 21, 1842.

THE WEST INDIA PACKET STATION—SOUTHAMPTON OR DARTMOUTH?

To the Editor of the Railway Times.

SIR,—The advantages of Southampton are considerably overstated by your correspondent, "A Glasgow Citizen." According to his calculation, the journey from Dartmouth to London will take 13 hours, viz., 4 from Dartmouth to Exeter, and 9 by the railway from Exeter to London; whereas if the packets went to Southampton the distance would, according to his statement, be performed in 11 hours, viz., 8 hours by sea to Southampton, and 3 by the railway from Southampton to London.

Your correspondent supposes, that on the railway from Southampton the distance of 73 miles will be performed in 3 hours; and that on the railway from Exeter the distance of 194 miles will not be performed in less than 9 hours; that is to say, he gives a speed of 24 miles an hour to the London and South-Western Railway, and allows only 21 miles an hour to the Great Western. We all know that the speed on the Great Western is greater than on any other railway in England; but if your correspondent had only put it on the same footing as the London and South-Western, he would have found that the distance between Exeter and London would take 8 hours only, and not 9. That this is the true calculation is evident from the fact, that the distance between London and Bridgewater—151 miles—is now performed in 6 hours. The distance between Bridgewater and Exeter will be only 43 miles, and that will certainly not take more than the remaining 2 hours.

The road from Exeter to Dartmouth has lately been much improved; it is capable of further improvement; and I believe there is no doubt that the mail would not take so much as three hours and a-half to perform the journey.

The whole distance between Dartmouth and London would thus not take up so much as 11½ hours; and the advantage of Southampton is consequently reduced from two hours to something less than half-an-hour.

But even this advantage exists only with respect to London and the eastern part of the kingdom. When the railway is completed between Bristol and Gloucester, there will be a complete communication by railway, from Exeter through Birmingham, to Liverpool, and all the manufacturing districts of Scotland and the north of England. The distance by railway from Exeter to Birmingham will be 158½ miles, and will no doubt be performed in less than 7½ hours. So that if your correspondent were to land at Dartmouth on his way to Glasgow, he would in 11 hours be at Birmingham; whereas if he had proceeded to Southampton, he would, according to his own showing, be at that moment just arriving at the Vauxhall terminus. By landing at Dartmouth, your "Glasgow Citizen" would save the whole distance between London and Birmingham. I have hitherto proceeded on the assumption, that the additional time required for the steam-packet to reach Southampton would be only 8 hours. Under ordinary circumstances this may be correct. But we all know, that though the Southampton water may be tranquil enough when you are in it, yet the passage of the Needles, either in a storm or a fog, is both difficult and dangerous. In proceeding to Southampton very considerable delay must occasionally happen. The port of Dartmouth may be made at all times, so that by landing there the utmost possible regularity in the mails would be provided for.

I am, Sir, your obedient servant,
MELETES.

ASSESSMENT OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—At the hazard of being thought presumptuous, I venture to draw your attention again to this subject, feeling that, however erroneous my view of it may be, others may be induced to think the matter over, being as it is of great importance both to the railway interest and the parishes through which the railways pass.

It seems to me that there are two material points to be decided. First, what the railway is worth to rent; and, secondly, how that rent should be subdivided amongst the parishes.

In my previous letter of the 22nd January last, I said that the fairest way would be, to be governed by the published returns of the Railway Company itself, as to the amount of interest paid upon the whole of the shares annually whilst under their own management. From this amount a deduction should be made for a tenant's risk and profits. Upon reconsidering this part of my proposed mode of assessing railways, an objection can be made, on the ground of the income arising partly from the profits of carrying, which it is contended ought not to be assessed—personal property not being liable. We must then be governed by the sum the *tolls* will let for, making a deduction for repairs and insurance, as also a reasonable amount for a tenant's risk and profits.

This value can be ascertained by the overseers on inspection of the Company's books, which ought clearly to point out how many passengers have travelled from station to station respectively, and the distance between those stations; which can then, for the sake of simplification, be brought into the number of miles which one passenger has travelled.

Digitized by Google

Then, by referring to the table of tolls, the result in money can be ascertained.

For instance, suppose there have been—

	Passengers.	Miles.
From A to B	4,000	10
A to C	6,000	15
A to D	6,000	25
A to E	29,600	40
B to F	3,000	30
C to F	2,000	25
D to F	2,500	15
Total	57,000	190

The number of passengers multiplied by the number of miles will give the total of miles for one passenger, and the toll being 2d. per passenger per mile, we then have 57,000 × 190 × 2d. = 90,250*l.*

Then suppose the allowance for repairs and insurance, and tenants' risk and profits, to reduce this amount to 60,000*l.* "This sum would have to be divided between the parishes through which the line passes; not, however, according to a mileage rate, for that would not be just, but according to the value of the railway property within each parish. If there were no buildings or other matters pertaining to a railway, but the *way* only, then a mileage rate would operate; but the value laid out in the letable portion of the property varying in each parish, the only fair way to arrange the apportionment of the rent would be, to value all the buildings, land, rails, sleepers, blocks, and all other *letable* property in each parish; then adding them all together, see what relative proportions the whole value bears to the whole rent." Thus—

The whole rent ascertained as above, is	£60,000
The whole value of the assessable part of the railway shall be taken at	1,200,000

Thus, for every 20*l.* laid out in each parish, the railway would be assessed at 1*l.*

	£	Assessed. £
The first parish had laid out in the letable part of the railway	150,000	7,500
Second ditto	105,000	5,250
Third ditto	135,000	6,750
Fourth ditto	75,000	3,750
Fifth ditto	180,000	9,000
Sixth ditto	150,000	7,500
Seventh ditto	300,000	15,000
Eighth ditto	45,000	2,250
Ninth ditto	60,000	3,000
Total	£1,200,000	£60,000

The question must be looked at as a *whole*; because, if the toll taken in each parish were to be the criterion of the value of the railway within that parish, some parishes would receive nothing from the Railway Company, no toll at all being taken in them. They would be placed in a worse situation than before the road was made, as they would be deprived of the rates which used to arise out of the land which is now occupied by the railway.

There is evidently great difficulty in settling this question, by the Court taking so long a time in delivering its judgment.

I am, Sir, yours, most respectfully,

CHARLES PENFOLD.

Croydon, May 24, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

Sir,—I observe it *frequently* happens that your statement of the weekly traffic on this line differs materially from that published in the *Times* and other newspapers. For instance, the last week's traffic is reported by you to have been 1,296*l.*, but by the *Times* and *Morning Post* 1,050*l.* only. Can you explain how this is, as I suppose you all get the return from the Secretary of the Company?*

The railway world is much indebted to you for the very able manner in which you have lately exposed the malpractices of the Directors and Engineers of a certain railway. Now, without imputing any such conduct to the Directors of the Blackwall Railway, who I firmly believe are all *honest* men, it must at the same time be admitted, that the way in which they have set about the establishment of the goods' traffic on the line, shows the grossest mismanagement and negligence, and has been the cause of very serious loss to the Company, for which, in my opinion, they ought to be made personally responsible. To be impartial, I think you are called upon to expose this mode of injuring those who have intrusted them with the conduct of their affairs, as well as the other practices above alluded to.* By inquiring into this matter you will do an essential service to the Company generally, and will have the best thanks of,

Yours, &c.

A LARGE SHAREHOLDER IN THE BLACKWALL RAILWAY.

May 24, 1842.

* We can only answer for ourselves. We get our returns from the office.—Ed. R. T.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—The traffic on the Edinburgh and Glasgow Railway for the last month (April) averaged 2,003*l.* per week, although the line had only been completed and opened to the public about five weeks previously. Now, supposing the railway had been opened at the beginning of the year (1st January), instead of the 20th February, and estimating the average weekly traffic of April (2,003*l.*) as the average weekly receipt of the half-year, the amount of the 26 weeks' receipts would have been, say,—

Up to 30th June next		£52,078
The half-year's interest on the expenditure of the Company (1,283,234*l.*) at the time of the last statement, at 5 per cent., will be	£30,830	
The probable expense of working the line, 40 per cent. on the gross receipts	20,831	
		51,661
Leaving a balance of 417*l.*, after paying at the rate of 5 per cent. per annum on the whole capital of the Company at the date of the last statement		£417

I confidently ask, therefore, seeing how much the receipts of all the great lines of railway have increased, *as compared with the first few months after the opening throughout*, whether the shareholders in this, the greatest of the Scottish Railways, have not the brightest prospects for the future? and if so, how is it that the price of the shares in this line are at no more than 55*l.*, 50*l.* having been paid up, whilst money is now again abundant; new 3½ per cent. stock being 100 to 101; consols 92 to 93?

I remain, Sir, your obedient servant,

VERITAS.

P.S. Allow me to exhort the Directors of the Edinburgh and Glasgow Railway never for a moment to cease endeavouring to cut down the working expenses of the line, so that they may show at the next half-yearly meeting *a diminishing expenditure and increasing receipts*, than which nothing can make the line so much a favourite with the public. There is the utmost need, too, that the Directors should endeavour to take advantage of the favourable state of the money market, in order to borrow the amount they are about to take up on loan at *less than 5 per cent. interest*—the Manchester and Leeds Company having fully succeeded in this, as in everything else they have attempted in the way of railway economy, being altogether alive to the certainty that, as regards a dividend, diminished expenditure is tantamount to increased receipts.

SUNDAY TRAVELLING ON RAILWAYS.

To the Editor of the Railway Times.

Sir,—In order that you may be acquainted with the movements of the Agnewites in my parish, Islington, I beg to enclose you a notice which was placed in the pews of the various churches last Sunday, followed up by an earnest exhortation and request from the reverend Vicar, Mr. Wilson, to the congregation, to respond to it, by flocking to and signing their names to the petitions, and thereby avert from the nation the awful consequences that must follow such a desecration of the Sabbath as railway travelling on that day. I am myself but a plain simple man, and am therefore somewhat at a loss to understand what greater sin is committed by persons travelling by railway (oftener I am sure by this mode, on that day, from necessity, than by any other) than by those by *steamers on the water*, *omnibuses*, *vans*, *coaches*, or the numerous other *conveyances* that are continually plying on that day. Why is it, I should like to know, that all this agitation exists, and that poor railway travellers only are to be subjected to the denunciations of these people? There is something of hypocrisy or fanaticism in all this, that I cannot for the life of me understand. Perhaps you may be able to enlighten me on the subject. In the meantime, however, it behoves railway proprietors to keep a watchful eye on these mischievous agitators, for their motives and actions cannot, I am sure, be honest, whilst they single out and confine their denunciations solely to railway travellers, in the conveyance of whom on that day not one-twentieth the number of persons are employed as would be immediately called into existence, and consequently desecrating, as they call it, the Sabbath, if the old coaches as formerly were upon the road. I am, Sir, yours, &c.,

AN OCCASIONAL CONTRIBUTOR.
(A hater of cant and humbug.)

Islington.

† If our correspondent will favour us with data, he will speedily see that we are "impartial" enough.—Ed. R. T.

The following is the notice above alluded to:—

"*Observance of the Lord's-day.*—A petition to the House of Commons, from the inhabitants of Islington, praying that no railway may be used on the Lord's-day, except in cases of charity and necessity, lies for signature at the following places:—

* * * * * *

"The petition is to be presented on Monday or Tuesday next, parties are therefore requested to sign it early on Monday."

BRISTOL AND EXETER RAILWAY.

We rejoice to say that there is quite a re-action in favour of this most important undertaking. The agriculturists will certainly derive a most important advantage from the work, notwithstanding the apparent indifference of the landed interest as a body to its progress. It has now, however, got beyond the need of their care, and even the Exonians, who now press in with their aid, have the satisfaction of reflecting that it will be more for their benefit than the necessary advancement of the work. The shares are rapidly rising in the market, the shareholders are daily increasing here (Exeter), and upwards of 100,000*l.* have been offered as loans on debenture bonds, within the last month. The Company have also about 200,000*l.* in the hands of their bankers. Under these prosperous circumstances, we presume, from the well known energy of the Directors, and the skill and indefatigable spirit of the able Engineer, that a grand push will be made to complete the work long within the period announced. The line will be opened to Taunton on the 7th of July, by which Exeter will be brought within eight hours and a-half of London; and another hour will be saved in the course of a few months beyond that period by the extension of the line to Bean's Bridge, this side of Wellington. The operations are continued day and night, and as a proof of the celerity with which the works proceed, we may state that the Taunton people were declaring that the line could not possibly be opened to that town at the time stated, as the Company had not even begun to provide a station-house. It so happened that within 24 hours, the ground for the station-house, hotel, &c., was staked out, the foundation laid, and the walls rising several feet above the ground. The surveyors are at work on the line between Collumpton and Exeter, and it is to be hoped that the Directors will avail themselves of the present tide of success by carrying the work on, so as to meet the line at the White Ball tunnel as soon after its completion to that spot as practicable. The Company will build a splendid hotel at the terminus here. Their system is wholly different from that of inns generally, as all the servants are paid by the proprietors, and are not permitted to accept of fees on any pretence whatever.—*Western Times.*

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

2. *Minus* toll to London and Birmingham 13*l.* 12s. 0d.
3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 903*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half year's traffic, amounts to 130*l.* per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 30*l.* 17s. 0d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 5,200*l.* 1s. 10d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, carriages, 41*l.* 18s. 0d.; horses, 56*l.* 4s. 0d.; dogs, 2*l.* 17s. 6d.; parcels, 266*l.* 10s. 8d.; cattle, 56*l.* 2s. 0d.; corn, 7*l.* 15s. 7½d.; heavy goods, 350*l.* 17s. 4d.; coal and lime, 118*l.* 5s. 0d.—Total, 900*l.* 10s. 1½d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, ——; carriages and horses, —— ——; parcels, ——; mails, ——; merchandise, ——; minerals, ——; cattle, ——.—Total, ——; including North Midland proportion of Manchester and Leeds traffic, amounting to ——. [The returns had not reached us at the time of going to press.]

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Brighton Railway.—*If any "Jew on the Stock Exchange," or any Gentile there or elsewhere, asserts that he has or ever had the smallest influence, direct or indirect, over any person connected with this journal, with reference to the articles on the Brighton or any other Company, such person asserts what he must know to be a wilful falsehood. We thank* Incredulus *for writing to us on this matter. There is another party upon whom we have our eye, who goes about to the Companies and individuals interested in joint-stock undertakings, representing for purposes of his own that he has great influence with the railway and the daily press, when, in fact, we know that he is scouted by nine tenths of the conductors of these journals. We warn him not to take such unwarrantable liberties with us. We assure him we shall not stand upon ceremony with him.*

Mr. G., of Brighton, will see that his suggestion has been adopted.

Greenwich Railway.— P. F.—*With every disposition to oblige our old friend (under a new name), we cannot give insertion to comments on letters which have appeared in other journals. Our correspondent should at once address our contemporary; but really it seems hardly worth while.* Holdfast's *letter, he will have seen, was declined by us weeks ago, and the best apology we can offer for the writer, Mr. George Walter, is, that he must have been* Bacchi plenus *when he penned it. We are surprised that this individual should display so strongly his bad taste in attacking the present Management of the Greenwich Railway and certain of its officers. Were they so disposed, a fearful retaliation might be the result.*

Thames Haven Railway.—*We should be glad to receive a copy of the Report of the Directors of this concern for* 1840, *supposing such to have appeared.*

Truth *will find an answer above.*

D. P.—*We do not at all understand the question of our correspondent.*

Croydon and Greenwich Railways.—*A great number of letters on this subject have been received. Some of them shall appear hereafter; the majority but go over ground already traversed.*

P. P. W. *(Harwich.)—The following is a* verbatim *copy of the proposed motion, as it appears in the "Votes and Proceedings" issued yesterday:—*

"That, whereas the public service requires that her Majesty's Postmaster-General should at all times be able to command the use of railways for the conveyance of the mails at the lowest rate of charge consistent with the actual cost of carrying the same, be it enacted, That in all cases in which the Postmaster-General shall, under the powers of the said Act, require that the mails or post letter-bags shall be conveyed and forwarded by any Railway Company or their railway, such Company shall convey and forward the same on every day of the week on which the conveyance of such mails and post letter bags shall be required by the Postmaster-General, without making any difference on any such days, either in the rate of speed, or in the cost and charge of conveying the said mails or post letter bags along their railway: and that in the event of the Postmaster General having on any day of the week occasion to require from any such Company the use of any special train or trains on their railway for the conveyance of the mails, the cost of carrying the mails by any such special train shall in no case be enhanced or increased on the ground or pretence of the same being a special train, employed to pass along the railway without passengers, but the same shall in all respects be considered as a train for the conveyance of passengers, and be furnished with the customary carriages and accommodation for passengers, should any such offer to accompany the same."

*** Double price will be paid by our publisher for any of the following numbers of the *Railway Times*, in order to enable him to complete sets. For the year 1838—January 13th, 20th, 27th; February 3rd, 10th; March 3rd; April 21st; October 27th. For the year 1842—February 26th.

THE RAILWAY JOURNALS.

THE three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES	72,524
Mining Journal	38,500
Railway Magazine	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, MAY 28, 1842.

THE South-Eastern Railway made its first advances towards Dover, by the opening as far as Tunbridge, on Thursday last. The late period of the week at which the opening took place, precludes us from giving more than a short notice at present, reserving ourselves for a more detailed account of the line at a future opportunity. The arrangements appear to us to have been made with consummate judgment, and at the same time with due regard to the comfort as well as the safety of the passengers. The carriages are neat in external appearance, and possess, in the first classes, a luxury not usually met with on railways, viz., in height, just sufficiently so not to be cold and cheerless, and yet affording imperceptibly a perfect ventilation, while the windows are closed on both sides.

The carriages on the Dover line do great credit to the judgment and taste of the Directors, both in mechanism and finish. For the first time on an English line *whole trains* composed of carriages on Mr. ADAMS's bowsprings, and fitted with his elastic buffer arrangement, are in daily use. Hitherto these carriages have been mixed up with others on the common plan, marring their perfect action, but now that they constitute entire trains, the result is uniform motion. It is only needful to ride in both kinds of trains—the bowspring and one on the common plan—to be satisfied of the immense superiority of the former. Not merely a blind man, but a paralytic man, or one with nerves like cart-ropes, would find out the difference. In the common carriages there is a constant hard vibration, accompanied by noise and incessant lateral shocks, from the action of the flange on the rails. These effects disappear in the bow-spring carriages, the motion of which is soft and easy, analogous to that of a sailing-boat, while the starting and stopping is free from all startling movement. One carriage that we tried was even still superior, being fitted with wood wheels, which appeared to absorb the sound generated between the wheel tyres and the rails. This wheel, we were given to understand, is also a plan of Mr. ADAMS'S.

The colour of the carriages is novel on railways, and will well distinguish them from those of the Brighton, Croydon, and Greenwich. It is a rich brown, known as the Wellington brown; in fact, it is the family colour of the Duke of WELLINGTON, with whose peculiar carriage, on four equal-sized wheels

Digitized by Google

and bowsprings, most carriage connoisseurs are familiar. With the exception of the large Dover arms on the panel, the general painting of the Dover carriages resembles that of his Grace on a large scale. We hope that all these circumstances combined will have the effect of inducing the Duke to become a patron of railways in general, or at least of this line, of whose seaward terminus he is the warden. It would be a novel sight to see his equal wheeled bowspring road-carriage on an equal-wheeled bowspring railway truck, which we have heard a Railway Engineer remark "is the perfection of all travelling." We trust his Grace will try it, if only as an experiment calculated to give *eclat* to a line over whose terminus he claims jurisdiction.

In travelling by this train we were strongly impressed with the conviction of the material saving in damage to the road which must accrue from the use of these carriages. Ease to the passenger must be ease to the road, and ease to the road must be ease to the engine. We were amongst the first to recognise the importance of this invention, and have been amongst its strongest advocates, notwithstanding the powerful prejudices opposed to it. We are satisfied by practical trial, as well as by theoretic reasoning, that a very large economy in engine power and "maintenance of way" must be the result. In the carriage of goods this will be found most important, for goods trains will be enabled to travel at the same rates of speed as passenger trains, without risk or damage, and the chances of collision will be very much diminished when all trains travel at the same speed, at equal intervals of time. On the Dover line there must ultimately be a large goods traffic, and it is probable that the rate of speed will be the greatest—it being the high road of Europe.

The stations at Reigate, Godstone, Edenbridge, and Penshurst, are convenient, and well placed for the localities to which they are intended to apply. They are neat in construction, and simple in their design, and appear to be inexpensive when compared with intermediate stations on other lines, and yet to possess every requisite for the transaction of business and the convenience of passengers.

The country through which this line passes, after leaving the Brighton Railway at Redhill, is extremely picturesque, and diversified with the richest scenery. The once high-sounding names of Gatton on the west, and Blechingly on the north, of the railway, recal to recollection the olden times antecedent to borough reform and railway travelling, while the classic remains of Hever and Penshurst, on the south, remind us of the days of chivalry, and of our entering the country of the Men of Kent, whose princes are now brought to our notice on some of the engines used upon this line.

The station at Tunbridge is exceedingly commodious, having a complete set of offices in duplicate on each side, for the use of the up and down trains, so that no passenger has occasion to cross the line at this station.

On the whole, we find reason to congratulate the public on the traffic arrangements of the line, and in doing so have no hesitation in expressing our opinion that, while the Directors have been liberal, they have not been extravagant in their outlay.

The road itself appeared to be more finished than any we ever inspected on a day of opening.

We insert this week another letter from our correspondent [△] "Delta," on the Croydon toll question, because it professes to be an answer to some remarks of our own upon his last, although we cannot promise to notice thus prominently any more of his communications. Of course, we shall at all times feel happy in allowing him to make what impression he can upon the public through the medium of this journal.

Lest, however, "Delta" should suppose that he has silenced us by his "argument" or assertion, we must beg to refer to what we said last week, and to reiterate what we then stated.

We have no means, any more than our correspondent, of producing the original agreement between the Croydon and Greenwich Companies, but we are satisfied to take it upon our correspondent's own showing, as set forth in the late Act, and we say again, as we said last week when speaking of the agreement of the Croydon Company to pay this toll, that such payment is conditional upon the use of the line, and that there is nothing whatever in the agreement, expressed or understood, as to the *necessity* of such use by the Croydon Company. In corroboration of our reading of this agreement we refer to the speech of Mr. Wood, the counsel for the Greenwich Company, in Committee on the Bill, which is now before us—and published by themselves, in which we find, page 63, the following paragraph. [The *italics* are their own]:—

"Then what right have they [the Croydon Company] to speculate on any additional profit, any more than we have a right to speculate on it? We had a right to that from the first, as well as they. If they like to deprive us of toll, let them go to the Elephant and Castle. If they choose to go to the Elephant and Castle, it would be a breach of faith, in some degree, because unquestionably the agreement is most *unilateral*—very one-sided, indeed,—it is a *licence* on our part to let them come for 3d. *Nothing binding on them* that they will always use us—a very unfair agreement, as far as concerns us, and yet on that they want to saddle us with extra terms, and we are to give any extra terms they choose to ask. It is a mere bare licence they should travel on what we had made at 3d."

We said last week, and we say again, that the other Companies were anxious to make the new line, but the Greenwich Company interposed, and *would* make the line themselves, although they were told that it could never realise a larger income on account of the outlay which would be necessary.

We said last week, and we say again in spite of the Act of Parliament, that the new line which is *all* that the other Companies have the use of, ought not to have cost more than 100,000*l.*, for it was so estimated by Colonel Landmann himself upon a former occasion, and has been so estimated since by other parties.

We said last week, and we say again without fear of contradiction, that no contract can be made between parties, to which one party objects; and that the most strenuous objections and protestations were always made by the Croydon Company against the imposition of any additional toll as a thing which *could* not be borne.

Nobody denies that each party has strict legal rights. The Greenwich Company have a right to charge a maximum toll of 4½d. This right they exact to the full measure. The Croydon Company have a right to charge 3½d. per passenger per mile. This right they do not exact to the full, since they only charge an average fare of less than 2½d. per mile. The Greenwich Company, therefore, can have no ground of complaint against the Croydon Company on this score. Then as regards the public—the Greenwich Company *having no cost of conveying the passengers to pay* charge a rate of more than 2½d. per mile per passenger for all passengers; while the Croydon Company having to provide for all this cost, charge to the public less than 2½d. per mile per passenger for all passengers, so that the public has no special reason to complain on this account, and the less so as the charges of the Croydon Company are still very much under those of the Brighton and Dover Companies. Unfortunately, however, the public decline using the Croydon Railway upon these terms, and unless the rates can be reduced the trade must be given up.

We refer our readers to the amusing proposition of our correspondent for a reference of the dispute between the Companies to arbitration upon the terms that the *result of the adjudication shall be entirely favourable to the Greenwich Company, and if not found to be so upon experiment, that such adjudication shall be set aside.* The modesty of these terms is surpassing, and yet terms quite as good as these have been offered to the Greenwich Company without any arbitration at all (as may be seen by reference to the correspondence), and have been refused by that Company!

But we suspect that the time for arbitration, upon *any* terms, is past. We have been as anxious as our correspondent for arbitration, or any other means of avoiding the present crisis, but the parties are now in the exercise of their respective rights. The Greenwich Company have chosen to push these rights to the extreme point, and it remains to be seen what the result will be. It is quite a mistake to suppose that this is a case between the Greenwich and Croydon Companies alone, although the latter is, at present, the most interested party.

Let us look at the position of the Brighton Company. In order to derive an income of 5 per cent. upon the capital expended by this Company, the gross average earnings must be at least 4,500*l.* per week. The line has been opened throughout for more than six months, and the revenue during that time has not averaged more than 2,000*l.* per week—we believe not quite so much. It is very evident, therefore, that something must soon be done to improve this state of affairs, for it is not conceivable that any ordinary increase of traffic in better seasons, can raise the average to the requisite amount, even for such an income. We make no doubt that a council of war must ere long be called for this purpose, and what possible mode can be suggested? The fares are already at the maximum rate allowed by the Act, and cannot therefore be raised: a reduction is the only alternative. The moment this reduction shall be carried to any efficient extent, the toll question will become as serious an object with the Brighton as with the Croydon Company. As regards the toll payable to the Croydon Company, the Croydon Board has, we understand, already proposed to meet the question in a spirit of fair compromise. If then the Greenwich Company are to remain in their present obdurate position—the only obstacle to a reasonable and necessary reduction of fare to the public—what is to be done? Clearly the other Companies must combine to find some new mode of getting into London without the assistance of the Greenwich Company. The Greenwich Company cannot plead ignorance of this possible result. Their own counsel before Parliament foretold, that if

Digitized by Google

their charge should be excessive, and the other parties chose to avoid it, that is, "to deprive them of toll," they might "*go to the Elephant and Castle.*" And Mr. AUSTIN, in his closing speech, specially farewarned them that this toll of 4½d. *would* be found excessive, and expressly reserved the rights of the Croydon and the other Companies to make further application to Parliament, for the purpose of avoiding such an impost. This warning our correspondent is pleased to term farcical. We expect that it will turn out to be of that character of farce, which, to borrow the phraseology of our correspondent, is apt to make some people laugh on the wrong side of their mouths.

So much for our correspondent. And now a very few words on the latest cause of contention—the Grange-road approach. The angry feeling which has unhappily arisen between the Greenwich and Croydon Boards, may in some measure excuse the opposition offered by the former Company to this measure, as they may naturally distrust and feel hostile to any proposition emanating from the Croydon Company, but as regards the public the opposition is certainly not justifiable. Is it reasonable, that, because the Greenwich Company have made a railway to a point excellently well calculated for the accommodation of the citizens of London, but as ill-adapted for the convenience of the nobility and gentry residing at the west-end of the town, they should obstruct the progress of a measure which is promoted for the better accommodation of that smaller in number, but scarcely less important, portion of the community? Are the nobility and gentry to be compelled to drive their equipages through the already over-crowded thoroughfares of the City to Tooley-street, to the manifest inconvenience and danger of those proceeding to the railway, and to the interruption of those important mercantile transactions which must of necessity be there carried on? And for what? To preserve intact the monopoly of the Greenwich Company! Again, the Greenwich Railway is not, and cannot be made, conveniently, available for the transit of the cattle and goods which will be forwarded by the different southern railways for the supply of the metropolis. Are the public to be deprived of that supply, or must the Railway Companies carry on that department of their trade at the greatest possible inconvenience, and bring such supply to a part of the metropolis where it would impede the existing traffic, and among the passengers proceeding to Brighton, Tunbridge Wells, Dover, &c., because, forsooth, the Greenwich Company have made a railway at a great outlay? The idea is preposterous. If the Grange-road approach had proposed to afford accommodation for the same (and only the same) class of persons and traffic as the Greenwich Railway is calculated to accommodate, that Company would, in our opinion, have been justified in the course they have adopted; but the circumstances here are obviously different. The opposition appears to us to originate in a jealous spirit, which, if listened to for a moment by the legislature, would indeed give the public good reason to complain of the monopoly of Railway Companies.

A MEETING, of which an account will be found in another page, was held at Evesham, in Worcestershire, on Monday last, for the purpose of promoting a communication between that borough and the Birmingham and Gloucester Railway by means of a branch line. The result was as favourable as could be desired, and there can be little doubt that the proposed junction will be speedily effected, the more especially as the amount of funds required from local subscription is said to be very inconsiderable.

The importance to the town of Evesham of direct railway communication with the surrounding districts was admitted on all hands, the only question being whether the proposed branch was the best that could be projected. It needed not that the superiority of the project laid before the meeting should be incontrovertibly made out—it might even have been granted that there were other routes very much preferable—but the question for the good folks of Evesham to consider was, not what might be the most desirable route theoretically, but which of them could be most readily brought practically into operation; and it would appear that in this latter respect the Eckington junction alone stands any chance of success. We know that a connection with the Great Western Railway is strongly advocated by several influential individuals, as combining the greatest amount of local benefit with the largest extent of general accommodation—and we are not sufficiently acquainted with details to say that the fact is not so—but then, if there appear no likelihood of the more comprehensive project being carried out, it would be folly in the extreme if the inhabitants of Evesham were to neglect the opportunity now presented to them of accomplishing their object in part. The case of Worcester was specially referred to at the meeting of Monday, as illustrative of the results likely to arise from non-participation in railway facilities, and Worcester unfortunately is not a solitary instance. Look at Northampton, the inhabitants of which so strongly opposed the approach of the main line of the London and Birmingham Railway to their town. What would *they* not give *now* to have even a branch line? Opposed as they once were to the whole scheme, it has now become to them a matter of no inconsiderable importance whether a first-class station shall be fixed at this point or that. Like the citizens of Worcester, they have seen and regretted the error into which they fell by throwing impediments in the path of those who, with due encouragement, would have proved their best friends; and it is to be hoped that their experience—which is the experience of many a town and district besides—will not be lost upon those locally connected with Evesham, and the termini of similar projected branches. One of the speakers alluded to the Aylesbury line, and said, that "if it had not been formed, that town, instead of enjoying its present state of prosperity, would have been completely pauperised." There is a good deal of truth in this remark, and the example of the Aylesbury line may well act as a stimulant upon the promoters of other undertakings of a like kind. The direct pecuniary returns from that speculation are not particulary attractive; but we do not think any one will deny that the indirect benefits to the district would have amply compensated for the *total* loss of the money invested, had it been advanced—which we believe it was not to any great extent—by the leading individuals of the locality.

We have repeatedly adverted to the new character which railway communication is rapidly assuming, in being as it were *forced* upon the attention of the parties who are more immediately interested. Of this we have a further proof in the instance of Evesham. "It was [said one of the gentlemen who addressed the meeting] no longer a question whether they should have railways, for railways *were* in existence, and it behoved them to consider whether their borough should be isolated from the rest of the country." The spread of this feeling is one of the best auguries that could be presented for the extension of the system. Speculators (usually so called) have all but retired from the concoction of railway schemes, satisfied probably that their nefarious proceedings would now-a-days be too narrowly scrutinized to leave any hope of success, but in their stead are springing up bodies of individuals whom the strongest of all motives, the innate desire of self-preservation, impels to carry out what others have begun. The latter, comprising the great men of provincial towns, the lords of the soil, and others more or less interested in the prosperity of particular places, may advance more slowly towards the accomplishment of their object, but not on that account the less surely; and it requires but a few instances by way of example to induce the carrying out to a far greater extent than has ever yet been exhibited, of this principle of local participation in railway projects. We had looked to the promoters of the proposed Cornish Railway for an example upon a much larger scale, but even the means of self-preservation, to which we have alluded, appear to have but small influence *there*. The effects will fall upon their own heads, and their apathy is, under all the circumstances, inexcusable, for they have been many times warned of the consequences. Let us hope better things from the Evesham scheme.

We take it for granted that this branch line will be carried into execution with the greatest possible attention to economy. Should there be any deficiency in the estimates of cost, the proprietors will have good reason to complain of their Engineer: no excuse can *now* exist for excess in this department. Incompetency or insincerity, as we observed in reference to a a recent flagrant instance, must be ascribed to the Engineer who shall hereafter fall into the *mistakes* into which some (we may say nearly all) of his predecessors have fallen. We say this without special reference to the Evesham case, with which we do not profess to be particularly familiar We are extremely anxious that no further discredit should attach to the profession, for nothing could more effectually impede the extension of railway communication than a repetition of the gross blunders and bunglings which have rendered engineering estimates all but objects of contempt and disgust. We have heard, from more quarters than one, that the estimates for a scheme which has engaged the attention of Parliament during the present session are likely to prove wholly inadequate—we allude to the projected Norwich and Yarmouth line. It is to be hoped that the fears of our informants will prove unfounded, but should it be otherwise, the parties testifying to the sufficiency of such estimates would do well to be prepared to meet the consequences of that which cannot, in such a case, be looked upon as other than a gross fraud upon Parliament and the public. Our present purpose, however, is not with the Norwich scheme, and we only refer to the matter incidentally by way of suggestion to the parties interested, whom it behoves, before leading the public further into the project, to set forth fully and unreservedly the whole circumstances of the case, leaving no loophole for future retreat.

With reference to the Evesham branch, we take it for granted that the plan will meet

Digitized by Google

with the required local support. "There is a tide in the affairs" of boroughs as well as of individuals, and, unless "taken at the flood," the omission may, and must, lead to the isolation of which Worcester is now experiencing the effects. Of course the branch is certain to prove advantageous to the proprietors of the main line, otherwise would they care nothing for its execution, but there appears to be a desire on the part of the Direction to act liberally towards their intended tributaries, which we hope and believe the intelligent inhabitants of Evesham are too prudent to overlook.

Since the above was written, we learn that the deputation from Evesham have had an interview with the Directors, and that the following resolution has been come to by the Board:—

"That the Directors of the Birmingham and Gloucester Railway are of opinion that the formation of the proposed line would be conducive to the interests of this Company, and in the event of its being made would recommend to the proprietors to undertake the working of it in common with their own line, under lease, and on such fair terms as may hereafter be agreed on."

A CORRESPONDENT, whose letter appears in another column, steps forward as an advocate for the locking of carriage doors during a railway journey. The mere fact that more than nine-tenths of the Companies do *not* lock the doors must, we should imagine, be sufficient to satisfy our correspondent that the Great Western Directors stand in something like "a glorious minority of one" upon this question. Our correspondent asserts, that the Versailles accident was not aggravated by the locking of the carriage doors. Now, really, even at this distance of time, we know so little of the real facts of the calamitous occurrence in France, that we can scarcely take upon ourselves to contradict our correspondent's assertion; but the circumstance that the future locking of the doors has been peremptorily prohibited by the authorities, would seem to imply that the public impression is somewhat different from that of our correspondent. It matters little, however, so far as the general question is concerned, whether the accident on the Versailles line was or was not thus aggravated. The real point to be determined is, whether or no the chances of a disastrous result, in case of accident, are increased by the practice which we reprobate, and our correspondent supports.

Our correspondent refers to "the many individual accidents which have occurred from passengers too hastily taking advantage of the outlet of an unlocked door." May we beg to be informed of the times when, and the places where, these "many individual accidents" have occurred? We really cannot call them to mind; but if they were ten times more numerous than our correspondent can possibly point out, does he not see that they are chargeable solely upon the imprudence of the sufferers themselves, whereas in such a case as that on the Versailles Railway *all* are liable to suffer, whether careful or not—whether sufficiently prudent to await the stoppage of a train before stepping from the vehicle, or so reckless as to risk death or mutilation from "too hastily taking advantage of the outlet of an unlocked door?"

It is further advanced by our correspondent that, in case of the occurrence of an accident at the moment of the passing of a train in a contrary direction, the free egress of the passengers would probably produce most frightful results. Now, for our own parts, we can see very little to choose between being burned alive in one train and being crushed to death by another, (only that the latter appears preferable). But even admitting the prudence of having the carriages locked under such circumstances, surely the chances are a thousand to one against the passage of a train at that particular moment; and moreover, the scene of the disaster must be very peculiarly situated indeed, if the passengers who were thus allowed free egress, or the driver of the coming train, could not perceive beforehand how matters stood.

The pretext under which, we believe, the locking of the doors of the French train was ordered, is well exposed in the letter of the Rev. SYDNEY SMITH, which immediately follows that of the correspondent referred to. With a good deal of apparent prejudice, and something of irreverent and rather inappropriate wit, the reverend writer puts the matter very forcibly. "The passengers [says he] will [in case of accident] attempt to escape through the windows, and ten times more of mischief will be done than if they had been left to escape by the doors in the usual manner." The letter in question is particularly worthy of notice, as proceeding from one who, it is to be presumed, has no bias in the matter. If fools choose to commit suicide on railways, all the precautions of all the Railway Managements in the kingdom will not avail to prevent it. But even if it were otherwise, what have the Directors to do with the matter? As the reverend gentlemen very properly observes, "It is the duty of the Directors to take all reasonable precautions to warn the public of danger—to make it clear that there is no negligence on the part of the Railway Directors; and then, this done, if a fool-hardy person choose to expose himself to danger, so be it. Fools there will be on roads of iron and on roads of gravel, and they must suffer for their folly; but why are Socrates, Solon, and Solomon, to be locked up?"

This matter has twice during the present week been brought under the notice of the Upper House. On Monday Lord CAMPBELL inquired whether it was the intention of Government to propose any regulation with respect to the locking of carriages. The Earl of RIPON, the President of the Board of Trade, not being at that time present, the Lord Chancellor (LYNDHURST) could give no satisfactory answer, but rather treated the question with derision, stating that he himself had been locked up in a railway carriage that morning, and had experienced no inconvenience. On the following evening, however, the question was entertained in a more becoming tone by the Earl of RIPON himself. "He had," he said, "made inquiries, and he found that, with the exception of the Great Western Railway, there were no Railway Directors who locked the carriages on both sides, although some of them did lock a door on one side, leaving the other unlocked. Feeling that this was a most dangerous practice, and that it might lead to the most deplorable consequences, as in the recent accident in France, he (Lord R.) referred to the Inspector-General of Railways, inquiring whether the practice was necessary, or what was the object of it? To this that gentleman answered, that it was a most dangerous and unnecessary practice, and ought to be discontinued. Accordingly he (the Earl of RIPON) wrote to the Directors of the Railway, recommending that the practice should be discontinued. This was the utmost interference the laws at present allowed the Government to make; but he had reason to believe that the suggestion would be acted upon." A similar intimation was made in the House of Commons on Wednesday evening by Mr. GLADSTONE. We sincerely trust that the suggestion *will be* acted upon. The practice of locking does not appear to be effective even for the prevention of fraud, if we may judge from a case which appears under our customary head of "Railway Offences."

AT a special meeting of the Dublin and Kingstown Railway Company, held on the 6th of April last,* the Directors stated, that the proposed extension of the line to Dalkey, on the Atmospheric principle, was estimated to cost 25,000*l.*, the whole of which sum they proposed to borrow from the Commissioners of Public Works. The proprietors authorised the project; and we have now great pleasure in stating, that within the last few days the Commissioners have readily agreed to advance the amount required, accompanying the loan with a very handsome and well-deserved compliment to the Managers of the Railway, for the punctuality with which the payments on previous loans had been made good. We understand that the works upon the extension line will be commenced in a few days, and it is confidently expected that the whole will be completed and ready for traffic within the present year.

The result of this experiment (for such we must still regard it) is looked forward to with much interest; and assuredly it could not be entrusted to better hands than those of the very able Treasurer of the Company (Mr. PIM), who has so energetically and so disinterestedly taken up the matter. For our own parts we can only express a hope that the invention will have a fair trial, and certainly it shall have this justice at *our* hands. We learn that on Wednesday last a further trial of the Atmospheric apparatus took place on Wormwood Scrubbs, in the presence of a large number of members of Parliament and other gentlemen, including the PRIMATE of IRELAND, and that notwithstanding the extremely defective condition of the machinery, the results were such as strongly to strengthen the anticipations of the patrons of this novel method of traction.

IT is gratifying to find that measures are in active and successful operation for the completion of the important line of railway from Edinburgh to Dunbar, usually denominated the North British Railway. Our southern readers will see that this is the first step towards the formation of an unbroken line of communication from Edinburgh to London. Already the line is finished to Darlington, and in a short time it will be carried to Newcastle, there being but a comparatively small space to be completed. The great and increasing success of the Edinburgh and Glasgow Railway leaves not a doubt that judiciously projected Scotch lines will afford a secure return for the capital expended. The North British will be a continuation of the Edinburgh and Glasgow, and the country is so much more favourable for works of this kind, that the railway will be made for little more than one-half the cost of the former per mile. The Government Commissioners gave this line a preference over all the others which had been projected for effecting the most immediate and speedy communication with Scotland. The middle line had some advantages in respect of gradients, but it passed through a poor country very thinly peopled, and had little or no present

* See *Railway Times*, April 16.

Digitized by Google

traffic. The west coast line was in no respect equal to the east—so the Commissioners reported—and the best proof of the soundness of this Report is the fact, that the leading railway gentlemen in Glasgow have become warm supporters of the North British. All thoughts indeed of carrying any of the other lines must soon be, if they are not now, abandoned; for without the assistance of Goverment it is impossible that the large capital can ever be raised by individuals, seeing that the probable returns would hardly be sufficient to keep up the works, and there is no chance of Government interfering in the present times. On the other hand, the North British is supported by the Directors of the Edinburgh and Glasgow Company although these gentlemen are equally interested in both towns; and the leading shareholders both in England and Scotland have come forward very effectually in its behalf. The landowners of the district are unanimous in its favour, and it is understood that there is not a single interest opposed to it. As an independent line, and supposing that it should never be carried further than Dunbar, it has been stated that it possesses the most ample resources for securing a handsome return on the capital required, while its execution will be of the most essential importance to the Edinburgh and Glasgow line, already so prosperous.

We learn with much pleasure that the goods' traffic upon the Birmingham and Gloucester Railway is gradually becoming developed. The comparison between the first four months of the present and past years stands, we are informed, thus:—

	Weight in Tons.		Total Tons.	Miles average.	Receipts per Ton per Mile.
	Company's	Carriers.			
1841. 1st Jan. to 7th May	2,952¾	1,970¼	4,923¼	29	3·7d.
1842. 1st Jan. to 7th May	4,691	2,576¼	7,267¼	35¾	3·5d.

Among the petitions recently presented to Parliament, is one from a Railway Company of which, conversant as we deemed ourselves with these Companies, we had never before heard. The petitioners style themselves proprietors of the "Portland Railway," and state that in the year 1825, "a certain number of persons (many of them unconnected with the stone trade), considering that stone might be conveyed from the quarries to the place of shipment, at a much lower price by means of a public railway, formed themselves into a joint stock company for the purpose of raising a capital of 5,000*l.* to carry into effect the proposed measure, and on application to your honourable House obtained an Act of Incorporation, which received the Royal Assent the 10th day of June, 1825." They go on to state, that the then existing proprietors proceeded to the purchase of the necessary land and the formation of the railway, and having expended the 5,000*l.*, found that a further sum of 3,000*l.* was required for the completion of the works, which further sum the said proprietors advanced by way of loan on the security of the said railway. They represent that this capital they were induced to expend on the faith of the protection afforded by the existing duty chargeable on the importation of foreign stone, and that they have heard with surprise and dismay, that certain resolutions have been proposed for the sanction of the House of Commons, whereby foreign stone is to be admitted duty free, and as they have been informed and believe that the introduction of such foreign stone, duty free, will supersede the use of stone from the Portland quarries, and the capital embarked in this railway will be entirely lost, no revenue being derivable from the conveyance of passengers or other goods than the stone from the quarries, they humbly pray that such protection may be afforded to them as to the honourable House may seem meet.

—o—

The motion of Mr. Wilson Patten, to which we referred last week, relative to the Standing Orders of the House of Commons on Railway Bills, is fixed for Thursday, the 23rd of June.

—o—

The following is an extract of a letter from the Quartermaster-General, dated Horse Guards, 25th May, 1842, addressed to R. Creed, Esq., Secretary to the London and Birmingham Railway Company:—"I take this occasion of expressing the approval of the General Commanding-in-Chief, of the very regular and satisfactory manner in which the troops have at all times been conveyed by the trains of the London and Birmingham Railway."

—o—

The question of Sunday travelling (on canals) was incidentally brought under the notice of the House of Lords on Thursday, might, on the occasion of the presentation of a petition by Lord Hatherton. The noble lord stated that many of the Canal Companies, and many of the carriers, were anxious to discontinue Sunday trading, but could not induce all the parties interested to accede, and under these circumstances, they wished the legislature to authorise them to close the canals should they see fit. Lord Wharncliffe, on the part of the Government, stated that no objection would be offered to such a measure, if it were permissive merely, and not imperative, but that at present, Government were not prepared to originate any measure themselves.

RAILWAY OFFENCES AND OFFENDERS.

At the Ilford Petty Sessions, on Saturday last, a gentleman named Price was charged with trespassing on the Eastern Counties' Railway. It appeared that the defendant had been, out of courtesy, allowed a passage across the line to some pleasure grounds on the opposite side, but had so abused his privilege that it was found necessary to withdraw it. He had then attempted to carry matters with a high hand, but in vain. The officers of the Company seem to have acted with great forbearance in the business. The defendant appeared to look upon his passage across the line as a matter of right, although it was proved that an adequate means of intercommunication was supplied elsewhere. We venture to say, without knowing anything of the particulars, that this same Mr: Price claimed and obtained a pretty considerable sum for the severance of his property. The object being less to punish the offender than to prevent a repetition of the offence, he was fined only 20s. and costs. An attempt was made by a barrister of the same name as (and probably a relative of) the defendant to bully the sitting magistrates, who, much to their own credit, treated the Old Bailey blustering with contempt.

On Monday week, William Upcorn, a passenger by the Great Western Railway, was taken before Thomas Coleman, Esq., a county magistrate, for defrauding the Company by travelling from Bath to Chippenham, without having previously obtained a ticket. On the case being fully proved against him, he was fined in the mitigated penalty of 20s.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVE-HILL RAILWAY (ROAD AND SHIPPING PLACE).

May 20.—Sir George Strickland (Preston) selected, and added to the Committee.

LIVERPOOL AND MANCHESTER RAILWAY.

May 20.—Petition for leave to present a petition for a Bill; referred to the Select Committee on petitions for Private Bills.

Petitions in favour of the application: from the Bolton and Preston Railway Company; Salford; Manchester, Bolton, and Bury Canal and Railway Company; and, Lancaster and Preston Junction Railway Company; to lie on the table.

May 24.—Petition for leave to present a petition for a Bill reported; leave given.

Petition for Bill; referred to the Select Committee on Petitions for Private Bills.

May 26.—Ordered, that the Select Committee on Petitions for Private Bills, to whom the petition of the Liverpool and Manchester Railway Company [presented 24th May] is referred, have leave to sit and proceed to-morrow.

LONDON AND CROYDON RAILWAY (GRANGE-ROAD APPROACH), (No. 2).

May 20.—Bill reported; Report to lie on the table.

LONDON AND GREENWICH RAILWAY (No. 3).

May 20.—Order of reference to Mr. Greene, &c., discharged; Committee postponed till Wednesday, the 1st June, and to be nominated on Tuesday next.

May 24.—Bill referred to the Kent List, and Lord W. Paget (Andover), Lord A. Hervey (Brighton), Mr. Bannerman (Aberdeen), Mr. Alexander (Antrim County), Mr. Hope Johnstone (Dumfriesshire). Three to be the quorum of Selected Members, and the Committee to meet on Wednesday, 1st June.

May 26.—Order [20th April] for referring petition of the Rectors and Churchwarders of St. Olave and St. John, Southwark, to the Committee on the London and Greenwich Railway (Grange-road Approach) (No. 2) Bill, read, and discharged; petition referred to the Committee on the London and Greenwich Railway (No. 3) Bill; counsel ordered.

STOCKTON AND HARTLEPOOL RAILWAY.

May 24.—Report further considered; amendments agreed to; Bill to be ingrossed.

THAMES HAVEN DOCK AND RAILWAY.

May 20.—Order of reference to Mr. Greene, &c., discharged; Committee postponed till Tuesday, the 31st May, and to be nominated on Tuesday next.

May 24.—Bill referred to the Essex List, and Mr. Protheroe (Halifax), Sir John Chetwode (Buckingham), Mr. Lawson (Knaresborough), Earl Shelburne (Calne), Mr. Holland (Hastings). Three to be the quorum of Selected Members, and the Committee to meet on Tuesday, 31st May.

Glentanner [Temporary] Railway.—The lovers of enterprise will experience a treat by visiting the Glentanner forest, the woods of which have been lately purchased by Mr. Thomas Jackson of London, the eminent contractor. A railway has been laid down from the woods to the main road. The difficulties to be surmounted in this undertaking were numerous, in consequence of the great inclinations, and rocks which were in the way; but they have been entirely and successfully overcome, by the unwearied exertions of Mr. Jackson's active manager, residing at Aboyne. The railway was opened a few days ago. It is ascertained that it that it will supersede at least 40 horses and a corresponding quantity of manual labour. It is of a novel description, being constructed of wood—the only one, we believe, in the United Kingdom, formed entirely of that material.—*Aberdeen Journal*, May 25.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—I should be foolish, indeed, if I objected in any shape to just criticisms, or the taunts of ridicule on my letter in your last week's paper. Bring forth your severity or your jocoseness as you please; let me only use like weapons if necessary. But to remark that I have made statements with little regard to truth, is, according to the vulgar expression, "coming it strong," and I am sure you will insert contradiction or explanation of any such charges.

I assert in my letter, "that the Croydon Company agreed to pay a stipulated toll of 3d. per passenger." This you place in front as not true. I have not access to the archives of either Company, and my information is derived from Acts of Parliament; and for the edification of your readers, who will see how simple I have been to be misled, I insert a recital from the Act 3rd and 4th Victoria, chap. 127, under which the Greenwich Company has been compelled to construct the additional railway, which recital is as follows:—"And whereas by certain *articles of agreement*, bearing date the 30th day of December, 1835, and made and entered into between the London and Greenwich Railway Company of the one part, and the London and Croydon Railway Company of the other part, *it was* witnessed and *agreed*, amongst other things, *that the London and Croydon Railway Company should pay* to the London and Greenwich Railway Company, for and in respect of all carriages passing on, to, and from, the said London and Croydon Railway, which should be moved or propelled upon the London and Greenwich Railway by locomotive engines, or other power, belonging to the London and Croydon Railway Company, or to such other Company or Companies as therein referred to, for the conveyance of passengers, *for every person*, passing in or upon any such carriage, the sum of *three-pence*."

Now, you will say the agreement was all on the other side, and lest I should retort that this statement has little regard to truth, I hope you will set out verbatim, in your next paper, the clause of the agreement between the two Companies relating to this toll; and to prove your correctness (especially after giving me such a blow in the face), you will have to demonstrate that the Croydon Company did not agree to pay anything, but that the Greenwich Company merely agreed to charge not more than 3d. per passenger. The public ought to know the actual words of the agreement, if the recital I have quoted, and which guided me, is erroneous. I admit, candidly, that I do not know the terms of the agreement further than stated in the Act.

You next allege, that I am wrong in stating that "Parliament insisted on the Greenwich Company embarking a large additional capital in new works." All I can answer is, that the Greenwich Company insisted that its line was sufficient without any additional rails; that Parliament differed with the Company, and insisted on the additional works being made, and the Greenwich Company had to construct these works, or abandon its line as a trunk terminal line for the south and south-east into London. If this be not force, I know not what is. Your answer to me is really a funny one. It is that the Croydon and other Companies were willing, without any force at all from Parliament, to undertake the additional works, and to charge not more than a 3d. toll. Who can doubt it? Do we not find the tenth Commandment broken every day by somebody of our acquaintance? The words "anything that is his,' seem to have caused many a sleepless night to the Croydon Directors, and much restlessness. Witness all their recent kicks, flings, and antics. The sin which that commandment suppresses is, to my mind, the solution of the whole question, and explains the conduct from first to last of the Croydon Company. Underselling is the game of the world, and if the Croydon Company had been much pressed, very likely it would have agreed to a toll as low as 2d., if it could only thereby have obtained the object of its covetousness. "I want to take the bread out of your mouth," says the Croydon Chairman, with the utmost politeness to the Greenwich Board. "Let me insert my calculating finger and thumb for the purpose, and don't bite. The process is purely arithmetical, and won't hurt you, upon my honour." "I thank you for nothing," is necessarily the reply of the Greenwich Board, on turning its back upon such suavity.

In regard to your remark, that 100,000*l.* only, and not 200,000*l.*, have been expended, I can only say again, that the Act of Parliament has been my guide.

The Act authorises 200,000*l.* to be raised for its purposes, being the new works and commodious station-room; and I am told, that 200,000*l.* have been spent since that Act passed, and in consequence of that Act passing.

In two paragraphs you then remark, that there was not a "solemn contract" between the two Companies, and that the Croydon Company was not made by the Act a consenting party to the 3d. toll. Here we are not differing so much upon facts as upon opinions. I do not mean that the Croydon Company, disappointed in the overthrow of its covetous projects, did receive the Act of Parliament with pleasure, or did otherwise than retire from the Committee, after instructing Mr. Austin to sing aloud its lamentations. All this was done, and was farcical; and now to bring it forward is still more farcical.

If the Parliamentary Committee had decided upon terms much worse to the Greenwich Company, and quite in accordance with the wishes of the Croydon Company, should we not have heard the decision and arbitrament of the Committee called a solemn adjustment—solemn contract to be performed by both parties to the arbitration? Why should not the same rule apply to the Croydon Company? A self-willed man often refers a matter to arbitration, and tightly binds himself to submit to the arbitrators' tribunal. The arbitration commences—the arbitrators' views differ from the stubborn gentleman, who forthwith flies into a rage, refuses to attend the reference any longer, gets his counsel (Mr. Austin, perhaps,) to say, with most emphatic protestations to the arbitrators, that he (Mr. Stubborn) would be no party to an award being made imposing unjust terms, and arriving at a wrong decision—one quite contrary to his own opinion and expectations. Does all this vapouring lead to any good? No. The award is made. Obeyed it must be; and after Mr. Stubborn has exhibited the last symptoms of resistance, he is, with shame, obliged to give way to justice. I do, therefore, maintain, that as the decision of the Parliamentary Committee settled the matter finally, it became a solemn contract, which all the Companies were honourably bound to perform; and it must be obvious, *that when the Act recites the agreement of the Croydon Company to pay a threepenny toll*, and this award added 1½d. to that toll, the Croydon Company so consenting, which it could not help, to the adjudication of Parliament, was consenting thereby to a confirmation of the 3d. toll, and to the addition of the 1½d. toll. It is trifling with language and with facts to allege the contrary.

Had your intelligent paper not taken, in the article I complained of, so strong a leaning towards the Croydon Company's interests, I should not have written you in language which I regret, if any part of it is deemed in the least degree offensive. The article in your last week's paper is entirely of a different character; and speaking in the tone which its perusal engenders, I would say, that arbitration ought to be resorted to in order to settle the differences between the Companies, provided that the arbitrators proceed in the reference with the honest admission on all sides, that contracts, whether made by the Companies themselves, or made by Parliament for them, should be sacredly adhered to, and that tolls fixed by these contracts should not be at all modified, unless with the intention, and with the certain, well-judged, and well-planned hope, of amending the Greenwich Company's revenue, and increasing it by these modifications; and the full existing toll of 4½d. should, at the end of a short period, say 18 months, be reinstated in existence, if the experiment so framed for increasing such revenue should, by the end of that period, be found to have failed, and be unsatisfactory to the Greenwich Company.

If the Croydon Company decline to enter on a reference, with these admissions, and aim at obtaining greater advantage than this, or aim at making reductions of toll permanent which should only be experimental reductions, and should be confined to short-distance passengers, then nothing can be effected, and the war must rage until the angry and dividendless shareholders meet, and drive sense into the Directors, or drive others into their places.

I am, Sir, your obedient servant,

Δ

London, May 24, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have read with much care all the correspondence that has been published, from time to time, in the *Railway Times*, on the subject of the Greenwich Toll; and I am compelled to say, that while the one side of the question is maintained by sound principles, fair argument, and undisputed facts, the other is a mere tissue of prejudice, misrepresentation, and abuse. If the Croydon Company, like the Brighton and Dover Companies, had now to commence their trade, and in the outset were to fix the fares at maximum rates, the Greenwich toll would be to them a matter of small moment, and would be readily paid so long as they found such high fares remunerative. If it should afterwards appear, as it undoubtedly must to them all, that a lower scale of fares would be more productive, what argument, what shadow of reason, would there be for the Greenwich Company to resist any modification of the toll?

But because the Croydon Company—who, in ignorance of the bearing of toll upon fares, did at first fix a scale of fares too low for the toll of 3d. for one mile and three-quarters—should, so soon as they found out the disproportion between these, revert to their original Parliamentary power of increasing the fare, be branded with the foulest abuse and charged with sinister motives, does appear to me most monstrous.

The question is not at all one of paying a toll of 3d., as limited by the Greenwich Company, in consideration of the Croydon joining the Greenwich Railway, or of the questionable, *though Parliamentary*, power of violating that agreement by the exaction of 4½d. instead of the stipulated 3d., but whether either of these tolls can co-exist with such moderate fares as will produce a satisfactory income, either to the Croydon or Greenwich Company. If people engaged in commercial pursuits were to act in the same spirit as the Greenwich Directors, they could carry on no trade whatever. Let us suppose a merchant declaring that he would transact no business on which he could not get such a profit per package shipped or imported as his grandfather had secured, although the value of its contents had reduced 50 per cent. Do you think he would get any business at all? Or let a Manchester manufacturer say he would have the *same amount* of profit on *every piece* of goods he sold, whether it sold for 5*l.* or 5*s.*, and that such profit should be fixed at the same rate per piece as was obtained in the good old days of the first Sir Robert Peel. Would he not be laughed at for a fool, or pitied as a madman? But such conduct is precisely parallel with that of the men who manage the affairs of the Greenwich Railway. "We will," say they, "have the same toll—the highest rate—fourpence halfpenny—whether the mile and three-quarters of our railway produce to the merchant sixpence or one penny." I should despise any set of men who would trifle wilfully with the interests they are bound to protect. I cannot but pity those whose concerns have fallen to the management of those whose contracted prejudices are equally injurious; and I sincerely deplore that it is the fate of men

Digitized by Google

whose views, like those of the Croydon Directors, are more enlarged, and whose interests are incidentally affected, to have to contend against such obstinacy and absurdity.

I am, Sir, yours, &c.,

A. B.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—As you have frequently undertaken to elucidate and defend the doctrine of tolls and fares which the Croydon Railway Company have propounded, for the enlightenment of the railway public in general, will you have the goodness to explain the apparent anomaly exhibited by their present scale of fares?

The principle laid down for universal adoption is, that no Railway Company ought to make any profit over the line of another Company; consequently, that the fares and tolls should always bear such proportion to each other that the difference shall represent the cost of conveyance only. This difference, it is estimated by the Croydon Company, should be one-fourth of the whole fare; which is the same as one-third of the toll.

If this principle is sound, the ratio ought to be preserved, whether the toll be adapted to the fare or the fare to the toll; and a Company advocating the doctrine ought to fix its fares in the same proportion to a given toll, as it would have the toll in common fixed in proportion to its fares. Thus, if the Croydon Company insist that out of a fare of 2d. the Greenwich Company should only get three-fourths, say 1½d., the Greenwich Company are equally entitled to have the same ratio preserved at higher fares; and if the toll be three times as great, say 4½d., the fare should not be more than three times as much, viz. 6d., in respect of the distance for which such toll is charged.

	1st Class.	2nd Class.	3rd Class.
	s. d.	s. d.	s. d.
The fares charged between New Cross and Croydon, a distance of 7½ miles, are.....	1 0	0 9	0 6
The same rate of charge to Corbett's-lane, 8½ miles, would be	1 2	0 10½	0 7
Here the toll of 4½d. begins.— Charge for conveyance (one-third of toll) 1½d.	0 6	0 6	0 6
Total charge from Croydon to London should be.	1 8	1 4½	1 1
The fares actually charged are	2 3	1 9	not conveyed.
Excess	0 7	0 4½	

This excess is a profit made upon the Greenwich Railway over and above the assumed cost of conveyance, in direct violation of the principle advocated.

The origin of this contradiction is the attempt to extend the increased charge over the whole distance, so as to evade the obvious consequences of adhering to the doctrine; in other words, to make the public pay the Croydon Company as well as the Greenwich, for an accommodation which is provided by the latter exclusively. The public pay twice over for the widening of the Greenwich Railway; first, in the shape of toll to the Greenwich Company, and next, a fare enhanced nearly 50 per cent. for the benefit of the Croydon Company.

To simplify the case, let us suppose the conveying Company distinct from the two Companies owning the line of railway, and existing by its profit as carrier, upon an agreement fixing a certain proportion of fares to tolls on the principle advocated by the Croydon Company. An increased outlay is then demanded on a portion of the line, and an increased charge is made as toll for the use of such portion. But would the carrying Company be entitled, in consequence, to increase their charge, not only over the portion where the outlay had been incurred, but also on the portion where it had not been incurred? Or would the Company owning the latter portion be entitled to charge a higher toll for the use of their railway, merely because the Company which has made an additional outlay for the public makes an additional charge for it?

If Parliament were now to decide that the Croydon Railway required widening, on the same grounds that enforced the enlargement of the Greenwich Railway an additional toll might with propriety be charged over the whole line to Croydon. But to charge an additional amount as *toll*, without incurring additional expense, is to insist on being paid for what has not been done just as though it had been done; and to charge more as *fare* (the *toll* remaining the same) is to abandon at once the whole principle contended for—that fares should bear a definite proportion to tolls.

I am, Sir, yours, most obediently,

A TRAVELLER.

May 18, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—"Vigil" is correct in doubting that this half-year's gross receipts will be equal to that of the last half-year; but he is wrong in the inference that therefore a 6 per cent. per annum dividend cannot be declared fairly.

The gross receipt of the last half-year was 337,352*l.*, but that left a surplus of 10,937*l.* above the dividend of 6 per cent.; consequently a gross receipt of 326,415*l.*, supposing the expenses to be the same, will yield a similar dividend. That the gross receipts will be equal to that amount cannot now, I think, be questioned. It is more difficult to determine the probable rate of expenses; but considering that fewer trains have been worked, the cost of coke less, and the general arrangements more economical than during the last half-year, it is fair to conclude, that notwithstanding some additional portion of the maintenance of way has devolved upon the Company, the expenses will be less—especially as the accident at Sunning Hill, and the principal slips, &c., occurred prior to the commencement of this half-year.

With respect to the rumours of additional capital to be applied for at the next meeting, they must, I conceive, have reference either to the payment of the loan notes by the creation of shares, or to an arrangement with the Cheltenham and Great Western Company.

I am, Sir, yours, &c.,

L.

May 23, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The various calculations of your correspondents as to the probable dividend from the Great Western Railway in the current half-year, must be very amusing to those of your readers who recollect the ratiocinations of other (or the same) writers in your journal about six months ago. As the result of *that* half-year was shown to be very different from what some anticipatory figurers attempted to prove *must* be the issue, so I think the shareholders need not be much disturbed even at the "kind-hearted" attempt of "Vigil" to warn them of a probable reduction in the rate of dividend in June next.

There are two points, however, in his letter which require notice, because I think he speaks of both of them without having made proper inquiry. He will find that none of the Great Western contracts for the construction of the works included the usual charge on the contractor of *maintenance of way* for a year, and that this expense has from the first been entirely borne by the Company. The last half-year, of course, included this charge for *the whole line* from the date of its opening, and the present half-year will only bear a corresponding charge for the same item.

As to the "rumours" which "Vigil" relates, of an application for more capital being intended by the Directors, though I do not wish to impute motives, I must say this report looks very much like "a *wish* made father to the thought," for no good purpose. I do not speak on light grounds when I say that I believe such "rumours" to be nearly confined to his own hearing, and to be as utterly groundless as they are improbable. The Directors of course cannot notice the report of such "rumours," but I find that those best acquainted with their proceedings treat the assertion with the contempt which it deserves. Nothing could be more explicit and decisive than the Chairman's statement on this point at the last general meeting, and I do not see why it is to be falsified by mere rumours on anonymous authority.

I am, Sir, yours, respectfully,

A. M. R.

May 26, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—A correspondent in your last week's paper, under the signature of "A Midland Counties' Shareholder," asks a great variety of questions, which, when summed up together, seem to resolve themselves into two, viz., "Why is there not more traffic on the line?" and "Why is the value of the shares not higher in the market?" It appears to me that the second question is answered by the first; and that the shares are not higher *because* there is not more traffic on the line. I, like your correspondent, am deeply interested in the success of the undertaking, and the non-increase of the traffic has not escaped me; but I have preferred making inquiries through private sources to dealing out charges and insinuations, under pretence of *candour*, through the columns of a newspaper—a course which may encourage distrust, but can answer no other end. I am pretty well acquainted with the country through which this line passes, and I have friends on the spot who are still more so, and I can detect no cause for the falling off of traffic beyond the general stagnation of trade in the Midland districts, it being notorious that this line is greatly dependant on local traffic. Your correspondent seems to imagine that because a line is well constructed it *must* have traffic. With deference to him, I do not take this to be a *sequitur*. A railway cannot have more traffic than there is in the country, and that the Midland Counties' Railway has all within its reach, is proved by the fact that there are no coaches on the roads affected by it, and no such thing even as a passenger van, except between points which the railways does not, because it *cannot*, accommodate. While all the people who travel at all, travel by the railway, I do not see how it can be the fault of the *Directors* that more do not travel.

But your correspondent has made a charge which ought to be more gravely noticed. He says that "*most* of the Directors who take an active part are ironmasters, or connected with trade in such a degree as to render them careless save to that part which may effect themselves." I most unhesitatingly pronounce that assertion to be false, and, if your correspondent has ever been a member of the Board of Direction *himself*, he *knows* it to be false. He knows that there is but one ironmaster on the Board, and he a gentleman of the highest honour, of the most consummate knowledge in railway matters, and to whose experience and assiduity the Company are as much, if not more, indebted, than to any individual in it. He knows that neither this gentleman, nor *any* member of the Board, has an *atom* of interest in the line, except in the promotion of its general prosperity, in common with the rest of the shareholders. It is very easy to make general assertions, and perhaps to obtain from the public a careless assent to their truth until they come to be sifted and investigated, but I think it would puzzle your correspondent, or any of the enlightened oracles he has consulted on the occasion, to show by what process a connection with the iron trade or any other trade, by a Director, tends either to produce an adverse interest on his part, or to render him careless towards that of the railway; and I furthermore challenge your correspondent, and all the brokers in London or else.

Digitized by Google

where, to point out a single instance in the Direction of the Midland Counties' Railway, in which this has actually been the case.

That the shares are not so high in the market as they ought to be, even according to the present traffic, is beyond a doubt, and for my own part, I do not think they are likely to bear their proper value in public estimation, while shareholders, like your last week's correspondent, follow the example of "the bird that fouls its own nest."

I am, Sir, yours, &c.,
ANOTHER MIDLAND COUNTIES' SHAREHOLDER.

Liverpool, May 18, 1842.

LONDON AND GREENWICH RAILWAY.

To the Shareholders of the London and Greenwich Railway.

GENTLEMEN,—When I know there are so many persons in and near London who have very large invested sums in this railway, it is passing strange, not only to me, but to every person you converse with on the affairs of this Parliament law-ridden Railway Company, why you do not call on the Directors to give up their demands for salaries when they know the situation the unfortunate shareholders are in—I mean the original shareholders in the same situation with myself, who have been in this concern for 5 or 6 years, with but a trifling dividend occasionally. I presume the Directors are not original proprietors of any great number of these shares; if they were, they would readily come forward and give up claim for services—at least until the Company's affairs could afford to pay them. It is a well-known fact that a very great number of gentlemen render their services without any pay, for managing the savings' banks, poor laws, hospitals, &c., and I cannot entertain so mean an opinion of such honourable and highly-respectable gentlemen as are in this Company as to think that they would refuse, if solicited, to direct the affairs of the Company without pay for short periods, by turns. You are working the line at present for the preference shareholders and servants; but with all the economy that may be made, this short line cannot, nor ever will, be able to pay you 3 per cent., unless you adopt the advice that has frequently been given—that nothing short of making the line on to Chatham, &c., will better our concern. If the present shareholders are not disposed to take shares, there are men of large capital ready to take them immediately. Nay, more, I have not the least doubt of her Majesty's Government giving all their assistance to forward such a benefit as the railway would afford to them, as we have within these few months seen in the quick dispatch of the troops.

I hope no time will be lost in getting up a petition to the House of Commons against the Croydon Bill to deprive us of what Parliament has granted for the great expense we have been put to. I do hope the Committee will never suffer so unjust a Bill to pass. By acting thus they will be ruining the Greenwich Company, and doing away with what the Committee have forced on us at an expense of 250,000*l.* for the sole advantage of the other Companies.

I am, Gentlemen, and brother Proprietors,
Yours, &c.,
ACTIVE.

May 23, 1842.

CHELTENHAM AND GREAT WESTERN RAILWAY.

[From the *Gloucestershire Chronicle*, May 23.]

WE need hardly premise that the unsatisfactory position in which the public are placed with regard to a communication by railway between this county and the metropolis, has for a considerable period been a subject of great and increasing interest, both here and elsewhere; for Gloucester may be considered the key of a large portion of South Wales, and of the adjoining counties of Monmouth and Hereford. At present the traffic is very imperfectly developed—a circumstance to which the Directors of the Great Western Railway drew the especial attention of the shareholders in that unrivalled line at their last half-yearly meeting. We do not entertain the slightest doubt that, when a direct and rapid communication is secured with the metropolis, the traffic from this county to the eastward will soon, relatively speaking, be fully doubled. Many persons from the adjoining counties, who now travel to the metropolis *via* Worcester, Newport, or Chepstow, will proceed in future through Gloucester; and as regards our own county, all experience shows that traffic is immensely augmented by increased facilities of transit. But we need not dwell on a topic which must have already presented itself to the mind of the intelligent reader; and shall therefore at once proceed to indicate the leading provisions of the Cheltenham and Great Western Company's new Act, which are mainly as follows:—

1. The Company are empowered to sell or transfer their powers to any other Company, whether they relate to the line already made or that portion which remains unfinished.

2. The Company are empowered to retain the power to their transferees, as well as to themselves, to redeem a half of the line between Gloucester and Cheltenham, now wholly vested in the Gloucester and Birmingham Company, if the whole line from Swindon to Cheltenham be completed by the 21st of June, 1845. If this latter event should not take place—if the line should not be so redeemed—the Cheltenham and Great Western Company, "or other Company forming a communication with the Great Western Railway," are to have power to use the portion of the line in question ("rails of the wider gauge being laid down at the expense of such Company"), on payment of tolls to the Birmingham and Gloucester proprietors.

3. The Cheltenham and Great Western Company are empowered to carry their railway into the centre of Cheltenham, thereby saving to the inhabitants and visitants of that important town the intermediate distance between the present inconveniently-situated station of the Birmingham and Gloucester line and Jessop's Gardens, which will be the site of the proposed station. Our Cheltenham neighbours will be most glad to learn this, as the existing arrangements are to a certain extent injurious to their interests, and have from the first constituted a well-grounded reason for complaint. It may be added, that the Birmingham and Gloucester Company have the power of laying rails of the narrow gauge, in continuation of their present line, to the new station—of course at their own expense—subject to the regulations of the Cheltenham and Great Western Company, with a right of appeal to the Board of Trade, if any difference should take place as to terms, &c.

Such is an outline of the powers conferred by the new Bill. The Gloucester and Birmingham Company, who, as the reader is no doubt aware, offered a strenuous opposition to the measure in its progress through Parliament, only succeeded in defeating one main power that was sought for—an extension of the period previously given for the completion of the line, for three years, viz., from June, 1845, to June, 1848. The Committee of the House of Lords differed from the Committee of the Commons on the point, and considered that such an extension was a breach of contract with the Birmingham and Gloucester Company.

We shall now proceed to offer some practical remarks and suggestions relative to the course which it seems expedient that the Cheltenham and Great Western Company ought to pursue. We have seen that power is given by the new Bill to treat with other Companies. We need scarcely say that these parties are the Bristol and Gloucester Company, who are interested in the completion of the line between Gloucester and Stonehouse, and the Great Western, who are interested in the accomplishment of the link between Stonehouse and Kemble. With regard to the former, we believe that an understanding exists with the Bristol and Gloucester Company of a most satisfactory nature; and that the shareholders in the Cheltenham and Great Western Company may remain perfectly at ease as to the future. We can confidently state that they will be relieved from all trouble or expense, as regards that portion of their line.

We next come to the Great Western Company, with whom, we take it for granted, a negociation will be opened by the Cheltenham and Great Western proprietors. The terms of this negociation are obviously an object of the highest consequence to the latter. First, they have to sell—supposing that it should be so determined—the line now in operation between Swindon and Cirencester, which at present produces on lease to the Great Western 17,000*l.* per annum. Next, they must be reimbursed the amount already expended on the tunnel and on any part of the line between Kemble and Stonehouse. They have, it may be added, to relieve themselves from the expense of making all the line between Kemble and Cheltenham. The first point is plainly that which i in every respect the most material; for it is to *that* that the shareholders must look as a means of reimbursing themselves from a capital expended to the extent of 80*l.* per share. Various modes suggest themselves for an arrangement between the two Companies. It seems to us that the most feasible plan would be, that the Great Western Company should grant debentures to the Cheltenham Union shareholders in the former undertaking; or else give shares of a certain value to the holders of Cheltenham and Great Western stock, for the amount which it shall be agreed to pay them. In this case, all other rights under the Act should be transferred to the Great Western line, on the Cheltenham Union Company being exonerated from *all* further liability. The provisions of the Act, as we have seen, remove all difficulties in this respect, and enable the two Companies to make every necessary arrangement. We presume that the Directors of the Cheltenham and Great Western Railway Company will very shortly convene a special meeting of the shareholders to take these and other matters into consideration; and we hope soon to be able to record that they are in a position to carry practical measures into operation. Whatever may be the result, one thing is quite clear—*the interests of the Great Western and the Cheltenham Union Companies are reciprocal.*

Altogether, the passing of the Bill on which we have been commenting is a most important event for the shareholders in the Cheltenham Union line, and we cordially congratulate them on the result—a result in which the public are also beneficially interested. We shall, no doubt, have occasion to return to this subject, and in the meanwhile commend our observations to earnest attention.

RAILWAY ADJUDICATIONS.

THE QUEEN *v.* THE EASTERN COUNTIES' RAILWAY COMPANY.

Court of Exchequer, May 26.—In this case Mr. (now Mr. Justice) Cresswell had obtained a rule calling on the Attorney-General to show cause why, upon the payment of a deodand of 125*l.*, all further proceedings against the Company should not be stayed.

The case arose out of an accident on the railway, caused by the bursting of a boiler, by which four persons lost their lives. An inquest was held on the bodies, and the jury in their verdict returned a deodand of 500*l.* against the engine, which had been sworn on the trial to be of the value of 1,300*l.* The jury apportioned out the amount of the deodand in four different sums of 125*l.* each to be given to the families of the sufferers. The rule obtained by Mr. Justice Cresswell had been granted on the ground that the verdict was on this account informal, inasmuch as one deodand only could be levied upon any article, while the jury had, in effect, ordered the payment of four different deodands.

The ATTORNEY-GENERAL now appeared to show cause against the rule.

The COURT, after hearing the case argued, decided that the plea put forward by the Company could not be maintained. The jury had substantially awarded a verdict of 500*l.*; and the Company were

Digitized by Google

bound either to pay the entire amount, or to give up the engine.

The rule was therefore discharged.

THE AYLESBURY RAILWAY COMPANY *v.* MOUNT.

Court of Common Pleas, May 25.—Lord Chief Justice TINDAL, at the sitting of the Court this morning, delivered judgment in this case, which was argued in last Michaelmas term, and which the Court had taken time to consider. The action was brought in debt for calls of 5*l.* per share upon 50 shares in the undertaking for which the Company was incorporated, and the defendant's answer to the action was, that two days before the calls made by the Directors were payable, he had duly transferred his shares to one Charles Thompson. It was stated that the Company brought an action in the first instance against Thompson, the transferee of the shares, but the Court of Queen's Bench decided, in Hilary Term, 1841, that the action against him was not maintainable. The seller, therefore, the present defendant, was sued for the amount of the calls in this Court, and the main question discussed upon demurrer to the defendant's plea was, whether the proprietor of the shares at the time the call was payable, or the owner of them at the time the call was made, was liable for the amount. On the part of the defendant it was contended that the liability fell upon the proprietor for the time being when the calls were payable, while it was urged on behalf of the Railway Company that the proprietor of the shares at the time the call was made was the party from whom they were entitled to demand payment.

The COURT now expressed their opinion, looking at the different sections of the Act of Parliament, that the plea was a good answer to the action; but in saying this, they did not mean to intimate any disapprobation of the decision in the Court of Queen's Bench. Their judgment, therefore, must be for the defendant.

EFFECTS OF RAILWAYS ON SMALL TOWNS.

[From the *Manchester Courier*.]

WHEN the railway era first dawned upon the country, plain folks with old-fashioned notions and prejudices about them, prognosticated all sorts of evil from the increased speed and facility of locomotion. In imagination they already saw turnpike roads deserted and grown over with grass; horses at a discount, and cropping a miserable subsistence from the scanty pasturage of waste lands; roadside inns robbed of the fascinations of buxom landladies, shut up, and falling into ruin; burly and rosy-gilled coachmen reduced to the dimensions of Lazarus in his grave-clothes, with lank jaws and "paper faces" to match. In a word, to their disordered vision, the whole order of things was changed.

These were looked upon as the inevitable concomitants of a great locomotive revolution, and to some extent, it must be confessed, they have been realised.

On the other hand, there were those who anticipated a succession of increased national blessings from the opening of the steam locomotion and railway era. Amongst these were the inhabitants of remote and secluded districts, and small towns. The latter, in particular, whenever a railway was projected that could by possibility "come their way," betrayed the utmost anxiety to secure the privilege of a "branch line" and a "station;" never of course dreaming that the branch line and the station would lead the trade of the place into other channels. This, however, has actually occurred in the case of small towns situate within a convenient railway distance of large cities and manufacturing towns.

We have, at least, two examples of it in our own neighbourhood—Stockport and Ashton-unde-Lyne. The distress amongst tradesmen in the former place is, unfortunately, but too notorious. The trade of linen drapers and other shopkeepers has fallen off to such an extent that many establishments have been entirely closed, whilst others are only kept open so long as their owners are enabled by their profits to pay rent, taxes, and the other ordinary current expenses. Various causes have been assigned for this, but the most common, and, as it seems to us, the most reasonable is, the cheap and easy communication with Manchester established by the Manchester and Birmingham Railway. People who formerly repaired to the tradespeople in Stockport on market-day for anything they might want, now pay their sixpence and come to Manchester, where they can buy the same commodities at least as cheap, and in some instances cheaper; nor are the pleasures of a trip, and the superior attractions and the excitement of a large town, amongst the least powerful inducements to such a course. The same thing, we are told, is happening, perhaps with less severity, on the tradespeople of Ashton-under-Lyne, and we have little doubt that other towns within the same distance of Manchester will eventually experience the same evils. We say evils, because we deeply deplore the injury inflicted on our neighbours. Yet it is quite in the nature of things that people should go to the largest mart for their commodities, for it commonly happens that largeness of supply brings with it comparative cheapness. We do not apprehend, however, that this state of things will be permanent. We are rather inclined to think that when the novelty is worn off, things will in a great measure settle down to their former state, and that people will be content with what *home* can supply—more particularly if the tradesmen at home will put forth all their energies and their enterprise to compete with their neighbours in the large towns. In this way, and in this way only, can they destroy *the great towns' monopoly*.

These are some of the effects of the railway system demonstrable by actual facts within our reach, and coming within our own observation. At the same time we do not mean to deny that railways have had a diametrically opposite effect. On some of the lines towns have sprung up, and communities have been formed, (to wit, "Kingston-upon-Railway,") which, under other circumstances would most probably have never known existence. Again, there are other places remote from large towns which have derived great benefit from railways. Indeed, we do not doubt that the evil is quite counterbalanced by the good which will eventually accrue from the establishment of the new mode of transit. It is a step *in advance*—of the *necessities* of the age it may be, but it is nevertheless *an advance*—and as such we cannot but anticipate the best results from it.

THE ADVANTAGES OF RAILWAYS TO AGRICULTURE.

THE following extract from a work by Cuthbert W. Johnson, Esq., is well calculated to remove the prejudices so generally entertained by the landed interest against railway communication, by showing the landlords that the keeping up or prospective increase of rents may be greatly aided by railways:

"For the attainment of both these objects, the railway in many important respects is preferable even to water carriage. The lands near the banks of navigable rivers are generally the most naturally fertile of all the soil a farmer has to cultivate; they usually abound with animal and vegetable matters, and contain such a mixture of the alluvial deposits, washed down from the uplands in the course of ages by the flood waters, that it does not often occur that the addition of any earthy manures is deemed serviceable by the farmer; the chalk, ashes, or other mineral fertilizers, therefore, which he brings by water carriage, are usually afterwards carried, at a great expense, a considerable distance on to the uplands, to supply some essential fertilizing ingredient of which the soil is naturally deficient. A railway, on the contrary, is not confined to low grounds, it passes as much as possible over upland districts, and unites together different strata of the earth, which no flood waters or rivers could otherwise bring together in a manner profitable to the farmer. For the disposal of a farmer's produce, the quickness and regularity of a railway, in all states of the weather, renders it incomparably superior to water carriage. Unlike a canal, a railway is never rendered impassable by ice, an interruption which occurs in weather above all others the most favourable for getting manures upon his land. The importance of effecting an extensive and general interchange of relief for the purpose of rendering them more fertile, has hitherto been almost universally retarded, from the want of a sufficient means of reasonable conveyance; for, otherwise, the farmers of England are so generally aware of the advantages of the use of mineral fertilizers, that they have invariably seized every possible opportunity of profitably employed them. 'The best natural soils [says the illustrious Davy] are those of which the materials have been derived from different strata, which have been minutely divided by air and water, and are intimately blended together; and in improving soils artificially the farmer cannot do better than imitate the processes of nature. The materials necessary for the purpose are seldom far distant; coarse sand is often found immediately on chalk, and beds of sand and gravel are common below clay; the labour of improving the texture or constitution of the soil is repaid by a great permanent advantage; less manure is required and its fertility insured, and capital laid out in this way secures for ever the productiveness, and consequently the value, of the land.'—*Elem. Agric. Chem., p.* 204. Much of the meat which supplies the London market is produced in Essex, Norfolk, Suffolk, and Lincolnshire. The cattle are slowly driven up, being often a fortnight on the road, attended by responsible and well-paid drovers. They are fed at considerable expense on their way to market with the best food; since a stall-fed beast is naturally, when taken away from his Swedish turnips, mangel worsel, and oil cake, possessed of rather a fastidious appetite, which travelling in his fat state does not tend to improve; he becomes over-heated, refuses his food, and rapidly decreases in weight. I have been told by some of the farmers of Norfolk that every fat bullock they send to London costs them, in this way, not less than three guineas; and one of the tenants of the Holkham estates assured me that he has often, upon following his bullocks to London, when shown them in Smithfield market, doubted their identity, so completely were they altered in appearance. The miseries of such a mode of conveyance will now be speedily rendered in a great degree unnecessary by the completion of the Eastern Counties' Railway, an undertaking against which many profoundly absurd prejudices have been till recently entertained, but which will eventually not only be a highly lucrative undertaking, but be the greatest boon conferred in our days upon the agriculture of the east of England."

COMMUNICATION BETWEEN ENGLAND AND IRELAND.—The Committee of the House of Commons to whom has been confided the important subject of ascertaining the best mode of facilitating the communication between the two countries, have concluded their inquiries, so far as the south of Ireland is concerned, and are now proceeding to examine witnesses respecting the necessity of establishing a railway from Chester to North Wales. Mr. Cubitt and Captain Denham have already been examined, and the London correspondent of the *Dublin Evening Mail*, who has frequently shown that he has means of obtaining correct information on such subjects, says:—"There is little doubt that the Committee will recommend in the strongest manner the necessity of making a railway communication between Chester and North Wales; and in the event of the proposition receiving the sanction of the Government, the Committee will most probably recommend that the whole of the Irish correspondence shall be transmitted *via* Dublin. This will set at rest the rival claims of Cork and Waterford."—*Liverpool Standard* of yesterday.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—You would very much oblige one of your subscribers if you would give him your opinion on, or state the reality, if such it be, of a rumour that is just getting into calculation here. My question relates to the Blackwall Railway and the General Steam Navigation Company. The Navigation Company has, as you no doubt know, been at drawn daggers hitherto with the Railway Company. They not a long time since removed their Scotch steam-boats from the Brunswick Wharf, Blackwall, evidently to injure the railway—not for their own convenience. But their former hostility is notorious.

Now, it is whispered that the Railway Company and the General Steam Navigation Company have been made friends quite lately. It is said that the Scotch boats are to come to the Railway Pier again. And what appears confirmatory of the truth of the matter rumoured, are the following, among other facts.

The Steam Company have just appointed the *Soho*, *Wilberforce*, and *Rainbow*, three steamers to Antwerp, &c., to start from the Railway Pier. The BROCKLEBANK (the name of one of the most influential men in the Company), one of their boats, is to start from the Blackwall Railway to Ipswich.

I know enough of the Blackwall Railway to know that the hostility of this mighty, I might almost say omnipotent, Company in steam navigation affairs, if suffered to continue, would prevent the railway from being a good paying concern. I mean it would not, I am persuaded, pay 7 or 8 per cent. on the real capital expended.

Whereas if the leviathan Steam Company were to throw their interest into the same scale with the Railway Company, I do think, under those circumstances, the railway would become very soon one of the best, indeed it is my opinion it would be the very best, and by very much the very best, in England.

I am not a proprietor in the railway, and therefore I cannot write to the Secretary to inquire of the matter. But if I was sure that the rumour was the voice of truth—that the report was true, I certainly should make an investment in the Blackwall shares. But, on the other hand, if I know that the hostility between the Companies was unremoved, and that the shareholders in the railway had to look to nothing but Gravesend, and other holiday and fine weather passengers, and a little merchandise from the West India Docks, by-and-bye, perhaps, I should not care to give much for the claim to receive dividends on any of the 48,000 shares. The question appears to me one of life or death to the Company.

If the rumour is well-founded, the shares will, I am confident, make an upward move, and, your opinion of the credit due to the *on dit* of the day, would oblige, Your obedient servant,

EUGENIUS.

Poplar, May 17, 1842.

[The General Steam Navigation Company's boats, *Rainbow*, *Wilberforce*, and *Soho*, to Antwerp, and the *Ocean*, *Columbine*, and *Giraffe*, to Rotterdam, land and embark their passengers at the Brunswick Pier, Blackwall. We are not aware of there ever having been other than a good understanding between the two Companies, and it is probable more of their boats will come to the pier at Blackwall shortly.—ED. R. T.]

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Bailliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton-street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive TENDERS for the LOAN OF MONEY, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to GRANT MORTGAGES of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

INTEREST WARRANTS, for the whole term for which the loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

TRAVELLING BY RAILWAY FROM LONDON TO THE NORTH.—JUNE 1st, 1842.

Trains leave the Euston-square Station, and arrive as under—

The Train heretofore leaving London at 2 p.m. is now discontinued.

The Train leaving London at 6 a.m. is a quick Train throughout, and is the only Day Train by which Passengers can reach Darlington and Newcastle in the same day.

Coaches leave Newcastle for Morpeth, Berwick, Dunbar, Hoddington, and Edinburgh, early in the morning, and during the day.

Time is allowed for refreshments at Wolverton, Derby, York, and Darlington.

TO ARCHITECTS.—SEYSSEL ASPHALTE COMPANY, CLARIDGE'S PATENT, established March, 1838, for working the Mineral Asphalte Rock of Pyrimont Seyssel.

This valuable material has been extensively used since its first introduction into this country for the following purposes:—Foot pavements, public and other; in the carriage approach to mansions, garden walks, and terraces; the flooring of kitchens and other basement offices, also of coach-houses and stables, dog kennels, barn floors, cow-houses, piggeries, poultry-houses, tun-rooms and maltings; for roofing, covering of railway and other arches, the lining of under-ground cellars near rivers to prevent the ingress of the tides; also in covering the ground line of walls, to prevent damp rising, thereby rendering the basement stories in the worst situations both dry and warm. It is an excellent cement, as applied to docks, breakwaters, or walls built for resistance to the encroachments of the sea, lining of tanks, fish-ponds, and other hydraulic purposes.

Several extensive works have been executed by this Company for the Board of Ordnance and her Majesty's Commissioners of Woods and Forests. The Asphalte has been used at the Thames Tunnel, also at the London and Greenwich Railway, where it has been laid over a surface of 400,000 superficial feet, to prevent the percolation of water; at the Great Western, Birmingham, Midland Counties', South-Western, Brighton, and other railways; at the South Metropolitan, Highgate, and Nunhead Cemetries.

The Asphalte of Seyssel is perfectly free from smell, and is not acted upon by the change of temperature.

Books of testimonials, with scale of prices, can at all times be had at the Company's depot.

J. FARRELL, Secretary.

Stangate, Surrey side of Westminster Bridge, April, 1842.

ARCHITECTS, BUILDERS, AND OTHERS.

For the purpose of securing the use of the genuine article, architects and others are particularly requested to insert in their specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "asphalte" or "bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London. Established by Act of Parliament in 1834.

DIVISION OF PROFITS AMONG THE ASSURED.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834.

In 1841 the Company declared an addition to the Shareholders of one-half of their Stock, and also added £2 per cent. per annum, from the date of the policies, to those parties who had insured with profits.

The Premiums nevertheless are on the most moderate scale, and only a moiety need be paid for the first five years, when the Insurance is for Life.

The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st December 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13s. 4d.
1000	4 Years	80 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq., and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq., *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'Clock.

IMPORTANT INFORMATION.—That excellent Ointment called the POOR MAN'S FRIEND, is confidently recommended to the Public as an unfailing remedy for wounds of every description, and a certain cure for Ulcerated Sore Legs, if of 20 years' standing; Cuts, Burns, Scalds, Bruises, Chilblains, Ulcers, Scorbutic Eruptions, Pimples in the face, Weak and Inflamed Eyes, Piles and Fistula, Gangrene, and is a specific for those Eruptions that sometimes follow Vaccination. Sold in pots, 13½d. and 2s. 9d. each.

Also, his PILULÆ ANTISCROPHULÆ, confirmed by more than 40 years' successful experience, as an invaluable remedy for that distressing complaint called Scrophula Glandular Swellings, particularly those of the neck, &c. They destroy all sharpness and acrid salts, open the obstructed pores, expel all the superfluous humours on the skin, and present one of the best alteratives ever compounded for purifying the blood, and assisting nature in all her operations. They are efficacious also in Rheumatism, and form a mild and superior Family Aperient, that may be taken at all times, without confinement or change of diet. Sold in boxes at 13½d. and 2s. 9d.

By the late Dr. Roberts' will, Messrs. BEACH and BARNICOTT (who have been confidentially entrusted with the preparation of his medicines for many years past) are left joint Proprietors of the "Poor Man's Friend," and "Pilulæ Antiscrophulæ," &c., with the exclusive right, power, and authority to prepare and vend the same.—The utility of these medicines is fully testified by thousands of persons who have been benefitted by their aid.

Beware of Counterfeits.—No medicine sold under the above names can possibly be genuine, unless "Beach and Barnicott, late Dr. Roberts, Bridport," is engraved and printed on the stamp affixed to each packet. Sold wholesale by the Proprietors, Beach and Barnicott, at the Dispensary, Bridport; by the London Houses; and by most respectable Medicine Vendors in the United Kingdom.

Dogs will be charged 2s. 6d. for the whole or any part of the journey between London and Tunbridge, but they will not be permitted to travel in the same carriage with the Passengers. By Order,

London, May 21, 1842. JOHN WHITEHEAD, Secretary.

Just Published, price 2s., and sent free on receipt of a Post Office Order for 4s.,

MANLY VIGOUR: a Popular Inquiry into the Concealed Causes of its Premature Decline; with Instructions for its Complete Restoration, addressed to those suffering from the Destructive Consequences of Excessive Indulgence in Solitary and Delusive Habits, Youthful Imprudence, or Infection; with Remarks on the Treatment of Gonorrhœa, Gleet, Stricture, and Syphilis. Illustrated with Cases, &c.

By C. J. LUCAS & Co., Consulting Surgeons, London.

Published by the Authors; and sold by Brittain, 11, Paternoster-row; Effingham Wilson, 18, Bishopsgate-street; Field, 65, Quadrant, Regent street; Burgess, 28 Coventry-street, Haymarket; Huett, 141, High Holborn; and by all Booksellers in the United Kingdom.

"The best of all friends is the Professional Friend; and in no shape can he be consulted with greater safety and secrecy than in 'Lucas on Manly Vigour.' The initiation into vicious indulgence—its progress—its results in both sexes, are given with faithful, but alas! for human nature, with afflicting truth. However, the authors have not exposed the evil without affording a remedy. It shows how 'Manly Vigour' temporarily impaired, and mental and physical emasculation, produced by uncontrolled indulgence of the passions, can be restored; how the sufferer, who has pined in anguish from the consequences of early indiscretion—afraid almost to encounter his fellow man, can regain the vigour of health and moral courage. The work is written in a concise and perspicuous style, displaying how often fond parents are deceived by the outward physical appearance of their youthful offspring; how the attenuation of the frame, palpitation of the heart, derangement of the nervous system, cough, indigestion, and a train of symptoms indicative of consumption or general decay, are often ascribed to wrong causes; and instead of being the natural results of congenital debility or disease, are the consequences of an alluring and pernicious practice, alike destructive to the mind and body."—*Bell's New Weekly Messenger.*

Messrs. Lucas and Co. are to be daily consulted from ten till two, and from five till eight in the evening, at their residence, No. 60, Newman-street, Oxford-street, London.

Country Patients are requested to be as minute as possible in the detail of their cases, as to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party. The communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application; and in all cases the most inviolable secrecy may be relied on.

SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—NOTICE is hereby given, That the TRANSFER BOOKS of this Company will be CLOSED on Thursday, the 19th inst., and will remain closed until after Tuesday, the 31st inst.

By order of the Directors,
JOHN WHITEHEAD, Secretary.

Railway Office, 10, Coleman-street, London,
May 3, 1842.

SOUTH-EASTERN (LONDON AND DOVER) RAILWAY COMPANY.—THE HALF-YEARLY GENERAL MEETING of the Proprietors will be held at the London Tavern, Bishopsgate-street, in the City of London, on Tuesday, the 31st instant, at One o'Clock in the Afternoon precisely, to elect Three Directors in the room of the like number retiring by rotation, and on the general business of the Company.

JOSEPH BAXENDALE, Chairman of the Board of Directors.
JOHN WHITEHEAD, Secretary.

Railway Office, 10, Coleman-street, London,
May 9, 1842.

THE SOUTH-EASTERN (DOVER) RAILWAY.—An Elaborate MAP and SECTION of this LINE, published under the direction, and by authority of the Company, is now ready. It embraces the whole of the South-Eastern District of England, and the north-east coast of France. Price, coloured, on one large sheet, 7s.; and in a case, on linen, 12s. 6d. It may be had in various mountings.

T. R. Jobbins, 3, Warwick-court, Holborn; J. Weale, Architectural Library, 59, High Holborn; and Bell and Wood, 186, Fleet-street, London; and at the Company's Booking Office; and the *Railway Times* Office.

LONDON AND BIRMINGHAM RAILWAY.—FINAL CALL OF £10 ON THE £25 SHARES.—The Directors of the London and Birmingham Railway Company having resolved that a THIRD or FINAL INSTALMENT of £10 per Share, payable on or before the 11th of July, 1842, should be called for on the £25 Shares of this Company, the Proprietors of such Shares are hereby required to PAY, on or before the appointed day, to any one of the under-mentioned Bankers, the sum of £10 on each of their respective Shares, viz.:—

London—Messrs. Glyn and Co., 67, Lombard-street; or at the Office of the Company, Euston square.
Birmingham—Messrs. J. L. Molliet and Son; or the Birmingham Banking Company.
Liverpool—The Bank of Liverpool.
Manchester—Messrs. B. Heywood and Co.; or the Bank of Manchester.

The Bankers have been severally instructed to charge Interest, at the rate of 5 per cent. per annum (according to the provisions of the Act of Incorporation), on all sums which shall be tendered after the 11th July.

GEORGE CARR GLYN, Chairman } Of the Board of
J. F. LEDSAM, Deputy Chairman } Directors.

By order,
R. CREED, Secretary.

May 13, 1842.

LONDON AND BIRMINGHAM RAILWAY.—ALTERATION OF TRAIN.—The Public are informed, that on and after the 1st of June next, the TIME OF DEPARTURE of the present TWO P.M. TRAIN from London will be CHANGED to HALF-PAST ONE o'CLOCK; and that a corresponding alteration will be made in the Time of Departure of this Train from every Station at which it now calls between London and Birmingham.

The Grand Junction Company having appointed a Train from Birmingham, in connection with the above-mentioned Half-past One o'Clock Train, passengers, horses, and carriages may be booked through by it from London to Lancashire.

By Order,
R. CREED, Secretary.

Office, Euston Station, May 19, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers, in London or Manchester, on the half-yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars explaining the peculiar eligibility of this Security, may be obtained at the Company's Offices, No. 43, Piccadilly, Manchester; or at the Office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb. 1842.

ANY HOLDER in the Cheltenham and Great Western wishing to dispose of Thirty Shares, may obtain a good price by applying, on or before Monday, the 30th May, to THOMAS ALLSOP, 34, Cornhill; where parties desirous of purchasing, selling, or exchanging Croydon Shares may apply at *all* times.

MANCHESTER AND LEEDS RAILWAY —MANCHESTER JUNCTION LINE.—CONTRACTS FOR WORKS.—TIME EXTENDED FOR RECEIVING TENDERS.—NOTICE is hereby given, That the Directors will meet at their Office, Clowes's buildings, Hunt's Bank, on Monday, the 6th day of June, for the purpose of receiving Tenders for the completing the following Contracts:—

CONTRACT No. 1.—The formation and completion of the Junction line from a point about 4 chains east of Collyhurst-lane to the east side of Lower Tebbutt-street, in the town of Manchester, being a distance of about 1,316 yards, including the formation of the excavations and embankments; the building of the arches over the reservoirs near Collyhurst; the bridge over Collyhurst-lane; bridges with iron girders, under St. George's-road and Cropper-street; retaining walls; drains; laying and ballasting the permanent way; and other works connected therewith.

CONTRACT No. 2.—The formation and completion of the said Junction line, from the termination of the last Contract to the intended station at Hunt's Bank, being a distance of about 701 yards. This Contract consists principally of a *viaduct* containing several bridges, with *iron* girders, and crosses some of the principal streets in Manchester, as well as passing three times over the river Irk.

Plans and Specifications of the works intended to be let are now ready for inspection at the Engineer's Office, Palatine-buildings, Hunt's Bank, Manchester. Printed forms of Tender will be provided, which must be delivered properly filled up, at the Secretary's Office, Hunt's Bank, by Eleven o'Clock on Monday, the 6th day of June. No others will be attended to.

Parties tendering must attend personally, or by their agent, at Three o'Clock in the afternoon of the same day.

Engineer's Office, Manchester, May 17, 1842.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—NOTICE is hereby given, That a SPECIAL GENERAL MEETING of the Birmingham and Derby Junction Railway Company will be held on the 2nd day of June next, at the Waterloo Rooms, in Waterloo-street, in Birmingham, at Eleven o'Clock in the forenoon, under the provisions of an Act passed in the present Session of Parliament, entitled, "An Act to enable the Birmingham and Derby Junction Railway Company to raise a further sum of Money," for the purpose of considering and determining upon the creation of New Shares in addition to the present capital of the said Company, and the nominal amount or value of such New Shares, and any special advantages in favour of or other regulations in relation to the same; and also for the purpose of authorising the said Company to borrow a further sum of money on Mortgage, under the provisions of the said Act. Dated at Birmingham, this 17th day of May, 1842.

The Chair to be taken at Twelve o'Clock precisely.

(Signed) HENRY SMITH,
Chairman of the Directors of the said Company.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

GREAT WESTERN RAILWAY—SUMMER TRAINS.—On and after Wednesday, the 1st June, ALTERATIONS will be made in the Time-Table of Trains, adapted to the Summer Traffic of the line. More Trains will run between PADDINGTON and SLOUGH, and between BATH and BRISTOL. Several alterations will be made in the starting and stoppages of the trains, of which particulars may be known by application for the Time Bills at any Station.

The 3·30 Day Train, and 6 o'clock Afternoon Trains, from BRIDGWATER, will start one hour later, to suit the convenience of the more distant traffic.

The 5 o'clock Train from BRISTOL to LONDON, and the 5·45 from CIRENCESTER to LONDON, will also start one hour later from each Station.

ASCOT RACES.

There will be several Extra Trains on Tuesday, the 7th, and Thursday, the 9th, June (Gold Cup day), and Carriages and Horses will be conveyed early in the morning, if Trucks or Horse-boxes are previously engaged. An Extra Train at Half past Ten at Night from Slough on 4th June, for SURLEY HALL Night.

EASTERN COUNTIES' RAILWAY SCRIP.—The Holders of Scrip, and of Bankers' Scrip Receipts, are reminded, as a matter of caution, that the 2nd Instalment of £2 will become due on Saturday, the 4th June next, and unless punctually paid on that day to the Bankers of the Company, the right to the New Shares will be forfeited, in accordance with the terms of the Resolutions of the Special General Meeting of Proprietors held on the 22nd February last.

By Order of the Board,
A. BULKELEY, Secretary.

Offices, High street, Shoreditch, May 26, 1842.

THE POLLOC AND GOVAN RAILWAY COMPANY is desirous of borrowing, on the authority of their Acts, 11 Geo. 4, cap. 62, and 1 and 2 Will. 4, cap. 58, the Sum of £20,000, on the security of a first and only assignment of the whole Railway, Property and Revenues, in the manner provided by the said Acts.

Tenders for such Loans, which may be for Sums of not less than £300, for a period of not exceeding five years, may be addressed to the Company's Office in Glasgow; or to C. and H. Mac Rae, Stock Brokers, 57, Moorgate-street.

May 16, 1842.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

Norwich	Huntingdon
Cambridge	St. Neots
Wells	Biggleswade
Holt	Bury St. Edmunds
Dereham	Bishop Stortford
Fakenham	Hockerill
Newmarket	Harlow
Holbeach	Hertford
Wisbeach	Hoddesdon
Chatteris	Waltham Cross
St. Ives	

Also to

St. Leonards	Maidstone
Hastings	Godstone
Rye	Reigate
Battle	Worthing
Cranbrook	Lewes
Tenterden	Eastbourne
Tunbridge Wells	Horsebridge
Tunbridge	Hailsham
Penshurst	Uckfield

From the
Spread Eagle, Gracechurch-street.
Swan-Two-Necks, Lad lane.
Cross Keys, Wood-street, Cheapside.
Golden Cross, Charing Cross.
George and Blue Boar, Holborn.
Spread Eagle, Regent Circus, and
Griffin's Green Man and Still, Oxford-street.

HORNE & CHAPLIN, Proprietors.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

GRAND JUNCTION RAILWAY.—ALTERATION OF DOWN TRAINS.—The Public are informed that on and after Wednesday, the 1st June next the Times of Departure of the Trains from Birmingham for Liverpool and Manchester will be as follows:—

1.45 a.m., Mail.	2.45 p.m., Mail.
6.0 a.m., 3rd Class.	4.30 p.m., 2nd Class.
11.30 a.m., 1st Class.	7.15 p.m., 1st Class.

And an extra Mixed Train will leave Stafford for Birmingham at 7.30 a.m.; and Birmingham for Stafford at 9.30 a.m., stopping at all the intermediate Stations.

Passengers by the Train from London at 1.30 p.m. can be booked through to Liverpool and Manchester, arriving at 11.15 p.m.

Passengers from Derby by the 4.30 p.m. Train will be in time for the last Train to Liverpool and Manchester.

By Order,
MARK HUISH, Secretary.

Railway Office, Liverpool, May 20, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

RAILWAY POLICE.—WANTED, TWELVE Police Officers to serve on a Foreign Railway. Particulars, stating age, family, present employment, &c., may be addressed to J. W. W., *Gazette* Office, Doncaster, before the 1st of July.

Parties applying must be able to read and write. No Agency Office will be attended to. Applications must be *pre-paid*.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources. Corrected to the end of February. Price 3d. royal 8vo. *Railway Times* Office, 122, Fleet-street; Groombridge, Panyer-Alley.

II.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

III.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways, Corrected to the present time. Price 1s., in cloth. *Railway Times*, Office, 122, Fleet-street.

IV.

ROBINSON'S RAILWAY DIRECTORY for 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

V.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s. in cloth 1s. 6d.; on canvass, 2s. 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VII.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, May 28, 1842.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 231. Vol. V.—No. 23.] SATURDAY, JUNE 4, 1842. [Price 6d.

CROYDON RAILWAY.—An anonymous advertisement having appeared in the *Railway Times*, purporting to be "in answer" to an advertisement issued by this Company in the previous week, the Directors hereby beg to state, that the Fares on this Railway were raised in the month of July, 1840, after due notice had been given to the Greenwich Company that such a course would become necessary unless some modification of the *then* Toll of 3d. was made—a year's experience of that Toll having been found incompatible with the *then* rates of Fare. Upon the present increase of 1½d. of *Toll*, the average increased rate of *Fare* per passenger has been about 2½d; and an increased rate of *Fare* to such extent, beyond the Toll, becomes necessary to repay the loss occasioned in the conveyance of each passenger, when the number of such passengers is reduced. The present average rate of charge on the Croydon Railway, IN *cluding cost of conveying the passengers*, is UNDER 2½d. per mile; the present average rate of charge over 12 miles of the Greenwich Railway, EX *cluding such cost of conveyance*, which is borne by the Croydon Company, is OVER 2½d. per mile.

YORK AND NORTH MIDLAND RAILWAY.—£25 SHARES.—The Directors of the York and North Midland Railway Company having, in pursuance of the provisions of the Act, resolved to make a CALL of £5 per Share, payable on or before Friday, the 1st day of July next, Proprietors of £25 Shares in this Company are hereby required to pay, on or before that day, to any of the undermentioned Bankers, the sum of £5 on each of their respective Shares, viz.:—

London—Messrs. Barnetts, Hoares, and Co.; Sir R. C. Glyn and Co.

York—City and County, and Union Banks.

The Bankers have been instructed to charge interest, after the rate of 5 per cent. per annum, on all sums paid after the 1st day of July next.

GEORGE HUDSON, { Chairman of the Board of Directors.

GEORGE BAKER, Clerk to the Company.

Railway Office, York, June 1, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years, to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

SCOTTISH UNION FIRE AND LIFE INSURANCE COMPANY; instituted 1824, and incorporated by Royal Charter.

LONDON BOARD.

John Kingston, Esq.	Daniel Stoddart, Esq.

SUTHERLAND MACKENZIE, Esq., Manager.

London Offices, 449, West Strand, and 78, King William Street, City.

LIFE DEPARTMENT.

The additions made to the Life Policies granted by this Corporation for the last seven years vary from 41 to 65 per cent. on the premiums paid, and average 14 per cent. on the sums assured—a result, it is believed, far more favourable to the assured than any other Company has hitherto accomplished, when the low rates of premium charged by this Corporation are taken into consideration.

The next division of life profits will take place in December, 1846, being an interval of five years, and persons entering before the 1st of August next will enjoy one year's additional rating, and rank at next division of profits for five complete years.

Forms of proposals may be had at the offices, 449, West Strand, and 78, King William street, City.

F. G. SMITH, Secretary.

The usual commission allowed to Solicitors and Agents.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.—NOTICE is hereby Given, That, in pursuance of a Resolution of the Board of Directors, PROPRIETORS OF NEW SHARES in the said undertaking are required, on or before Tuesday, the 5th day of July next, to pay into any one of the under-mentioned Banks, the Sum of £3, as a FOURTH CALL on each New Share held by them respectively, viz.:—

Edinburgh } Royal Bank of Scotland.
Glasgow.. }

Greenock—Any of the Banks there.

Liverpool—Liverpool Commercial Bank.

Lancaster—Lancaster Banking Company.

London—The Chief Office of the London and Westminster Bank, Throgmorton-street.

Dublin—To Messrs. Labertouche and Stafford.

Londonderry—Branch of the Provincial Bank of Ireland.

Discount, at the rate of 5 per cent., will be allowed on all Payments made previous to the said 5th July; and the Bankers have been instructed to charge Interest from that date until payment.

By order of the Board of Directors,
WYNDHAM HARDING, Secretary.

Railway Office, Greenock, May 26, 1842.

NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY.—The Directors do hereby give NOTICE, that in consequence of the Postmaster-General having given orders for the discontinuance of the mails being conveyed to and from Newcastle and Carlisle by the early trains, the following times have been fixed for the Trains starting on and after the 30th instant, until further notice:—

GOING WEST.

Leaving Newcastle.	*Arrive at Carlisle.*
7 o'Clock.... a.m.	10¼ o'Clock.. a.m.
*10 ..... a.m.	1¼..... p.m.
Mail * 2½..... p.m.	5½..... p.m.
* 5 ..... p.m.	8½..... p.m.
6½..... p.m.	8½ at Haydon Bridge.

ON SUNDAYS.

Leave Newcastle.	*Arrive.*
9 o'Clock....a.m.	12½ o'Clock p.m., at Carlisle.
1½..... p.m.	3 p.m., at Haydon Bridge.
Mail 5 ..... p.m.	8½ p.m., at Carlisle.

GOING EAST.

Leaves Haydon Bridge.	*Arrive at Newcastle.*
7 o'Clock,..... a.m.	8¾ o'Clock..... a.m.
Leave Carlisle.	
* 7 o'Clock....a.m.	10¼ o'Clock..... a.m.
Mail *10 ..... a.m.	1 ..... p.m.
2½..... p.m.	6 .... p.m.
* 5 ..... p.m.	8 ..... p.m.

ON SUNDAYS.

Leaves Haydon Bridge.	*Arrive at Carlisle.*
7 o'Clock ..... a.m.	8¾ o'Clock..... a.m.
Leave Carlisle.	
Mail 9 o'Clock.... a.m.	12½ o'Clock..... p.m.
5 ..... p.m.	8½ ..... p.m.

N.B. The Trains marked thus * will start from and arrive at Redheugh at the same times as from and at Newcastle.

By Order,
JOHN ADAMSON, Clerk to the Company.

Railway Offices, Forth, Newcastle-upon-Tyne,
May 24, 1842.

LONDON AND BIRMINGHAM RAILWAY.—ALTERATION OF TRAIN.—The Public are informed, that on and after the 1st of June next, the TIME OF DEPARTURE of the present TWO P.M. TRAIN from London will be CHANGED to HALF-PAST ONE o'CLOCK; and that a corresponding alteration will be made in the Time of Departure of this Train from every Station at which it now calls between London and Birmingham.

The Grand Junction Company having appointed a Train from Birmingham, in connection with the above-mentioned Half-past One o'Clock Train, passengers, horses, and carriages may be booked through by it from London to Lancashire.

By Order,
R. CREED, Secretary.

Office, Euston Station, May 19, 1842.

REPORT OF THE OFFICERS OF THE BOARD OF TRADE.

(*Concluded from p. 561*).

ENFORCEMENT OF THE PROVISIONS OF RAILWAY ACTS.

The Board of Trade has been called upon in several cases to exert the powers vested in it by Lord Seymour's Act, in order to prevent alleged deviations on the part of Railway Companies from the provisions of their Acts and of the general law, but hitherto it has not been found necessary to institute any prosecution for that purpose.

The enforcement of the provisions of the Act 2 and 3 Vict., c. 45, relative to the erecting gates and stationing gatekeepers at level crossings, has been, as is already stated, generally complied with, and also of the provisions of different local Acts relative to fencing, and other measures for the protection of the public safety.

The proceedings of the Railway Department in the case of Messrs. Pickford and Co. against the Grand Junction Railway Company, are fully stated in the evidence before the Select Committee of the House of Commons of last session.

It only remains to add that the Board of Trade having been satisfied that one of the most material points, in respect of which their interference had been requested by Messrs. Pickford and Co., was the subject of litigation in an action then pending in a court of law, letters were written to the parties stating that under these circumstances no further steps would be taken, at least for the present, since which period no application has been made to this department on the subject.

In April last an application was made to this department by Mr. G. W. Johnstone, of Glasgow, to interfere for the purpose of preventing the Glasgow and Greenock Railway Company from indirectly becoming steam-boat proprietors, for the purpose of forwarding passengers by the railway to Rothsay, Dunoon, and other places beyond Greenock, and acquiring a monopoly of the whole passenger traffic on the Clyde.

After a full consideration of the circumstances, it was determined that this was not a case in which the Board of Trade could interfere, on the following grounds, which may be stated as illustrative of the principles upon which their Lordships have acted in the exercise of the power of instituting prosecutions against Railway Companies, vested in them by Lord Seymour's Act, in cases where personal safety is not concerned.

1. That this power, being of an extraordinary nature, is only to be exercised in cases where it is quite clear, 1st, that the conduct of the Railway Company is illegal; 2nd, that it is contrary to public policy, and injurious to public interests.

2. That in the present case neither of these points was sufficiently established; for although it is clearly illegal for a Company, incorporated for a specific purpose, such as making a railway, to undertake a different and distinct branch of business, yet in the present instance it might be fairly a question whether the employing steam-boats to forward passengers from the terminus of the railway was not incidental to the main business, and a public convenience; and, at any rate, it did not appear that, whatever might be the ultimate object of the Railway Company, any loss was in the mean time sustained by the public, but rather that a certain class of passengers were conveyed part of the distance at lower fares than had been charged before the opening of the railway.

The next application was from Mr. Grey, of Norton, near Stockton-on-Tees, complaining of the conduct of the Clarence Railway Company, in having illegally laid down a new branch across a public road under circumstances involving great danger. The Inspector-General was instructed to visit the line, and from his Report, which with Mr. Grey's memorial and other documents relative to the affair are given in Appendix, p. 286, it appeared that the branch line, of which Mr. Grey complained, was absolutely necessary, in order to conduct the traffic upon the railway in safety, and that with certain precautions and alterations pointed out in the Report, there was no reason to apprehend that the public safety would be endangered. Under these circumstances it was considered that although the right of the Railway Company to cross the highway might be doubtful, yet as the measure was on the whole conducive to the public safety, the Board of Trade should not interfere, on condition of receiving an assurance from the Railway Companies that the various precautions, specified in the Inspector-General's Report, should be complied with. This assurance was given, and proper steps will be taken to ascertain that it is duly fulfilled.

One case has occurred in which the Board of Trade has been called upon to exercise the jurisdiction vested in it by the 19th section of the Act for Regulating Railways, of determining disputes relative to the opening of branch communications with railways. It arose in consequence of a dispute between the Great North of England Railway and the proprietors of a warehouse and brick-yard adjacent to the line, who had enjoyed a right of communication by means of a short branch line with the main railway, which the extension of traffic consequent on opening the line from York to Darlington had rendered highly dangerous.

It will be seen from the Report and correspondence relative to the case, Appendix, p. 283, that an amicable arrangement was effected through the invervention of this department, by which the danger to the public was entirely obviated, and the rights of the parties preserved. Such an arrangement, however, might not be practicable in all cases, and in the event of the right, generally secured to the proprietors of lands adjoining a railway, of laying down branch communications with the main line of rails, being frequently acted upon, the powers at present vested in the Board of Trade might prove insufficient.

In concluding this review of the proceedings of the railway department during the past year, we think it right to advert to the points upon which further legislation appears desirable.

The recommendation of the Committee of the House of Commons of last session, that the supervision of the Board of Trade should for the present be exercised in the way of *suggestion* rather than that of *positive regulation*, will probably be considered conclusive, more especially as the experience of the past year has shown a progressive diminution in the number of railway accidents, and a general disposition on the part of Railway Companies to acquiesce in the suggestions offered by the Board of Trade.

Under existing circumstances, therefore, it seems better that the Government should not at present ask for the power of enforcing regulations for the prevention of accidents, and that such a power should not be resorted to hereafter, unless experience should clearly show the existence of general and culpable negligence and mismanagement under the present system.

The same consideration may, perhaps, render it advisable to postpone for the present any attempt to introduce a system of examining and licensing the engine-drivers employed on the railways. We have already stated that a remarkable diminution has taken place in the number of accidents which may be attributed to the misconduct or unskilfulness of engine-drivers, and we may add, that in the few instances which have occurred there has been no backwardness on the part of the Railway Companies to prosecute the offenders under the provisions of Lord Seymour's Act. Under these circumstances it may, perhaps, be more prudent to wait for further experience before attempting to introduce any change in the system at present in operation, which would appear to be on the whole not ill adapted for procuring a supply of efficient engine-drivers.

With regard to the opening of new lines, however, the case is very different, as here the immediate interest of the Company always furnishes an inducement to open at the earliest possible moment; and experience has shown that a large proportion of the railway accidents which have occurred have been upon lines recently opened.

We have already stated that the powers at present vested in the Board of Trade are inadequate for the purpose of insuring an efficient inspection before a line is permitted to open; and we should recommend that the clauses of the Bill of last session, requiring a more definite notice of the completion of the line, and giving to the Board of Trade a positive power of postponing the opening in the event of an unfavourable Report from the Inspector, should be again brought forward.

The necessity of some further power of obtaining from Railway Companies returns of accidents, and information bearing on the question of safety, is also obvious, the only power at present enjoyed being that of ordering returns of accidents attended with personal injury, to be made within 30 days.

It is evident that, in order to exercise an effective supervision, the railway department of the Board should have access to any description of information bearing upon the question of public safety. Accidents frequently occur where imminent danger is sustained by the passengers, and under circumstances calculated to throw much light on the sources of danger in railway travelling, of which no return is made to the Board of Trade, because it happens that no personal injury has been sustained. It is important that the railway department should be enabled to keep a record of all accidents, such as engines running off the line, axles breaking, &c., which tend to throw light on the respective advantages of different methods of construction, and also of interruptions and irregularities in the traffic, which are a source both of danger and inconvenience to the public.

With this view we should recommend the renewal of the clauses in the Bill of last session, which extend the powers of the Board of Trade, of requiring information bearing upon the question of the public safety.

The Committee of last session recommended that provision should be made for obliging the Directors of connecting lines of railway to come to an agreement upon the arrangements necessary for conducting the joint traffic with safety and convenience to the public, and to refer disputes between them to arbitration. This principle might properly be extended to several other cases in which rights have been secured to various parties by Railway Acts, which cannot be exercised without danger to the public. These rights are principally of three classes:—

1. The right of crossing roads by railways on a level.

2. The right of laying down branch communications opening into the main line of a railway.

3. The right secured to parties other than the Railway Company, of entering upon the railway with locomotive engines.

With regard to level crossings, the cases of the Glasgow and Ayr, Dundee and Arbroath, and Croydon Railways, have been already mentioned, in which level crossings, which it would be extremely desirable for the public safety to avoid, have been continued from the want of any controlling power to compel the different parties interested to come to an agreement.

It is also obvious that the rights which have been universally guaranteed to the owners of lands adjoining to railways, and to the public, with their permission of laying down branch communications with the main line, and entering upon it with carriages and locomotive engines of their own, could seldom be exercised without extreme danger to the public using the railway. One case has been already mentioned, that of the Great North of England Railway and Messrs. Gill and Brown, in which the former right was insisted on, under circumstances which, but for the amicable arrangement effected by the intervention of the Board of Trade, would have been attended with considerable danger. It might not be possible to effect such an arrangement in all cases, and it would appear desirable that some more effectual provision should be made, to ensure the public safety. With this view we should recommend that, in all cases where rights have been given with respect to level crossings,

Digitized by Google

branch communications or locomotive engines, which cannot be exercised without decided danger to the public, the Board shall have a power analogous to that recommended by the Committee in the case of connecting railways, of calling upon the parties interested to come to an agreement for obviating the danger, and to refer any disputes between them to arbitration.

It would also be desirable to set at rest all doubts relative to the proper manner of shutting gates at level crossings, by a specific enactment that such gates should be kept shut in the manner which experience has shown to be most conducive to safety, viz., across the road, and not across the railway, excepting in special cases where the Board of Trade may find it necessary for the public safety to make a different arrangement.

It has been represented by several Railway Companies that the clauses usually inserted in Railway Acts, imposing a penalty on persons omitting to *shut and fasten* private gates opening on the railway, are insufficient; and as we have reason to believe that this statement is correct, and as it is very important for the public safety to prevent cattle and horses from straying upon the railway, we should recommend a clause obliging the occupiers of lands adjoining the railway to keep gates opening upon it *locked*. This clause might be properly accompanied by one making it imperative on Railway Companies to keep their lines properly fenced, instead of merely obliging them to erect such fences as the owners of adjoining lands may require, as is generally the case under existing Railway Acts.

The occurrence of so many slips during the present winter upon lines which had been constructed for a considerable period, has shown that it would be desirable in several cases to give a greater width to embankments, and inclination to cuttings. A considerable obstacle is, however, presented to the adoption of these precautionary measures by the want of power to take the land requisite for the purpose. We would recommend that, in cases in which the Board of Trade shall certify that certain small portions of land adjoining a railway are required for the above purpose, the compulsory powers of taking land contained in the original Act, should, as regards such portions of land, be revived. We should also recommend that, with a view to the speedy repair of slips and failures in the works of railways, Railway Companies should be allowed to enter upon and pass over adjoining lands for the purpose of repairing accidents, upon paying proper compensation to the owners of such lands for an damage done.

We have the honour to be, &c.

G. R. PORTER,
FREDERIC SMITH,
S. LAING.

GREAT WESTERN RAILWAY—HOTEL AT THE SLOUGH STATION.

THE Royal Hotel at the Slough station has been erected upon a grand Italian elevation, by Mr. Chadwick, upon land which the original proprietor, Mr. Bonsey, sold to the Great Western Railway Company. On the basement projecting from the main building, quite distinct from the hotel, is a suite of rooms for the accommodation of railway passengers of all classes, where refreshments can be obtained at a fair remunerating price. There are two capacious coffee-rooms, one looking over a most extensive terrace (forming a part of the edifice itself) to the railway, and the other commanding a view over the extensive gardens, which are laid out in the Italian style, and planted with English, French, and Italian exotics, shrubs, plants, evergreens, &c. &c. Apart from these is an elegant saloon, 40 feet long by 23 wide, which, upon days of great fashionable resort, will be used for the purpose of holding a *table d'hôte* upon a grand continental scale.

The first floor is occupied by a series of sitting-rooms, each having its separate balcony, and replete with comfort and elegance. The carpets are chiefly from France, and are of Ambusson and Tournay manufacture; very many, however, are of Brussels fabrication, of exquisite texture and workmanship.

The next floor consists of bed-chambers and dressing-rooms, tastefully ornamented, with baths adjacent, and baloonies to each; but the triumph of art seems to have been achieved in one of the bed-rooms, called a "State Room," which is fitted up in the style of Louis XIV, and in it is a magnificent dome bed brought from Versailles, and, it is said, originally the property of Maria Antoinette. The hangings and draperies are of rich silk, satin, and brocade. The head and foot cushions are covered with gorgeous Genoa velvet, with flowers and emblematical devices painted thereon. In the centre of the dome is fixed a splendid mirror.

All dinners, refreshments, wines, orders, and communications of every kind, are conveyed from the bottom to the top of the building, or intermediately, by an unique mechanical arrangement, thereby avoiding the mingling and jostling of visitors with waiters, chambermaids, and servants; and immediate orders can by the same means, and through the agency of whispering trumpets, be silently transmitted to the kitchen, cellars, confectionary, larders, ice-houses, still-rooms, plate-closets—in fact, to every part of the structure. The *chef de cuisine* is the well-known *artiste* of the *Roches de Concale* at Paris.

On the opposite side of the way is a tap or minor tavern, not less excellent in its way than its splendid neighbour; and behind it are most extensive stabling, coach-houses, with loose boxes for the accommodation of the horses of the nobility and gentry following her Majesty's hounds. The carriages (which are splendidly got up) are very numerous, and of every description, and the horses appear to have been selected by a person of sound judgment.

The waiters, servants, coachmen, postboys, &c. (to none of whom gratuities are allowed to be given) are dressed in rich crimson liveries.

The furniture throughout (most of which, with the upholstery, was furnished by Mr. Dawes, of Soho-square), is of the best description.

There are 42 clocks in the various apartments of the mansion.

The whole of this gigantic undertaking has been planned, executed, and carried out under the untiring industry, taste, judgment, and enterprise of Mr. Charles Dotesio, the proprietor.—*Sun.*

RAILWAY PLEASURE EXCURSION.

GRAND JUNCTION RAILWAY.

Two special trains left the Grand Junction Railway station at Birmingham on Monday morning, conveying a party on a trip to Liverpool by railway, and thence by steam-packet to Beaumaris, Bangor, and the Menai Bridge, taking up passengers at Walsall and Wolverhampton. On leaving the Wolverhampton station the trains consisted of 56 second-class carriages, decorated with flags and flowers, with a party of about 1,250 persons, and as they proceeded along the winding embankment presented a beautiful appearance to the hundreds of spectators assembled to witness them.—*Wolverhampton Chronicle*, June 1.

MANCHESTER AND LEEDS RAILWAY—OLDHAM BRANCH.—The passenger traffic on this line during the latter part of Whitsun week was immense. The last train from Manchester to Oldham, on Friday evening, brought up 1,180 passengers; and three successive trains from Oldham to Manchester, on Saturday morning, conveyed above 800 passengers each, or above 2,400, exclusive of Sunday scholars. The traffic is nearly all worked by a single locomotive, which ascends or descends the inclined plane by means of a rope attached to a sort of balancing train, consisting of a number of sand-waggons, but this method of transit is much disapproved of by the public, being a slow process compared with the original plan of having two locomotive engines on the incline at once.—*Manchester Courier.*

BRISTOL AND GLOUCESTER RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL meeting of the shareholders in this undertaking was held at the White Lion, Broad-street, Bristol, on Tuesday; GEO. JONES, Esq., Chairman of the Directors, was in the chair, and opened the business of the meeting by requesting

The SECRETARY (R. Fletcher, Esq.) to read the advertisement calling the meeting, from which it appeared that the object of the meeting was to consider an application now before Parliament for an Act for granting further powers to the Company, a draft of which Act was to be submitted to the proprietors for their approval.

The CHAIRMAN then called upon Jere. Osborne, Esq., to give the principal parts of the Bill now before Parliament.

Mr. OSBORNE said, it was necessary that a meeting of the proprietors should be held to take into consideration and approve of the Bill, in compliance with the Standing Orders of the House of Lords, who would not pass the Bill without. The principal object of the Bill was to extend the time for the purchase of lands; that is, to extend the compulsory power of the Directors with reference to

Mr. FRIPP—Then it will be a very reasonable line.

In answer to a remark from Mr. Fripp, in reference to a clause in the Bill giving power to the Company to enter into negociations with the Cheltenham and Great Western Railway Company, for the purchase of land beyond Gloucester, and suggesting the propriety of much caution,

Mr. OSBORNE said, the matter had never been discussed by the Board. The Cheltenham and Great Western Railway, in their last Act, had taken powers to enable them to dispose of, and this Company to purchase, certain portions of their line; the only powers now taken were to enable this Company to raise the necessary monies, supposing such purchase and sale should ever be agreed on.

Mr. FRIPP threw out as a suggestion to be considered by the Board, the plan adopted by the Manchester and Leeds Railway in the issuing of new shares. That Company issued all their new shares at par, and were enabled to do so by allowing 10 per cent. interest on all the new calls for five years; and it was done at a comparatively little charge upon the Company, and was fairer to the original proprietors, who were thus enabled to take the new shares, although the old stock was in a depreciated state. The plan had been approved of by Mr. Jones Lloyd, and other monied men.

that object. In the original Act three years only was allowed, according to the usual practice of Parliament; and Parliament on any renewal would not extend the time beyond two years. To obtain that extension was the object of the present Bill, as their power to purchase would expire in two months. The Directors had also taken the opportunity to include other matters in the Bill, so as to save the expense of going to Parliament another time. He did not know if the meeting would require him to go through the whole Bill; he would read the marginal references to each clause, and should be happy afterwards to give any explanation the meeting might require. Mr. Osborne accordingly read through the heads of the clauses of the Bill, which, besides providing for the object before referred to, gives power to raise monies by additional shares, mortgages, debentures, and bonds, and also provides for there being but one Committee of Management for the Coalpit-heath and the Bristol and Gloucester line, and for many other minor matters.

Mr. C. B. FRIPP asked, as there was to be such a complete merging of the two Companies, the Coalpit-heath and the Bristol and Gloucester, what was the amount of stock or value for which the first was debited?

The CHAIRMAN said, between 80,000*l.* and 90,000*l.*

Mr. OSBORNE—It is 84,000*l.* or 85,000*l.*

Mr. FRIPP—With this additional capital, then, what will it require to carry on the line from the Coalpit-heath terminus to Stonehouse?

The CHAIRMAN—We ask in the Bill the power to raise 400,000*l.*, and to borrow one-third.

Mr. FRIPP—It is not calculated that the 530,000*l.* will complete the line?

The CHAIRMAN—We hope it will not much exceed that sum.

Mr. OSBORNE—If it should be a small sum beyond, 50,000*l.* or 60,000*l.* or 70,000*l.*, we have power to borrow.

The CHAIRMAN—Our general impression is, that 600,000*l.* will carry us to Stonehouse.

Mr. FRIPP well knew the pains the Chairman had taken to keep down the expenses, and he entertained hopes, therefore, that he was correct in the sum he had mentioned. He would now ask what they calculated as to the cost for the seven miles from Stonehouse to Gloucester?

Mr. OSBORNE—It has been calculated at 200,000*l.*, but it was upon assumption, not upon estimates; it might not be more than 150,000*l.*

Mr. FRIPP—Then the whole cost would be 100,000*l.* to the Coalpit-heath terminus, 600,000*l.* thence to Stonehouse, and 200,000*l.* beyond. What is the entire distance?

Mr. OSBORNE—Thirty-seven miles and a-half.

The CHAIRMAN said, Mr. Fripp's suggestion should meet with the best attention of the Board.

Mr. FRIPP then moved, that the draft of the Bill be approved and adopted, that the seal of the Company be affixed thereto, and the Chairman be requested to sign the same on behalf of the meeting.

Mr. WILLS seconded the motion, which was carried unanimously.

Thanks were then voted to the Chairman, and the meeting broke up.—*Bristol Journal*, May 28.

SOUTH-EASTERN RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the South-Eastern Railway Company was held on Tuesday, at the London Tavern, Bishopsgate-street, and was numerously attended; JOSEPH BAXENDALE, Esq., Chairman of the Board of Directors, presided.

The advertisement convening the meeting having been read,

The CHAIRMAN proposed that the common seal of the Company be affixed to the register of proprietors, whereupon,

Mr. RICHARD TYRRELL asked if this were a formal motion, and being answered in the affirmative, inquired who seconded it. An answer was instantly given from upwards of half-a-dozen parts of the room, amid loud laughter, and the resolution was passed unanimously. The seal was accordingly affixed in presence of the meeting.

The SECRETARY (John Whitehead, Esq.) then read the Report of the Directors as follows, printed copies having been circulated among the proprietors several days previously:—

"DIRECTORS' REPORT.

"London, 31st May, 1842.

"At the special general meeting held on the 28th April last, the half-yearly account was distributed, it is now annexed to this Report. The amount of calls then in arrear has been still further reduced, being at present 2,264*l.*, which, with 8,181*l.*, arrears due on shares surrendered to the Company, and re-issued (for which security is held), makes a total arrear of 10,445*l.*

"The whole of the new shares, issued agreeably to the resolutions of the late meeting, have been taken, and the first instalment paid.

"Loans on debentures continue to come in liberally, which, with the large amount paid upon the new shares, has justified your Board of Directors in giving the required legal notice of payment to the Brighton Railway Company, for the portion of the line between Croydon and Redhill, which this Company are entitled to purchase. The notice will expire on the 19th July next, from which date the portion of line in question will be transferred to this Company.

"From Redhill to Tunbridge the line of railway was opened on the 26th instant, having been previously inspected and approved by the officer of the Board of Trade.

"Your Directors have been engaged in an important negociation for the purchase of land, for forming an approach from the junction of the Greenwich and Croydon Railways, near Corbett's lane, to a point near the Bricklayer's Arms, and have concurred with the Croydon Company in their application to Parliament for powers to carry it into effect.

"This measure is in every respect highly beneficial to the interests of the South-Eastern Company, it may be carried out at a moderate expense—it will give ample space and accommodation (which at London Bridge cannot at any cost be had), and the works can be executed speedily; it will comprise also the important feature of a terminus for the west-end traffic.

"The most economical system for working the railway has had the earnest attention of the Board; they have entered into an agreement with the Croydon Company to make a joint concern of the station, engine-houses, and workshops at New Cross, and also of locomotive engines, carriages, and *materiel*, the costs of the buildings being arranged in the shape of rent, and each Company paying rateably to a common fund for locomotive power and carriages, in proportion to the use made of them by each. It is believed that this arrangement will effect a very important saving to both parties, and the Directors feel assured that the proprietors will see the advantages which must result from it.

"The stations upon the railway, viz. Reigate, Godstone, Edenbridge, Penshurst, and Tunbridge, have been erected at a moderate cost, leaving to a future period their enlargement and embellishment, should circumstances render it necessary, ample land having been secured for such purposes.

"The works beyond Tunbridge are in a forward state, and the promises made of future openings of 15 miles to Headcorn, and 11 miles further, to Ashford, in the months of August and December next, will be made good.

"The opening to Headcorn will bring the line at Staplehurst, within 7 miles of Maidstone, and 21 of Hastings and St. Leonards, and on the opening to Ashford the traffic of Canterbury and Dover will come on the line.

"From Ashford to Grove Bridge, 6 miles, will be completed early in the next spring, and from thence to Folkestone, 7 miles, in July, 1843, leaving from thence to Dover, to be completed before the end of the year.

"It is very satisfactory to your Directors to report, that both public and private communications fully justify their previously expressed expectation, of railways connecting Paris, Belgium, and the Rhine, with the Channel, either by way of Calais or Boulogne. These projects, which may be considered as an immediate connection with our own line, stand foremost in the great system of railways, which has received the sanction of the French Chambers and Government, and their execution is no longer a matter of question.

"The communication by branch railways to Maidstone, Canterbury, and Ramsgate is not forgotten, the Standing Orders of Parliament have been complied with, and in due course the sanction of the proprietors will be asked.

"The Directors who go out by rotation are Capt. Tyndale, Messrs. William Parry Richards, and Edw. Suart, and being eligible for re-election, they offer themselves for that purpose.

"The annexed account of the receipts and expenditure shows a balance of 62,461*l.* 5s. 8d. in the hands of the Company.

"(Signed) JOSEPH BAXENDALE,
"CHAIRMAN."

The CHAIRMAN said, before putting the motion which he now begged to propose, namely, that the Report just read be received, adopted, and printed for circulation among the proprietors, his colleagues, and himself would feel much pleasure in listening to any remarks that might be made upon it, or in answering any questions to the best of their ability. They were anxious to lay before their fellow-proprietors all the information in their power.

Mr. J. M. PARSONS observed, that at present there was no Report from the Engineer-in-Chief before the meeting.

The ENGINEER (William Cubitt, Esq.) said, he had intimated on the occasion of the recent special meeting, that his time would be so incessantly occupied in the interval between that date and this, in preparing for, and perfecting the arrangements connected with, the opening to Tunbridge, that it would be quite impossible to get ready a Report, and in truth he had been thus occupied night and day, and under the circumstances he trusted that a formal Report would, in this instance, be excused. (Hear, hear.) He was quite prepared to give any verbal explanations that might be desired. His Report must necessarily have been brief. He could only have stated that the line had been partially opened, and was working well. That statement he now made most unequivocally. Everything that had transpired fully confirmed his previous expectations, and if, as Engineer of the line, he might venture to give an opinion as to its remunerating qualities, he would say that even if it were never extended beyond Tunbridge, it would produce a satisfactory return, after allowing for the payment to be made to the Brighton Company. (Hear, hear, hear.)

Mr. PARSONS had conversed with Mr. Cubitt on this matter, and had no doubt that that gentleman was ready with ample verbal explanations. It was desirable, nevertheless, to have on record an official statement of the probable ultimate cost of the undertaking, and in this respect the Report of the Directors was extremely meagre. At the late special meeting the Chairman had stated, that the cost of the line would not exceed 30,000*l.* per mile with an allowance of 15 or 20 per cent. for contingencies; and some proprietors had gone away with an impression that the actual cost of that part of the line which was exclusively the Company's own would not be more than 28,000*l.* a mile, whereas in fact the amounts given by the Chairman—deducting the 350,000*l.* supposed to be the amount to be paid to the Brighton Company—would bring, within a very few hundred pounds, the cost of the 66 miles of the South-Eastern Railway up to 35,000*l.* per mile. The statement of the Chairman to which he had referred was not official, and therefore he was the more anxious that such an official record should now be made as might enable the proprietors hereafter to check the actual expenditure, and compare it with the estimated cost.

The CHAIRMAN said, he held in his hand a statement which he believed was strictly correct,

* Referred to in preceding page.

May 18, 1842.

and would tally with the verbal explanations before given. This statement he would now read to the meeting; and as copies of it would be handed to the representatives of the railway press, and would no doubt be made public, the proprietors might regard it, as he was willing it should be considered, as an official document. The honourable gentleman then read as follows, commenting upon the several items as he proceeded:—

Powers to raise capital by the first Act		£1,850,000
Deduct loss by consolidation of shares.....	£235,000	
Deduct interest paid and to be paid to 31st October.....	90,000	
		325,000
		£1,525,000
Powers to raise capital by the second Act.....	800,000	
Have only raised] 700,000*l.* (28,000 shares at 25*l.* discount have been issued).		
Powers to borrow	266,000	
		1,066,000
Powers to raise by the London Bridge Station Act.....		120,000
Total amount to be raised.....		£2,711,000
Statements made at previous meetings of cost of 78 miles at 30,000*l.* is		£2,340,000
Supposed per centage for contingencies 15 per cent.....	351,000	
		2,691,000
Paid to the 1st April as per statement	£1,075,000	
Leaving a balance for works, plant, &c.....	1,616,000	
		2,691,000
Balance brought down available for works, plant, machinery, carriages, &c.....		1,616,000
To pay the Brighton Company for 12 miles, suppose.....	£360,000	
Engineers statement of works, ex. of plant, suppose	800,000	
Land not paid for, about	25,000	
Cost of London Bridge station, about	50,000	
New Cross station	30,000	
Dover station	25,000	
Engines, carriages, waggons, plant, &c.....	100,000	
		1,380,000
Leaving for contingencies.....		£236,000

From what the proprietors knew of the Engineer, he thought they might safely trust to his representations as to the further amount required in his department. It would be seen from these figures that the Directors still steadily adhered to the 30,000*l.* a mile, with the 15 or 20 per cent. margin. (Hear, hear, hear.) They had at various times made other statements, in all sincerity, which statements the event had confirmed. They had told the proprietors nearly 12 months ago, that the opening to Tunbridge would take place in the present spring—probably in May—and so it had. They now told them that 15 additional miles would be ready in August, and he had not the shadow of a doubt that this promise also would be kept, nor that the further extension of 11 miles would take place by the end of the year. From the fulfilment of their promises in these instances, it was reasonably to be inferred that their statements as to the probable ultimate cost were to be depended on, and for his own part, if he entertained the slightest suspicion that the undertaking would cost more than he had repeatedly stated, he would at once stand forward and declare it. (Hear, hear, hear.) His colleagues and himself felt as confident as any man or set of men could feel, that the amount would not be exceeded, but should anything now wholly unforeseen occur to alter that belief, which was founded upon the fullest examination they could give to the matter, the proprietors might rest assured that *they* should be made acquainted with it forthwith. (Hear, hear, hear.) He regretted that the absence of a Report from the Engineer should have disappointed any one. The past Reports of that officer were on record, and he believed there was nothing contained in them to which Mr. Cubitt did not at the present moment adhere.

Mr. CUBITT said, there was nothing in his previous Reports to which he did not adhere, or the cause for modifying which he could not explain.

Mr. PARSONS was sorry to find, from the tone of the Chairman's answer, that the expression of his (Mr. Parsons's) disappointment should have been construed into an expression of censure. [The CHAIRMAN—Not at all.] He was not imputing blame in any degree to Mr. Cubitt, although he deemed it the duty of all Boards, at such a particular crisis as when new capital was required, to submit the fullest statements that could be procured of their prospective expenditure; but as it seemed that the statement which had been read was to appear in the public prints, and to be looked upon as official, he was so far satisfied. He would repeat that he had alluded to the matter not by way of imputing or implying censure. He knew that the excess over the estimates on this line—for there *was* excess—was less than upon other lines; but he was anxious that the proprietors should not suppose that the line would be completed for a very small sum. The margin of 15 or 20 per cent. had been taken not on the 66 miles of railway, but on the whole 78, which brought the cost per mile to what he had already stated. If he thought censure deserved, he should not hesitate to administer it, for he held that it was the duty and the interest of railway proprietors to exercise a free, and full, and independent inquiry into the state of their affairs, and he wished this spirit were more frequently exhibited. (Hear, hear, hear.) He would say again, that he wished for an official statement for the purpose of future reference, not with captious objects, but that it might be seen whether their affairs were prosecuted hereafter on the same economical principles as before, and that no disappointment might be experienced at a future period as to the cost of the line. He felt great confidence in the Board of Directors, for they had a large stake in the undertaking, and were men of business; but he thought that when, as in this Company, the Directors' Reports were previously to the meeting circulated among the proprietors, they ought to be accompanied with such statements as those to which he had referred, and without which in truth they were of comparatively little use.

General HODGSON (a Director) observed, that if the Engineer had been employed in making out a Report, the line would not now have been open.

Mr. JAMES WHISHAW thought the statement made by the last speaker was a satisfactory explanation as to the non-appearance of a Report from the Engineer. He could have wished that the Report of the Directors had been somewhat more explicit and more satisfactory upon one or two points, but in saying this he would not be understood as throwing any censure upon them. He should be glad to know the present state of the negociations with the Brighton Company. He believed the Brighton Directors had as yet furnished no account, as required by the Act of Parliament, of the cost of that portion of their line which the South-Eastern Company were empowered to purchase, and he was anxious to ascertain if the Directors of this Company were satisfied of the *bona fide* intention of the Brighton Board to supply such accounts, and also what was the probable amount that the South-Eastern Company would have to pay. There was another subject referred to in the Report, respecting which he should be glad to be further informed—he meant the Grange-road approach. He should like to know what advantages the Directors anticipated from this scheme, beyond the obtaining of further room at the station—whether the same amount of toll would still have to be paid, for that was a most important point, and also the probable cost of the project. With respect to the financial statement of the Company's affairs laid before the meeting, he believed it to be perfectly fair, but he was at a loss to understand some of the items with respect to the payment of interest on mortgage bonds. [The honourable proprietor here went into a statement of figures, which, from his position in the room, we could not distinctly catch. We understood him to express surprise that so little interest should have been paid on so large an amount borrowed.]

The CHAIRMAN explained that the mortgage bonds had not been issued sufficiently early to bring the interest within the present accounts, which were made up to the 1st of April.

The SUPERINTENDENT (J. S. Yeats, Esq.) added, that the average period of interest coming within these accounts was less than three months.

Mr. WHISHAW presumed, therefore, that a large amount of interest was due?

Mr. YEATS said, a larger amount than was included in the accounts now before the meeting was accruing.

Mr. WHISHAW inquired if there was any fund provided from which the interest was to be paid.

The CHAIRMAN said, the line was now partially open, and would speedily be opened further, and of course they might look for funds from that source to do more than pay the interest. With respect to the first question of the honourable proprietor, he begged to state that the Act of Parliament prescribed what steps were to be taken with reference to the Brighton purchase. With the requirements of that Act the South-Eastern Directors had complied, and had given two months' notice of their intention to purchase the six miles; but, until the Brighton Directors sent in the accounts required by the Act, his colleagues and himself were not able to afford any further information. If such accounts had been supplied, it would not have been necessary for him to set down the purchase-money at *about* 350,000*l.* There could be no question that an account would be rendered, and then there could be no doubt or difficulty in the matter, for the South-Eastern Company might at once relieve themselves, and the six miles would become vested in them. The meeting were now in possession of as much information on the subject as the Directors.

Mr. WHISHAW inquired if the Brighton Directors were now making out the required accounts, and if there was a friendly disposition on their part towards the South-Eastern Company.

The CHAIRMAN supposed the accounts were in the course of preparation, and as to the feeling subsisting between the two Boards, it was of a most friendly character, and if the honourable proprietor heard the contrary, he might honestly and fairly contradict it. With respect to the Grange-road approach, if there were any project which he deemed likely to be more conducive than another to the prosperity of the South-Eastern Company, or more likely to improve his property in it, it was the satisfactory settlement of this Grange-road scheme. (Hear, hear.) He believed it would prove invaluable to the South-Eastern Company, and if hereafter it should be deemed necessary or expedient to carry out an integral line from Croydon as had been proposed, this Grange-road could be abandoned without any great sacrifice. He was, however, for leaving something to be done by their successors, and when he found that a line from Croydon, 10 miles in length, would cost at least a million or a million and a-half of money, and that it would require as many years as the Grange-road would need months to carry into effect, he thought they ought not to let the opportunity of securing a present benefit escape, and therefore he should continue strenuously to press the subject upon the attention of the proprietors. (Hear, hear, hear.) The position was very favourable for a west-end terminus, and when the difficulty of passing through the crowded streets of the city was taken into consideration, and the comparative freedom from bustle of the Surrey side, he thought the great advantage of such an approach could not fail to be duly appreciated. (Hear, hear.) As regarded toll, they would thus escape the toll of 4½d. to the Greenwich Company, and 1½d. of the toll to the Croydon. He had repeatedly stated that he believed the station at London Bridge to be totally inadequate to the accommodation of the whole of the traffic, and if there were therefore no other reason for entertaining this proposition, *that* would be sufficient.

Mr. WHISHAW asked if it were intended to give up the London Bridge station.

The CHAIRMAN said, by no means. The City traffic would require accommodation as well as that of the west end. If the space at London Bridge

Digitized by Google

had been sufficient for both, there might have been some pretext for bringing the west-end traffic thither, but as it was manifestly totally inadequate, it was incumbent upon them, and of course greatly to their advantage, to find accommodation elsewhere. As to the cost of the Grange road, he was very unwilling, now that the question was before Parliament, to offer any opinion. Of course the cost would differ according as the approach was rendered a road or railway.

Mr. WHISHAW had no desire to press the question if it were inconvenient to give an answer. The principal point to be determined, however, was whether the funds of the Company were sufficient for completing the approach.

The CHAIRMAN had no hesitation in stating his opinion that the funds of the Company would be ample. (Hear, hear.)

Mr. WHISHAW was entirely satisfied with the information that had been elicited. He was quite sure that the liberal way in which previous promises of the Directors had been fulfilled, would lead the proprietors generally to have every confidence in the statements now put forth. (Hear, hear.) As to the undertaking itself, he was satisfied that it had within it all the elements of success, in as great a degree as, if not in a greater degree than, any of what he might term the *modern* lines of railway in the kingdom. (Hear, hear, hear.)

Mr. PARSONS said, the Chairman had intimated that the making of the Grange-road approach would not seriously interfere with the construction of a line from Croydon—which line he had stated as 10 miles in length. He (Mr. Parsons) believed, however, that the distance was not more than 8 miles, which would make a very material difference in the total cost.

Mr. CUBITT said, the line which he had surveyed from Croydon was 10 miles in length to the Obelisk in St. George's Fields, and 9 to the Elephant and Castle.

Mr. PARSONS said, he believed these 9 miles of railway, through a somewhat expensive country, were estimated to cost only about 1,120,000*l.* The estimate of 20,000*l.*, which the Chairman had given at the late special meeting as the probable cost of the Grange-road approach, applied of course only to the formation of a common road. If it were a railway, having to be constructed as it must be on a viaduct, the cost, calculating by the mere brickwork of the Blackwall and Greenwich lines, exclusive of land, could not be less than 250,000*l.*, besides the cost of a station at the Grange-road. Before they incurred so large an expense they ought to have the whole details before them. To make this approach, as it was called, pay interest at 5 per cent. on the outlay, would require the passage of 1,000 passengers a day over it; and did any one suppose that passenger traffic to any thing like that extent would be obtained? As to goods, he spoke with deference on this point in the presence of a gentleman so well acquainted with it as the Chairman was, but when they knew that other Companies, such as the Birmingham and South Western, had in this department fallen so far short of the traffic originally anticipated, they could not reasonably look for a sufficient return from that source to make up the deficiency. Why then should they rush into a large expenditure, until they had actually securred the traffic, which was said to be too large for the London Bridge station? When that time arrived, they might then have an integral line, avoiding the objectionable incline on the Croydon Railway. He was quite of the Chairman's opinion that something ought to be left to posterity, and he hoped this question would—("hear, hear," and a laugh)—at any rate let them wait till the excess of traffic was found to exist, and then construct a line worth possessing.

The CHAIRMAN said, that even supposing the Grange-road had not saved them the 4½d. and 1½d. to which he had alluded, still it was necessary to have another station; and, in his decided opinion, if this project were abandoned the proprietors would be throwing away an advantage, since there was no chance that any more comprehensive scheme could be carried out within any reasonable time. It was easy to talk of raising a million and a half, but when they knew that after an existence of years they had only recently been able to secure such a sum upon their own 78 miles, he thought there was not any immediate prospect that it could be obtained for the construction of a line from Croydon towards the west end of the metropolis. (Hear, hear.) It was, nevertheless, for the proprietors themselves to determine the question of the Grange-road. The Board were unanimous in opinion as to the soundness of the undertaking. (Hear, hear, hear.)

Mr. PARSONS had been extremely reluctant to bring this matter forward, but he thought it desirable that objections should be fairly stated and fully canvassed. (Hear, hear.) With respect to the 1,120,000*l.* estimated as the cost of a line from Croydon, he did not think that so large an amount would be required, but if it were so with a distance of 9 miles, the question was, what would be the cost of 1½ miles of viaduct—for if the approach were not a railway it would be no west-end approach at all. He had no doubt that the brickwork alone would cost the two Companies together, at least 280,000*l.*, including land, stations, and other contingencies.

Mr. CUBITT said, he had never made out an estimate of the cost of a railway to the Grange-road. Formerly he had estimated the probable expense of two lines to the west-end—the one through Croydon direct, through an expensive country, to the back of the Elephant and Castle, at a cost (he believed, for he spoke from memory) of 650,000*l.* for works alone; the other from the Dartmouth Arms station, on the Croydon Railway, to the Obelisk, at a cost of from 400,000*l.* to 600,000*l.* If, as had been the case on the South-Eastern line, the cost of land, stations, plant, and other contingencies, should amount to as much as the engineering works, the total cost of the line from Croydon would be about 1,120,000*l.* He believed that the honourable proprietor was pretty near the mark in estimating the Grange-road approach at 250,000*l.* if constructed as a railway; but whereas this latter could be entered upon immediately that the Parliamentary sanction now applied for was obtained, the other could not be proceeded with before the year 1847. (Hear, hear.) He deemed it quite impossible that the traffic of the three lines could be adequately accommodated at London Bridge. The Croydon Company would pay one-half of the cost of the Grange-road approach; and supposing, therefore, that it amounted in the whole to 200,000*l.*, the cost to the South-Eastern Company would be only 100,000*l.* He had again to express his regret that he was not prepared with a Report. His Reports were of necessity at all times meagre; but he pledged himself, that when the portion of the line now opened had been got fairly into operation, the proprietors should have, if they pleased, the exact cost of every mile or half-mile of the works. (Hear, hear, hear.) It was not from want of materials or want of intention that such details had not already been supplied; and Mr. Parsons would bear him out in the assertion, that there were ample particulars ready for posting, although, from several accounts not being finally settled, the present was not the proper time.

Mr. PARSONS was bound to say that he had never seen accounts in which so satisfactory a statement of details was made as to the estimated and actual expenditure; and he was glad to find that, as he had already said, in this Company the excess was less than in others. It was rather invidious to mention names, but he must say, that having had an opportunity of inspecting the accounts of the Resident Engineer at Dover (Mr. Wright), nothing, in his opinion, could be more creditable; and if the accounts of the other local engineers were equally satisfactory, the proprietors would have ample opportunity of examining every detail of the expenditure. (Hear, hear, hear.)

A PROPRIETOR wished to know if, in Mr. Cubitt's opinion, the Grange-road project would be beneficial, supposing it to be confined to a common road.

Mr. CUBITT said, many noblemen and gentlemen had, since this matter was brought before Parliament, expressed to him the accommodation which would be afforded to them if they could reach the railway in their own carriages by such a road as the Grange-road, without the necessity of encountering the bustle of the Borough.

Mr. PARSONS said, it would be recollected that the London and Birmingham Company, although strongly urged to make a west-end station at Kilburn, had refused to do so because they thought it would not pay.

Mr. P. St. L. GRENFELL (Deputy-Chairman), as a Director of the Birmingham Railway, did not recollect that any urgent representations had been made to the Board on this subject, and, moreover, it should be remembered that the establishment of a west-end station at Kilburn would have cut off 3 or 4 miles of the integral Birmingham line, whereas in the case of the South-Eastern the Grange-road approach would cut off about 2 miles of toll. (Hear, hear, hear.) If the approach were found convenient for the Croydon and South-Eastern Companies, there could be no doubt that the Brighton Company would ultimately avail themselves of it, and, whether they did so by participating in the original outlay, or by the payment of toll, the cost to the South-Eastern Company would be proportionately reduced. (Hear, hear, hear.)

The CHAIRMAN said, it should further be recollected that at one time it had been proposed that the Birmingham and Great Western Railways should have one and the same terminus, and he knew of nothing that had proved more desirable for both than that each should have had a distinct and independent entrance into London.

Mr. PARSONS thought the utmost they ought to do at present was to gain possession of the land, and wait until it was seen whether the traffic would justify the future formation of a road or railway. He thought it premature and unwise to commit themselves to a permanent connection with the Croydon Company before it was definitively settled what was the maximum amount of toll that the Croydon Company would charge.

Mr. HILDYARD said, the honourable proprietor assumed, first, that the approach must necessarily be a railway; and, secondly, that the cost of constructing it would amount to a certain sum. That sum assuredly was not extravagant, but then the honourable proprietor asserted, that to pay common interest, it would require the conveyance of 1,000 passengers a-day. Of course the honourable proprietor meant that it would require 1,000 passengers over the Approach road, but he seemed to forget that if this were an improvement, its effects would extend to the traffic of the whole line. (Hear, hear, hear.) He (Mr. Hildyard) was too little acquainted with the merits of the project to give any decided opinion of his own for or against, as it was necessary that much time and attention should be devoted to the investigation, but when he heard that this question—which had not been suddenly taken up—had received the unanimous approbation and sanction of the Board, in whom even the objectors themselves professed to have the fullest confidence, he could not but surrender his individual judgment; and he did so the more readily as there appeared no disposition on the part of the Directors to squander the funds of the Company. (Hear, hear, hear.) They had not indulged in extravagant, although they had provided amply commodious, stations, and as he could not suppose that in this instance they would depart from their usual practice, he sincerely wished them the fullest success. (Hear, hear, hear.)

Mr. W. A. WILKINSON (Chairman of the Croydon Company) had felt not a little surprised to hear the honourable proprietor (Mr. Parsons) objecting to a scheme which, according to his own account, would cost about 280,000*l.*, and yet advocating one which would cost at least a million, but he now saw that the honourable gentleman's opposition was directed against a *marriage* between the South-Eastern and Croydon Companies until the maximum amount

Digitized by Google

of toll should be fixed. The Chairman was aware that such amount had been fixed, and although the honourable proprietor objected to the Croydon line, it should be recollected that, although not so good as might be desirable, it was for 10 miles made to their hands.

Mr. PARSONS explained. He had not proposed that a million should be expended, until it should have been found that the accommodation at London Bridge was insufficient. When such insufficiency had been practically proved, they might then consider the comparative merits of the Grange-road Approach, and the other schemes referred to. As to the maximum toll payable to the Croydon Company, he had understood that it was 8½d. per passenger, which was a very high toll, especially when it was taken into consideration that the Grand Junction Company paid no more than 28,000*l.* a year for the use of 30 miles of the Liverpool and Manchester Railway, with most expensive termini, and the Northern and Eastern Company only 1d. per mile per passenger, in addition to the rent of the station—which rent, however, must be admitted to be a heavy one. What he wished for was, that the South-Eastern should be a totally independent line, so that the Company might regulate their charges without referrence to the tolls of other Companies. As to the maximum toll to be charged by the Croydon Company, he wished that it were fixed not at so much per passenger, but at a gross amount per annum.

The CHAIRMAN was quite sure, and he believed his colleagues fully coincided with him, that unless the Grange-road approach were secured now, it could not be secured hereafter. So convinced was he of this fact, that he had said he would purchase the property, take it into his own hands, and carry the scheme out. (Hear, hear, hear.) If, therefore, they were to wait for 18 months, or 2 or 3 or 4 years, until, as recommended by the hon. proprietor, the traffic had developed itself, he was quite sure that they would then in vain seek to attain their object. With respect to the understanding with the Croydon Company, he thought that Company were fully and justly entitled to what the South-Eastern had to pay. It was too frequently the case in public bodies that what were called *sharp bargains* were sought after, whereas in his opinion it was the duty of Directors, while they endeavoured as far as in their power to protect the interests of their constituents, to have a regard to their own character, and while they took care that others did not gain an undue advantage over them, they should not seek such advantage over others. (Hear, hear.) He had looked upon the arrangement with the Croydon Company as highly beneficial to the South-Eastern, and he had stated as much to the Croydon Board, reminding them at the same time that it was invaluable to the Croydon proprietors. Every transaction with the Croydon Company had taken place in good faith, and he had no hesitation in saying that he considered the arrangements entered into highly beneficial to both Companies.

After some further conversation, the Chairman was about to put the motion for the adoption of the Report, when

Mr. TYRRELL inquired how the 12 miles between Croydon and Redhill were to be apportioned between the two Companies.

The CHAIRMAN explained (as at the previous meeting) that the South-Eastern Company would purchase 6 miles of the 12, and that the trains of both Companies would pass over the whole 12 miles without charge.

Mr. TYRRELL said it was now stated that the line would cost 35,000*l.* a mile.

The CHAIRMAN begged the honourable proprietor's pardon. Gentlemen might fix the cost at 35,000*l.*, 45,000*l.* or 50,000*l.*, a mile, but his colleagues and himself adhered to their previous statement of 30,000*l.*, with the margin already mentioned. (Hear, hear.)

Mr. TYRRELL said, even taking the Chairman's estimate, it would be remembered that some of the shares had been issued at 50*l.* per cent. discount, and that therefore the dividend had to be paid upon a much larger capital than the real capital. He was only anxious that the public who might be disposed to invest their money in the concern should not be misled. (Laughter.)

The CHAIRMAN thought the public were much indebted to the honourable proprietor for the trouble he was taking to protect them. (A laugh.) He might however rest perfectly satisfied. At least he (the Chairman) was perfectly satisfied. (Hear, hear, hear.) He held every share that he had originally held, and had added materially, and was continuing to add, to them simply because he looked for a satisfactory return on his capital. (Hear, hear, hear.) If the honourable proprietor and himself were to compare notes, perhaps it would be found that the weight of their property in the railway was widely different.* (Hear, hear.) His colleagues and himself, who had a large stake in the undertaking were perfectly satisfied with its prospects, and (continued the honourable gentleman, addressing Mr. Tyrrell) "pray do not make yourself unhappy about *yours*." (Loud laughter.)

The motion was again about to be put, when

Mr. WRAY said, he had some years since called attention to the appointment of Auditors, and he now wished to revive the question. He thought the nomination of Auditors would relieve the Directors from much trouble in answering questions now put to them at public meetings. In the Hull and Selby Railway Company, and in many other joint-stock bodies, Auditors were appointed; and although he did not intend to cast any slur on the mode of managing the affairs of this Company, he thought a similar appointment was desirable, and he would propose a motion to that effect.

Mr. TYRRELL seconded the motion, amid much laughter.

The CHAIRMAN said he would, with the permission of the meeting, first put the motion for the adoption of the Report; and the honourable proprietors who deemed the appointment of Auditors necessary might afterwards bring forward their proposition.

[This was agreed to, but Mr. Wray did not again moot the question.]

Mr. PARSONS inquired if the carrying of the Report pledged the proprietors to the Grange-road project.

The CHAIRMAN thought not; but that it might not be supposed that the Directors were desirous of getting rid of that or of any other question by a side wind, he would request the Solicitor to draw up a special resolution on the matter, to be afterwards proposed.

Mr. PARSONS said, he would interpose the same caution with respect to the Canterbury and other branch lines.

The motion for the adoption of the Report was then carried unanimously.

The CHAIRMAN then brought forward the motion, which the Solicitor (J. P. Fearon, Esq.) had in the meantime prepared. It was as follows:—

"That the Directors be, and they are hereby, authorised to adopt such measures as they in their judgment may think proper, with reference to the Grange-road Approach, mentioned in the Report this day submitted to the proprietors."

Mr. GRENFELL seconded the motion.

Mr. PARSONS inquired if the motion referred to the formation of a road or a railway.

The CHAIRMAN said, they could not, he believed, construct a railway without the sanction of Parliament, although there could be no doubt that a railway would best answer the purpose. As he understood the motion, it was left to the Directors to take such steps for the formation of either a road or a railway as they might deem expedient.

Mr. BARNED (of Liverpool), who was very indistinctly heard, was understood to argue for the production of further information. The two main points to be considered were, what would be the probable outlay and what the probable return. He believed the Grange-road approach would be an improvement—because he could not think that the Directors, who were so well qualified to form an opinion, would have been unanimous in recommending it if it were not likely to prove so; but he believed that the proprietors, as a mercantile body, cared little whether it were a road or a railway, so that it presented the prospect of a profitable return. (Hear, hear.)

The CHAIRMAN said, if the cost of the Approach were 250,000*l.*, the South-Eastern Company would not have to pay more than 125,000*l.*, and if the Brighton Company joined in the scheme, as he had no doubt they ultimately must, the cost would be still further reduced.

Mr. SALOMONS thought it unwise that this question should be mooted, pending the proceedings in Parliament. (Hear, hear.) He would suggest that the Directors be empowered to proceed with the scheme, provided the estimates did not exceed a certain sum. If such excess took place, then they should call the proprietors together again.

The CHAIRMAN did not care how fully or how frequently the matter were discussed, and his colleagues and himself were at all times happy to meet their fellow proprietors.

Mr. HILDYARD said, it was quite clear that whether a road or a railway were ultimately formed possession of the soil must first be had, and as far as he could judge, the motion pledged the proprietors to nothing else. It did not preclude them from expressing hereafter any opinion contrary to the opinion of the Directors, although he did not think that either the present or any future meeting would, on such a question, oppose the decision of a Board in whom they professed to have the fullest confidence, and who had given a great deal of attention to this matter. (Hear, hear.) He had said before, and he would now repeat, that he yielded his own judgment in this question to the Board; and if objections were urged to the motion, they ought to be put into a specific and definite form.

A PROPRIETOR said, the great point for the meeting to be acquainted with, was whether it would be necessary to raise any further capital for this Grange-road approach.

The CHAIRMAN did not believe that any such necessity would exist. (Hear, hear, hear.)

Mr. PARSONS, although he would rather that the whole matter were deferred, would be glad to see the proposition of Mr. Salomons adopted. He was of opinion that the whole available balance would be very nearly exhausted in completing the line to Dover, with the station and approaches at that place, and therefore he thought it desirable that, at the most, they should only take steps to purchase the land for the Grange-road approach, postponing all further operations. The honourable proprietor, after some further remarks, proposed an amendment to that effect.

Mr. BALFOUR seconded it.

Mr. WILKINSON would much rather that the proposition were met with a direct negative. Anything like halting in the matter could not fail to be injurious. (Hear, hear.) It should be recollected that the project involved a considerable saving to the South-Eastern Company.

After a good deal of further desultory discussion,

Mr. SALOMONS again brought forward his suggestion.

The CHAIRMAN said, there could be no objection on the part of the Board to accompany the passing of the original motion with a pledge that nothing should be done to carry out the construction of a railway, beyond securing the soil, without again consulting the proprietors. (Hear, hear, hear.)

Mr. WILKINSON thought that if the Directors, who had been intrusted with the expenditure of a million and a-half of money, could not now be trusted to lay out 100,000*l.*, the sooner a vote of want of confidence in them was proposed and passed, the better. (Loud cries of "No, no.")

The CHAIRMAN said, their worthy friend was at times rather effervescent. He occasionally had something too much of the Champagne principle in him. (A laugh.)

The amendment was then withdrawn on the understanding expressed by the Chairman, and the motion, having been put, was carried unanimously.

Digitized by Google

Mr. Parsons trusted that when the plan of a railway was again brought forward, it would be accompanied with detailed estimates of cost.

The Chairman hoped so, for his own sake.

Mr. Blencoe then proposed the re-election of the retiring Directors, named in the Report, which, having been seconded, and the names separately put, was carried unanimously.

Captain Tyndale returned thanks.

Mr. Parsons did not oppose the re-election of these gentlemen, with only one of whom he was in any degree acquainted, but he thought greater influence ought to be exercised by railway proprietors over the election of Directors than was at present customary. It was very invidious to object to the election of particular individuals nominated by the Directors, but he thought the difficulty might be got over by leaving the proprietors to take the initiative in these matters, instead of the vacancies being filled up, as now, by the Directors. He would move a resolution to that effect, although without particular reference to the Directors of the Company, who he believed were in general most efficient.

Mr. Wray seconded the motion.

The Chairman thought they must first get the Act of Parliament repealed before altering the mode of election.

Mr. Parsons said, the Act of this Company must be very peculiar if it did not grant such powers. He had recently had occasion to consult the Act of another Company, and he found that the Directors might, if they pleased, fill up vacancies at the Board, but were not compelled to do so.

Mr. Grenfell had no wish that Railway Boards should be converted into close boroughs; nevertheless he thought it desirable that the Directors should have the power of selecting from the proprietors at at large such gentlemen as they believed would act cordially with them. If it were not so, there would soon be an amazing number of candidates, and electioneering would go on; and if the proprietors were split into parties, persons might be thrust upon the Board to the great detriment of the Company's business. (Hear, hear.) He thought the plan prescribed by the Act of Parliament was, on the whole, the best. The parties nominated by the Board were from time to time brought before the proprietors, who might call them to account, and if necessary — although such an occurrence was not frequent—oppose their re-appointment.

Mr. Wray inquired if the Act of Parliament required that the number of Directors should be 12.

Mr. Grenfell answered in the affirmative.

Mr. Parsons would not raise an argument in the matter, although he could not concede that the practice of other Companies justified what was not right in itself. He would, however, withdraw the motion.

A series of bye-laws, for the regulation of the traffic, were then unanimously agreed to.

A Proprietor inquired if it were intended to lock the passengers into the carriages.

The Chairman said, he trusted such a practice would never be adopted on the South-Eastern line.

Mr. Bosworth inquired why the running of Sunday trains, which had been announced in the time-tables first issued, had since been abandoned. He was far from entertaining a desire for what was called Sabbath desecration, but he should be glad to have some explanation on the subject.

The Chairman said, the trains referred to had been countermanded, not because they were likely to involve a desecration of the Sabbath, but because there appeared no occasion for them, as there was but one coach running to Tunbridge on Sunday. For his own part he should, if the proprietors thought the establishing of Sunday trains likely to prove an accommodation to the public and beneficial to themselves, vote for them. There could be no doubt that when the line was further opened, as it soon would be, Sunday trains would be run.

Mr. Bosworth was quite satisfied with the Chairman's explanation. He had only been anxious to ascertain the principle upon which the running of Sunday trains was omitted.

Mr. Hildyard was glad that the principle had been so fully avowed. For his own part, he believed that when trains were so arranged as not to interfere with the devotional exercises of the public, the running of them was not inconsistent with the dictates of true religion. (Hear, hear.) He thought, however, that the non-necessity of Sunday trains had not been made out in this case, by saying that only one coach ran to Tunbridge on that day. If a person desired to spend a Sunday at Tunbridge, of course he would not think of proceeding to the spot by coach, when the whole of the day would be consumed in going and returning, but if he could go in two or three hours the case would be different. (Hear, hear, hear.) He had understood that it was proposed to run Sunday trains when the line was further opened in August. Now reckoning that each train cost for the 40 miles 4*l.*, as he believed it did, and reckoning two trains each way on Sunday, the cost per Sunday would be only 16*l.*, or for the 10 weeks between this date and the further opening 160*l.*, supposing not a single passenger to be conveyed. (Hear, hear, hear.) This was a very insignificent sum. Not that he wished to throw away pounds, or even shillings, but he was anxious that a right principle should be established. He believed that the Sunday trains, so far from involving a loss, would pay. The case of this Company was very different from that of the Brighton Company. Persons might wish to go to Tunbridge and return the same day, who would visit Brighton on Saturday, and return on Monday. In fact, several parties had expressed to him their disappointment that they had not, as originally announced, been able to visit Tunbridge last Sunday. But it was not simply a question of remuneration, or of accommodation to the public. They ought to bear in mind that a large number of new shares had just been issued, and although there could be no doubt that the proprietary was one of the soundest in the kingdom—as, indeed, had been fully proved by the appropriation of these shares—still there must be some who would be obliged to part with a portion of their holdings to make good the payments on the remainder, and it would be an act of injustice towards such parties if the public were to form their opinion of the capabilities of the undertaking from a six days' instead of a seven days' traffic. And then it might be imagined that the road was shut on Sundays from what were called conscientious scruples. He should be sorry if this question were ever introduced among the proprietors, since theological discussion was at all times to be avoided in such a body. (Hear, hear.) They could not pretend to be better than their neighbours; and no metropolitan Company had as yet shut up their line on Sundays. He hoped, therefore, the Board would re-consider their decision, and afford the public an opportunity of visiting Tunbridge next Sunday. (Hear, hear, hear.) A party might, as the trains were originally regulated, reach Tunbridge in time for divine service, partake of a quiet dinner, and return in the evening, and in his opinion a day thus occupied could not be said to be ill spent. (Hear, hear, hear.) He would not bring forward any motion on the subject, but content himself with offering a suggestion, which he always preferred to a formal resolution, and leave the matter in the hands of the Directors.

The Chairman could see very plainly the feeling of the proprietors on this question, and he had little doubt that when the Board assembled at the close of the present meeting, steps would be taken to carry the suggestion into effect. (Hear, hear, hear.) He would repeat that the Sunday trains had not been omitted from conscientious scruples, for although there might be some gentlemen at the Board who would rather that such trains should not run, the greater number thought differently.

Mr. Parsons made an inquiry respecting "free-passes" on the line.

The Chairman said, this question had been earnestly taken up at the Board meeting on the previous day. He had seen the system of free passes carried to a very lamentable extent, but he would assure the meeting that on the South Eastern line there would be no abuse of the privilege. The Directors, of course, would be able to travel free, but if they took a friend with them, they would have to pay for him, or he for himself. The privilege was to be extended to two or three only of the principal servants of the contractors, and an order had been issued directing that a return of the passes should be laid before the Board every week.

Mr. Parsons said, in some Companies the Solicitor was allowed to travel upon the line without charge. He thought this an abuse. He did not speak with reference to their own Solicitor, Mr. Fearon, for really he thought so much credit attached to that gentleman for the admirable way in which he had prepared the land accounts, which he (Mr. Parsons) had recently had occasion to inspect, and than which nothing could be clearer or more explicit, that he should not be sorry if there was a little extension of the privilege in Mr. Fearon's favour. (Hear, hear).

Mr. Cooper wished to know if anything had been done in the matter of a railway to Calais or Boulogne.

The Chairman said, the Directors had no information to communicate beyond that which was submitted to the late special meeting. The decision of the line to be adopted must rest solely with the French themselves, and it was desirable that this Company should hold themselves independent and neutral. The French were certainly moving in the matter.

A Proprietor asked if there were to be any third-class carriages on the line.

The Chairman said, there were none at present, and it must depend upon the character of the traffic whether they should be put on hereafter.

Mr. Everett, having in answer to a question ascertained that the number of surplus shares remaining after the *pro rata* distribution of the last issue was 721, complained that they had been distributed among those of the proprietors who held 25 shares or upwards, the lesser holders being excluded from the benefit. He himself held but 15, but he would have qualified if he had thought that he was not to receive his proportion of the surplus. In the Birmingham and Great Western Company fractional parts of shares had been issued, but if that had been deemed objectionable, the surplus might have been sold at the average premium. 2,000*l.* would thus have been realised, which might have been added to the first dividend, and then the benefit would have extended to all the proprietors.

The Chairman said, the question of the disposal of these surplus shares had been most anxiously considered; and if the matter were to come before them again, he did not see how the Directors could act otherwise than they had acted. They could not have disposed of the shares, for the special meeting had taken from them the power, and he was glad that such had been the case.

Mr. Wilson (a Director) said, the surplus could not have been distributed without splitting shares into quarters.

The Chairman was sure, if the honourable proprietor knew the amount of trouble which these shares had involved, he would not complain. There had been claims sent in for 30,000*l.* beyond what the Board had the power of granting. So strict had they been in carrying out this, and a previous appropriation, that Mr. Grenfell, one of their body, had suffered considerably from some slight oversight of his own.

After some further conversation,

The Chairman said, the business of the day was at an end, unless any further questions were deemed necessary.

Mr. Salomons hoped that, after so protracted a sitting, all further questions would be deferred till the next meeting. (Hear, hear.) The honourable proprietor then at considerable length eulogized the character and conduct of the Directors, stating that no Board stood so deservedly high in the estimation

Digitized by Google

of the railway public as the South-Eastern. He then adverted to the difficulties in which the undertaking had at one time been involved, and with which, from having himself been a member of the Board, he was familiar, and spoke of the persevering exertions displayed, and the commendable economy practised, by the Directors. He concluded by moving the hearty thanks of the proprietors to the Chairman and his colleagues, and their congratulations on the opening of the first section of the line.

Mr. PARSONS seconded the motion, which was carried by acclamation, amid loud applause.

The CHAIRMAN, in returning thanks, observed that the Board were, at least, very earnest in their endeavours to promote the prosperity of the undertaking with which their own was so closely associated He had again and again expressed how highly he thought of the line, and his opinions on th atpoint remained unchanged. The Directors had hitherto studied economy—perhaps they had been driven into it by circumstances, and if they had had the same means at their command as some other Boards, they would have been equally extravagant; but he trusted that having thus far, and in their days of difficulty, adhered to the principle, they would not in the time of their prosperity disregard it. (Much applause.)

The meeting then broke up.

SOUTH-EASTERN AND BRIGHTON RAILWAYS.*

To the Editor of the Railway Times.

SIR,—At the special meeting of the proprietors of the South-Eastern Railway, held recently, the assurance was repeated that the line would not cost more than 30,000*l.* per mile, accompanied by the remark, that on the cheapness of a railway rested the only hope of the proprietors, the tendency of which representation must be to produce an impression very generally that this concern presents a very advantageous subject of investment.

But although the investment may, and I hope it will, prove advantageous to shareholders who have taken their quota of new shares, which have been issued at a discount, the result will be less favourable with respect to present purchasers, who will do well to guard against being misled by the specious representation of cheapness of actual cost. What they are to consider is, the amount of annuity a 50*l.* share is likely to yield. To ascertain this, they must compare the net profits with the nominal capital, or number of shares on which the profits will be divided, which nominal capital far exceeds, in this concern, the capital actually expended, as will appear from the following statement:—

Original capital number of shares	28,000
Additional shares to raise 120,000*l.*, issued at 50 per cent. discount	5,000
Ditto to raise 700,000*l.*, issued at 50 per cent. discount	28,000
Borrowed capital, equal in shares to	14,650
Total number of shares which will be entitled to dividend	75,650

In the Parliamentary estimates the gross receipts from traffic are stated at 350,000*l.* I am aware that a revised estimate has been published, giving the gross receipts at 382,000*l.*, which would make a difference of about 5*s.* per share in the dividend. But, taking the Parliamentary estimate,

Which amounts to	£350,000
And deducting 40 per cent. for expenses	140,000
Leaving net profit	£210,000

to be divided on 75,650 shares, gives for each about 2*l.* 15*s.*; or, taking the revised estimate, would give about 3*l.* per share.

The Brighton line, from the gross mismanagement, it is said, of both Directors and Engineer, has cost nearly twice as much per mile as will be expended on the South-Eastern. Yet, according to the following statement, the Brighton line, to a present purchaser, offers a more advantageous subject of investment than the South-Eastern:—

Number of original shares on the Brighton	28,000
Number of new shares to raise 30,000*l.*, issued at 10 per cent. discount	7,500
Borrowed capital 600,000*l.*, from which deduct 350,000*l.* receivable from South-Eastern Company, leaves 250,000*l.*, equal to	5,000
Total number of shares to participate in dividend	40,500
Gross traffic on this line, per estimate	£300,000
Expenses 33 per cent.	100,000
Total	£200,000

which on 40,500 shares will pay a dividend of 4*l.* 10*s.* per share.

I have allowed a larger expenditure on the South-Eastern than on the Brighton line by 7 per cent. on the gross returns, because the working expenses on the South-Eastern line of 88 miles, the distance between Dover and London, must amount to a larger per centage on its traffic of 350,000*l.* than the working expenses of the Brighton line of 50 miles will amount to on its traffic of 300,000*l.* The former must be at the expense of maintenance of way, and all other charges incidental to a railway of 72 miles, whereas the latter have their expenses to pay on 34 miles only, being less than half the distance, and consequently requiring less than half the expense, while the amount of traffic out of which that expense is paid is but 1-7th less than that of the former.

In both the estimates above referred to, I believe that no income was assumed for the traffic within reach of the Croydon Railway, but that the mileage was taken, not from London but from Croydon.

I am aware that an additional capital of 100,000*l.* will be required for the Brighton line, but this capital will produce additional profit.

I am, Sir, yours, &c.,

GULIELMUS.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—It is amusing indeed to observe how a contemporary of yours goes blundering on, like the Engineer of the Brighton Company himself in his blue gault embankments at Redhill, in stupid iteration of the same silly, baseless, arguments in defence of that gentleman's professional reputation, and who will soon have reason to exclaim, methinks, "The Lord defend me from my friends." The only two answers he has been able to make to your very able exposure of Mr. Rastrick's ignorance of the country he had to deal with, as well as his bull-headed obstinacy in persevering in the commission of the same faults day after day (the distinctive mark of all mere practical men), have been—first, the often-quoted nonsense of the merit of his having accomplished, *a fores d'or*, what others had chosen to declare impracticable; secondly, by holding Mr. Rastrick up to comparison with other blunderers. As regards the first of these apologies, is your contemporary so badly schooled in his ancient history, or so regardless of his reputation as the writer of a journal supposed to be conducted on principles of demonstrable argument, as not to know, in the first place, that the great Sicilian inventor of the screw declared his readiness to raise the world by a lever, if supplied with one of the length he should describe; and in the second place, does he fancy that the proof of merit is to be found in the bare accomplishment of useless undertakings by an outlay not justified by the term practicable? "Impossible!" said Nelson, to an officer, "there's no such word, Sir, in my dictionary." Impracticable! I repeat; there is no such word in the vocabulary of modern terms; for, when we look around us, and observe what man has accomplished of late years, since science has been our guide, we can readily appreciate the magnificent extension of that capacious mind which felt that it could lift the world with a lever. But there is this slight difference between the Engineer of Syracuse and him of the Brighton Railway, that what one only felt was practicable if a fulcrum and lever were supplied him, the other determined to prove so, (in his undertaking) by a lever of gold. In the one, we admire the lofty conceptions of the man who first taught that to science nothing was absolutely impracticable which thwarted not the laws of nature; in the other we find the impersonation of that bold presumption, the effect of ignorance, which Pope has so finely satirised in the line—

"And fools rush in where angels fear to tread."

The second point to which I would advert is, the endeavour to screen Mr. Rastrick behind the faults of others. It has been repeatedly and ignorantly asserted, that Mr. R. is less to blame than Mr. Stephenson of the Birmingham. Now, Sir, what man of plain sense will for a moment admit that, because others have been worse, Mr. Rastrick in his turn is not to receive the castigation due to his follies; or that a proprietary who have ventured their fortunes (some their all) upon the faith of promises of a fair return for their outlay, so repeatedly and unconscientiously broken in the false estimates tendered by Mr. Rastrick, are bound to sit still, and eat their leek in patience, and with tearless eyes, merely because Mr. Stephenson, who had pronounced that the Brighton Railway was an impracticable work (for there lies the basis of the argument), has also given false estimates? I am no way a defender of Mr. Stephenson's faults, and I think he was, and is, answerable, as well, for leading along a proprietary hoodwinked; but there is this difference between the faults of the two, which should not be lost sight of. When Mr. S. undertook to construct the Birmingham road, not only was the art of railway-making then in its comparative infancy, but, though he may have stooped to disguise the real truth from the shareholders as to the great expense (if, indeed, anticipated by him) of constructing that line, and which I cannot discharge him from his share of blame for doing, he felt, doubtless, that his best exculpation would be, the triumphant success of a line of road whose traffic no other given space on the face of the old world at least, will probably ever see equalled. When Nelson, whom I have before quoted, held the spy-glass to his blind eye at Copenhagen, and exlaimed to Foley, "Now, really I don't see the signal,"—the signal to discontinue the action, and when he exclaimed again, "Now damn me, if I do," he was guilty of an act of insubordination of so high a range, that he might have lost his life to the indignant laws of his country, had he not succeeded in his high resolve to conquer; but with the prescience of a great mind, he foresaw the eventful success of his boldness, and knew that the gratitude of his country would help to blot out, from the page of history, so flagrant and so dangerous an example of military insubordinance. Just so Mr. Stephenson may have felt, that the practicability of his plan would be borne out by the ultimate triumph of the undertaking, as a profitable concern; and the reason why the just indignation of shareholders has ceased to level its shafts at Mr. Stephenson is, because the proprietors are satisfied that, though dearly payed for, the whistle is worth the purchase. This, however, is not yet (if it ever will be) the case with the highly-lauded accomplishment of Mr. Rastrick's impracticabilities. The traffic of the Brighton line, all knew, was confined to that of a mere pleasure line; and to add to this limitable kind of profit, Mr. Rastrick and his followers will doubtless claim to themselves likewise the merit of having carried the line, with the most scrupulous avoidance of every town or village in the way, through a country which, for 50 years to come, offers no sort of hope of either great intermediate passenger traffic, or any from commerce—traversing, as it does, the very poorest and least inhabited portion of the counties through which it passes. When Mr. Stephenson constructed the Birmingham road, as I said before, these great undertakings were in their infancy, and numberless were the difficulties engineers had consequently to contend with. From the highest sub-engineer to the lowest navigator on the line, both ignorance and exaction were to be encountered and endured. As yet, neither experience nor competition had begun to be apparent: iron was enormously high-priced, and every movement of an el-

gineer was attended with those outlays which are the inevitable results of a comparatively new system of things, and which each succeeding day diminishes. The improvements in the economy of time and piece labour, in the better construction of machinery and tools, and in the greater facility of procuring contractors, engineers, workmen, and materials of all sorts, are such as were more or less unknown to Mr. Stephenson; but to Mr. Rastrick, who has had all the advantage of other men's miseries, who has had a cheaper market to deal with, and who has had all the advantages of a ready supply of highly-practised workmen, and a choice of well-tested materials and plans of working, the art of railway making was, comparatively speaking, made easy ere the Brighton line was commenced; and yard per yard, of the same material, should have been constructed at less cost than the Birmingham. Neither was the country through which it had to pass nearly so impracticable as that of the Birmingham. The latter had to pass through every variety of soil and strata; in the former but three natures of material had to be dealt with, two of which are the most favourable an engineer can encounter—namely, chalk, and sand or sandstone; the remaining one, of clay, was rarely found in cuttings on this line, and should never have been used at all in the embankments, almost every yard of which might have been constructed of chalk from the two ends of the line, where it was dug from the tunnels, and had to be thrown to spoil. Mr. Locke, therefore, was fully justified in his report of the line, as to the favourable nature of the soil. "God finds meat, and the devil cooks," says the old proverb. Now, God had provided with as much providence, in this case, favourable soil, but ignorant men had found an engineer who did not appreciate or know how to benefit by the gift, and to work he went in clay, with Centaur-like labour, piling Mount Ossa on Pelion, while the finest material in the world for embankments, (chalk) was carted away on to lands purchased at an enormous cost from extortionate landowners, to enable Mr. Rastrick to throw what was valuable to waste for ever. Let the expense of these spoil lands, and the thousands laid out in repairing the slipping clay embankments, be placed against what would have been the cost of bringing the chalk of the tunnels by locomotive power, from the two ends of the line to form the intervening embankments, and then some notion will be gathered of the monstrous mistakes which Mr. R. has made through his want of geological information. It is all mighty fine for the well-payed advocates of such follies to chatter to the unreasoning many of the "geological jargon" of such observations; but any one of plain sense will readily perceive that there is more of rhyme than reason in the use of such a jingling compact of dissimilar terms; that, in fact, "fine words butter no parsnips," as the old saying is, and that Mr. Rastrick's backers, if they cannot use better means for extricating their man from the slough of despond into which he has fallen by his own obstinate ignorance, had better not sink him still further into his own favourite clay, by endeavouring to place him on a level with engineers of highly-instructed minds. My object in thus addressing you is not the vindication or condemnation of either of the parties: it is for the purpose of warning the shareholders not to continue to entertain, in their service, an engineer who treats science as a jargon unworthy his notice. The line to Brighton is now sufficiently secure to dispense with Mr. Rastrick's Atlas-like shoulders. A single Engineer at 250*l.* a year can always be obtained, who, being a younger man, and educated in those schools where geological jargon and such other superfluous learning are taught, will fully execute all that is now needful to be done in the way of repairs and finish, and the now too palpable humbug of a consulting engineer may most advantageously be done away with. Who, that appointed an apothecary to his establishment, could ever expect to have done with medicine? And so long as a consulting physician is kept by the Brighton Company there will be no want of quackery. Fresh branches to the main line, with their consequent entanglement with the interests of opposing parties, involving all sorts of expenses; new fashions of buildings and stations, and a hundred such schemes, will always be requiring the assistance of the consulting engineer, and the solemnly plausible mockery of taking the assent of the proprietors to such ridiculous plans (always to the immense future advantage of the Company, mind ye!) will be gone through, to acquit the Directors of any charge of mal-administration of the Company's affairs, while the main object—as yet not the least thought of—the acquiring of filthy lucre from the hitherto undeveloped traffic of the main line, will be entirely neglected. My warning advice, therefore, to the shareholders is, to strike a balance at once, between themselves and this expensive pupil of the Capibility-Brown school. Let this gentleman retire to the *otium cum dignitate* of his new residence in one of the fashionable west-end squares, and repose himself beneath the laurels which your contemporary has bestowed on him, as —the Great *Practicable* Engineer.

I am, Sir, your obedient servant,

H.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—I am glad to find that some of the shareholders are beginning to stir themselves in the affairs of this Company, and I hope soon to hear that an investigation is going on. This ought to be the case, and the matter should not be allowed to rest upon the *ipse dixits* of your correspondents. There is little doubt that the shareholders may get at the bottom of the whole affair, and sift out every particle of unwholesome truth in their inquiry, if they set strenuously to work on the subject; but it is of little use for them to complain loudly and act supinely. Their money is gone, and it behoves them in self-defence to find out what has become of it.

"Expositor" has completely borne out my assertion respecting the shameful job on contracts Nos. 2 and 3; and I have no doubt that he is intimately acquainted with some similar instances which I know to have occurred further down the line, where the most cursory visitor must have observed the lethargy evinced by the contractors of the works, and the gross neglect which was visible throughout the whole proceedings; but I am sorry that my engagements have hitherto prevented me from going so narrowly into the subject as I could have wished, and I am obliged to defer, until your next publication, the facts of which I am in possession from one end of the line to the other.

In the meantime, I trust the shareholders will not be idle, but that they will call on the Directors and Engineers to render up a full and impartial account of the mode in which their business has been transacted, and at once put the funds into a healthy channel, by which they may reap a due advantage, and distinguish between the parties who have pandered to their officials, and the men who have acted honestly toward the Company.

I am, Sir, yours, obediently,

ALKALI.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

Sir,—As reports are now very rife that the Directors of the Blackwall Railway Company intended to smuggle a clause into their Bill, authorising them to buy steam-boats to ply from their railway, might I and the public, through your columns, ask the Chairman to explain his statement at the last meeting, when, in answer to Mr. Bigg, he said (see *Railway Times*, March 5), "As to the steam-boats, there *was not*, *never was*, and *never would be*, any part of the funds of the Railway Company invested in these speculations." Now, Sir, not to use a harsher term, there must be great vacillation in the Management of this Company, when a few weeks subsequent to this meeting we hear of a clause in direct contradiction to the above assertion.

Allow me, also, to draw your attention, and the serious attention of my brother-shareholders, to the want of development in the merchandise traffic, which was to be so lucrative to the shareholders; and, as the effects of this non-development will evidently be a small dividend to the shareholders, and a depreciation of their stock, it now behoves them to look about and inquire into the cause, which I trust will not be found in defective management, or inadequacy in the line itself.

Your obedient servant,

BLACKWALL.

May 30, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—In reply to "Vigil's" last letter, I think I can all but demonstrate that the Great Western Railway will be able to pay out of their profits a dividend of 3 per cent. for the six months ending 30th June, 1842.

The receipts for January, 1842, were			£42,461
,,	February ,,		40,006
,,	March ,,		48,332
,,	April ,,		55,554
,,	1st to 24th May	£46,890	
	25th to 31st May, computed same as two preceding weeks	14,000	
			60,890
,,	June, computed with the average increase of the last three months		68,000
,,	Extra for the Ascot Races, and *perhaps* the cattle meeting at Bristol		4,000
Over from the last six months			10,900
Total			£330,143
The half year ending 31st December, 1841, it required, to pay the 3 per cent. dividend, the interest on loans, the appropriation fund, and all other outgoings			326,452
Leaving a surplus, on 30th June, 1842, of			£3,691

I am, Sir, yours, &c.,

A CONSTANT READER.

May 29, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—I am glad to see "A Permanent Holder of Great Western Railway Shares," in your journal of the 21st, reply to "those kind-hearted correspondents of yours, who occasionally put themselves to the trouble of demonstrating to the shareholders of the Great Western Railway Company the very deplorable nature of their property." I have no doubt this "Prominent Holder" in his arguments is correct, and I congratulate him on his good fortune in being a "Permanent Holder." There can be no doubt, as he states, that when other lines open into and communicate with the Great Western, and when a full traffic is developed, it will rank second to no railway in the kingdom, if due care, vigilance, and economy, be always exercised in its management—and soon very eminently so, when the Cheltenham and Great Western Union, and the Bristol and Exeter Railways, are completed. Then comes the Welsh and Cornwall traffic in goods and passengers: from these two sources alone the traffic to be added will be immense.

That far-famed and delightful watering-place, "Cheltenham," will produce more passenger traffic than can now, in the absence of a direct railway communication with the metropolis, be imagined.

I am, Sir, yours, &c.,

G. B.

Manchester, June 1, 1842.

GREAT NORTH OF ENGLAND RAILWAY.

To the Editor of the Railway Times.

Sir,—I shall feel much obliged to any of your correspondents if they will explain the cause of the extraordinary uniformity in the *passenger* receipts on the Great North of England Railway, the shillings and pence for the last *nineteen* weeks having been invariably 7s. 6d.

I am, Sir, your obedient servant,

J. A. G.

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

21. Mines toll to London and Birmingham 12*l.* 9s. 0d.

22. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

23. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

24. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,338*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134¾ (83¾+21+31.)

24. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 903*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half year's traffic, amounts to 130*l.* per week.

25. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 30*l.* 16s. 10d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 933,300*l* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,403*l.* 5s. 3d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, carriages, 38*l* 8s. 6d.; horses, 24*l.* 0s. 6d.; dogs, 2*l.* 7s. 6d.; parcels, 206*l.* 9s. 1d.; cattle, 20*l.* 3s. 0d.; corn, 9*l.* 1s. 5d.; heavy goods, 358*l.* 12s. 8d.; coal and lime, 98*l.* 13s. 9d.—Total, 757*l.* 16s. 5d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 2,000,000*l.* The details of the receipts are as follows—Passengers, ——; carriages and horses, —— ——; parcels, ——; mails, ——; merchandise, ——; minerals, ——; cattle, ——.—Total, ——; including North Midland proportion of Manchester and Leeds traffic, amounting to ——. [The returns had not reached us at the time of going to press.]

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

36. The traffic stated does not include the Leeds and [illegible]

TO CORRESPONDENTS.

London and Brighton Railway.—*Information as to the management of this Company pours in upon us from every side, and shall be made public in due time. Two correspondents assure us that Mr. Buckland, the Accountant of the late Investigation Committee, has been appointed to a berth in the Company at a salary of 150l. a-year. Can this be so? If so, why? Is it a sop to any influential member of the Committee? We hope not. Another correspondent wishes us to keep a watchful eye upon the forthcoming sale of some land formerly belonging to the Merstham tramroad, and which borders a farm belonging to the Chairman, near Croydon. We are glad to find that the* Guinea-Hunters *caused such dismay at the Board. "'Tis conscience does make cowards of us all."—A third correspondent forwards some strange surmises with reference to a Brighton Cemetery, with which the Chairman and Engineer of the Railway Company are connected, as to the ornamental stonework of the undertaking. The same correspondent tells us that "the Chairman and Engineer, united in bonds of indissoluble interests, have both established themselves in fine houses in the fashionable Chester square." Lucky for them that they can so manage it.*

Midland Counties' Railway.—*No good purpose could be answered by the publication of the letter of* A Midland Counties' Shareholder, *or that of a* Permanent Holder. *If the object of the writers be to improve the working of the railway, it will be better attained either by representations to the Directors, or by bringing forward the subject at the next general meeting, which must be held shortly—especially as the parties disclaim all attack upon the motives and the integrity of the Directors.*

Detector.—*The same answer as above.*

The suggestion from the correspondent who dates from the University Club *shall be attended to when we commence a new volume.*

A Looker-on *(Sheffield).—If our correspondent will furnish us with facts or arguments, we shall be happy to publish them, but mere assertions, as he must be aware, go for nothing.*

A Captain.—*There was, we believe, a clause to the effect stated by our correspondent, but it has been struck out.*

Gee Bee *would do a service to the public, if he would lay aside declamation and state matters of fact plainly. Such phrases as "lordling landowners," "brazen-headed lawyers," &c. are by no means necessary, nor is the use of them likely to forward the object which, we presume, our correspondent has in view.*

A Shareholder *(Gloucester).—We shall make some inquiries on the subject.*

Mr. George Walter *denies that he is the writer of the letter signed* Holdfast, *to which we alluded last week. We only know that it came to us from Mr. Walter, with an order for a considerable number of copies of our journal if we would insert the letter—which, however, we declined to do. If not written by Mr. Walter, it was at least very much in his style and tone. Perhaps he will next deny that he had anything to do with a letter sent to us last week, which we refused, but which, under the signature of* Justus, *a contemporary published. We cannot have anything further to do with Mr. George Walter, who, by the way, is his own greatest enemy.*

Dublus *need be under no apprehension. The dividend will be at* least *what he hopes for.*

X. X.—*The dividend is paid of course on the* nominal *capital; the new shares having been issued at a large discount.*

Senior—*5 per cent. per annum.*

We wish all our correspondents would write legibly, upon one side only of the sheet, and not use the thin paper now becoming so fashionable. The additional postage would not be much, and a vast deal of needless trouble to us and our printers would be avoided.

*** Double price will be paid by our publisher for any of the following numbers of the *Railway Times*, in order to enable him to complete sets. For the year 1838—January 13th, 20th, 27th; February 3rd, 10th; March 3rd; April 21st; October 27th. For the year 1842—February 26th.

THE RAILWAY JOURNALS.

THE three papers that treat of railway matters are the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*. Their relative circulation will be seen from the following extract from the Stamp Returns for the six months ending the 31st December last, as just printed by order of the House of Commons:—

RAILWAY TIMES	72,524
Mining Journal	38,500
Railway Magazine	30,500

Since the date of this return, the *Railway Times* has steadily increased in circulation, as will be seen by the next Return.

THE RAILWAY TIMES.

SATURDAY, JUNE 4, 1842.

THE mode of Management adopted in the Birmingham and Gloucester Railway Company very naturally excites, from various causes, considerable interest. We have reason to know, however, that many of the speculations indulged in respecting it, and not a few of the predictions hazarded as to its ultimate failure or success, are founded upon a total misapprehension of the real *facts* of the case; and under these circumstances we shall, we think, be performing an acceptable service to our readers, by furnishing a brief statement of the plans pursued, leaving to time to show how far the deductions of theory are confirmed or controverted by the results of actual practice.

Many persons have fallen into the mistake of supposing that the Directors composing the Committee act as executive officers, and interfere individually with the details of the business. This mistake can only have arisen from want of attention to the letters of the able Chairman, Captain C. R. MOORSOM, read to the public meeting in February, 1841, for in them that gentleman guards against such a construction, in the following language:—"I have no idea of Directors becoming executive officers, and no one is more decidedly opposed than I am to their giving any orders in their individual capacity, which is a practice that destroys the responsibility of the proper executives, and is entirely opposed to the division of duties I wish to see carried into effect." The following is a slight sketch of the system as it really exists.

On the 9th of February, 1841, the Board of Directors, consisting at that meeting of 8 (its complement being 12), passed a resolution empowering 5 of their number, by name, "to perform all such acts with reference to the general management as a Board of Directors might perform," and divided the management into five departments, viz.:—

Police, and general arrangements;
Finance;
Locomotive;
Way and works;
Coaching and carrying;

each of the five Directors composing the Committee taking oversight of one of the departments, but acting collectively as a Committee, of whom 3 should constitute a quorum.

This Committee, so appointed and constituted, meet every Tuesday, and oftener if business requires it; and they act through their Secretary, who records their proceedings

Digitized by Google

and conducts their correspondence in the usual way.

The Committee meetings are attended by the Superintendent (who is also the Resident Engineer), and likewise, as occasion requires, by the head of the locomotive and goods departments.

All orders are given by minute of Committee, and the Superintendent and Heads of departments are responsible for their execution.

It is understood that the respective Directors make themselves acquainted, through personal communication with the Heads, with the business of the several departments over which each presides, and that they satisfy themselves as to the way in which the orders of the Committee are executed; but no Director is at liberty to originate any order except in Committee, when the subject is discussed, and a minute made accordingly.

Each Head of department is left to himself as to the detail of matters entrusted to him, and he may consult the presiding Director of his department or not, at his own choice. He may suggest things to the Committee personally at its sittings, or in writing, as he may prefer, and he is not bound in either case to consult the Director. The Chairman, however, usually ascertains whether the presiding Director and the Head of department are agreed on any given question before it is decided.

The finance measures of the Committee are checked by three Auditors (members of the Board of Directors, not of Committee), named by the general meeting in August last, on the recommendation of the Committee in their Report, and they report proceedings to the general meeting. Their instructions will be found in the Report of August last. The Auditors may call a general Board on any question affecting the money affairs, if, after conference with the Committee, they should consider such a course necessary.

It will be seen that, under this system of 12 Directors, 8 are actively employed—5 in the administration of affairs, and 3 in checking that administration as far as money is concerned; and the whole may be united in Board on any important question.

The whole Board has occasionally met since the system was established. At a meeting on the 18th February, prior to the general meeting, the Board passed unanimously a resolution to the effect, "that after the experience of nearly 12 months—although the experiment cannot yet be said to have had either a full or a fair trial—they are unanimously of opinion that the system has answered the expectations the Board were led to entertain, and that it ought to be continued." And it is worthy of notice, that this opinion, thus unanimously expressed, is the opinion of a body of men, 5 of whom—there were 10 present—have no direct power or authority in the administration.

The system is not, after all, anything new or remarkable. The usual course of Boards is for a few, at most perhaps three or four, to get all the power and influence into their hands, and the rest take little trouble or interest in the business. But these few have no responsibility; they are not known beyond the walls of the Board-room, and they often perpetrate very objectionable things which the Board either hears nothing of, or learns only through their partial representation. This state of affairs has sometimes been attempted to be cured by dividing a Board into Committees, and giving the several Committees a charge of departments, similar to these individual Directors. The principal defects of this plan are, that some one Committee must have the control of the working of the line to the exclusion of the rest, and this Committee then becomes a *clique*, exercising power without responsibility; and also that the several Committees issue orders in their respective departments, and there is no unity of design or combined action; for although they go through the form of reporting to the Board, its meetings are too infrequent to admit of the matters reported to it being really left for its decision.

Seeing these defects, and believing that individual responsibility was the only remedy for the abuses of joint-stock Management, Captain C. R. MOORSOM suggested the system above described, as the condition on which alone he would consent to become Chairman of this Company, and we have no doubt that at the next meeting various explanations of the further working of the system will be supplied.

ELSEWHERE we publish an ample report of the proceedings of the South-Eastern Railway proprietors at their half-yearly assembly, on Tuesday last. Whether as regards the tone and temper of the shareholders and Directors, or the results arrived at, we have seldom had occasion to notice a meeting so entirely satisfactory.

The principal discussion, it will be seen, had reference to the contemplated Grange-road approach—a project in which, as our readers are aware, the South-Eastern is associated with the London and Croydon Company. Mr. PARSONS—to whom, by the way, his co-proprietors in this and other similar undertakings, are deeply indebted for his firm, yet temperate, inquiries into financial and other details—Mr. PARSONS objected to the expenditure of so large a sum of money as would be requisite to construct a *railway* to the Grange-road, (for to *that* it must ultimately come,) when a better line, and one which would render the South-Eastern Company to a great extent independent of other Companies, might be secured at a comparatively trifling addition of cost. Surely, however, the estimate hazarded by Mr. PARSONS as to the expense of constucting the Grange-road approach must be greatly over the mark. It is true, as Mr. PARSONS hinted, that a mile of the Greenwich, and much less than a mile of the Blackwall Railway, has cost something like the same amount; but in these cases there was a vast deal of house property to purchase, and there were hundreds of hungry claimants to satisfy, neither of which sources of enormous expense will, as we understand from the description given of the locality at the late Croydon meeting, have to be encountered in the case of the Grange-road scheme. With all deference, moreover, to Mr. CUBITT, who assuredly is far from reckless in his estimates, we greatly doubt whether a line from Croydon to the Elephant and Castle, could be constructed for much less than double the amount put down by that gentleman from a survey made years ago. And then, to say nothing of the opposition which such a project as an extension from Croydon would be sure to meet with, and the delay which even under the most favourable circumstances must necessarily take place before it could be carried into execution, there is the very material consideration that the cost of the Grange-road line is at once divided between two—and ultimately, no doubt, will have to be divided among three—Companies, and so far as the South-Eastern Company are concerned may be proceeded with and completed without the necessity of imposing further burdens on the proprietary. Altogether, the advantages which would result (and they are neither few nor unimportant) from an extension of the South-Eastern line, *via* Croydon, direct to the Elephant and Castle or St. George's Fields, are indefinitively remote—the benefits fairly to be anticipated from the execution of the Grange-road plan immediate and certain; and under all the circumstances the South-Eastern Company will, we think, act prudently in not losing the chance of securing the *good*, in a fruitless effort to attain the *best*. Nevertheless we are pleased to find that, before the proprietors are committed to any but preliminary and indispensable measures, a further opportunity of canvassing the project in all its details will be afforded. The decided and unanimous feeling of the Board in favour of the scheme is strong *primâ facie* evidence of its soundness, and in the meantime the course of events, and the discussions which are now going forward in our pages, cannot fail to elicit *the truth*, and set the merits and demerits of the various plans fairly before the parties interested. We are sorry to find that so sensible a man as the Chairman of the Croydon Company should have attempted to construe the prudent hesitation of the proprietors into an expression of want of confidence in the Board. The entire proceedings of the meeting, and every incident connected with the recent history of the South-Eastern Company, show, as clearly as the simultaneous "*No*" which Mr. WILKINSON's remark called forth, that there is anything but distrust existing on either side. Mr. WILKINSON, we daresay, has so fully investigated the merits of the Grange-road scheme, as to be firmly persuaded of its immense advantages to both Companies, but he should make allowance for those who have not had an equal opportunity of examining into details, or may not be of so sanguine a temperament as himself.

Another of the subjects brought forward at the meeting was the omission of Sunday trains, contrary to the announcements originally put forth. It appears from the explanations given by the Chairman, that the omission had arisen from no puritanical notions of what is called "Sabbath-desecration," but simply from an idea that Sunday trains were not required by the public until the line should be further extended, and, consequently, that they would not pay. The fact that for some time back only one Sunday coach has kept the road had led the Directors to these conclusions; but it was very fairly and very clearly put by one of the speakers, that access to railway facilities would very probably lead to a different result, and that whether profitable or otherwise, the accommodation of the public, and more than all, the mischief which might arise from a seeming sympathy with the anti-Sunday travelling agitators, rendered it desirable that in this respect the practice of the South-Eastern Company should correspond with that of their neighbours. The ready deference paid to the expressed wish of the meeting is highly creditable to the Board, and we have great pleasure in stating that *to-morrow there will be two trains each way at the hours originally announced.* Already have the Agnewites in Scotland seized upon (and held up for imitation!) the example of the South-Eastern Board in declining to run Sunday trains. If, however, they will consult our columns of to-day, they will speedily discover how widely different are the sentiments of the South-Eastern Board and their constituents, from those of the party who,

Digitized by Google

as Lord CAMPBELL expressed himself the other night in the Upper House, entertain so strong a "horror" of railway travelling on Sundays—a "horror," which we agree with the noble Lord in thinking extremely absurd, seeing that it is directed against railways alone, and not against turnpike roads.

For particulars of the other matters discussed at the meeting, we must refer to our report. We cannot, however, refrain from expressing our regret that the proposal for the appointment of Auditors should have died so completely and so ridiculously at the moment of its birth. The time chosen by Mr. WRAY for bringing forward his motion was ill-judged, and the support of Mr. RICHARD TYRRELL very naturally disinclined him from reverting to the subject. We are sorry for this, for it is in such Companies as the South-Eastern, where there is no shadow of suspicion entertained of malpractices on the part of the Management, that a stand can gracefully be made for a right principle. In some Companies that we could name, a proposal for nominating Auditors, loudly called for though they might be, would at once be regarded, and not without good cause, as imputing misconduct to the Board of Direction; but with the South-Eastern it is widely different, and had the proposition been carried in Tuesday's meeting, the force of example would no doubt have had a wide-spreading effect. We are sorry, therefore, we repeat, that Mr. WRAY should have suffered the matter to drop, albeit he was (as our great moralist says of the protege of a would-be patron) "encumbered with the help" of Mr. RICHARD TYRRELL. What a strangely-constituted mind must this Mr. TYRRELL possess, to brave the contempt and disgust which his periodical exhibitions never fail to excite!

In another page will be found a letter signed "J. C. HADDAN," commenting upon the notice incidentally supplied by us last week of Mr. ADAMS's bow-spring carriages, as now in use on the South-Eastern Railway. The tone of the letter would amply justify us in striking out the whole of the matter irrelevant to the question at issue (which, indeed, would be about nine-tenths of the epistle), but, on the principle that self-exposure is the most perfect of any, we allow Mr. J. C. HADDAN to have his say. His impertinences respecting ourselves we shall not condescend to notice—although, were we disposed to retaliate, and charge Mr. HADDAN with fathering what he never wrote, we rather think we should be much nearer the truth than in this instance he happens to be. As to defending Mr. ADAMS from Mr. HADDAN'S attacks, we need not undertake so superfluous a task. Mr. ADAMS, as our readers well know, is quite capable of standing up for himself, and we are greatly mistaken if he do not speedily satisfy Mr. HADDAN that discretion would have been the better part of valour. It is simply necessary to state, that Mr. HADDAN is the commission-agent of Mr. JOSEPH WRIGHT, the railway carriage builder, to account for the annoyance which he feels, and which he has not sense enough to conceal, at the success of a rival builder, from whom he appears to have no commission—although, if we have not been very much misinformed, it is not Mr. J. C. HADDAN'S fault, nor owing to any peculiar bashfulness on his part, that he does not at this moment draw a commission from these same bow-springs.

Having said this much, it is not requisite that we should follow Mr. HADDAN through his lengthy letter, although we shall have something further to say on the subject next week.

He appears to be special pleading on the words "whole trains." By whole trains we understand a succession of bow-spring carriages, whether supernumerary carriages are attached to the train or not. We believe the 9½ a. m. train from London Bridge, and the 3 p. m. from Tunbridge, are trains of this description. The train on which we made our report was certainly, to all intents, a bow-spring train.

To what Mr. HADDAN refers concerning broken springs,—the experimental journey to York—and the letting of the Manchester contract, we do not know; but Mr. ADAMS will doubtless explain.

Wooden wheels, of various descriptions, have been known to the railway public for some years, and, strange to say, are not general. The wheel in question does not need Mr. HADDAN'S explanation, as a wood-cut of it appeared, in company with Mr. HADDAN'S and several others, in our pages of last year.

Mr. HADDAN'S concluding insinuation we leave to be noticed by those whom it may concern. Our correspondent is deeper in the art of wheel-selling than ourselves, if such despicable tricks be really played by any makers whatever.

With regard to the invention itself, we have too often and too earnestly dwelt on its importance to the railway world to make our passing comment on the South-Eastern carriages a matter of any material consequence. As a point, however, of interest to our readers, we have pleasure in publishing the following returns of

BOW-SPRINGS MADE IN ENGLAND SINCE SEPTEMBER, 1838.

Private carriages	204 pairs.
Carts, waggons, and drays	80 do.
Railway carriages	332 do.
Buffers, double	73 sets.
Ditto, single	50 do.
Total	689

Weight of steel used, upwards of 60 tons.

A MEETING of the Birmingham and Derby Railway Company was held at Birmingham on Thursday last, for the purpose of agreeing upon a plan for raising further capital, pursuant to the powers of the late Act. So many complaints having been made (and certainly, so far as we can judge, not without good reason) of the suppressions and garblings of the local journals in their notices of the last meeting, we made arrangements for securing a special account of the proceedings. This will be found in another page, although it would seem that nothing of particular interest transpired.

New shares are immediately to be issued at a very serious discount, and upon the strength of this stock a further sum is proposed to be raised by mortgage. The scheme did not pass without opposition on the part of Mr. CRAWSHAY, Mr. ROUTH, and others, who appear to have objected, not so much to the proposal *per se*, as to the hurried way in which it had been pressed upon the decision of the proprietors. We question whether any other scheme—a scheme now unfortunately too common—than that of issuing the new shares at a figure somewhat below the present ruinously low price of the market, would have met the necessities of the case, but, nevertheless, we entirely agree with the objectors, that the matter should not have been forced upon the proprietors, without giving due time for deliberation. The requirements of the Company, we can readily believe, are urgent enough, but an adjournment for a fortnight or three weeks could not have made much difference, and probably the undesirable spectacle of a minority of 433 votes might thus have been got rid of. We believe it is customary in cases of this kind, that the plans to be recommended by the Directors shall be circulated among the proprietors previous to the meetings called to give them their formal sanction, but in the Birmingham and Derby case there seems to have been nothing of the kind. For this course of proceeding we deem the Directors in no slight degree censurable, were it only for acting in a manner so impolitic as to excite opposition.

With respect to the present condition and future prospects of the undertaking, we regret to say that there is but very small room for holding out encouragement to the proprietors. Incapacity seems to have had full sway in the councils of this Company, and its effects will be felt long, very long, after the cause has been removed. We shall have something to say on this subject hereafter, but in the meantime we would recommend the proprietors to bestir themselves. Something may yet be saved from the wreck of their property, although if they delay much longer, they must not feel surprised if the future, like the past, should prove a bitter disappointment.

THE comparative merits of the Brighton and South-Eastern Railways, as investments, are adverted to in a letter signed "Gulielmus," which we give in another part of our journal. Without entering into any lengthened discussion of the question mooted, there are one or two points respecting which we cannot but think that our correspondent is in error.

He represents the respective capitals by shares, and puts down to the South-Eastern 5,000, as necessary to raise 120,000*l.*, the shares being issued at 50 per cent. discount. He forgets, however, that the powers of the Joint Station Act have never been called into requisition, and never will, if the Brighton charge for the six miles to be purchased by the South-Eastern Company should be reduced, as it is now said it will be, to 250,000*l.*—a reduction which would add in proportion to the share-capital of the Brighton Company.

"Gulielmus" proceeds to take, in each case, the Parliamentary estimate of the probable traffic; which, as respects the South-Eastern, is all that he can do. But not so with the Brighton: for *there* facts speak for themselves. Again, he assumes that the cost of working the Brighton line will be 7 per cent. less than the South-Eastern—which is most unfair, seeing that the gradients of the latter line are very superior; and it is notorious that a line of 86 miles can be worked at a less comparative expense than one which, like the Brighton, is 52 miles in extent, that is, 34 miles shorter. It would, as experience has proved, be fairer to reverse the presumed cost of working; certainly it is most erroneous to throw the preponderance into the Brighton scale. In reference to this point, the South-Eastern has one advantage over every other railway—it has 40 miles of straight continuous line, without the slightest curve in that distance.

The Brighton earnings are taken by "Gulielmus" at 300,000*l.* per year. If they ever touch 200,000*l.* we shall be very agreeably deceived. They have not as yet averaged 3,000*l.* per week. But let us assume that they will reach

Digitized by Google

200,000*l.*, and the South-Eastern the Parliamentary amount, the result will then stand thus:—

SOUTH-EASTERN.		BRIGHTON.	
Parliamentary estimate	£350,000	Presumed annual earnings, allowing at least 50,000*l.* beyond present and past appearances	£200,000
33 per cent. cost of working	116,000	33 per cent. cost of working	66,000
	£234,000		£134,000

equal to about 3*l.* 3s. per share, which, at present prices, would be at the rate of about 12½ per cent.

equal to about 2*l.* 10s. per share, or at the present price of the shares, about 7½ per cent.

The whole management of the South-Eastern Company has exhibited so much care, and the line is laid on so excellent a plan, that we have no doubt, taking the engineering character of the line into consideration, the saving that must be made in the locomotive department, and in that arena of plunder and error, the stores' department, by the union of the South-Eastern Company with the Croydon Company under a joint Committee of thorough independence, must be very large, and will add much to the eventual profit of the South-Eastern line. Add to this also the moral certainly of a French line to Calais (a death-blow to all other Anglo-French railways), and there can be no doubt that the South-Eastern will rise into high importance. We are sure that the Brighton Company will be happy to secure the 7½ per cent. Neither Company can gain by detracting from the other; each has its own good and legitimate field of operation, and all persons connected with both have enough to do without meddling with their neighbours.

It is stated that the Great Western Company have, at the suggestion of the Railway Department of the Board of Trade, given up, or are immediately about to give up, the plan of "locking in" their passengers, and, as we believe the practice was confined to that Company, it is not necessary further to discuss the question. Another letter in favour of the "locking-in" system will be found in another column. *Valeat quantum.*

A further trial of the Atmospheric Railway took place yesterday at Wormwood Scrubbs. There were present, among other gentlemen, Mr. George Rennie, C.E.; Lord Bruce; Honourable Thomas Vesey; Dr. Buckland; Dr. Arnott; Dr. Conquest; Mr. Cottam; Mr. Hallam; Professor Wheatstone; Sir John Croft; Mr. Vernon; Baron de Steinburg; Mr. George Palmer; Mr. Doull, C.E.; Mr. C. Vignoles, C.E.; Mr. Guthoven, C.E.; Mr. James Pim, jun., of the Dublin and Kingstown Railway; and a very large number of the first City capitalists.

The experiments were highly satisfactory. The speed attained was considerably above 40 miles per hour, and the vacuum varying from 24 to 25 inches of mercury.

It will be seen, from a notice which appears elsewhere, that the Grange-road Approach Bill was rejected in the House of Commons last night, by a majority of 148 to 88. The principal ground of objection appears to have been, that the Standing Orders for a *Railway* Bill had not been complied with. We shall revert to the subject next week.

The members of the French Commission for making researches and experiments as to improvements in the manufacture of axletrees for locomotive steam-engines, the resistance they have to sustain during their use, and the proofs to which they ought to be previously subjected; and secondly, to study the various means which ought to be employed to diminish the effects and dangers to arise from shocks and collisions on railways, have been nominated by the Minister of Public Works. They amount to 17 in number, having M. Cordier, the peer, for their President, and M. Teisserence for their Secretary. They are all scientific or practical men.

RAILWAY OFFENCES AND OFFENDERS.

We learn from the Worcester papers that on Wednesday week one of the Birmingham and Gloucester Company's servants, named Musto, who was employed near the Eckington station to adjust the "points," was run over by the first morning mail train. It was supposed that it having been the night of the Eckington wake, he had taken too much liquor (this, however, has been subsequently denied), and was either asleep or incapable of accomplishing his task with sufficient quickness or steadiness; for when the train came up he had not performed his duty, and the engine passed over his leg, below the knee, breaking the bone, and severing the leg, with the exception of a piece of flesh. It will hardly be credited, but it is nevertheless true, that the unfortunate fellow, perceiving the state of things, with the utmost *sang froid* took a penknife from his waistcoat pocket, and *completed the amputation by cutting the flesh through!* He then took up the detached member and threw it on the platform, where he himself crawled, and lay for upwards of an hour, till medical assistance was procured from Pershore, and the leg was then amputated above the knee. He was removed, and at the time of our last account was doing as well as could be expected. No blame can be attached to the engine-driver.

"Strange as it may appear [says the *Worcestershire Chronicle*], on the night following the one on which this accident occurred, another man fell asleep at the same spot. He was named James Playdon, and was placed to discharge the same duty as that performed by Musto. Both the men had been employed a long time on the railway, so neither can be excused on the score of inexperience. When the mail train arrived at half-past two, there was no one to turn the points. The steam-whistle was used vociferously, and the men with the engine hallooed most lustily, but no one appeared. At length the train was stopped, and a search for the missing functionary commenced. He was found fast asleep on the platform, and it took a great deal of shaking to rouse him from his deep slumbers. He also, unwarned by the sad example of the preceding night, had been tippling. On the following day, Playdon was taken to Tewkesbury, before the magistrates, *and was most deservedly committed to prison for two months, with hard labour.*"

On Wednesday week, R. Chadwick, foreman of the platelayers employed upon the Duffield contract of the North Midland Railway, was taken before John Strutt and Fras. Hurt, Esqrs., magistrates, charged by Mr. Faulkner, general inspector of the line, with having placed a lurry laden with broken blocks upon the line, and not having the signal exhibited at the proper distance, viz., half a mile from the point where the lurry was placed. He was severely censured by the magistrates and convicted in the penalty of 1*l.*, and 12s. costs.

On the same day, Joseph and Wm. Booth were taken before the same justices and convicted in the sum of 15s. costs, for having trespassed upon the line after having been frequently warned off.

Last week, William Ward was summoned before the magistrates assembled in petty sessions at Burton-upon-Trent, charged with riding in one of the carriages on the Birmingham and Derby Railway without a ticket, with the intention of defrauding the Company. He was convicted in the penalty of 20s. and costs.

On Wednesday, the 25th ult., William Jervis and William Lucas were taken before Sheriff Campbell, at Paisley, charged with having trespassed with a horse the night previous on the Glasgow and Paisley Joint Railway. The parties—who were in the employment of the contractor of the Greenock Railway, and wanted to borrow some earth-waggons from the contractor's superintendent of the joint line, were proceeding along the line for that purpose when arrested by a policeman—having pleaded guilty to the charge, and stated their ignorance of its being a violation of the Company's regulations, were fined in the mitigated penalty of 10s. each, with costs.

On the previous day, James Buchanan, itinerant auctioneer, in an intoxicated state, entered and passed through the Ayr Railway station without a ticket; and, on being detained, resisted and to strike and obstruct the manager and his assisted in the execution of their duty, thereby attempted detaining the train two minutes past the time of starting. Having been apprehended and brought before George Taylor, Esq., justice of the peace, he pleaded guilty, and was sentenced to pay a fine of 1*l.*, or to suffer eight days' imprisonment.

On Tuesday week two young men of respectable appearance, named Harris Sloane and Robert Loyd, were placed at the bar of the Borough Court, Manchester, before Sir Thomas Potter and Mr. Alderman Walker. Superintendent Stephenson said, the prisoners were given into his custody, charged with embezzling 34s. the property of the Manchester and Leeds Railway Company. The prisoners were employed as clerks in the Company's service, and it was Loyd's duty to receive the tickets from the passengers as they got out of the carriages at the railway station, Manchester. He held back four of those tickets, and sent them to Sloane, who was stationed at Normanton; and he, having altered the dates and numbers, re-issued them, and embezzled the money (amounting to 34s.) which he received for them. The case having been made out, Mr. Walker directed Superintendent Stephenson to take the prisoners before the magistrates at Wakefield, as the embezzlement was committed within their jurisdiction. The accused have since been committed for trial.

A Vienna letter of the 16th ult. says:—"The works on our railways are going on with great perseverance; that to Prague will be finished in three years; and that to Trieste in six years."

Messrs. Barr and Boyd of Renfrew have taken a lease of the railway to that burgh, for a year, at 1,001*l.* The carriages are to be drawn by horses, and several light new ones are to be put on as soon as possible.

PROCEEDINGS OF THE HOUSE OF COMMONS ON RAILWAYS.

BRISTOL AND GLOUCESTER RAILWAY.

May 31.—Message from the Lords that they have agreed to the Bill with amendments.

LIVERPOOL AND MANCHESTER RAILWAY.

May 27.—Petition for Bill reported; Report referred to the Select Committee on Standing Orders.

May 30.—Petition of the Manchester and Birmingham Railway Company, in favour of the application; to lie on the table.

May 31.—Resolution of the Standing Orders Committee reported, and agreed to:—"That, in the case of the Liverpool and Manchester Railway petition, the parties be permitted to proceed with their Bill, on giving forthwith the notices in some one and the same newspaper published in the county of Lancaster, and in the *London Gazette*, for three successive weeks; and that the Committees on this and the preceding Bill do examine, in the first place, how far such orders have been complied with, and do report the same to the House, on the Report of the Bill."

Report [this day] from Select Committee on Standing Orders, read; Bill ordered to be brought in by Viscount Sandon and Sir Howard Douglas.

June 1.—Bill "for better enabling the Liverpool and Manchester Railway Company to extend the line of the said railway, and for amending and enlarging the powers and provisions of the several Acts relating to such railway," presented, and read first time.

LONDON AND BLACKWALL RAILWAY.

May 31.—Mr. Speaker reported the Royal Assent to the Bill.

LONDON AND GREENWICH RAILWAY (No. 3).

May 31.—Mr. A. S. O'Brien (Northamptonshire), selected, and added to the Committee.

NORTHERN UNION (NEWCASTLE AND DARLINGTON JUNCTION) RAILWAY.

May 31.—Message from the Lords that they have agreed to the Bill with amendments.

June 1.—Lords amendments agreed to.

SAUNDERSFOOT RAILWAY.

May 31.—Mr. Speaker reported the Royal Assent to the Bill.

STOCKTON AND HARTLEPOOL RAILWAY.

May 27.—Bill read a third time and passed.

THAMES HAVEN DOCK AND RAILWAY.

May 31.—Mr. Tufnell (Devonport), Mr. T. Mackenzie (Ross and Cromarty), selected, and added to the Committee.

THE GRANGE-ROAD APPROACH — LONDON AND CROYDON RAILWAY BILL (No. 2.)

House of Commons, June 3.—Mr. CLIVE moved the order of the day for the further consideration of the London and Croydon Railway (Grange-road Approach) Bill.

Sir E. KNATCHBULL rose to oppose the further progress of this Bill, on the ground that, according to the present clauses of the Bill, the Company would be empowered to convert the road in question into a railway at some future time, although it was only proposed at present to form a common road approach. He moved, therefore, as an amendment, that the Report be further considered that day three months.

Viscount MARSHAM having seconded the amendment,

Mr. KEMBLE rose to support the original motion. The present was the second Bill that had been brought in, the first having been objected to on the very ground now suggested against this, and to satisfy the Greenwich Railway Company, who were the opponents. It would be rather too hard, therefore, to reject this Bill on grounds that had originated with the objectors themselves. If the clauses in the Bill were not sufficiently strong to prevent the evil apprehended, the promoters of the Bill were quite willing to have any clause more stringent introduced.

Mr. STRUTT considered the clauses of the Bill so framed as to admit of the conversion of the road into a railway, which never was intended by the Committee, and he should therefore support the amendment.

Mr. DARBY supported the original motion. The clauses now objected to were framed by the opposers of the Bill in order to secure them against any alteration of the plan proposed, and now they turn round and object to those very clauses. The fact was, the Greenwich Railway Company wanted to establish for themselves a monopoly in the London terminus, and prevent the formation of the depot proposed by the Bill.

Mr. W. PATTEN had prepared a clause which he thought would obviate all objection, and, if it were inserted, he should support the origiual motion.

Mr. ESTCOURT opposed the further progress of the Bill.

Mr. BARNARD supported it.

Mr. M. ATTWOOD would support the amendment, on the ground that the Standing Orders had not been complied with.

Mr. LABOUCHERE expressed his intention of also supporting the amendment. The Chairman of the Standing Orders' Committee had stated that those Orders had not been complied with, and for that reason the amendment should have his (Mr. Labouchere's) support.

After some further discussion the House divided.

For the original motion.....	88
For the amendment.....	148
Majority.....	60

The further consideration of the Report was accordingly postponed for three months.

"LOCKING-IN" ON RAILWAYS—GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The "glorious minority of one" may yet be *the right one*, and, like the broad gauge, stand alone, to the insignificance of the "nine-tenths" of railways; and I cannot but feel satisfied that the only argument which its opponents can use against its management is, the hacknied cry of "infringement of the liberty of the subject," (help the mark!) and, which I am sorry to add, is but too often used to screen some sinister object. This, Mr. Editor, I would not, and do not, for a moment impute to you, and I should have been glad if in your remarks upon my letter there had been more real argument—by which at least you might have shaken my faith, and enabled me to feel more reconciled to the change which is to take place. You beg to be informed of "the times when, and the places where, these individual accidents* to which I have alluded have occurred." Allow me to refer you to the "Report of the Officers of the Railway Department," merely mentioning two which occurred on the Grand Junction, on the 27th and 28th October last, whereby Mr. Thomas Phillips, professor of music, and a Mr. William Lowe, lost their lives. If I am not misinformed by a gentleman, who has had every opportunity of obtaining correct information from the Board of Trade, their books will show about 24 more cases of various accidents, arising from unlocked doors; the numerous others which have occurred previous to this branch of the public service taking the supervision of railways it is impossible now to obtain. These, you say, "may all be chargeable solely upon the imprudence of the sufferers themselves." I beg to differ; and should attribute most, if not all of them, to the nervous, agitated, and bewildered state of these unfortunate passengers. Now I would ask, in defence of locking-in, where has there been an instance of one accident from that, if we except (as I contend we ought) the Paris and Versailles one, and where the charge has been brought forward without reflection, maintained without justice, and persisted in dishonestly by those who, prognosticating a possibility of a similar catastrophe on the Great Western Railway, blind themselves to the fact of the vast difference of the construction of the carriages on the one line to that of those on the other, and which I would compare to the difference of strength between the *sapling* and the *pride of the forest?* I must here express my regret at your still harping upon the *improbable* "burning alive in a train;" such expressions are fit only to alarm the timorous and ignorant, and to the stronger reasoning mind they must be nonsensical. I readily grant you, that "the chances are a thousand to one against the situation" in which I had pictured a train of passengers with unlocked doors, and that "such a disaster must be very peculiarly situated indeed;" and, surely you will admit as readily, that the chances of the Paris one were equally remote, and equally peculiar, *and yet it did come!* I can assure you, Sir, as a frequent traveller on railways, I have given the subject on which I have written much thought, and I declare that I have looked at it with an unprejudiced mind. For you to bring to your aid such a letter as the Rev. Sidney Smith's is surprising. It is written, as you truly say, "with a good deal of apparent prejudice, and something of irreverent and rather inappropriate wit"—I would add, unbecoming a Christian minister, for its want of truth and feeling. Witness the levity with which he treats the idea of a "half-yearly coroner's inquest" on "some poor idiot" killed by a train; witness the false assertion that "men cannot persuade the females of their family to travel by railway;" witness the statement "that passengers contemplate a journey with horror." Do not the unruffled faces, and show of females by each train, contradict these statements?

Accidents in most cases are sudden, and consequently unavoidable. To imagine, then, that by leaving the doors unlocked we can escape the greater for a lesser evil, seems to me preposterous. Mr. Smith's cases of the packets and stage-coaches appear to me to favour locked doors. A "Sam Weller" of former days, without "tying his passengers on the roof," had them more completely under his care than the conductor of a railway train even with his key. He saw them—he spoke to them—they heard him, and they saw and knew their danger. This effectually tied them to their seats; and if the danger came upon them, their own sense, or wanting that, the coachman's warning voice "to keep their seats," was in most cases the preservative of their lives and limbs. Not so the railway passengers. The danger, if even small in itself, is magnified by its uncertainty; the Socrates, Solons, Solomons, and Sidney Smiths, wise in their own conceits, increase the alarm; and "timid women, old people and sick, sages, philosphers and bishops," become fools; and "fools must suffer for their folly!" In packets, passengers are not locked in their cabins, but they are locked on board with a powerful key—the blue water which bears them. The danger of the storm, of fire, of concussion or of foundering, will not tempt them to jump overboard.

"Better to bear the ills we have, than fly to others that we know not of."

In fact, passengers on entering on board of a vessel for a voyage, feel that the safety of themselves is placed (under Divine Providence) in the the hands of the captain and his crew, with the full knowledge that they will strain every nerve to preserve those entrusted to their care, or lose their own lives in the attempt. And thus I would look upon passengers by a train, placing themselves in that train under the care of the driver, conductor, and guards, with a certainty that they will do all to preserve their lives which they can do for their own.

I cannot but admire the remark of Lord Lyndhurst upon the subject, and feel satisfied that the majority of Mr. Smith's "children of the west" are of the same opinion.

I am, Sir, your old subscriber,

K. W.

"LOCKING IN" ON RAILWAYS.—GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—We are not to do evil that good may come. Surely the Great Western Directors had better unlock their doors, *sponte suâ*, with a good grace, and please the public who support their line, than be compelled (as they will be, sooner or later) to do so.

I believe the Company would be the pecuniary gainers.

I remember two or three years ago, that twelve of the guards on the Birmingham and Liverpool (the Grand Junction) were instantly dismissed for having *connived* at some passengers going further than they had taken tickets for. That Company then ceased to lock their doors, and there has been no more dishonesty. I do maintain, that the present locking-up system is unwarrantable, is a temptation to fraud, and is not fair and *open* to the liberty of the subject. Where is a line better conducted, or has more traffic, than the London and Birmingham? The doors are not locked *there*. I am, Sir, yours, obediently,

UBIQUE.

May 30, 1842.

(*Official Circular.*)

Railway Department, Board of Trade, Whitehall, May 26, 1842.

SIR,—The attention of the Lords of the Committee of Privy Council for Trade having been drawn to the practice of locking the doors of railways carriages in consequence of the recent disaster on the Paris and Versailles Railway, their Lordships have referred the subject to the Inspector-General of Railways, Major-General Pasley, who has reported to the following effect:—

"That his opinion is decided that passengers in a railway carriage ought not to be shut in by locking both doors, without the power of getting out, though it is proper and useful to lock all the carriage doors on the off side towards the middle of the railway, where they might be crushed by a train moving on the other side; that if the passengers have the power of getting out on the near side of the train only, it may be the means of saving their lives under many circumstances which are too obvious to require explanation, and that the opposite practice of locking up passengers is said to have caused the loss of many lives which might otherwise have been saved in the late lamentable catastrophe at Paris.

"That the practice of locking both doors has been adopted by one or two Companies in this country, from a belief that it is safer to deprive passengers of the means of jumping out when the train is in motion; but that this precaution is of little use in the case of third-class carriage passengers who travel in open carriages, and can seldom be of use except in the case of persons reckless from the effect of liquor, or devoid of common prudence, in which case any accident that might occur would be justly attributed to the individual himself, while, in the case of lives being lost in consequence of the passengers being locked up, the blame would be properly attributed to the Directors."

I am directed by their Lordships to request you to call the attention of the Directors of the —— Railway to the above Report, and to express to them their Lordships' opinion that the course recommended by Major-General Pasley should be invariably adopted. A reference to the late accident on the Paris and Versailles Railway, together with that which occurred in October last on the London and Brighton line, also induces their Lordships to recommend that, where it is necessary to employ two engines in drawing a train, care should be taken not to use engines of different power and construction, and especially not to place a four-wheeled engine immediately in front of one with six wheels.

I am, Sir, your most obedient servant,

S. LAING.

To ——, Esq., Secretary to the —— Railway Company.

GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—The Grand Junction have the unenviable reputation of being a grasping Company, and I think with some reason, judging from their new time-table, which I have seen advertised in this morning's paper. Their *only* second-class train leaves Birmingham at 4 30 p.m.—too late for all passengers to Preston and northwards, and compelling passengers for Liverpool, however early they may leave London, either to pay first-class fare, or else to reach their destination about nine o'clock, when the business of the day is over.

If the down train at 11 30 a.m. were mixed, as it ought to be, persons of moderate means would be enabled to go north in a second-class carriage in one day*—an accommodation which, upon every principle of justice, they are entitled to, but of which they are deprived by the power which the central position of this Company has enabled them to assume.

I am, Sir, your obedient servant,

MERCATOR.

Commercial Sale-Rooms, Mincing-lane, May 28, 1842.

MR. ADAMS'S BOW-SPRINGS, &c.—SOUTH EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your leading article of the 28th ultimo, you have furnished the public with a very flattering account of the opening of the South Eastern-Railway, in which the easy wheels, easy springs, and easy motion of the carriages, are depicted in colours almost as rich as the superb "Wellington brown" by which the panels of the carriages are really adorned. It is not my purpose, Sir, to question the truth of your eulogium on the beauty, ingenuity, and ease of the carriages on the South-Eastern line. My anxiety is, that the credit of all that excellence in the structure and arrangement of the train which the article describes, should be distributed in its *just proportion* among those to whom it is due. I humbly think, Sir, that in this quality of *justice*, your leading article is signally deficient. The name of *one* gentleman figures conspicuously, indeed I may say exclusively, in your leader of the 28th. That Mr. Adams has been his own trumpeter in the article in question I will not presume to affirm, but if not, he certainly has got some friend to blow for him most loudly and lustily. If the article were divided, after the fashion of sermons, into heads, the discourse would seem to divide itself into three topics; 1st, Mr. Adams's bow-springs; 2nd, Mr. Adams's wooden-wheels; and 3rd, the equal-wheeled bow-spring road carriage, built by Mr. Adams for his Grace the Duke of Wellington.

My business, Sir, in this letter, will be principally with the first two topics of your discourse. With the last I have not much concern; but, in order that I may not violate those principles of justice to which I am now making my appeal, I feel bound at once to bear my ready testimony to the clever adaptation of Mr. Adams's bearing springs to private carriages on common roads. I cannot, however, admit that the success which has attended the use of them, when applied to *small private four-wheeled carriages* running 7 or 8 miles an hour on a turnpike road, is any proof of their adaptation to carriages of a totally different construction, running on rails at the rate of 30 miles an hour. As to the ease and pleasantness of the motion of carriages on Mr. Adams's bow-springs, I would like the liberty of observing, that a "boat-like" motion is to some stomachs anything but agreeable; and although a "paralytic" may, perhaps, greatly enjoy this motion, yet if, as certain untoward accidents to Mr. Adams's bow-springs have lately demonstrated, these springs, easy as they may be, are liable to a sudden "snap," I apprehend that even a "paralytic" would be of opinion that easy motion might be purchased at too high a price. But these are matters of taste and opinion; and my business now is with *facts*, which Mr. Adams or Mr. Adams's friend has, I must not say distorted or perverted, but most strangely misunderstood and misrepresented; and it so happens, that the misunderstanding and misrepresentation are all in favour of Mr. Adams's "bow-springs," "buffer arrangement," and "wooden wheels." The public is informed, Sir, by your leading article, that "for the first time on an English line, whole trains composed of carriages on Mr. Adams's bow-springs, and fitted with his elastic buffer arrangement, are daily in use." "Hitherto," the article proceeds, "these carriages have been mixed up with others, marring their perfect action, but now that they constitute entire trains the result is uniform motion." In this passage, Sir, you present the public with cause and effect: the cause, "whole trains of carriages on Adams's bow-springs;" the effect, "perfect action"—"uniform motion." Now Sir, I cannot help thinking that when your readers are put in possession of the facts of the case, they will be of opinion that the Editor of the *Railway Times*, or Mr. Adams, or Mr. Adams's friend, or whoever the writer of the article may be, is much addicted to what by the learned is termed "hyperbole," and by the vulgar *exaggeration*; and that by "whole trains" and "entire trains" on Adams's bow-springs, he merely means a *few such carriages*, interspersed here and there in the midst of a train. You doubtless remember, Mr. Editor, the old story of the lad who, using the above rhetorical figure of *hyperbole* somewhat freely, exclaimed that he had seen a *thousand cats*, thereby meaning figuratively to inform his hearers that he had seen *one*. To descend, however, from the lofty regions of rhetoric, to plain matters of fact:—Of the 72 carriages on the Dover railway, 25 *only* are furnished with Adams's buffing and bearing springs; and at *no one time* have these latter carriages ever formed an entire train, but have been invariably mixed with carriages not furnished with Adams's springs. If then, Sir, as your leading article asserts, the "action" of the carriages on the South-Eastern Railway is "perfect," and the motion "uniform," it seems to follow, as a strict logical deduction, that "perfect action" and "uniform motion" may be obtained even in a train where "bow-springs" and "buffer arrangement" do not predominate or prevail. Whatever, therefore, may be the advantages of whole trains composed of "carriages on Mr. Adams's bow-springs," and fitted with his "elastic buffer arrangement," or his "shifting fulcrum, drawing and traction springs," these advantages are *at present* conjectural and prospective merely (unless the expeditious removal out of sight of a broken bow-spring, which occurred on the first trial, be deemed a merit). And, however great those advantages may turn out to be, it is somewhat difficult to conceive how entire trains thus composed could surpass your description of the trains *at present running* on the South-Eastern Railway. "Perfect action," "uniform motion," according to your own leading article, we have already attained to, without "entire trains on Adams's bow-springs fitted with his buffer arrangement;" and I should be glad to know what *more* than "perfect action" and "uniform motion" could be obtained, though the whole train, from the engine to the last luggage van, were nothing but "bow-spring" and "buffer arrangement." Mr. Adams has had a *finger* only in the pie, and the *Railway Times* pronounces the dish to be the *ne plus ultra* of delicacies: it could not therefore be *improved* possibly; it might be deteriorated, if Mr. Adams were to be entrusted with its *entire* concoction, and were he to introduce in much larger portions this favourite ingredient of "bow-spring" and "buffer arrangement." The public, Sir, are no doubt captious and carping enough about railways, and are much addicted to incessant grumbling, whether with or without cause; but I am disposed to think that the most discontented of the grumblers would be satisfied with "perfect action" and "uniform motion," and would be well content to regard *whole trains* of bow-spring and buffer arrangement as a beautiful theory, highly credit-

* The difference of expense, between first and second class, from London to Lancaster, is about 20s.—a great object to persons of limited means.

Digitized by Google

able to Mr. Adams; but which the present enjoyment of "perfect action" and "uniform motion" would not render it worth while to reduce to practice.

But, Sir, if the advantages of these entire trains are at present problematical, the advantages of Mr. Adams's bow-springs, in their present limited use, have been brought to the test. I have already alluded to the possibility of some poor invalid (to whom your article especially recommends carriages on Mr. Adams's springs), while luxuriating in their "boat-like motion," being suddenly started from his repose, and discovering that "bow-spring" and "buffer arrangement" do but furnish another illustration of that sad truth that ease and security cannot always be combined. Pray, Mr. Editor, did not the experimental journey to York of Mr. Adams's patent springed specimen carriage reveal the secret that these springs, however much to be admired for their ease, are rather deficient in safety; and may it not have been from a conviction of the fact, thus discovered, that the Manchester and Leeds Railway Company last week ordered 12 new carriages which are not to have bow-springs, although Mr. S. Adams himself tendered for them, and was thus afforded an opportunity of proving how much cheaper *he* could build a carriage than other people? As to the economy of carriages built with these springs, it is well known that Mr. Adams differs in opinion from all other carriage builders. *He* pronounces *them* obstinate and prejudiced, they are not improbably disposed to return the compliment.

I have, however, been led into a digression as to the merits of Mr. Adams's bow-springs, and as to the probable advantages of whole trains thus composed, whereas my present business is to set the public right as to *facts*, and to prevent their being misled by the statements in your leader of the 28th. I trust that by this time, your readers distinctly understand (notwithstanding the assertions of the article in question), that an entire train of carriages on Mr. Adams's "bow-springs" yet remains to be tried "for the first time on an English line."

Now, Sir, a few words as to the *wooden wheels*, with regard to which there is in the article an insinuation rather than a direct statement. The public would certainly presume from your leader that the use of wooden wheels on railways was Mr. Adams's invention, whereas, to use the *hyperbolical* language of your article, they are "old as the hills." The particular merits of Mr. Adams's wheel I am not here discussing; suffice it now to observe, that the use of the above material, in the construction of wheels for railway carriages, is not, as implied in the language of your article, the invention of Mr. Adams. Having thus disabused the public of the notion instilled into them by your leading article of the 28th, that the whole of the carriages (the ease and comfort of which they may have enjoyed at the opening of the South-Eastern Railway) were furnished with Adams's buffing and bearing springs, I deem it right, in order that the credit of any superiority in the trains in question may be *justly* apportioned, to state, that the *whole* of the carriages on the Dover Railway were designed by Mr. Joseph Wright, and are placed upon *my own patent vent axle wheels*, with the exception of two, which have Mr. Adams's wooden wheels, and two which are furnished with Hague's plate wheels. I think it right, also, for the credit of the builders, to state that 20 of these carriages were built by Mr. S. Adams, 36 by Mr. Wright, 8 by Mr. R. Jeffery, and 8 by Messrs. Lloyd, Forsters, and Co. Now, Sir, I am not about to boast that the "perfect action" and "uniform motion" which you eulogise, are attributable to my own wheels, nor am I about to state that *whole trains* are running on the South-Eastern line on these wheels, leaving the public to *infer* that they are indebted to my wheels for "perfect action" and "uniform motion"—though, in this latter statement, I should be much nearer the truth than the author of your article in asserting that whole trains are running on Adams's springs, and if puffing be allowable, I think I should prefer puffing myself to employing either a gratuitous or a hired puffer—but my object is simply to let the *facts* be stated, leaving the railway public to draw the inferences. I should not, indeed, have quarrelled with Mr. Adams, or with any friend of his, if, after stating the *real facts* relating to the carriages composing the South-Eastern trains, he had chosen to attribute the perfection of action and uniformity of motion to the admixture of "carriages on Adams's bowsprings fitted with his buffer arrangements." I should, indeed, have differed from him in this opinion, but this would have been a matter of *opinion* merely, and not a question of *fact*. My complaint, and I think a just one, is, that *facts* have been *misrepresented* to serve the interest of Mr. Adams. The facts *are now* before the public; with the public I leave them.

That the truth of the representations which I have made may be the better tested, I send you herewith drawings of the various Dover carriages, and also correct drawings of various wooden wheels (including Mr. Adams's), which you are at liberty to publish should you think fit.*

I beg, Sir, to express my hearty concurrence in your commendations of the whole of the arrangements of the South-Eastern line. Upon the Directors those arrangements reflect the highest praise, and I feel satisfied that they are no parties to misrepresentations, by which the interests of some of their contractors are to be promoted at the expense and to the detriment of others.

Before I conclude, in order to give the public some notion of the mode in which the railway contractors occasionally succeed in obtaining orders, I subjoin an approved receipe for getting orders for *wheels*, by which the uninitiated in these matters will, doubtless, be much edified.

Send a set of wheels (by *mistake*) to a railway; dispatch at the same time a note to the Superintendent, *regretting* that the wheels have been forwarded *in mistake*, as they were for the *London and Birmingham Railway*, but requesting that, as they are equally suited to the railway at which they have arrived by this unfortunate mistake, they may be kept to save the carriage back again.

A report will then rapidly prevail that *your wheels* are *used* by the *London and Birmingham Railway*, by which your pocket will be benefitted at the smallest possible expense to your conscience. *Probatum est.* (*Sic* in MS.).

I am, Sir, yours, obediently,

J. C. HADDAN.

29, Liverpool-street, King's Cross, June 2, 1843.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your correspondent "G. Green," whose letter appeared in your columns of the 21st instant, like most of the Greenwich advocates, begins at the wrong end of the argument, and therefore arrives at no satisfactory conclusion either for himself or others. To show the fallacy of his statement, I must lay down certain propositions, which must in the first place be admitted, or my labour is useless; and the mere statement of these will save reasoning, as their proof has been already established.

First, then, the Croydon traffic can only be profitably conducted at low fares, as high fares drive the custom away.

Secondly, low fares can only be adopted when, by bringing travellers in greater numbers, they reduce the amount of expenses on each passenger.

Thirdly, any one charge which maintains its high-fare rate per passenger in low fares, impedes *pro tanto* the carrying out of low fares.

The Greenwich toll is a high-fare rate, and therefore inconsistent with, and destructive of, low fares. But this toll graduated to the fares, according as they fluctuate, or compounded for by a fixed annual payment, would be more productive to the Greenwich Company than any fixed toll per passenger at high fares, and consequently infinitely increase the number of passengers.

Who, then, can complain that the maximum toll imposed by the Greenwich Company should be met by corresponding maximum fares on the part of the Croydon Company? I confess that, were the Croydon Railway entirely mine, instead of being so in a very small degree, I would at once resort to the maximum fare of 3½d. per mile, making the charge 3s. from London Bridge to Croydon. I know this would yield no return to me, neither would it to the Greenwich Company; but surely, so long as the contest lasted, I might depend on the other parts of my business, namely, the toll of the Brighton and Dover Companies, and also pay such attention to the traffic between Croydon and New Cross as would keep it alive until I got an outlet nearer London—at the Grange-road.

Again, Sir, are we to be told that, because the Greenwich Company raise their toll 1½d., the Croydon Company ought to raise their fares only 1½d.? This is perfectly ridiculous—the question being properly understood. On the contrary, if the Greenwich Company raise their toll 50 per cent., the Croydon Company should follow the lead, and raise their fares 50 per cent. for the whole distance they travel. Surely the Croydon Company cannot be expected to charge passengers at a fare of 1½d. per mile, and at the same time pay the Greenwich Company at the rate of 2½d. a mile, and carry the passengers into the bargain.

But, Sir, this subject has of late been so clearly reasoned in your admirable paper, that I am inclined to believe no novel argument can be produced; and I daresay, to those who have studied it, all these remarks of mine are second-hand.

I am, Sir, your obedient servant,

A CROYDON PROPRIETOR.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your correspondent who assumes the title of "A Traveller," appeals to you for a solution of a difficulty which he has himself raised, respecting the principle which actuates the Croydon Company on the question of tolls. The difficulty which he now puts forth has been fully answered as often as it has been started, but as his desire appears to be rather to fasten upon the Croydon Managers the charge of inconsistency than to have any doubts of his own (if doubts indeed they be) removed, I shall in vindication of those who seem never to have swerved from their principle, whether it made for or against them, endeavour more fully to explain it.

It may be remarked that "Traveller" flies to the very same subterfuge as the Greenwich Directors resorted to, when two years ago they maintained a correspondence with the Croydon Board. It consists in a wish so to separate the journey made by every passenger into two parts, as to secure to the Greenwich Company an undue share of the benefit to be derived from passengers brought to them at low fares from the Croydon line—a cunning device truly, but it was at once detected and repudiated by the Croydon Board.

I may state the object of the Greenwich Company to be simply this, that if the Croydon Company bring passengers over any part of their railway at a low fare, and afterwards conduct the same passengers over the Greenwich Railway, the fare hitherto low, should be only so much increased over the short distance of the latter railway, as to pay the larger impost of that Company, in respect of that distance for which that larger impost is levied; in effect they say, "let the Croydon Company, nay compel them, to carry at low fares—the lower the better—over their line, and tack on only just so much as will yield us 4d per passenger.

Such a proposal needs no answer. Every thinking man must see the anti-commercial, monopolising, spirit which pervades it, notwithstanding it is shrouded in the mists of pretended argument, such as the following, for example:—"If, [says 'Tra

* We feel much obliged for the "liberty" granted us of publishing eight large sheets of drawings, but must decline the honour.—ED. R. T.

Digitized by Google

veller,'] this principle (that the toll should bear a proportion to the fare) be sound, the ratio ought to be preserved, whether the toll be adapted to the fare or the fare to the toll." This will be readily conceded him. "If [he continues,] the Croydon Company insist, that out of a fare of 2d. the Greenwich Company should only get three-fourths, say 1½d., the Greenwich Company are equally entitled to have the same ratio preserved at higher fares." This the Croydon Company have never refused, for it is the very essence of their principles. Again—"And if the toll be three times as much, viz. 4½d., the fare should not be more than three times as much, viz. 6d., in respect of the distance for which such toll is charged," namely, from Corbet's-lane to London Bridge. All this is entirely and *bona fide* conceded. But let me inquire for the information of the public, who feel interested in this discussion, where are the passengers between Corbet's-lane and London Bridge, the *distance* belonging to the Greenwich Company? Why, there is not a single such passenger to be found. What then becomes of his theory when applied to these? It vanishes. If any such had indeed been found, the Croydon Company would at once have relinquished all title to any profit out of them—they being essentially the Greenwich Railway passengers, and the principle laid down by them, as "Traveller" says, "for universal adoption, being, that no railway ought to make any profit over the line of another Company."

But "Traveller" may be supposed to exclaim, "There are plenty of passengers to be carried *from* the Croydon Railway, provided you will bring them cheap enough." Very true; but these are all *Croydon Railway passengers*, and for all such the Croydon Company are entitled to its *pro-rata* share of the profit. These passengers pay for their entire journey over both railways only *one fare*, which fare, after deducting the cost of conveying them, leaves a profit in the shape of toll, to be apportioned between the parties on the principle advocated by the Croydon Company, according to the relative distance travelled upon either. But since he has suggested, nay, insisted upon the inversion, if it may be so called, of the ratio, namely, that the fare should be adapted to the toll as well as the toll to the fare, let us see what is the corollary of his proposition. If at the toll of 4½d for one mile and three-quarters of a journey the fare should be 6d., the fare for the continuous journey of ten miles and a-half should be six times as much as 6d., or 3s. But the Greenwich Company complain that passengers are not carried at 1s. 3d. each: let them modify their toll, and that result will assuredly follow.

Traveller next "to simplify the case" (query, to mistyfy it), supposes the conveying Company, distinct from the two Companies owning the line of railway, conveying over both railways at a certain proportion of fare and toll *as advocated by the Croydon Company*. He further supposes, that an increased outlay may be demanded on a portion of the line, and an increased charge, as toll for the use of such portion made, and inquires, "would the carrying Company be entitled, in consequence, to increase their charge, not only over the portion where the outlay had been incurred, but also on the portion where it had not been incurred? Or would the Company owning the latter portion be entitled to charge a higher toll for the use of their railway, merely because the Company which has made an additional outlay for the public makes an additional charge for it?"

Here are three distinct questions jumbled together upon the assumption of an increased outlay being demanded.

1. The right of one of the Companies incurring such outlay to make an additional charge in respect of it.

2. The right of the conveying Company to increase their fare over the whole line, in consequence of such extra charge.

3. The right of the other Company, who have not incurred the outlay, to raise the toll, because the Company who have incurred it does so.

Now, as to the first point, I would ask for what purpose is such increased outlay required? If only, as was the case in widening the Greenwich Railway, to afford a safe passage over it, I maintain no additional toll could be justified. As well might the Croydon Company expect to obtain from their own passengers a higher fare, and from the Brighton and Dover Companies an additional toll, to repay them for the outlay incurred in clearing away the great slip at New Cross, which the elements, instead of a Parliamentary Committee, required them to do, in order to render their railway safely usable, as that any additional toll should be imposed upon the conveying Company, by either section of the railway, which should require such increased outlay.

But if a Company so circumstanced should by any means whatsoever disturb existing arrangements, and attempt, in violation of agreements, to obtain more than its due share of the profits divisable in respect to the respective distance travelled by each passenger, by exacting an additional toll, I would contend that not only are the other Companies justified in increasing their charge both of fare and toll, but that they would be succumbing to a gross imposition if they did not at once do so.

The conveying Company may fairly raise its charge to the public over the whole distance, on the ground that the additional charge on one portion of the line, provided it diminishes a single passenger, occasions the loss of such portion of that passenger's fare as represents the cost of conveyance over the whole distance, and consequently increases the cost per passenger of conveying the rest.

And certainly the kindred Company would be justified in following the same course with regard to toll, as the amount of their toll would be diminished by the decrease in the numbers, and the loss on every diminished passenger would be the same multiple of the rate of toll as previously adjusted, as the length of the kindred line is of the length of the line making the advance; for on every passenger which an additional 1½d. for one mile and three-quarters, the loss of toll to that Company, whose line might be five times that length (which is the proportion the Croydon Railway bears to the Greenwich Railway), would be, on the supposition that the rate of toll mutually receivable was 3d., for one mile and three-quarters no less than one shilling and threepence; and on the Dover Railway, which is fifty times that length, the loss would amount to 12s. 6d. *toll* for every passenger who might be thereby deterred, however incidentally, from travelling thereon, in addition to one-third of that sum, say 4s. 2d., they also being the conveying Company.

Surely, taking this view of the matter, "Traveller" will not expect the Croydon Company to furnish a weapon to the Greenwich, to enable them to frustrate the carrying out of this principle to the full extent, nor charge them with abandoning the whole principle contended for, because when the Greenwich Company raise their toll over a portion of the distance, the Croydon Company also raise their fares. This charge of an additional amount of toll without incurring additional expense, "is not," as he puts it, "to insist on being paid for what has not been done just as though it had been done," but to compensate the Croydon Company for that loss of toll consequent on an additional charge made by the other party, contrary to every fair and equitable principle, and in violation of existing agreement.

If it should at any time hereafter be determined that the Croydon Company must incur still further expense to render this railway adequate to the wants of the long lines, they must be content either to go to that expense—aye, and without any additional toll, notwithstanding "Traveller" thinks such might with propriety be charged—or they must lose the custom of those Companies altogether, just as the Greenwich Company would have done had not their railway been rendered usable by the expenditure of the sum they laid out in widening it.

I am, Sir, your obedient servant,
INVESTIGATOR.

BIRMINGHAM AND DERBY JUNCTION RAILWAY COMPANY—SPECIAL MEETING.

On Thursday last a meeting of the proprietors of the Birmingham and Derby line was held in the Waterloo Rooms, Birmingham, pursuant to advertisement, for the purpose of considering and determining upon the creation of new shares, in addition to the present capital of the said Company, and the nominal amount of value of such new shares, and any special advantages in favour of, or other regulations in relation, to the same, and also for the purpose of authorising the said Company to borrow a further sum of money on mortgage, under the provision of an Act passed in the present session, intitled, "an Act to enable the Birmingham and Derby Railway Company to raise a further sum of money."

At 12 o'clock H. Smith, Esq., Chairman of the Board of Directors, opened the business as Chairman, by stating, after some preliminary observations, that at the meeting of proprietors held in February last, it was resolved that the Directors be authorised to apply to Parliament for powers to raise an additional capital of 100,000*l*. In compliance with that resolution, they had applied for and obtained the required power, and also the power to borrow money in such way as might be deemed advisable. Having obtained the Act, the Directors, as a matter of course, considered it their duty to ascertain the best course which they could advise the Company to take. They had done so, and that meeting was called for the purpose of laying before the shareholders the plans which the Directors had resolved upon recommending. As he had before stated, power had been given to the Directors to raise an additional capital of 100,000*l*., accompanied with power to borrow on mortgage of this undertaking to the amount of 43,334*l*., such being the balance of the gross sum of 143,000*l*., which would by that means be made up. It would not, he believed, be necessary to allude to the circumstances which rendered the application for these additional powers requisite, as they had been fully detailed and discussed at their previous meetings; but it was, he might say, the opinion of the Directors of the Company, that the circumstances which rendered the application for the Act necessary also rendered the immediate application of those powers indispensable. The purpose for which these powers were granted was the discharge of existing liabilities of the Company, and the completion of such further works as were required, and which were now of a comparatively unimportant character. Having stated, as he was authorised to do by the Directors, that the necessity for the immediate discharge of the liabilities of the Company, was such as to require the earliest creation of the capital, it only remained for him to state the mode in which the Board recommended the exercise of the powers which the recent Act had given them. He was sure he need not say that the Directors regretted the necessity which they were under of adding such an amount to the capital stock of the Company; and while that stock was in such a depressed condition. But although they were fully aware of the state of the stock, they nevertheless should fail in duty to the creditors, as custodiers of the honour of the Company, if they did not at once state what their conviction was upon so important a subject, while at the same time they were most anxious to make such arrangements as would cause as little injury as possible to the existing

Digitized by Google

proprietors. The present stock of the Company consisted of 6,228 old shares, or nominally 6,300, 72 having been forfeited for a long period. There were likewise 6,800 third shares, created under their last Act, making the stock of the Company equal to 8,524 whole shares. The Directors, therefore, proposed to create an additional number of 25,484 new shares, to be issued to the present proprietors at such a rate as would enable them by this issue to raise as nearly as possible the sum of 100,000*l*. These shares it was proposed to issue at 3*l*. 18s. 5d. each, although ranking nominally in the stock of the Company as one-eighth shares of 12*l*. 10s. each. They were to be offered in the first instance to the existing proprietors *pro rata*, and in case any number of the proprietors declined excepting them, the remainder should then be offered in the same proportion to those proprietors who had availed themselves of them; and if after this second appropriation there should still remain a small residue, they should be disposed of by the Directors, in such manner as they deemed best calculated to promote the interests of the Company. They also proposed to pay a dividend on such proportion of the new shares as might be paid up, estimating them at 12*l*. 10s. each. The proposed arrangement had been considered necessary owing to the unfavourable state of the market, and the fact that the Directors could not see any benefit likely to arise from delay, as there was no immediate prospects of improvement under the existing circumstances of the Company. They also recommended the borrowing of capital, in order to enable them to defer making calls upon the proprietors; some calls would be necessary at first, say 1*l*., but by borrowing the money they would be able to relieve them from other calls to a great degree. In conclusion, he should read a resolution which he held in his hand, detailing the whole of the proposed plan, and which he begged to submit to the meeting. Mr. S. read the resolution and moved it.

Mr. Lewis Prevost seconded the resolution, because the issue of the new shares would be an additional security to those who might be disposed to lend money on the Company's debentures, and because, taking into consideration the Act of Parliament, he did not see how they could avoid adopting the proposed course. He hoped they would not have to pay more than 1*l*. for some time.

Mr. Crawshay objected to the immediate adoption of the proposed plan. It was the first time he had heard it, and he really thought they ought not to be called upon to accede to so important a resolution without having at least some time allowed to consider the plan. It was very important, and all the shareholders ought to have a full opportunity of reflecting, before they adopted it. He certainly could not consent to take, without examination, the opinion of the Directors, to whose mismanagement of the concern he must attribute, in no small degree, their present wretched condition. He considered it due to the shareholders that the proposed plan should be printed and circulated amongst the Proprietors, in order to give them a full opportunity of coming to a proper conclusion upon so momentous a proposal. He must also say, that he considered due notice ought to have been given of the plan before they were required to assent to it. They ought to remember that they were proposing to raise the capital at an enormous sacrifice, by which many would be materially affected. He considered it his duty to move, as an amendment, that the plan be printed and circulated, and that that meeting be adjourned for 21 days or a month, to afford time for consideration. The resolution came quite unexpectedly upon him; and, if it was not out of order, he should like to know when the Directors had come to the resolution before the meeting.

The Chairman replied, that he could have no difficulty in answering the question, although he did not know that it was a question which ought to be put.

Mr. Crawshay considered the question in no way irrelevant, because if the Chairman could not assure them that it had been most maturely weighed, it would be an additional reason why they should require time for consideration.

The Chairman said, it had received their best consideration, and unless it was adopted, he for one must say he could not clearly see their way out of the difficulties in which they were placed.

Mr. Crawshay then moved that the meeting do adjourn for one month, and that the plan be immediately printed and circulated.

Mr. Routh seconded the amendment with great pleasure. He also thought they ought to reflect well before they agreed to the plan. He knew that very great dissatisfaction had been felt and expressed at the late management of the concern; but he augured well from the new management. Still he thought they ought to wait to hear some Report from the new managers before they agreed to so important a measure as the one just proposed. He did not say the proposed course was not the best that could be devised, but he contended he ought to have time to consider it. If the prospects held out were not all frustrated, surely they might hope to issue shares on better terms than those proposed.

Mr. Prevost did not think they would be in a better condition in a month than they were at the present time.

Mr. J. Nicholas Kahrs said he never knew an instance before, wherein it was proposed to raise shares at so enormous a discount.

Mr. Routh said, before he left London he was requested by many interested in the concern, to urge upon the meeting the necessity of guaranteeing a certain rate of interest upon the shares. He thought in justice to the absent shareholders they ought not to press the question before the meeting.

The Rev. R. Bedford supported the amendment, concurring as he did in opinion with Mr. Crawshay, that the question was one of much importance, and not to be hastily disposed of. He did not say the plan would not answer, but they ought to have time to consider it. There were many persons who would be materially affected by the plan, and as there were others interested who had as good an opportunity of judging of the question as the Directors, and were as capable of giving an opinion, he thought the shareholders ought to have full time allowed for reflection.

Mr. Yateley did not consider his interest had been so greatly sacrificed by the Directors as to render them unworthy his confidence. He knew that the Company were in want of money for important purposes, he had considered how it could be raised, and he must say he had not been taken by surprise in hearing the proposal, because he knew that some plan must be proposed.

Mr. Desioll said, if the money was really required for the useful and necessary purposes of the Company, he did not see any advantage to be gained by the delay.

The Chairman briefly replied, after which a show of hands was taken upon the amendment, and it was lost by a large majority.

Mr. Crawshay demanded a scrutiny of the proxies. This was gone into, when the numbers appeared as follows:—

Votes present for the amendment	171
Proxies	262
Total	433
Against the amendment, votes present.....	510
Proxies	638
Total	1,148
Majority against the amendment.....	715

The original resolution was then declared carried, after which the meeting dissolved.

RAILWAY ADJUDICATIONS.

MONKLAND AND KIRKINTILLOCH RAILWAY COMPANY *v.* DIXON.

House of Lords, May 27.—Mr. Pemberton and Mr. Kelly appeared for the appellants, and Mr. Solicitor-General and Mr. James Anderson for the respondent.

The question arose under an application by the appellants to the Sheriff of Lanarkshire, praying for an interdict to restrain the respondent from crossing their railway for the purpose of forming another railway to communicate from certain ironstone mines on the lands of Sir W. Alexander, situated on the one side of the railway, to the Calder Ironworks, belonging to the respondent, on the other. The application was rested on the ground that the Act of Parliament by which the Monkland and Kirkintilloch Railway Company was incorporated only permitted an adjoining proprietor to cross the railway for the purpose of forming a railway or other road within the lands of which he was owner, and not to extend such cross railway or road to an adjoining property. The Sheriff was of this opinion, and granted the interdict; but the Court of Session, taking a different view of the construction of the statute in an advocation by the respondent, the Railway Company presented the present appeal.

After counsel for the appellants had been fully heard, Lord Cottenham expressed his opinion that the appellants had no case in the facts disclosed upon the record, and he therefore moved their Lordships to affirm the interlocutor appealed against with costs.

The other noble and learned Lords present concurred.

Interlocutor affirmed with costs.

THE THAMES HAVEN DOCK AND RAILWAY COMPANY *v.* ROSE.

Court of Common Pleas, May 31.—Mr. Serjeant Bompas moved for a rule to show cause why the judgment signed in this case, and the proceedings thereon, should not be set aside, and why the Directors of the Company, or their attorney, should not pay the costs of the present application. The judgment in this action had gone by default in March last, but it appeared that there were then only 7 Directors of the Company, instead of 12, which was required by the Act of Incorporation, 6 and 7 Will. IV., c. 108. There were, therefore, no parties to the suit who could legally sue the defendant.

The Court thought that there was no ground for an application to their summary jurisdiction in the present stage of the proceedings, particularly when the defendant had suffered so long an interval to elapse between the time of signing judgment and making this motion. If the facts stated were an answer to the action, they were pleadable; but upon looking into the Act of Parliament, they thought that there was no foundation for the argument, that the Company could not be plaintiffs in any action unless the full number of 12 Directors had been regularly appointed, and continued to serve.

Rule refused.

THE QUEEN *v.* THE BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY.

Court of Queen's Bench, May 28.—Lord Denman gave judgment in this case. An indictment had been preferred against the Railway Company in their corporate name for refusing to erect an arch and other works, pursuant to an order of justices. To this indictment there had been a demurrer, on the ground that an indictment would not lie against a corporation. A case had been cited in which it had been held that a corporation was not indictable, but that the members of it were. The facts, however, were not stated in that case, and it might have been that personal violence had been the cause of the indictment. But all the other cases went to show that a corporation could be indicted. The corporation of Liverpool had been indicted for the non-repair of a highway, and this question had never been raised upon that indictment. The Court was of opinion that the corporation was indictable, and, therefore, there would be judgment for the Crown.

THE QUEEN v. THE GREAT WESTERN RAILWAY COMPANY.

It will be recollected that an accident happened on this railway on the 24th December last, when many persons lost their lives. One person, however, who was seriously injured, was removed from the scene of the accident, in the county of Berks, into the borough of Reading, when, after lingering some days, he died. The coroner for the borough of Reading afterwards held an inquest upon the body, and the jury returned a verdict, with a deodand of 100*l.* against the Company. The defendants afterwards came to the court to set this finding aside, on the ground that the borough coroner had no jurisdiction where the cause of death had occurred in the county. The court took time to consider the point, and now delivered its judgment. The blow constituted the felony, and not the death: therefore, when the blow took place in one jurisdiction and the death in another, the proper jurisdiction was the place where the felony was committed. The mere fact of the body lying dead did not give a coroner jurisdiction. If there was a reasonable suspicion that the deceased came to his death by violent means, the coroner should make inquiry as to the circumstances, and if he found that that which had occasioned the death had happened out of his jurisdiction, and there was no reason for supposing that murder or manslaughter had been committed, he ought to abstain from summoning a jury; and the body, in order to have an inquest held, must be removed to the place where the injury had occurred. If murder or manslaughter had been committed, the want of jurisdiction was cured by the statute of Edward the Sixth. The Court held, therefore, that the present inquisition was void, on the ground of want of jurisdiction.

THE MANCHESTER AND LEEDS EXTENSION LINE, AND THE JUNCTION WITH THE LIVERPOOL RAILWAY.

We last week noticed the fact, that the whole of the purchases of land for the extension of the Leeds line to the Hunt's Bank station had been completed. We understand that the contracts for the same, two for the formation of the works on the line, and a third for the erection of the station, are to be let on the 6th June; and it is expected that the whole of the works will be completed, and the line open to the public to the Hunt's Bank station, in September, 1843. We understand, that the Manchester and Liverpool Company are also proceeding rapidly with the purchases of those portions of the land required for the Junction line, which are situate between the Hunt's Bank station and the station of the Manchester, Bury, and Bolton Railway, in New Bailey-street; and we hear it is probable that they will succeed in purchasing the whole, without any necessity for the intervention of a sheriff's jury. The land lying between the Bolton station and the Liverpool line, which belongs to the Bolton Railway Company and the Old Quay Company, they have already entered into agreements for, and they have now a Bill before Parliament to confirm these agreements. The measure is, of course, unopposed; and we see by the papers, that the Select Committee on this Bill had leave to sit and proceed yesterday. We believe it is expected, that the Junction line will be completed by the Liverpool and Manchester Railway Company by the same time as the Manchester and Leeds Extension line; so that this important link in the great chain of railway communication across the island from Liverpool, through Manchester and Leeds, to Hull, will be completed in the autumn of next year. It will also connect the Manchester and Birmingham line with the lines northward, on both the west and east sides of the island; and, in short, it is not easy to estimate its importance and advantages, by thus giving continuity to the various lines of railway communication to various parts of the kingdom. Of course the junction of all these lines will require a spacious station; and the Manchester and Leeds Company have already purchased ground for this purpose around their offices in Clowes's Buildings, Hunt's Bank, comprising in one plot nearly five acres, or about 23,720 square yards, of land. We see that the Mersey and Irwell Navigation Company (the Old Quay Company) have set labourers to work, to remove the masonry of the old abutments, together with the loose stone and rubbish from the river, beneath the Victoria Bridge, in order to make the river navigable from that point up to Hunt's Bank, where the Company will establish a communication with the lines of railway. In our next we shall probably notice the course of the proposed line of the Extension Railway from Collyhurst to Hunt's Bank, and the direction which it is at present proposed to take for the junction line from Hunt's Bank to the Bolton Railway station, and thence to the Liverpool and Manchester line.—*Manchester Guardian.*

RAILWAYS IN FRANCE.

The Chamber of Deputies rejected on Tuesday the three Bills relative to the railways of Strasburgh to Basle, Bordeaux to La Teste, and Paris to Versailles, along the left bank of the Seine. The Ministry had proposed to authorise the former to borrow 6,000,000f. for the completion of the works, but the Chamber on being assured that the Company possessed ample means to complete them, and that one of the proprietors still held 34,000 shares unsold, thought proper to withhold the authorisation. By the second Bill, the Minister of Public Works asked to be empowered to lend 2,000,000f. to the Bordeaux and Teste Railway Company, and to dispense the Paris and Versailles Company with paying the interest of a sum of 5,000,000f., loaned to it last year, until the 1st of January, 1859. This demand was likewise negatived by the Chamber, and the ballot on the three Bills produced only 63 votes in their favour, and 206 against their adoption.

We learn from Berlin that, on the 15th inst., the axletree of the four-wheeled engine, the Hecla, while running on the Berlin and Dessau Railway, broke down between Trebi and Lackenwalde, but fortunately the effects of the shock did not extend beyond the tender and five waggons, with goods, which followed the locomotive, and they were only slightly damaged. The carriage, in which were the passengers did not receive the slightest injury. Another engine was put on, and the whole train was brought safe to Berlin.—*Daily papers.*

Accident on a French Railway.—A Montpelier journal says, that the railway train which left that station in the evening of the 26th ult., had reached within sight of Cette, when the axletrees of the hind wheels of the four-wheel engine, the *Rosine*, by which it was drawn, broke and diverged from the rail, which it damaged. It made its way along the ground to a distance of between 60 and 70 yards before it stopped. The waggons were thus far kept in motion, but neither of them went off the rails. They were not in any degree injured, and the passengers did not sustain any other inconvenience than having a short distance to walk into Cette. Upon this the journal remarks, that it is the third accident of the same kind which has happened within the present year without producing any serious consequences, and adduces it as a proof that the safety of passengers is not put to any risk when the trains are drawn by only one locomotive.

HUNGERFORD AND LAMBETH SUSPENSION FOOT BRIDGE COMPANY.—Seventh Call of Two Pounds Ten Shillings per Share.—Notice is hereby given, That the Directors have this day made a Call of £2 10s. per Share, and that in pursuance thereof the Proprietors of Shares in this undertaking are hereby required to pay the same on or before the 4th July next, to the credit of Alexander Rogers, Esq., the Treasurer to the Company, at the London and County Joint Stock Bank, 71, Lombard-street. Dated the 2nd day of June, 1842.

(Signed) W. HAWES, Deputy Chairman.

TO ENGINEERS, RAILWAY DIRECTORS, &c.—A person who has been with an eminent Engineer for the last three years (from whom he can produce testimonials of his ability) is desirous of an engagement as Engineer and Draughtsman, either in this country or abroad.

Address, F. E., Mr. Good's, chemist and druggist, Minories.

EVESHAM, BIRMINGHAM, and GLOUCESTER JUNCTION RAILWAY.—Capital, £70,000, in 3,500 Shares of £20 each.—Deposit, 2*l.* 10*s.* per Share.

PROVISIONAL COMMITTEE.

BANKERS.

London.

Messrs. Glyn, Halifax, Mills, and Co., 67, Lombard-street.

Country.

Gloucestershire Banking Company, and Herefordshire Banking Company, at Evesham.

Engineer.—John Addison, Esq.

Consulting Engineer.—Captain W. S. Moorsom.

Solicitors.—Messrs. Roy, Blunt, Johnston, and Walton.

Agents.—Messrs. Workman, Evesham.

Secretary.—Henry Stephenson, Esq.

The Borough of Evesham stands in the midst of an extensive and populous district, at present without railway communication.

Considering the facility with which such communication might be obtained, and the comparatively trifling expenditure at which it might be connected with the Birmingham and Gloucester Railway, and so with all the existing important Railways, it is a matter of surprise that such an undertaking has been so long neglected.

The Goods Traffic also of the Evesham district is estimated at a large amount, the greater portion of which is despatched to Birmingham, and thence, by Railway, to Manchester, Liverpool, other towns northwards, and the metropolis.

These facts demand the establishment of some continuous, rapid, and, at the same time, cheap medium of communication between these towns; and it is important to add, that beyond the great local influence which is rallying round it, the undertaking will be aided by the important interests connected with the Birmingham and Gloucester Railway Company.

Which Company have also passed the following Resolution, thereby ensuring to the promoters of this undertaking a certain and profitable return on their outlay, as will appear from the following, viz.:—

Extracts from the Minutes of the Committee, 24th May, 1842.

The Committee having conferred with the Deputation from Evesham, who laid before them the Resolutions of the Public Meeting held there yesterday, of a Branch Railway to join the Birmingham and Gloucester Railway at Eckington.

Resolved—

That the Directors of the Birmingham and Gloucester Railway are of opinion, that the formation of the proposed line would be conducive to the interests of this Company, and in the event of its being made, would recommend to their Proprietors to undertake the working of it in common with their own line, under Lease, and on such fair terms as may hereafter be agreed on.

(Signed) George King, Secretary.

It is proposed that the Company shall join the Birmingham and Gloucester Railway at Eckington, and avail themselves of that line, not only as a communication to Birmingham, Liverpool, and Manchester, but to Cheltenham, Tewkesbury, Gloucester, and, in connection with the Great Western Railway, to Bath, Bristol, Exeter, and, by the London and Birmingham or Great Western Railway, to the Metropolis, and intervening counties.

The line of country between Evesham and Eckington (the proposed point of junction with the Birmingham and Gloucester Railway), a distance of 8¼ miles, has been surveyed by the Engineers, and the plans and books of reference lodged agreeably to the Standing Orders of Parliament for the next Session.

Applications for Shares to be made to Messrs. Workman, Solicitors, Evesham; to the Solicitors for the Bill, at their offices, No. 42, Lothbury; or to the respective Bankers.

By order of the Provisional Committee,

HENRY STEPHENSON, Secretary.

THE CHAIRMEN AND DIRECTORS OF RAILWAYS who do not consider a saving of 50 per cent. in the cost of the fuel used in Locomotive Engines as too minimum a matter for their consideration, and those Engineers who are competent (without requiring the opinons and advice of others) to discriminate between what is essentially and practically good, and what is merely plausible or theoretical, are solicited to inspect the operation of Mr. SAMUEL HALL'S PATENT APPARATUS FOR THE CONSUMPTION OF COAL WITHOUT SMOKE, as applied to two Locomotive Engines on the Midland, and two on the North Midland Railways.

N. B.—The Invention, as applied to a Dyer's Boiler, is in daily operation in Duke's-court, Tavistock-square, London.

No. 18, King's Arms Yard, London.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—The Public are respectfully informed that the TRAINS now RUN from the London Bridge Station as under:—

To Tunbridge, stopping at Reigate, Godstone, Edenbridge, and Penshurst, 9 30 a. m., 11 30 a. m., 2 30 p. m., and 5 30 p. m.

SUNDAYS—8 30 a. m., 6 30 p. m.

From Tunbridge, stopping at Penshurst, Edenbridge, Godstone, and Reigate, 7 45 a. m., 10 30 a. m., 3 p. m., and 6 p. m. Sundays expected.

SUNDAYS—8 30 a. m., 6 30 p. m.

Full particulars and time-tables may be obtained at the London Bridge Station, and at the Offices of the Company, 10, Coleman-street.

By order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, June 1, 1842.

DUBLIN AND DROGHEDA RAILWAY COMPANY.—Call of £5 per Share, being the Tenth Call, and making £35 per Share now called up.—NOTICE is hereby given, That the Directors of this Company have this day passed a Resolution (in conformity with the provisions of the Act of Parliament in that case made and provided) calling upon the several Proprietors of Shares in the said Company to pay a further subscription upon their Shares of £5 per Share; and such Proprietors are accordingly hereby required to pay up such further Call, on or before the 27th of June next, to any of the undermentioned Bankers, who are appointed to receive the same:—

The Bank of Ireland, Dublin,
The Royal Bank, Foster-place, Dublin,
The District Bank, Liverpool and Manchester, or to
Messrs. Labertouche and Stafford, 25, College-green, Dublin.

GEORGE ALEXANDER HAMILTON,
Chairman of the Company.

Office, 22, Marlborough-street, Dublin,
27th May, 1842.

NEW WORKS ON STEAM.

I.

A TREATISE ON THE NATURE, PROPERTIES, AND APPLICATIONS OF STEAM, AND ON STEAM NAVIGATION: By JOHN SCOTT RUSSELL, M.A., F.R.S.E., Vice-President of the Society of Arts of Scotland. Illustrated with upwards of Eighty Engravings on Wood, and Fifteen Folding Plates on Steel. Post 8vo., 9s. cloth.

"A work on Steam and Steam Navigation, in which science and interesting information are equally combined."—*Mechanics' Magazine.*

II.

By the same Author.

A TREATISE ON THE STEAM ENGINE. Illustrated by 248 Engravings on Wood, and 15 Folding Plates on Steel. Post 8vo., 9s. cloth.

"Most complete and circumstantial."—*The Surveyor, Engineer, and Architect.*

Adam and Charles Black, Edinburgh; Simpkin, Marshall and Co., Whittaker and Co., and Hamilton, Adams, and Co., London.

RAILWAYS.

Price 9s., illustrated with Woodcuts and Engravings,

A PRACTICAL TREATISE on RAILWAYS, being the article under that head in the Seventh Edition of the ENCYCLOPÆDIA BRITANNICA, with additional details. By Lieutenant LECOUNT, R.N., F.R.A.S., C.E., of the London and Birmingham Railway.

Adam and Charles Black, Edinburgh; Simpkin, Marshall and Co., Whittaker and Co., and Hamilton, Adams, and Co., London.

CIVIL ENGINEERING.

In royal 8vo, price 15s., illustrated by 13 Plates, a coloured Chart, and numerous Engravings on wood.

A TREATISE on the APPLICATION of MARINE SURVEYING and HYDROMETRY to the PRACTICE of CIVIL ENGINEERING. By DAVID STEVENSON, Civil Engineer, Author of "A Sketch of the Civil Engineering of America," &c.

The object of this work is to explain the practical application of Trigonometrical and Marine Surveying to the practice of Civil Engineering, and also to point out the method of obtaining with accuracy the Soundings, Sections, Borings, Measurement of the Velocities of Surface and Under-currents, and other data required for forming designs and estimates of Harbour and River Improvements, and other Hydraulic Works. The subject is treated in great detail, and illustrated by numerous examples taken from actual practice, in reference to the rivers Tay, Lune, Forth, Dee, Forsdyke, Ribble, &c. &c.

"A work of more extensive practical utility, more certain to bring honour to its author, and confer lasting benefit on his profession, has seldom come under our notice."—*Mechanics' Magazine.*

"The production of one who, thoroughly understanding the subject on which he writes, in a clear, lucid, easy, and familiar style, describes the manner of conducting the survey of a river or harbour, from beginning to end."—*Civil Engineer and Architects' Journal.*

"A very clever work, and shows the author to be a man of the greatest talent."—*The Surveyor, Engineer, and Architect.*

Adam and Charles Black, Edinburgh; Longman and Co., and John Weale, London.

BIRMINGHAM AND GLOUCESTER RAILWAY.—ALTERATION OF TRAINS.—In consequence of the Grand Junction Railway Company having given notice of an alteration of their Afternoon Trains from Birmingham on and after Wednesday, the 1st of June, this Company's Trains will then run as follows until further notice:—

FROM BIRMINGHAM.

H. M.		
12 44	Night, (Mail,)	1st and 2nd Class Carriages.
3 10	(Mail,)	1st and 2nd ditto
5 30	Morning, (Goods Train,)	1st, 2nd, and 3rd ditto
8 45	Morning,	1st, 2nd, and 3rd ditto
12 15	Noon,	1st and 2nd ditto
2 45	Afternoon,	1st and 2nd ditto
6 15	Evening,	1st, 2nd, and 3rd ditto

FROM GLOUCESTER.

5 30	Morning, (Goods Train,)	1st, 2nd, and 3rd Class Carriages
8 15	Morning,	1st, 2nd, and 3rd ditto
11 15	Morning,	1st and 2nd ditto
1 0	Afternoon,	1st and 2nd ditto
4 0	Afternoon,	1st, 2nd, and 3rd ditto

Time is allowed for refreshments at Wolverton, Derby, York, and Darlington.

TRINITY COLLEGE, DUBLIN.—The Board of Trinity College, Dublin, give notice, that they will proceed to the ELECTION of a PROFESSOR OF ENGINEERING on Saturday, the 2nd of July, 1842.

Applications and Testimonials from Candidates to be sent in, addressed to the Registrar, on or before the 25th June, 1842.

Dublin, May 26, 1842.

TO ENGINEERS, MACHINISTS, IRON FOUNDERS, BUILDERS, &c.—Important Sale of Plant, Machinery, 350 Tons of Iron, and the Building Materials of Six Houses. The Thames Tunnel Works, Rotherhithe.—PULLEN and SON beg respectfully to announce that they are favoured with instructions from the Directors of the Thames Tunnel Company, to SELL by AUCTION, on the premises at Rotherhithe, on Monday, June 13, and following days, at Twelve, in consequence of the completion of that great national work, the whole of the valuable MACHINERY, IMPLEMENTS, STORES, and SURPLUS MATERIALS; a capital 15 horse power steam engine, by Rennie, with two wrought iron cylindrical steam boilers; 350 tons of wrought and cast iron, including the well-known iron shield used in the formation of the Tunnel, with 36 chambers for the workmen, weighing 150 tons, and cost nearly 10,000*l.*, with the whole of the machinery complete; the expensive oil gas apparatus, with gasometer and tank, two retorts, hydraulic main, purifier, refrigerator, &c., and 1,500 feet of tubing; 3,000 feet of iron railway, four large mooring anchors, three others, and 1,800 feet of inch, seven-eighth, and three-quarter chain, 1,400 feet of cast iron pipe; fly, spur, bevel, and other wheels, screws, and boxes; four smiths' forges and bellows, anvils and vices, drilling machines, and an immense assortment of tools and implements, several excellent pumps, two crabs and a powerful crane and jib, iron blocks and ropes, new rod and bar iron, lead, copper, and brass; six Pearce's patent signal lanterns, a large quantity of miners' clothes and boots; the whole of the erections of the workshops, a timber carriage, a 3-feet elm curb, 55 feet diameter; oak and fir timber, floor boards and useful wood, earth waggons and navigators' barrows; 50 rods of sound brickwork, granite, and other stone; two boats, office fittings, desks, two eight-day dials, and other valuable property; together with the excellent building materials of six houses, put into convenient lots, to be taken down to improve the approach to the tunnel.

May be viewed two days prior to the sale; catalogues had on the premises; at the Thames Tunnel Offices, Walbrook-buildings; and of Joseph Pullen and Son, 99, Poststreet, Cripplegate.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3	0	0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1½ inch thick, per superficial yard	0	4	6
Paving pathways, granaries, warehouses, &c., 1½ inch thick, per square yard	0	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0	5	6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

CEMENT.—MOST IMPORTANT and VALUABLE INVENTION.—To ARCHITECTS, ENGINEERS, CONTRACTORS, BUILDERS, MASONS, PLASTERERS, and the Trade, and also to SHIPPERS. The Patent STUCCO PAINT CEMENT, surpassing every article hitherto introduced, possesses the following extraordinary and valuable properties:—remarkable adhesiveness, fixing most tenaciously to the smoothest surfaces (even to glass). It is perfectly impervious to wet or damp. The more it is exposed to the atmosphere the harder and more durable it becomes. It is perfectly free from any of the caustic qualities of lime, and it may therefore be painted upon as soon as dry, as it is impossible that it can vegetate or change colour, nor can it be affected by frost or heat, or crack, chip, or peel off. To merchants and shippers it must form a most important item of commerce, as it will keep for any length of time as fresh as delivered from the manufactory. With regard to price, it is cheaper than any other cement, and its lasting qualities render it a fortune to builders and others investing capital in building speculations.

The Patentees have appointed Messrs. Mann and Co., 5, Maiden-lane, Queen-street, Cheapside, their sole Agents, at whose warehouses any quantity may be had. Specimens may be seen, and every information afforded.

FOR SALE.—A THIRTY-HORSE CONDENSING STEAM ENGINE and TWO BOILERS, with all their Apparatus complete, as now at work, and to be seen on the premises of Messrs. Marshall and Co., Water lane, Leeds.

The engine has a 30½ inch cylinder, and a 6 feet stroke, was made by Fenton and Murray, and is in good working condition.

RAILWAY POLICE.—WANTED, TWELVE Police Officers to serve on a Foreign Railway. Particulars, stating age, family, present employment, &c., may be addressed to J. W. W., *Gazette* Office, Doncaster, before the 1st of July.

Parties applying must be able to read and write. No Agency Office will be attended to. Applications must be *pre-paid.*

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY. — TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive TENDERS for the LOAN OF MONEY, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to GRANT MORTGAGES of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

INTEREST WARRANTS, for the whole term for which the loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

THE SOUTH-EASTERN (DOVER) RAILWAY.—An Elaborate MAP and SECTION of this LINE, published under the direction, and by authority of the Company, is now ready. It embraces the whole of the South-Eastern District of England, and the north-east coast of France. Price, coloured, on one large sheet, 7s.; and in a case, on linen, 12s. 6d. It may be had in various mountings.

T. R. Jobbins, 3, Warwick-court, Holborn; J. Weale, Architectural Library, 59, High Holborn; and Bell and Wood, 186, Fleet-street, London; and at the Company's Booking Office; and the *Railway Times* Office.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources. Corrected to the end of February. Price 3d. royal 8vo. *Railway Times* Office, 122, Fleet-street; Groombridge, Panyer-Alley.

II.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

III.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways, Corrected to the present time. Price 1s., in cloth. *Railway Times*, Office, 122, Fleet-st.eet.

IV.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

V.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s. in cloth 1s. 6d.; on canvass, 2s. 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VII.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London: Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton-street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun, evening paper.*

"This is a work that we fear there exists too much need for to cause us to hesitate to recommennd it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

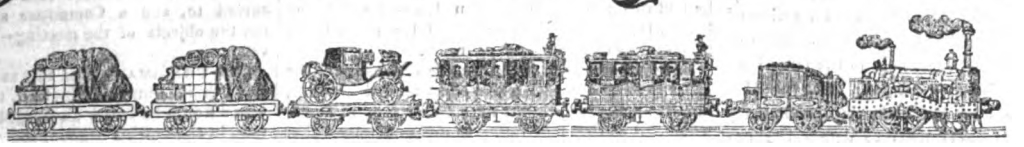
Just Published, price 3s., and sent free on receipt of a Post Office Order for 4s.,

MANLY VIGOUR: a Popular Inquiry into the Concealed Causes of its Premature Decline; with Instructions for its Complete Restoration, addressed to those suffering from the Destructive Consequences of Excessive Indulgence in Solitary and Delusive Habits, Youthful Imprudence, or Infection; with Remarks on the Treatment of Gonorrhœa, Gleet, Stricture, and Syphilis. Illustrated with Cases, &c.

By C. J. LUCAS & Co., Consulting Surgeons, London.

Published by the Authors; and sold by Brittain, 11, Paternoster-row; Effingham Wilson, 18, Bishopsgate-street; Field, 65, Quadrant, Regent street; Burgess, 28 Coventry-street, Haymarket; Huett, 141, High Holborn; and by all Booksellers in the United Kingdom.

"The best of all friends is the Professional Friend; and in no shape can he be consulted with greater safety and secresy than in 'Lucas on Manly Vigour.' The initiation into vicious indulgence—its progress—its results in both sexes, are given with faithful, but alas! for human nature, with afflicting truth. However, the authors have not exposed the evil without affording a remedy. It shows how 'Manly Vigour' temporarily impaired, and mental and physical emasculation, produced by uncontrolled indulgence of the passions, can be restored; how the sufferer, who has pined in anguish from the consequences of early indiscretion—afraid almost to encounter his fellow man, can regain the vigour of health and moral courage. The work is written in a concise and perspicuous style, displaying how often fond parents are deceived by the outward physical appearance of their youthful offspring; how the attenuation of the frame, palpitation of the heart, derangement of the nervous system, cough, indigestion, and a train of symptoms indicative of consumption or general decay, are often ascribed to wrong causes; and instead of being the natural results of cougenital debility or disease, are the consequences of an alluring and pernicious practice, alike destructive to the mind and body."—*Bell's New Weekly Messenger.*



Messrs. Lucas and Co. are to be daily consulted from ten till two, and from five till eight in the evening, at their residence, No. 60, Newman-street, Oxford-street, London.

Country Patients are requested to be as minute as possible in the detail of their cases, as to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party. The communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application; and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, June 4, 1842.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 232. Vol. V.—No. 24.] SATURDAY, JUNE 11, 1842. [Price 6d.

CROYDON RAILWAY.—An anonymous advertisement having appeared in the *Railway Times*, purporting to be "in answer" to an advertisement issued by this Company in the previous week, the Directors hereby beg to state, that the Fares on this Railway were raised in the month of July, 1840, after due notice had been given to the Greenwich Company that such a course would become necessary unless some modification of the *then* Toll of 3d. was made—a year's experience of that Toll having been found incompatible with the *then* rates of Fare. Upon the present increase of 1½d. of *Toll*, the average increased rate of *Fare* per passenger has been about 2¼d.; and an increased rate of *Fare* to such extent, beyond the Toll, becomes necessary to repay the loss occasioned in the conveyance of each passenger, when the number of such passengers is reduced. The present average rate of charge on the Croydon Railway, IN *cluding cost of conveying the passengers*, is UNDER 2¼d. per mile; the present average rate of charge over 13 miles of the Greenwich Railway, EX *cluding such cost of conveyance*, which is borne by the Croydon Company, is ovea 2¼d. per mile.

R. S. YOUNG, Secretary.

YORK AND NORTH MIDLAND RAILWAY.—£25 SHARES.—The Directors of the York and North Midland Railway Company having, in pursuance of the provisions of the Act, resolved to make a CALL of £5 per Share, payable on or before Friday, the 1st day of July next, Proprietors of £25 Shares in this Company are hereby required to pay, on or before that day, to any of the undermentioned Bankers, the sum of £5 on each of their respective Shares, viz.:—

London—Messrs. Barnetts, Hoares, and Co.; Sir R. C. Glyn and Co.

York—City and County, and Union Banks.

The Bankers have been instructed to charge interest, after the rate of 5 per cent. per annum, on all sums paid after the 1st day of July next.

GEORGE HUDSON, } Chairman of the Board
GEORGE BAKER, Clerk to the Company. } of Directors.

Railway Office, York, June 1, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years, to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 2?0, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

FIFTEEN USEFUL SEASONED CART HORSES, HARNESS, &c.—To be Sold by Auction, by Mr. DIXON, at his Repository, Barbican, on Friday, June 17th, 1842, commencing at Two o'Clock precisely, Fifteen firm, active, useful Cart Horses, the property of Mr. Groves, sold in consequence of having completed their work on the Northern and Eastern Railway. Colours: Bay, Browns, Blacks, and Greys.

The above lot of useful, seasoned Cart Horses, are worthy the attention of Farmers, Carriers, Boat Owners, Brick Makers, and others, being just off constant hard work, and to be sold without reserve.

On View, and Catalogues had, two days before the sale.

FOR SALE.—A THIRTY-HORSE CONDENSING STEAM ENGINE and TWO BOILERS with all their Apparatus complete, as now at work, and to be seen on the premises of Messrs. Marshall and Co., Water-lane, Leeds.

The engine has a 30¼ inch cylinder, and a 6 feet stroke, was made by Fenton and Murray, and is in good working condition.

TO RAILWAY COMPANIES AND OTHERS. The advertiser, 28 years of age, who has been engaged for the last 12 years in the Carrying Trade, is seeking a re-engagement in some confidential capacity; is a good correspondent, and possesses a first-rate connexion among the London Houses. Address, post-paid, A.B.C., care of Mr. Hancock, Printer, 55, Aldermanbury.

THE CHAIRMEN AND DIRECTORS OF RAILWAYS who do not consider a saving of 50 per cent. in the cost of the fuel used in Locomotive Engines as too minimum a matter for their consideration, and those Engineers who are competent (without requiring the opinions and advice of others) to discriminate between what is essentially and practically good, and what is merely plausible or theoretical, are solicited to inspect the operation of Mr. SAMUEL HALL'S PATENT APPARATUS FOR THE CONSUMPTION OF COAL WITHOUT SMOKE, as applied to two Locomotive Engines on the Midland, and two on the North Midland Railways.

N. B.—The Invention, as applied to a Dyer's Boiler, is in daily operation in Duke's-court, Trafalgar-square, London, from 10 a. m. till 4 p. m.

No. 18, King's Arms Yard, London.

TO RAILWAY COMPANIES, RAILWAY CONTRACTORS, BUILDERS, IRON FOUNDERS, IRONMONGERS, COACH BUILDERS, and GENERAL DEALERS.—Important SALE of SURPLUS RAILWAY STORES, &c. &c., belonging to the London and Birmingham Company, at the Camden Town Station.—Mr. BIRKETT has received instructions from the Directors of the London and Birmingham Railway Company to offer for Sale by Auction at the Store Yard of the Company's Station, Camden Town, on Tuesday, July 12, 1842, and two following days, at Eleven, the following very Important PROPERTY, constituting THEIR SURPLUS STORES, and comprising upwards of 150 tons of bar, scrap, and cast-iron; several tons of spring, shear, blister, and other steel; sets of patent carriage springs and axle boxes; together with a large and varied assortment of ENGINEERING TOOLS and Implements used in the construction and maintenance of Railways. The articles of ironmongery comprise a large assortment of wood screws, bolts, nails, hinges, sledge and other hammers, anvils, chisels, files, screw and shell augurs, a large quantity of chains and iron wire, carriage handles and springs, copper and iron, wire-gauge, &c. &c. Also numerous other articles, comprising railway lamps of every variety; larry wheels and boxes, barrow-wheels; large monkey for driving piles; drain tiles; tool handles of all kinds; 10 *iron safety chests, with patent rack locks*; about 32,000 oak pales; 28 pieces of American oak; 6,000 feet of pine boards; several waggon cloths; articles of office furniture; a quantity of old wearing apparel; neck straps, chains, and cloths for horses; 50 hammocks, with mattresses, blankets, &c. &c.

The above property, being nearly all new and of first-rate quality, will be found eminently deserving public notice. As the articles are exceedingly varied, a reference to the Catalogues is particularly requested; and which may be had, 14 days before the Sale, on application at the Storekeeper's Office, Camden Station; at the Company's Stations, Euston-square and Birmingham; at the other Stations on the Line; and of Mr. BIRKETT, Estate Agent and Auctioneer, Wallingford, Berks.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by

FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ARTHUR FREELING.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt and Bogue, Fleet Street; and all Booksellers.

TO RAILWAY CONTRACTORS and Others.—TO BE DISPOSED OF, on very low terms, between 40 and 50 Sets of Second-hand 30-inch Railway Waggon Wheels and Axles, in very good condition, with pedestals and tipping irons.

Apply to Barrett, Exall, and Andrewes, Engineers and Founders, Reading, Berks.

PROPOSED RAILWAY FROM AYR TO CUMNOCK, &c.

[From the *Ayr Advertiser*, June 2.]

A MEETING of those favourable to the formation of a mineral railway from Ayr towards the confines of the county of Cumnock, was held in the large Hall of the Ayr Arms Inn, on Tuesday last, the 31st ult., in order to take the necessary preliminary steps for raising subscriptions to defray the expenses of mineral and railway surveys of the district.

On the motion of Sir James Boswell, seconded by Provost Miller, Mr. OSWALD was called to the chair.

Messrs. J. F. Murdoch and J. D. Boswell were chosen joint Clerks, on the motion of Sir James Boswell, seconded by Mr. Allason Cuninghame, of Logan.

The CHAIRMAN read a letter from Mr. Hamilton, Brachead House, Kilmarnock, apologising for non-attendance, but expressing his readiness to submit to Lord George Bentinck whatever resolutions were agreed to by the meeting.

Mr. M'CLELLAND begged to explain the circumstances under which the meeting had been called. He had taken the liberty of writing to Sir James Boswell, drawing his attention to the peculiar advantages which a railway would afford in a district so rich in minerals, as that around Cumnock, Muirkirk, &c. Sir James joined warmly in the proposal—and, after consulting with parties friendly to the undertaking, they agreed to call a meeting by advertisement in the public papers, inviting all interested to attend; and he hoped that those present would approve of the means that had been used. He also stated that Mr. Robson, who was both a mineral and a railway engineer, had taken a general view of the country through which the line was intended to pass, and would be enabled to communicate some particulars relative to the contemplated undertaking which would be interesting at that stage of the proceedings.

Mr. ROBSON, at the request of the Chairman, then stated, that, in walking across the country through which the proposed line was intended to pass—from Ayr towards the confines of the county by Cumnock—he had examined the ground, but found it impossible, without taking levels, to state precisely which line of way would be preferable. It was his opinion that one line could be got to pass by Joppa, Ochiltree, and Auchinleck; and another to separate at Joppa, and go to the south of Ochiltree and Old Cumnock. From the shortness of the time—only two days—that he had been on the line, he felt it impossible to make any statement as to which of these lines would be the best, or if either of them would be preferable to others that might yet be chosen. He was also unprepared to state whether the above-mentioned lines intersected those mineral fields promising the most abundant supply. He estimated the expense of making the railway, with a single line of rails, at about 6,000*l.* per mile. The length of line required would be about 22 miles to join the present Muirkirk Railway, at an expense of 132,000*l*; and if carried to Muirkirk, about 25 miles, at an expense of 150,000*l*.

Mr. PAUL was opinion that every endeavour should be made to take the line through those parts of the district where the greatest quantity of mineral produce was to be found.

Mr. MACKINTOSH said that it would be advantageous that early stage of the proceedings, to ascertain the intentions of the various proprietors along the proposed line as to their co-operation, as it would be important if the land could be acquired without opposition. He might mention that letters he had received from friends in London and Edinburgh, represented the prospect of the stock being taken up as exceedingly favourable.

Several gentlemen present made statements to the effect that no opposition was apprehended—indeed, almost all the proprietors were either present or represented at that meeting. It was understood that in the event of the undertaking being carried into execution, the proprietors along the line were willing to give their land, if not gratuitously, at least on very easy terms.

Mr. M'CLELLAND stated that the expense of a survey would amount to about 250*l.*, and there was no danger whatever of their procuring that sum by subscription.

Mr. CHRISTIE—on the part of the Muirkirk Iron Company—said, they were very favourable to the proposal, and would, no doubt, support it. The greater part of the Company's goods would go that way, instead of being carted, as at present, by turnpike to Glasgow.

Mr. M'CLELLAND then read a series of resolutions, and went on to state that it might be interesting to those who were not acquainted with the rise and progress of railways, to learn a few particulars regarding them. In order to afford some information relative to the complete success that attended such undertakings as the one in contemplation, he submitted the following statistical notices of the three principal mineral railways in Scotland, showing their gradually advancing benefits, both to the country and to shareholders:—

MONKLAND AND KIRKINTILLOCH RAILWAY.

Revenue from 1826 *to* 1841.

Year.	£	s.	d.
1826 Revenue	704	2	11
1827 Ditto	2,020	0	0
1828 Ditto	2,837	13	11
1829 Ditto	3,480	5	0
1830 Ditto	3,538	4	1
1831 Ditto	3,602	1	6
1832 Ditto	4,114	8	0
1833 Ditto	4,578	15	9
1834 Ditto	5,332	1	1
1835 Ditto	6,260	3	9
1836 Ditto	6,595	16	5
1837 Ditto	7,203	1	9
1838 Ditto	11,172	18	0
1839 Ditto	13,985	10	0
1840 Ditto	16,991	3	7
1841 Ditto	22,252	5	11

The above railway had cost about 6,000*l.* per mile; and the shares which originally cost 25*l.* were now selling at 57*l.*

BALLOCHNEY RAILWAY.

Revenue from 1827 *to* 1841.

Year.	£	s.	d.
1827 Revenue	12	4	4
1828 Ditto	151	4	4
1829 Ditto	568	3	3
1830 Ditto	1,120	4	8
1831 Ditto	1,511	11	2
1832 Ditto	2,153	8	5
1833 Ditto	3,160	11	9
1834 Ditto	3,326	17	1
1835 Ditto	3,723	11	5
1836 Ditto	4,249	5	0
1837 Ditto	5,031	7	1
1838 Ditto	6,454	1	9
1839 Ditto	9,240	17	8
1840 Ditto	13,294	15	7
1841 Ditto	17,200	1	8

The above railway also cost about 6,000*l.* per mile in construction; and the shares from 25*l.* had now risen as high as 85*l.*

WISHAW AND COLTNESS RAILWAY.

Revenue from 1834 *to* 1841.

Year.	£	s.	d.
1834 Revenue	436	17	2
1835 Ditto	1,657	18	0
1836 Ditto	2,471	5	7
1837 Ditto	2,330	16	8
1838 Ditto	3,972	9	4
1839 Ditto	6,501	1	3
1840 Ditto	7,883	9	0
1841 Ditto	12,818	7	7

This railway had originally cost from 6,000*l.* to 7,000*l.* per mile, and shares had advanced in price from 40*l.* to 78*l.* The same thing might be said of many other lines, and Ayrshire had only to put forth her energies to produce the like beneficial results.

The resolutions were then read *seriatim* and agreed to, and a Committee appointed to carry out the objects of the meeting—Mr. Oswald, convener.

The CHAIRMAN stated that as he was about to leave this country for England, the duties of convener would be better discharged by some gentleman in the neighbourhood, and with this view he would propose Sir James Boswell as vice-convener, which was unanimously agreed to.

Mr. PAUL then proposed a vote of thanks to Mr. M'Clelland and the other gentlemen, the originators of the projected railway, which was seconded by Mr. Mackintosh.

Mr. M'CLELLAND returned thanks, and said that the people of this district should do everything in their power to develope the mineral treasures of the county, and by doing so there was every reasonable prospect that Ayrshire would ere long become the Staffordshire of Scotland.

On the motion of Mr. Allason Cuninghame, of Logan, seconded by Bailie Gemmell, the thanks of the meeting were given to Mr. Oswald, as Chairman, and the meeting broke up.

A subscription paper being then produced, upwards of 160*l.* were subscribed at the table.

LLANELLY RAILWAY AND DOCK COMPANY—GENERAL MEETING.

THE annual general meeting of the proprietors of the Llanelly Railway and Dock Company was held on Monday, at the London Tavern, Bishopsgate-street, City. ROBERT BIDDULPH, Esq., Chairman of the Committee of Management, was unanimously voted to the chair.

The advertisement convening the meeting having been read,

The CHAIRMAN said, it would be observed that this was not only the occasion of their annual meeting, but that the meeting was to be made special for the election of two members of the Committee in the room of Mr. Jacob Sims, deceased, and Mr. Gambier, resigned. To fill these vacancies there were five candidates, namely, Admiral Sir W. Lake, the Hon. G. F. Hotham, Mr. J. N. Collyer, Mr. H. L. Smale, and Mr. C. W. Christie. By the Company's Act it was specified that in the event of a ballot being demanded, the ballot-box should not be open more than two hours, and as Mr. Crowder, the Company's Solicitor, thought the terms of the clause required that the ballot should not be closed prior to the expiration of the two hours, perhaps it would be desirable that it should at once be declared open, so that business might proceed in the interim, and those gentlemen who desired it, could then give their vote and retire.

Mr. STRACEY requested the Secretary to state the average number of Directors who had attended at the Board meetings during the past year.

The SECRETARY (J. Bigg, Esq.) said, he was not quite prepared to state the precise average number, but his impression was that it was 5 or 6.

Mr. STRACEY wished to know how many of that number attended regularly.

The SECRETARY believed the whole of them might be said to attend regularly.

Mr. STRACEY said, the Act fixed the number of members of the Committee at 10, of whom 3 were to be a quorum. It appeared to him that as only 5 or 6 attended regularly, it would be better to limit the number of Directors to 7, and he would propose, therefore, that with this view the present vacancies be not filled up.

The CHAIRMAN, as a pretty regular attendant at the meetings of the Committee, would be ex-

NEWSPAPER ARCHIVE
Digitized by Google

...ely glad if a larger number of them could ...always be got together, but he thought if the number were reduced, there would be less chance of this, and more labour would be thrown upon those who did attend than they would be willing to bear. The gentleman who had now resigned had done so solely because he could not attend the Committee's meetings.

...'s proposition was not seconded, and ...ly fell to the ground at once.

...ere then taken to proceed with the bal... Williams and Mr. Fennell having been ...scrutineers, the polling commenced.

...SECRETARY then read the following Re...

REPORT.

...with much regret the Committee of Management ...their Annual Report unaccompanied by those ...which they had hoped and expected would have ...at this time realized.

...mittee feel that the proprietors have a right to a ...of the cause of this continued disappointment of ...ipated expectations; they are bound therefore to state ...ir opinion, that it is attributable to the backwardness of ...interested in mineral produce in their works at dif...ts since the line of railway—from which but a very ...ortion has proceeded, compared with the abundant ...of supply which those collieries and works possess ...ve.

...Although the unsatisfactory returns for the year ended ...as appears in the sense just stated, it must be admitted that a ...of greater depression can scarcely be paralleled; and ...and iron trades have fully shared in this with almost ...other great branch of national commerce.

...Committee now proceed to state, that the Company ...completed 12 miles of the main line towards Llandilo, ...the several branches 14¼ miles; making altogether ...miles of railway. They have also erected cottages and ...extensively known as the line of railway, with sheds and ...for the locomotive engines and waggons. There ...been 325 new coal waggons completed, and 29 in ...course of completion—making, in the whole, 354. Also ...3 locomotive engines—2 of them in constant use, and 1 ...nearly ready for service. The basin has been most mate...rially enlarged, and on the south side, a stone quay wall ...with three new shipping stages have been completed; whilst ...on the north side, two additional stages are in the course of ...erection. The channel has been widened, and the sidings ...with the dock and the termini at such place, and other parts ...of the line and branches, have been laid out and nearly ...finished. In short, works and arrangements are now con...structed, by which a tonnage to a remunerating extent can ...be brought down the line, and shipped at the dock and ...basin.

...The Committee have, on the part of the Company, done, ...and are doing, everything within the compass of their power ...to aid the colliowners in their operations; and at their ...urgent solicitation have (with the sanction of the proprie...tors) expended a large sum in providing a great number of ...coal waggons and haulage power for the trade; and to en...courage it, have consented to a drawback or abatement, for ...the present, of railway dues in respect of culm, for which ...there is a large and increasing demand at Llanelly.

...These circumstances, whilst they serve to show in part ...the cause of the extra outlay, at the same time exhibit one of ...the reasons to a certain extent, of a diminution of revenue ...for the past year.

...In respect of the use of the locomotive power and wag...gons, the Committee have in most instances reduced the ...same to written agreements, whereby the parties, in consi...deration of a certain number of waggons let on hire to them, ...undertake to send down the line to Llanelly, an agreed ...quantity of tonnage yearly; or to pay the deficiency at the ...same rate per ton. The result of this operation (as it relates ...to the profitable returns to the Company) cannot be practi...cally tested until the expiration of the current year; as ...already all these engagements have only been formed a short ...time ago.

...Since the last annual general meeting, the Committee have ...entered into several important contracts for the supply of ...engine and haulage power, a summary of which is as fol...lows:—

	Tons yearly.
With Messrs. Kymer and Kirke, for at least	10,000
Mr. Long Wrey, for	10,000
Messrs. Perkins and Heneken, for.....	14,000
Mr. George Bruin, for shipping	20,000
The "Patent Fuel Works," for the ship...ping of all their patent fuel, which, at least, is estimated at.....	20,000

...The foregoing contracts are in *addition* to those reported ...last year, namely, the Gwaun Cae Gurwen; the Bryn Am...monn Company; and the Mynydd Mawr Company, with ...which the Committee of Management had then entered into ...contracts.

...Works have been commenced at or near the entrance chan...nel, the subject of anxious solicitude ...Committee, on several occasions made ...Harbour Commission... ...(under the authority this part of the har...bour is now vested), to remove the ob...structions of any impediments ...Company's channel. ...ing in the receipt of ...dues from all vessels entering ...and leaving the Company's dock and basin, as well as all other vessels frequenting the port of Llanelly, the Commissioners, in consequence thereof, are bound to keep the navigation free. After many promises from them, and a parade of preparations for a considerable time, the Committee found that no proceedings in reality were about to take place; they had therefore no alternative but to adopt the painful proceeding of applying in last Term to the Court of Queen's Bench for a mandamus to enforce the performance of that which they had hoped would have been accomplished without a resort to a court of law. The Court have granted a rule *nisi*, which appears to have been productive of the desired effect, inasmuch as the Harbour Commissioners are now engaged in removing the obstruction of which the Committee have for so long a period complained.

The passenger traffic is unavoidably small, but such as it has been is highly encouraging, and, as can be explained by the accounts of the Company, very profitable; the main line completed being but short in extent, and terminating at a point near which there is no town, or even village, and the distance therefrom to Llandilo being full seven miles, holds out scarcely any inducement for passenger traffic, and renders it very inconsiderable.

Although the operations of the two locomotive engines have been great, and the line traversed by them at all times and seasons, it has afforded the Committee much satisfaction to report, that scarcely has any casualty happened, and no accident of any consequence occurred.

It will be seen by the present Report, that the aggregate tonnage brought down the old line is less by 8,327 tons than in the preceding year. This comparative deficiency is accidental, arising from the change of underground workings in the levels, by which the supply for a time is unavoidably diminished. That this circumstance does not in any way indicate a falling off in the demand, is best shown by the fact that at this time, and for the last preceding three months, the quantity of tonnage down the old line has been and is 33 per cent. greater than for any corresponding three months in the preceding year.

The Committee have the satisfaction to state, that the colliery on the old line, belonging to Mr. Bruin, which they have ever since 1836 been expecting to be extensively worked, has since the commencement of this year been vigorously in operation, and that the supply therefrom is now at the rate of 25,000 tons per annum, and a confident expectation entertained of its increasing to 40,000 tons, arising from the great demand for that peculiar kind of bituminous coal.

In consequence of the decision of the special general meeting of proprietors on the 10th of February last not to proceed to Parliament, those portions of the railway authorised to be made by the last Act which shall not have been completed by 10th of August next, cannot after that period be made under the powers of the Act. The Committee, therefore, have decided on not taking on themselves to direct the continuation of a small length, viz., about one-third of a mile from the present terminus on the Spitty branch to the foot of Spitty bridge. They therefore leave it to this annual general meeting to determine whether it shall be made or not, premising that no time must be lost in deciding the question.

The Committee have not thought it right to take credit in the year's revenue account for the proportion of dues owing from such of the parties as have entered into contracts with the Company for sending a certain quantity of produce down the line, but who have not fully performed their engagements, amounting in the whole to 2,078*l.* 7*s.* 10*d.* This sum, together with any deficiency of dues that may occur in the current year under the respective contracts of these parties, will be included in the next year's account of revenue.

In thus submitting this item the Committee of Management do so with the object of taking the instructions of the proprietors on this especial matter, as to whether they will enforce the payment of these sums, or direct any other course to be pursued in relation thereto.

The entire amount of interest paid on debentures, and on the balance due for the original purchase, amounting to the large item of 2,401*l.* 9*s.* 3*d.*, has been entirely charged on the revenue realised in last year's account, as also the other charges for repairs of permanent way, rates, taxes and salaries, which operation falling so heavily on a small and inadequate return, leaves this year no actual surplus to be disposed of by the proprietors.

The Committee feel, in common with the shareholders, the disappointment at the non-realisation of those estimates of profit which, from data formerly submitted, warranted the calculations then made; but they also feel, from their observation of the progress of the works and the sources of traffic, that the elements for profitable returns are possessed in abundance, and that fortuitous circumstances alone have stayed the course of their development.

ROBERT BIDDULPH, Chairman.

Mr. D. Hill inquired whether all the expenses of the Company were put against the revenue of the year.

The Chairman said, all the expenses had been put down to revenue, with the exception of some small sums which had been incurred in connection with the new works, and which, therefore, were charged to capital. With respect to the Report which had just been read, the Committee had been anxious, as it was of so very unsatisfactory a character, that the proprietors should have time fully to consider it, and they had, therefore, circulated it previous to the meeting, not only in justice to the proprietors, but to themselves. Many causes had concurred to produce the unsatisfactory results to which he had alluded. The first and greatest was undoubtedly the general depression of trade in the district, especially of the coal trade and the iron trade, the slight prospect of returns from which had rendered capitalists unwilling to embark their property in such speculations. He did not think that the expenditure of the Company, properly so called, had been large. The principal expenditure had been in the items of interest on mortgages, and this opened up a serious question whether it was desirable that the further amount required for the railway should be raised by loans from others, or realised by calls. The Committee had done everything to bring ships to the Company's docks, but there were strong prejudices against them. The Committee were compelled to take the steps in the Court of Queen's Bench referred to in the Report. The consequence was, that as there stated, a rule *Nisi* had been obtained, and the Commissioners of the harbour had at once set about the matter in right earnest, so that at the date of the last Report received by the Committee, large ships which had previously been in the docks, and which they had feared could not be got safely out, had passed through with perfect ease. The Committee had reason to hope that with the rule *Nisi* hanging in *terrorem* over the Harbour Commissioners no further difficulty would arise, and that the Commissioners would, as they were bound to do, apply to keeping the harbour in a passable condition, a portion of the tolls received from the traffic entering and leaving the docks. So much more had been spent on the works than had originally been anticipated, that it was right to state that 42,000*l.* of the expenditure, for buildings, locomotives, &c., had never been included in any estimate; but he was happy to state that the money thus expended had been expended usefully—in fact, the business could not otherwise have been carried on. With respect to the further works required, there were two new shipping stages necessary, and they must have 2 more locomotives and 50 more coal waggons, as well as various sidings in the vicinity of the basin, the aggregate cost of which would, in round numbers, be 6,000*l.*; and as he had already said, it became a question whether that amount should be raised by loans or by calls. If the 2 new locomotives were dispensed with, the amount required would be considerably less; but the 2 which they now had were at work day and night, and it was well known that with such a constant wear and tear, the expenses of repairs became so heavy as to render further expenditure in procuring more power preferable. There were two matters mentioned in the Report, upon which the Committee wished to take the opinion of the proprietors, namely, the extension of the line to Spitty Bridge, and the propriety of compelling the contractors in arrear with the Company to make good the difference between the amount of their several contracts and the tonnage actually forwarded. As the proprietors had decided that application was not to be made to Parliament for further powers, it would be necessary to complete the extension by the 10th of August next. Parties had said, that *if* the line were extended, they would send a large traffic upon the railway, but as these parties had refused to guarantee such, the Committee did not think it prudent to proceed, as there was no immediate prospect of a successful result. The Kidwelly Trustees had engaged to make the line over the bridge if the Company would lend them a certain sum at 5 per cent. interest, and this had been done. As matters had hitherto turned out, the arrangement had been favourable to the Company, but as yet not so to the Trustees. With respect to the extension to Spitty bridge, Mr. Crowder, the Solicitor, was of opinion that with the consent of the landowners it could be executed, even after the Parliamentary powers had ceased, and if this were so, it would not be advisable to push forward the matter now.

Mr. Smale inquired if the consent of the landowners had been obtained.

The Chairman said, there was only one small piece of land, near the bridge, which had not been secured.

In answer to questions, it was explained that the cost of the extension, including the land, would not exceed 1,800*l.* or 2,000*l.*, as the Company had already in their possession the requisite rails, timber, &c. The land would not cost much more than 150*l.* or 170*l.*

The Chairman said, the other point in the Report to which he had alluded was of very considerable importance. As had been mentioned at the meeting last year, contracts had been entered into with the owners of several collieries, these parties engaging to send down the line a certain number of tons annually, or to make up the deficiency in money; but he regretted to say, that not one of them had been able to forward the stipulated quantity, and there were arrears under this head amounting in the whole to 2,078*l.* 7s. 10d. The Committee had in their possession the securities of responsible parties, whereby the arrears could be enforced. The parties had been expending large sums of money, and no doubt would have been glad to fulfil their engagements if they could. He did not say that it would be advisable wholly to release them from their engagements, but perhaps a medium arrangement might be effected, so as to allow them to work it out, and make up the difference in future years.

Mr. Fowler inquired if the parties would accede to such a proposition.

The Chairman had no doubt they would feel too happy to do so.

Mr. Helme inquired if the security could be enforced hereafter, supposing the arrangement referred to did not succeed.

The Chairman said, there could be no difficulty on that point. An indulgence in the meantime would give the Company a better ground for proceeding hereafter.

Mr. Garland suggested that 5 per cent. on the arrears should be charged.

The Chairman said, he had now, he believed, touched upon all the material points of the Report, but he should be happy to answer any questions, or listen to any suggestions. It would, however, be unjust to the proprietors if he did not briefly advert to one or two circumstances bearing upon their future prospects. The last year had been very unfavourable in its results, but he had the pleasure of being able to state, that the current year promised to be very different. Thus, in the month of March, 1841, the receipts had amounted to only 327*l.* 10s. 10d., whereas in the corresponding month of the present year they had been 487*l.* April 1841 had produced, 352*l.* 11s. 3d.; April 1842, 718*l.* May 1841, 505*l.* 10s.; May 1842, 1,233*l.* 9s. 9d.; being an increase of about 120 per cent. upon the three months of the past year. (Hear, hear.) That this was not a mere temporary improvement was shown by the fact that the docks were at present as full as possible of shipping, and the only cry now was, that the Company could not furnish a sufficiency of locomotive power and coal waggons—those parties whom two or three months ago the Committee could not get to enter into a contract at all, now grumbling that they could not

Digitized by Google

secure more than fifteen or twenty waggons, when they required forty or fifty. He did not mention these facts for the purpose of unduly buoying up the proprietors, but to show that they had good reason to expect a more favourable result for the present year. There was another circumstance to which he might allude. Mr. Bruin's collieries, the opening of which for years they had been looking for, were now in work, and the quality of the coal was so excellent, that instead of 10,000 tons, which had been all that had been anticipated, Mr. Bruin was sanguine of being able to send 40,000 tons annually if the Company would afford him the accommodation of shipping stages. (Hear, hear). The Anthracite had not yet got into the repute which the Committee could desire. He hoped gentlemen would urge upon their friends to go and inspect the experiments which were being made with it, for he believed it would answer almost every purpose. He had induced parties to try it in steam-vessels, and although he had been disappointed in not receiving as he had expected the details of the experiments, he might state that it had succeeded so well, that he believed the parties would hereafter use it exclusively. Another source of expected revenue was from the Patent Fuel which the Government had strongly taken up. It was made from the very small coal which hitherto had been thrown away as wholly useless. The patentee, Mr. Johnstone, had erected large works for its production near the Company's docks, although not upon their land. It was expected that the works would be got ready in July, and not only would they receive profit from the shipping of the fuel when prepared, but a toll also on the small coal brought down the line to make it.

In answer to a question from Mr. Smale, the Chairman stated that, as there was no sulphur in the Anthracite, it was expected that the iron smelted by it would be more pure than that smelted by common coal. He had been promised full particulars of the quality of the iron.

After some further conversation,

Mr. Hill moved, and Mr. Smale seconded, the adoption of the Report.

Mr. Hill, after a few remarks in praise of the previous circulation of the Reports, suggested the propriety of holding the meetings of the Company half-yearly instead of annually. The result of last year had certainly added to their disappointments, but this was not attributable to any want of zeal or energy on the part of the Committee of Management. (Hear, hear.) And although last year had been a failure, the facts referred to by the Chairman showed that their prospects for the present year were encouraging. After all, the failure had been more in appearance than in reality: for he found that the receipts had been considerably larger during the last year than in any previous year, although the whole of the charges having for the first time been set against them, the income had been absorbed. With respect to the suggestion of the Chairman as to further capital, he should suppose that the proprietors generally would not wish to have further calls made upon them, as the past calls had materially exceeded what had originally been expected. He was not aware whether the Committee could raise money by loan, but if they could, the difference of interest was not sufficient to render it desirable to press further upon the proprietors by an unexpected call. There were two points upon which the decision of the proprietors was asked for; and first as to the Spitty branch. They would not, he thought, be acting in the spirit of the decision come to at the late special meeting, if they sanctioned any new works whatever. Already the Company had embarked in many collateral speculations, which hitherto had not been, although they might hereafter become, profitable; and in the present state of the Company's affairs he did not think they ought to embark in anything further. (Hear, hear, hear.) He went entirely upon a general view of the case, as he was not acquainted with the details, and therefore, at the proper time he should move a resolution that the Spitty branch be not undertaken. As to the other subject—the arrears due by the coal-owners, he thought it would not be to the interest of the Company to excite feelings of hostility. (Hear, hear.) The contractors must have good reasons for not fulfilling their engagements, as of course it would have been for their own interest to do so, and as he was of opinion that the Company ought not to act illiberally in such a case, he should propose that the parties be allowed to make up their several deficiencies within such periods as the Committee might deem fit. [The honourable proprietor here read and handed to the Chairman two resolutions to the effect stated, and concluded by moving the adoption of the Report.]

Mr. Butts was sure the Company were much in debt, and therefore the 6,000*l.* referred to by the Chairman would not be sufficient. He had not seen any notice of the Attorney's account in the Reports for the last six years. There were two shipping stages in the course of erection, and not paid for, and various matters connected with the termini, as referred to in the Report, from all of which circumstances he believed, as he had already stated, that the Company were greatly in debt.

The Chairman said, the account for law charges had been received within the last few days, but not in sufficient time to be included in the accounts now before the meeting.

Mr. Butts inquired what was the amount of the bill.

Mr. Crowder said, the charges connected with the late application to Parliament amounted to 500*l.*, the miscellaneous charges, ranging over a period of three or four years, to 469*l.* 15s. 2d., and the balance of costs over the taxed costs in a successful action connected with the *Hercules* steamer, to 18*l.*

Mr. Butts said, there was another action—namely, the *Mandamus* referred to in the Report.

Mr. Crowder said, that action was still pending, and the charges could not yet be ascertained.

The Chairman said, the cost of the additional shipping stages was comprised in the 6,000*l*, and everything else, including 2 new locomotives and 50 waggons.

Mr. Butts would bring forward no motion on the subject, but he hoped that in the next Report everything owing by the Company would be set forth, as well as what was owing to them. (Hear, hear.) The honourable proprietor then alluded to the locomotives, as the sum received from haulage appeared to be only about 88*l.* above what had been expended in repairs.

The Chairman said, the facts to which he had already referred, as to the depression of trade, accounted for this fact, for sometimes they had to run a locomotive at a cost of 5*l.*, when the haulage amounted to not more than 5s. This had arisen from the irregularity of the trade. So much had it improved of late, that the locomotives were not now equal to the work. Mr. Blanshard had returned from the railway on Friday last, and could give any information on the subject.

Mr. Butts said, there appeared an item of 900*l.* for wages of workmen and other expenses. Was the salary of the Superintendent included in this amount, and would the expenditure under this head be hereafter increased?

The Chairman said, the salary of the Superintendent was included. Hereafter there might be an extra clerk required, but not more.

The Rev. Thomas Stanley inquired what number of locomotives the Company possessed.

The Chairman said, they had now two running night and day, as already explained, and one was now in the course of construction by the Company from the spare time of the men. They thought 600*l.* could thus be saved.

Mr. Stanley inquired if the number of tons conveyed, as well as the money received, could not be mentioned.

The Chairman said, some of the coalowners had objected to the publication of these details, but they could be supplied to any proprietor. [The document was handed by the Secretary to the reverend gentleman.]

In answer to a question from Mr. Stanley, the Chairman stated that some of the collieries had been at work for only four or five, and one for only two months out of the twelve, and this was an additional reason why they should not press too hardly upon the parties in arrear.

Mr. Stracey said, it had been determined at the last meeting, that the balance then in hand of 3,133*l.* 11s. 1d. should be divided among the proprietors. He wished to know why this did not appear in the accounts.

The Secretary said the balance referred to had produced a dividend of 2½ per cent., and had been divided among the proprietors. It was therefore a transaction finished.

Mr. Stracey argued that the two points referred to in the Report should be left to the decision of the Committee, who alone could be acquainted with the details.

Mr. Mence said, there appeared to be no material omission of debt from the accounts, except the Solicitor's bill, which he presumed would be included in the next account.

The Chairman said, the bill would of course be included.

Mr. Garland inquired if the rumour were true that Mr. John Biddulph, the Company's Superintendent had been presented with 500*l.*, in addition to his salary.

The Chairman said, the sum referred to had been voted two years ago by the proprietors in general meeting assembled.

Mr. Garland inquired the present salary of Mr. Biddulph.

The Chairman—400*l.* a year.

Mr. Garland thought this was too much, now that the railway was opened. Did the Committee think he deserved it?

The Chairman would rather leave it to others to answer that question.

Mr. Blanshard (one of the Committee) was quite satisfied that the Company could not dispense with Mr. Biddulph's services. (Hear, hear.) As to the 500*l.*, he was sure that that amount did not nearly re-imburse Mr. Biddulph for the money he had been out of pocket. He might justly have brought in a much larger bill. (Hear, hear, hear.)

Mr. Latham, as having visited the spot, had much pleasure in bearing testimony to the great merits of Mr. Biddulph, who seemed to be at once Engineer, Clerk, and Superintendent. (Hear, hear, hear.) He thought 400*l.* a very moderate salary for such services. (Hear, hear, hear.)

After some further conversation, the motion for the adoption of the Report was carried unanimously.

The Chairman then brought forward Mr. Hill's motion with respect to the Spitty branch. The branch, he said, might easily be completed by August next, but under all the circumstances, he thought a postponement desirable. It might, however, be advisable to authorise the Committee to purchase the land, which could not amount to any large sum.

Mr. Stracey at some length contended that the whole matter ought to be left to the Committee, as the responsible parties, and those best able to judge of all the circumstances.

Mr. Blanshard was in favour of a suspension of operations, as he thought better terms with the coalowners could thus be secured than if the branch were made at once and unconditionally. The honourable gentleman then entered into details of his recent visit to the railway, stating that the works were in as good condition as those of the great lines, and, consequently, that comparatively little expense would hereafter be incurred in maintaining them—that the collieries upon which the Railway Company depended for success were now in operation, and the proprietors, some of whom had expended 20,000*l.*, were in good spirits, thus auguring well for the Company—that since the issuing of the rule *Nisi*, the Harbour Commissioners had been proceeding with spirit in removing the impediments complained of—and, in short, that whether as regarded the expenditure which might now be said to be closed (as the locomotives would pay for themselves), the opening and full

Digitized by Google

operation of the coal mines, or the improvement of the harbour channel, the future prospects of the Company were very promising.

The motion having, at the suggestion of the Chairman, been amended, so as to enable the Committee to purchase the land should they deem it expedient, was put and carried unanimously.

The CHAIRMAN then brought forward Mr. Hill's other proposition with respect to the contractors in arrear.

Mr. BLANSHARD seconded it.

Mr. MENCE entered at great length into the general condition and prospects of the Company, apparently with a view to prove that the late special meeting had erred in not authorising the extension of the line to Llandilo as originally proposed. He argued, that hitherto the Committee had been correct as regarded the actual facts connected with the line, although their expectations of immediate benefit from the opening of coal properties had been disappointed, and this being the case, he trusted that the resolution of the special meeting would hereafter be rescinded. ("No, no.")

Mr. GARLAND called the honourable proprietor to order, as entering into matters already discussed and decided.

This appeared to be the general feeling of the meeting, and after a few further remarks by Mr. Mence, the motion was unanimously carried.

A series of bye-laws for the regulation of parties using the dock, were then unanimously confirmed, and sealed with the common seal of the Company.

The scrutineers of the ballot reported the result thereof as follows :—

For the Hon. G. F. Hotham	272	votes.
T. N. Collyer, Esq.	241	,,
H. L. Smale, Esq.	199	,,
C. W. Christie, Esq.	154	,,
Admiral Sir W. Lake.	96	,,

Whereupon the first two were declared duly elected members of the Committee of Management.

Thanks were then voted to the scrutineers, the Chairman, and the Secretary, and the Court broke up.

DUNDEE AND ARBROATH RAILWAY COMPANY—GENERAL MEETING.

THE annual general meeting of the Dundee and Arbroath Railway Company was held in the Town Hall, on Wednesday last; Dean of Guild Adamson, in the chair.

The Clerk read the annual Report of the Directors, giving a full and satisfactory account of the affairs and prospects of the Company. It appeared from this document that the income for the by-gone year (up to 1st May last) amounted to 13,786*l.*, being 912*l.* more than the receipts of the preceding year. The passenger traffic had fallen off to some extent; but the deficiency had been more than made up by an increase in the conveyance of goods.

The Report further bore, that the expense of the past year had, owing to various circumstances, been unusually great; and concluded by stating that, although the Directors might have been justified in declaring a dividend, yet, under all the circumstances, they had resolved to recommend that the net profits on the year's business should be carried to the reserved fund.

After a good deal of discussion, it was ultimately agreed, on the motion of Mr. P. H. THOMS, seconded by Mr. Moyes, that the meeting should approve of the Report, and resolve in terms thereof, with a recommendation that the Directors should exercise the greatest economy in the various departments of the management.

The meeting then elected 15 gentlemen to be Directors for the ensuing year.

It was then resolved, that an abstract of the Report should be printed and circulated amongst the shareholders.

After passing a vote of thanks to the Directors for their services during the year, and to the Dean of Guild for his conduct as Chairman, the meeting separated.—*Dundee Courier*, June 7.

CHESTER AND BIRKENHEAD RAILWAY —GOODS TRAFFIC.

A HIGHLY respectable meeting of tradesmen, resident in the city of Chester, took place at the Royal Hotel, in that city, on Tuesday last, for the purpose of taking into consideration the best means of promoting the carriage of goods on the Chester and Birkenhead Railway. Mr. M. HARRISON presided on the occasion, and he called upon Mr. Roberts, Agent to the Company, to state his opinion of the contemplated measure.

Mr. ROBERTS in reply said, he had fully laid his plans before the Railway Directors, who had deputed him to inquire into the nature of the traffic, its extent, and the feeling of the trade generally on the subject; also to know about what rate of freight would be likely to command the undivided support and patronage of that trade. They were all aware that, at present, the majority of heavy goods was conveyed by canal, which was at best a long and tedious mode; and Canal Companies frequently displayed those feelings towards the public which ever prevail where monopoly holds undisputed sway. If the Railway Company were placed in a position to carry heavy goods, they would soon destroy this spirit. Mr. Roberts here observed that he should feel obliged to some of the gentlemen present if they would give him an idea as to the nature and extent of the traffic.

Mr. PALIN said, the Canal Company dispatched one flat per day with trade goods, but he was not able to state what was the amount of tonnage.

Mr. TRUSS observed, that a great quantity of goods were brought to Chester for Wrexham, and other parts of North Wales.

Mr. SPRENT said, if goods were dispatched per railway, a tradesman might calculate upon their arrival by a certain period, while, by the present conveyance, he had often to lay out of articles for several days.

Mr. ROBERTS remarked that, according to the best calculation he could make, the aggregate maximum of goods, exclusive of grain, would be about 35 tons per day for Chester, which traffic was worked by three modes of conveyance, viz.: per canal, per *Dairymaid* steamer up the river Dee, *via* Rock Ferry, per turnpike-road. By the railway, if suitable arrangements were completed, 30 or 40 tons per day might be readily conveyed, and even a much greater quantity, provided the mechanical arrangements were upon an extensive scale. There must be a large quantity of grain carried from Liverpool to Chester. Now, the Railway Company were not prepared to say that they could carry grain in bulk, but would do so in sacks. Mr. R. was of opinion, that a contrivance could be effected that would enable the Railway Company to carry grain even in bulk.

The CHAIRMAN remarked, that there had been various opinions as to whether the railway would be able to bring up grocers' heavy goods, such as sugar and molasses. He wished Mr. Roberts to state if they could carry such goods, and also an idea as to the charge upon such articles, and the facility of communication.

Mr. ROBERTS observed that the leading grounds of objection at first to a goods' traffic, when the subject was first mooted, were that they could not undertake to carry hogsheads of sugar, also puncheons of molasses. Now, the Company have already conveyed, from time to time, without the slightest injury being sustained, puncheons of spirits, pipes of wine, and tierces of brandy, with the present limited resources; that being the case, he thought he was warranted in stating that sugars and molasses would prove but small obstacles when aided by additional mechanical apparatus. The Company have already realised, by the carriage of goods of various descriptions, upwards of 1,500*l.*, which carriage was a spontaneous result, unaided by solicitation. Mr. Roberts also remarked that the river was held by many to be a fatal obstacle in the way of a goods' traffic per railway to Chester, but contended that mechanical means and appliances could be found capable of overcoming the difficulty. Mr. R. here explained his mode in detail, which satisfied the mind of Mr. Palin and the meeting generally. He was not prepared to say at present at what rates the Company could carry per ton.

Mr. SPRENT—What can the Canal Company afford to carry at per ton?

The CHAIRMAN—They carry now at ten shillings per ton. Would it not be considered an aggressive step on the part of the Railway Company to carry goods at a lower rate than the canal?

Mr. PALIN here observed, that although the Canal Company might look upon it as a hostile step, they must come lower than their charges or they could not contend with them.

The CHAIRMAN—All the difference appears to be about the charge. Can the Railway Company carry for less than ten shillings per ton?

Mr. ROBERTS—I am of opinion that they can, in addition to which there will be the superior despatch, which must of necessity be of great importance.

Mr. WHALEY said, that in addition to the quantity of grain and heavy grocery goods, the Directors should look at the vast quantities of vegetables that would be carried from Chester and its vicinity to Liverpool. Here Mr. W. proposed the rate of 8s. 4d. per ton for groceries, which was at once approved of.

Mr. SPRENT observed that the Directors ought to be impressed with the idea that they should not commence this project in a petty way, but at once make an attempt to accommodate the trade of Chester and North Wales. If they did so, the trade would be with them.

The discussion here closed, when Mr. Sprent moved the following resolution :—

"That this meeting view with satisfaction the movement made by the Directors of the Chester and Birkenhead Railway towards establishing a goods' conveyance between Liverpool and Chester, and pledges its most strenuous support, in the event of a rate of freight being fixed which shall hereafter be considered reasonable and just."

It was then moved by the Chairman, and seconded by Mr. Palin, Vice-Chairman,

"That the thanks of this meeting be given to Mr. Roberts, for the luminous report he had afforded them as to the practicability of conveying goods, *via* railway, from Liverpool to Chester."—*Liverpool Mail*, June 4.

SHEFFIELD AND MANCHESTER RAILWAY.—We are glad to learn that the guardians of the poor, and the Directors of the Sheffield and Manchester Railway, are negociating for the employment of part of the able-bodied poor this summer upon the proposed line near the town. It will do the Company no small good in public opinion to break ground at this end of the line, by dissipating the apprehensions which many persons entertained, that if they should get the branch from Penistone to the North Midland, Sheffield would still be left in the lurch. Preparations are making to mark out portions of the line for letting, which it is proposed to let to contractors who will employ the parish men. But as the Railway Company is cramped for money, we apprehend the stipulation will be, that the Company shall not pay the Union for the labour until the time when they would have executed the work in the regular course. This arrangement, therefore, will not afford immediate relief to the rates, but will ensure a considerable repayment hereafter.—*Sheffield Independent.*

LONDON AND BIRMINGHAM RAILWAY—BLISWORTH STATION.—The point for which we have so long and earnestly laboured has been at length conceded by the Birmingham Railway Company, and the station at Blisworth is to be immediately and permanently arranged for the receipt of carriages, and in a proper situation. We sincerely rejoice at this, and feel bound to acknowledge the change as another illustration of the deference paid by the Birmingham Company in question to the reasonable wishes and convenience of the public. *Northampton Herald.*

ASSESSMENT OF RAILWAYS.

THE QUEEN v. THE DIRECTORS OF THE SOUTH-WESTERN RAILWAY.

Court of Queen's Bench, June 3.—This was an appeal against a rate made for the relief of the poor of the parish of Mitcheldever, in the county of Southampton, by which the defendants were rated at the sum of 4,328*l.*, by a rate, of which the following is a copy: "London and South-Western Railway Company; railway four miles and a half, 4,320*l.*" The defendants appealed to the sessions, where the rate was confirmed, subject to a case. When brought up to this Court, it was admitted that the rate could not be sustained to the extent of 4,320*l.*, but the question was whether it was to be reduced to 3,800*l.* or to 1,400*l.*, on the facts stated in the following case:—

"The London and South-Western Railway Company are established and act under a certain Act of Parliament, passed in the fifth year of the reign of his late Majesty, King William IV., entitled, 'An Act for making a railway from London to Southampton,' and four other Acts of Parliament, respectively passed in the first, second, and fourth years of the reign of her present Majesty, and respectively entitled, 'An Act to alter the line of the London and Southampton Railway, and to amend the Act relating thereto;' 'An Act to amend the Acts relating to the London and Southampton Railway Company, hereafter to be called the London and South-Western Railway Company, and to make a branch railway to the port of Portsmouth;' 'An Act to amend the Acts relating to the London and South-Western Railway Company;' and 'An Act to amend the Acts relating to the London and South-Western Railway Company, and to authorise an agreement between the said Company and certain inhabitants of Wandsworth and Battersea, respecting an alleged loss in their supply of water.' Copies of these Acts, accompanying this case, and are deemed to constitute part thereof, and may be referred to by the Court or either party at the hearing thereof.

"Under the powers contained in these Acts, or one of them, the Company have formed and completed a line of railway from Vauxhall, in the county of Surrey, to Southampton, being a length of 77 miles, and this railway, for 4¼ miles thereof, passes through the parish of Mitcheldever aforesaid, and in pursuance of the powers and provisions of the Act, especially those contained in the 160th to the 161st section of the first-mentioned Act, the Company have caused lists to be made of the several rates, tolls, and sums, which the Company have appointed to be taken and received by virtue of the said first-mentioned Act. And the said Company have duly kept, and do duly keep, a separate account, shewing the amount of rates or tolls, which would have been received by them for the use of the said railway, in respect of passengers, cattle, or other animals, goods, wares, &c., if carried by any other party or parties, to which said account the overseers of the poor of the several parishes and townships through which the railway passes, have free access and have liberty to inspect in manner by the said Act provided.

"The sum which should have been so received by the Company for the use of the railway, by such other parties in the year next immediately before, and up to the time of the making of the said rate, in respect of so much of the railway as lies in the said parish, amounts to 3,470*l.* 13s. 9d., being such portion of the tolls as is earned by the Company in the said parish of Mitcheldever.

"The whole sum, however, received by the Company for the conveyance of passengers, &c., by the Company, in carriages provided, manned, and worked by the Company, at their own sole expense, including the said sum of 3,470*l.* 13s. 9d., amounts to 13,880*l.* per annum in respect of so much of the railway as lies in the said parish.

"The former sum of 3,470*l.* 13s. 9d. constitutes the proportionate sum for the said parish, which any individual who contracted with the Company for the exclusive right to take tolls for the use of the railway by persons using the same, under the powers and subject to the regulations of the aforesaid statutes, for the transmission of goods, cattle, and passengers along the line, in carriages provided by such persons, would receive from such persons; and the sum of 1,293*l.* constitutes the rent which a tenant, from year to year, would give to the Company for the exclusive right to receive tolls for the conveyance of goods, cattle, and passengers in the manner mentioned in section 157 of the said first-mentioned Act, along so much of the railway as lies in the said parish, free of all usual tenants' rates and taxes and tithe commutation, rent charge, and making all deductions for the average annual cost of repairs, insurance, and other expenses necessary to maintain the way, its fixtures and appurtenances, in a state to command such rent.

"The respondent parish contends that the annual value is not to be estimated on the basis of the tolls alone, nor is to be limited to such tolls or their value. But that the advantages which a lessee of the railway may be expected to derive from his lease by supplying power and by carrying upon it, may be taken into account.

"That if a lessee is to be supposed capable of deriving from the use of the railway all the profits which now accrue to the Company from the conveyance of passengers, cattle, and goods, under the powers of their Acts, such lessee finding locomotive power, carriages, &c., and paying all expenses incidental to working the railway, then the whole railway, with its fixtures and appurtenances, might be reasonably expected to let from year to year at a rent which, for the purposes of this rate, may be assumed at 70,000*l.* per annum at the least, free of all usual tenants' rates and taxes and tithe commutation, rent charge, and making all owance and deductions for the average annual cost of repairs, insurance, and other expenses necessary to maintain the way, its fixtures and appurtenances, in a state to command such rent.

"That, supposing such rent to be given for the whole line, the proportion thereof, in respect of so much of the railway as lies in the respondent parish, is to be assumed to be the net sum of 4,320*l.* per annum, being the amount at which the appellants were rated in the above rate.

"The questions for the opinion of the Court are—

"Whether the Company are rateable upon the principle contended for by them, or upon that contended for by the parish; that is to say—

"Whether, upon an estimate of the net annual value obtained from the statement of the tolls which would be received by the Company as aforesaid, forming the basis of the rent which a tenant would give as before-mentioned, subject to proper deductions, or upon an estimate of the net annual value as ascertained by a rent given by tenant under the circumstances and for the purposes above stated, as contended for by the parish.

"Lastly, whether the annual value upon which the parish rate is to be made should be such proportion of the estimated rateable value of the whole line (whichever basis is adopted by the Court) as the length of the part situate in the parish bears to the whole line, or such proportion thereof as the receipts actually derived from or in respect of the carriage of passengers, cattle, and goods, or from tolls upon so much as lies in the parish, bear to the same receipts throughout the whole line.

"If the rateable value is to be proportioned to the length of the railway in the parish, and not to the receipts, then the estimate, as contended for by the Company, should be the sum of 1,400*l.*

"If it is to be proportioned to the receipts as above, and not to the length of the railway in the parish, then the estimate, as contended for by the parish, should be 3,800*l.*

The rate is to be confirmed, quashed, amended, or sent to be re-heard at the sessions, according to the opinion of the Court upon the above point."

The case had been argued in the Hilary term, by the Solicitor-General, Mr. Creswell and Mr. Smirke in support of the rate, and by Mr. M. D. Hill, Mr. Kelly, and Mr. Gunning for the Directors of the Company.* The Court took time to consider the judgment which was now prayed by Mr. Hill.

Lord DENMAN delivered the judgment. The case has stood for some time for judgment on account of the novelty and importance of the question involved in it, with relation to the general laws of railways as to their liability to rates. We are now called on to determine the question on a particular state of facts, and the question raised is whether these defendants, being in the occupation of their own railway, were rateable on the amount of tolls payable by law by all carriers, though in reality never paid at all, or on the amount of the general profits of the Company, as received from this occupation. Another question was raised on the mode of measuring the rate—namely, whether it was to be measured according to the proportion which the mileage of the railway gave in the respondent parish, or according to the actual earnings of the railway in that parish. This question was not much argued, the latter being agreed to be the proper mode of estimating the rate. On the other point it was agreed that if the defendants were rateable on the general profits of the Company, as received from this occupation, the rate was to be reduced to 3,800*l.*, while if their rateability was limited to the tolls only, the amount must be reduced to 1,293*l.* This question depends on the construction of certain Acts under which the Railway Company was created, or by which the law of rating is settled. By the first of the statutes to which we shall have occasion to refer, the Company was created, and power was given to the Directors to purchase the fee simple of the lands through which the railway was to pass, subject only to certain conditions which it is not now necessary to mention. The lands thus purchased were to be employed in constructing the railway, or in erecting warehouses and station houses for the receiving and loading of goods, and the arrival and departure of passengers. For the labour thus performed in the carriage of passengers and goods, the defendants are entitled to demand certain tolls, of which the maximum is fixed, if such passengers or goods are carried on their line of road by other persons. They may provide the power for moving such persons or things, or they may let out their carriages for that purpose, or allow their railway to be used by persons who have provided carriages to travel on it. So that they may be the simple owners of the way on which others may place the steam power, and the carriages; and the two parties would then stand to each other in the relation in which trustees of a turnpike road and coach masters stand to each other, and then they would be entitled to receive tolls only for the use of their road. In such a case it would of course be the interest of the defendants to raise the tolls to the maximum. On the other hand, the defendants may unite the characters of owners of the way and carriers upon it. They will then receive both the tolls and the fares, which will then be paid in one undistinguished sum. Suppose them to be carriers only, as carriers they would not fix the rate of tolls. They would do so as owners only. To meet the case of their holding both these characters, the 157th section of the Act has provided that where they shall carry for their own profit, separate accounts shall be kept by them, as if the conveyance of the goods and passengers had been effected by other persons, to which separate accounts the overseers of the several parishes through which the railway passes shall have free access. But this Act, by some strange oversight, does not make any provision for keeping separate accounts where other parties shall carry the goods or passengers. It is not likely that such an event will happen, but the Act contemplates the possibility of it, and yet has not provided in such a case for the keeping of separate accounts, in cases where other parties, besides the defendants, are carriers on the railway. In the second Act, passed on the subject of this railway in 1837, there is a reference to the section of the former Act, directing the keeping of separate accounts, as if that direction had applied to both the supposed cases, and the neglect to keep them is directed to be visited by a heavy penalty. The effect of this clause, with a view to ascertain the intention of the legislature, must afterwards be considered. By the 122nd section, all persons are to be at liberty to use the railway on the payment of certain tolls to the proprietors, and on observing certain rules which are therein duly provided for; such, for instance, as the construction of the carriages, which must be according to the order of the defendants, the Directors of the Company. But though the railway itself is thus thrown open to the public, no corresponding provision with respect to the use of the warehouses, station-houses, &c., had been introduced into the Act. Yet both of the Acts contain powers for the purchase of lands for warehouses and station-houses; so that the Acts do not give to the public any right to the use of more than the railway by the public as adverse to the Company, and the use of the rest might, so far as the provisions of the Acts are concerned, be denied to any individual. This is a material fact to be considered. We have now to apply to the facts already stated, the rule of rating laid down in the 6th and 7th Wm. IV., c. 96, called the Parochial Assessments Act. That Act takes as the standard of rating "the rent at which the hereditaments might reasonably be expected to let from year to year, free of all usual tenants' rates and taxes, and to the commutation rent-charge, if any; and deducting therefrom the probable average annual cost of the repairs, insurance, and other expenses necessary to maintain them in a state to command such rent." The 3rd and 4th Victoria, c. 89, has been referred to, but it seems to have no bearing on this question. That prohibits the rating of inhabitants in respect of their ability derived from their profits of stock-in-trade, but it leaves unaffected the rateability of occupiers under the provisions of the 43rd Elizabeth and the 13th and 14th Charles II. The 6th and 7th William IV., c. 96, fixes the liability to rate upon the estimate of the net value of the several hereditaments rated, declaring that to be what they would let at from year to year, in the manner already stated. To that provision is added another, declaring that nothing therein contained should be construed to alter the principles or different relative liabilities, according to which different kinds of hereditaments were then rateable. The argument for the Directors may be stated shortly thus; it was clear, and, if applicable, convincing:

*See *Railway Times*, January 20, 1842.

Digitized by Google

it was—that it is necessary to suppose the property in respect of which the rate was to be imposed, as let from year to year, that this property must be supposed to be so let, and then the question was what the tenant or occupier, who would be the person rateable, would obtain from the demise, and what in his hands would be subject to the rate; that would be but a portion of the income from the railway and a portion of the tolls. For that the tenant having at best no greater right than the proprietors, would be at liberty to put carriages on the railway, not for himself alone, but in connection with all the world. He would be liable for the maintenance of the railway, and his carriages, and the residue after these disbursements, would be the net annual value on which the rate was to be imposed. That if because the lessees should place carriages on the road, and thereby obtain profits, they might be rated, other carriages not raising profits for them would not render them liable. This, as it seems to us, would be not an observance, but a violation of the statute. Practically speaking, there never is likely to be any such occupation, and we must decide on the rateability on the circumstances that have actually happened, and not on those which by bare possibility may at some future time occur. Such lessees would be mere toll collectors for the Company, without having, for the purposes of the Act, the most convenient mode of collecting the tolls. The supposition of a free competition of carriers on a line of railway is in fact absurd. If all the lines of railway were laid open to such competition, the nature of the mode of conveyance would forbid its adoption. We cannot, therefore, suppose the existence of any such state of things, the Directors of the Company retaining, as in fact they must do, the absolute control over all the existing approaches to the railway. But should circumstances place lessees in the same position as that now held by the Directors of the Company, the matter would not be free from difficulty, for the Act is framed with some regard to the interests of the public. The alarming risks that otherwise might be incurred are provided against, and many regulations of police are made for that purpose, regulations which the defendants are charged with enforcing, and which render it doubtful whether to lessees could be delegated the performance of that trust. These are considerations which make us pause in giving assent to the argument of the defendants. The Act of 6 & 7 William IV. declares that that statute has not altered the principles of rating which existed before the passing of that Act. It is therefore important to consider how this railway would have been rated, if that Act had not been passed. The defendants would then appear to carry on a trade, not thereon or thereat, but thereby—a trade not having existence without buildings and land being attached, and for the sake of which in a great measure the lands themselves were occupied in a particular manner. The profits would therefore arise from them, and the question would be, whether these profits were to affect the amount of rating. There is a class of cases which may properly be referred to on this subject—such as the King *v.* St. Nicholas, and the King *v.* Bradford. The learned Chief Justice fully stated both these cases. In one of these cases, where a canteen in reality formed part of a house of trade, though in appearance the canteen was separated from the house, Mr. Justice Le Blanc said that the rating was not rating of the canteen in respect of the profits of the trade, but only in respect of the rent which the tenant paid for the place where that trade was carried on. In that way, the house might be valuable only because it enabled those profits to be raised by its occupier. We now come to consider the case on which much reliance has been placed—the case of the Trustees of the Duke of Bridgewater. There it was held that the rent, or the sum at which the land might be let, was the proper criterion of value, after deducting the expenses of cultivation and the cost of the farmer's subsistence. Now, let us apply the principle of that case to the present. There are lines of railway and buildings on certain lands, and the only question, whether they increase the value of the land on which the rate is to be raised? If they do, then to what extent; and to that extent they must be directly or indirectly included in the amount of the value subject to the rate. It is no answer to say that all the world may carry goods upon this railway. That, and the other circumstances already referred to, are proper to be taken into consideration in determining the quantum of rate, but not the principle of liability. Then, do the buildings here affect the value of the land? The case itself says that they do; but it is argued that that might refer to the opportunity of carrying on trade, and so earning profits. If that argument is correct, the rateability would exist on the same principle as in the cases of the billiard-room and the canteen; but it will be observed that the lands and the buildings are included in one rate, and that the value of them is partly made up from the use of them, in connection with other buildings in another parish. Can it be truly said to make any difference that that is so, when both are in the same occupation, and are used for the same purpose? The subject matter of a rate in a particular parish is the beneficial occupation of land there, and the benefit of such occupation is not to be calculated with reference to the land alone. We cannot strike out a portion of a rate because it would not have existed but for the occupation of buildings in another parish. That occupation does exist, and therefore it must be taken into account. If this were not so, there would be two rates for two parts of the same property, though held conjointly, and for the same purpose. A man so rated cannot be allowed to say that the greater value derived from his particular occupation of a portion of his property is to go for nothing, as if he was to be rated as the holder of the inn, and not of the tap or stables. The answer would be, that if his peculiar occupation of part made the whole premises of increased value, it did not matter how that value was obtained. Where it does exist, he must be rated in respect of it. Then, in the present case, the question would be one of fact, whether the land was more valuable by reason of being occupied, together with the stations and warehouses, and the answer would necessarily be in the affirmative. These observations lead to the conclusion that if this case had come to be considered before the Parochial Assessments Act, the principle of rating on which the parish has here proceeded, would be the true one. Has then that statute made any difference in the matter? The enacting part of that statute lays down no new principle of rating, for in the Bridgewater case it had been understood that, fraud apart, whether the occupation was that of the owner, or of a tenant, such was the criterion of rateable value. In all the cases on rating, the great object has been to secure equality, and in effecting that object we must regard substance and not form; we must judge of things as they are, and not as they may by possibility be at some future time. We must therefore say whether this is not one entire rent, though in the mode of dealing with it by the defendants, it may be artificially divided into several separate lines of receipt. If it is, to deal with it only according to that artificial division, would be to break up all the rules which have hitherto governed Courts on these subjects. To the argument that the defendants may lease these lines of railway, and allow others to be carriers on them, the answer is that the present rate is made on no such state of facts. When such a state of facts does exist, we shall be prepared to apply settled principles to it. But at present we are not called on to partition the rate between two classes of occupiers. Then it is said that the private Act of the Company concludes this question by the clause directing that a certain toll account shall be kept for the use of the Directors, and that with nothing but the toll account have the Directors anything to do. Such, however, does not appear to have been the intention of the framers of this Act, who must not have dealt with it as a general Act, but as a mode of effecting a bargain between the Directors and the public. There is nothing in either of the local Acts to prevent the application to them of the general principles of law. The conclusion, therefore, at which we must arrive is in favour of the principle of rating adopted by the parish; a principle which, in our opinion, represents truly the value of the land occupied by the defendants in the parish. The rate will, therefore, be reduced to the sum of 3,800*l.*—Judgment accordingly.

RAILWAY ADJUDICATIONS.

THE QUEEN *v.* THE EASTERN COUNTIES' RAILWAY COMPANY.

Bail Court, June 6.—Mr. Butt moved to make a rule absolute in this case, which called upon the Directors of the Eastern Counties' Railway Company to show cause why they should not pay the costs incurred by a person named Collingridge, in establishing his claim to a compensation at the hands of the Directors, for the loss he had sustained by their having lowered a certain road for the purpose of forming the Company's railway. It will, perhaps, be recollected that this case was originally brought before the Court about two years ago, by an application being made on behalf of Mr. Collingridge for a rule, calling upon the Directors to show cause why a writ of mandamus should not issue commanding them to issue the usual precept for impannelling a jury to decide the amount of compensation to which Mr. Collingridge was entitled under these circumstances. Mr. C. was the proprietor of a large track of land near which the line of the railway in question passes, and that for the purpose of forming the said railway, the Directors had (as they were authorised to do by their Act of Parliament) lowered a road which ran right in front of the land of Mr. Collingridge, and by so doing they debarred him from that free access to the land which he had previously enjoyed. On his applying for compensation for the injury he had thus sustained, the Directors refused his application on the ground that they not having "taken or used" any part of his land for the purposes of the Act in question, he had no claim upon them for compensation. A rule *nisi* for a mandamus was granted, and subsequently the case was argued on the return to that writ, and a demurrer thereto filed by the prosecutor. The result of these proceedings was, that the Court ordered the mandamus to go, and a precept was consequently issued, and a jury impannelled, who awarded damages to Mr. Collingridge for the injury which he had sustained. The only question left in dispute was, who should pay the costs incurred by all these proceedings, and to settle that point the present rule was obtained.

Mr. James now appeared to show cause against it, and contended that as during the whole of the above proceedings no application had been made for costs, that the claim now made could not be sustained. In resisting the claim for compensation set up by Mr. Collingridge, the defendants had acted under the advise of counsel. The question as to their liability to make compensation under such circumstances was a most important one, as it would decide claims to the amount of several thousand pounds, made by persons who owned land through or near which the line of the railway passed; and there being great doubts as to their liability, he contended the defendants were perfectly justified in disputing the claim made on them, and ought not to be liable for anything beyond their own costs.

Mr. Butt, in support of the rule, said that the costs incurred by the prosecutor in endeavouring to establish a claim which the Court had since decided was a just one, had been very considerable, owing to the obstinate manner in which the defendants had resisted it. If his Lordship should discharge the present rule, and leave the prosecutor to pay those costs, the amount would be greater than that of the damages which the jury had awarded him by way of compensation for the original injury which he had sustained. His Lordship must be aware that in all cases of this kind the question of costs was entirely in the discretion of the Court; but it was usual to award full costs to the successful party.

Mr. Justice Wightman said he would look at

the affidavits, and give his judgment in a day or two.

THE QUEEN *v.* PRICE.

Bail Court, June 9.—Mr. Barstow applied to his Lordship for a writ of *certiorari* directed to certain justices of the county of Essex, to remove into this Court the depositions taken before them in this case, and also the conviction founded thereon. It appeared from the affidavits on which the motion was founded, that a gentleman named Price had sold a piece of land to the Directors of the Eastern Counties' Railway Company, and that by the contract entered into between the parties, the latter agreed to erect a foot bridge over that part of the line of their railway which passed through the defendant's land, but instead of that they put some steps on each side of the sloping bank, and thus persons who wished to cross it had to go upon instead of over the railway. This led to a dispute between the parties, and the Directors gave Mr. Price notice not to trespass upon their property, and refused to allow him to cross the railway at all, adding that if he did so they would give him into the custody of a policeman. Mr. Price disregarded this notice, and on his attempting, after having been served with it, to cross the railway he was warned off by a policeman, and on his refusing to go he was taken into custody and afterwards brought before the magistrates, who convicted him under a clause in the General Railway Act, of wilfully trespassing upon the said railway.

Mr. Justice Wightman granted the application.

[This arises out of a case recently included in our "Railway Offences."]

HAVRE AND ROUEN RAILWAY.

Chamber of Deputies, June 1.—The President took the chair at 12 o'clock.

The order of the day was the adjourned discussion on the Rouen and Havre Railway Bill.

"Art. 1. The offer made by Messrs. Charles Laffitte and Co. to execute, at their risk, peril, and expenses, the prolongation of the Rouen Railway to Havre is accepted. In consequence, all the clauses and conditions of the contract determined on by the Government, April 28, 1842, and accepted by the said persons on the following day, shall receive their full and entire execution."

M. De Laplesse maintained that the conduct of the Government was inconsistent, since a few days back it got a Bill adopted which insisted on the junction of the State with Companies to execute railways, whereas now it authorised a Company alone to complete a line.

M. Duprat considered that the Bill in question would cost the State 27,500,000f.; too large a sum in his opinion to lose for a line of which the State was not proprietor.

The Minister of Public Works would assert that there was no inconsistency, as was asserted, for the Government had plainly stated that a special Bill would be introduced for the Rouen Railway. The line was, in fact, nothing more than the continuation of the Paris and Rouen line, which had been granted to a Company, and the construction naturally was subjected to similar conditions with those granted to the first portion. With respect to the financial part of the question, five years ago a less sum had been proposed for this line, but experience had proved that the sum was insufficient, for they had been obliged since to grant aid to all the railways agreed to at that period. He could not clearly see how M. Duprat had arrived at the conclusion that the railway had cost 27,000,000f.

M. Duprat—And 500,000f.

The Minister of Public Works begged pardon for having omitted the 500,000f. (A laugh.) To arrive at that calculation, it must be supposed that the sum of 10 millions, which it was proposed to lend, should be completely lost.

The Chamber proceeded to the ballot on the ensemble of the Bill, when it was adopted by a majority of 173 to 99.

RAILWAY PLEASURE EXCURSIONS.

MIDLAND COUNTIES' AND NORTH MIDLAND RAILWAYS.

On the 22nd June, an excursion to that delightful place, Matlock, by special train is arranged. It will consist of first and second class carriages; will leave Leicester early in the morning; and traversing the Midland Counties' line to Derby and thence the North Midland to the Ambergate station, will discharge its living cargo at the point where the railway crosses the Cromford Canal. Here the party will take water, and a voyage of five miles, through the most picturesque scenery in Derbyshire, will bring them to Matlock. Not the least interesting, if the slowest, part of the journey, will be that on the silent highway. The Cromford Canal is, for the whole distance between Ambergate and Matlock without a lock; and it winds at the foot of majestic hills, and through beautiful pleasure-grounds, nearly the whole way. The preparations for the accommodation of the party, which is expected to be very numerous, will be conducted in real railway fashion—that is, without any regard to expense on the part of the Directory. Boats with awnings and seats, regimental bands of music, and everything to ensure the comfort and enjoyment of the travellers, will be provided. Eight or ten hours will be allowed for inhaling the breezes from the summit of the High Tor, or the heights of Abraham, while those whose aspiration or strength of limb will not take them so high, will find ample time to explore the caverns, or wander along the margin of the Derwent. Every facility will be afforded by the indefatigable Secretary of the Midland Counties' Railway—to whom our townspeople are indebted for this capital project—to parties who may wish to travel together, to secure one or more compartments of particular carriages to themselves. Altogether a more rational and interesting excursion could not be contrived. Already applications from Rugby to be included in the arrangements have been made, and we believe some carriages will leave that place, at six o'clock in the morning, with the Rugbæans.—*Leicester Herald*, June 4.

The Post-office and the Railways.—An instance was given, on Saturday last, of the necessity of the Post-office accelerating the speed of the mail trains upon railways. The *Times* and some of the other London morning papers, together with the letters intended for the royal mail steam-ship the *Britannia*, arrived in Liverpool on Saturday last by a quarter-past 2 o'clock in the afternoon, published in London the same day. This was accomplished by an express engine from Birmingham engaged for the purpose, in anticipation that the first edition of the *Times* would contain the news of the Indian mail more fully than given in the second edition of that journal on Friday last. The usual hour at which the London morning papers are received in Liverpool, a distance from London of 210 miles, is 4 o'clock in the afternoon, but if the Post-office authorities were to take a lesson from this express, they would send the mail by the six o'clock morning train, and by accelerating the speed the merchants of Liverpool and Manchester would receive their letters and papers every day at 2 o'clock, giving them an opportunity of answering their correspondents by the return mail at 7 in the evening. As it is, the London letters leave Euston-square at half-past 9 in the morning and arrive in Liverpool and Manchester at 7, after which hour no delivery takes place until the following morning, when another mail arrives from London, thus showing no necessity for the first, unless the speed be accelerated and the time altered. It is highly desirable that an alteration should be made in the mail trains on the northern line of railway. Two years ago the good people of Manchester and Liverpool did not receive their papers until 7 o'clock in the evening, but through the exertions of Mr. Gaskill, the Liverpool agent for the *Times*, they have ever since received them at 4 o'clock.—*Times* of Tuesday.

"LOCKING-IN" ON RAILWAYS.

To the Editor of the Railway Times.

Sir,—The late accident at Versailles appears to have given rise to a strong opinion against the locking of the carriage doors on a railway, but I have not seen the subject argued to my satisfaction by any of those who have written respecting it.

The question, of course, is whether there be less danger to the passengers in the locking-up, or in the *not* locking-up, system.

Let us examine, for example, the circumstances of the above-mentioned accident, which has caused this discussion. The carriages are said to have been piled up over the fire of the engines, and they were no doubt much broken and strained, so that the question is whether the doors could have been opened, had they been neither locked or even hasped. Any person who has seen anything of the kind, under similar circumstances, would know that in all probability the doors were completely jammed by the *twist* of the carriages consequent on their position; also that, if the carriages were constructed as substantially as those on the Great Western Railway (against which railway the arguments are pointed), or those upon any other railway with which I am acquainted, they could not have ignited to any dangerous extent under 10 minutes at least, which would have allowed time for all those passengers who were not too severely injured to have escaped through the windows.

I recollect seeing it stated somewhere, what a dreadful thing it would be to be locked in, in the case of an accident in the Box tunnel. Now it is there where I should conceive the being locked in would be of the greatest service; for how should the passengers, who would be rambling about in the dark, be able to avoid the train which has unfortunately sometimes run over a man *employed* in such a situation, who is constantly accustomed to the place, and aware of the line upon which the train must be approaching. See also the difficulty, not unattended with danger, in getting the passengers into the train again when another engine had arrived.

In conclusion, I may add, that the locking-in plan is, in my opinion, the safer; whether it is repugnant to our feelings of national liberty, those might determine who lock us up in pews, &c.

I am, Sir, your obedient servant,

R. R. R.

June 1, 1842.

P.S.—I should have mentioned, that I have not heard of any decided instance of a passenger having been killed or injured from being locked in, but I have heard of many such accidents from passengers attempting to get into or out of a train whilst in motion. I am informed that the exact number is 26.

GREAT NORTH OF ENGLAND RAILWAY.

To the Editor of the Railway Times.

Sir,—I perceive in the *Railway Times* of the 4th instant, that the uniformity of the amount of shillings and pence in the passenger receipts of this railway has excited the curiosity of one of your correspondents. I am happy to explain to him that we are obliged to forward to you for publication the weekly receipts, before we can receive the clearing-house returns for the Saturday previous. Until these arrive, there is a small branch of the parcel trade of which we do not know the exact receipts. As it is a matter of not more than a few shillings, the pounds only are returned, omitting shillings and pence. After this return comes in, the charge for carrying the mail is added, which being a fixed weekly sum, makes the invariable addition of a uniform amount of shillings and pence.

I remain, Sir, your most obedient servant,

W. O'BRIEN, Secretary.

Darlington, June 8, 1842.

Belgian Railways.—The *Moniteur Belge* publishes a royal decree, which grants to foreigners permission to try on the railways all kinds of carriages intended to be used on railways which they may bespeak of Belgian engineers.

BIRMINGHAM AND GLOUCESTER RAILWAY—PROFESSIONAL OR AMATEUR MANAGEMENT?

To the Editor of the Railway Times.

SIR,—In your last number you have given an outline of the *theory* of the present system of management on the Birmingham and Gloucester Railway—a system, you observe, "not, after all, anything new or remarkable." It is, however, very evident, that the amount of advantage that the proprietors are likely to reap from the adoption of this scheme is more dependant on the efficiency of the men occupying the several posts of duty, than on the mere system of management, however well planned. Let me put two imaginary cases, and illustrate my position.

I will suppose a railway of large traffic, where the office of Chairman should be held by Mr. Russell or Mr. Moss; the finance be attended to by Mr. Glyn; the locomotive department be guided by Mr. Sharpe; the way and works occupy the vigilant eye of Sir John Easthope; and the coaching and carrying be superintended by Mr. Chaplin or Mr. Baxendale. Under such an acting Committee, influenced by perfect unanimity, and each member of which held a large share in the line, men of experience, prudence, and known character, should fill the heads of departments; while liberal, though not extravagant, pay, and uniform good treatment, should insure the feeling on the part of every servant of the Company that it was no trifling object to retain his position and character, to satisfy his superintendents, and to advance the interests of the Company. Under such a rare combination of circumstances, we might hope to see a visible token of good management in the half-yearly dividends.

Let us take the converse, under a system similar in its outline, as far as the proprietors can gather from Reports alone. The Chairman, and real dictator of the railway, a naval officer, who should aim to introduce into civil life the discipline of the quarter-deck; the Director for the locomotive department a corn-dealer; a gay lawyer superintending way and works; a printer attending to coaching and carrying. Let us suppose that the Executive, placed under the orders of this somewhat incongruous Committee, should be more remarkable for subserviency than for efficiency; that the Resident Engineer and General Superintendent had been selected on the score of being *cheap*, although (or *because*) the youngest and most inexperienced man on the whole engineering staff; that as the Secretary's duties were reduced to those of a mere clerk, so was that officer in no way superior to the requirements of such mechanical functions; that the superintendent of locomotives was taken by chance from the shop of an engine-builder, where he was in no way distinguished. Let us suppose wages in all departments reduced to a minimum, the guards even paid *per trip*, and every valuable servant driven thus from the line. In such a case, might we not justly look for low traffic, lower dividends, and lowest character, on all such ill-managed lines of railway.

Now, I put it to all men versant in railway matters, which of these two cases we are the more likely to meet with.

We must not forget that service too cheaply bought is always the dearest in the long run—that one incompetent manager surrounds himself, ten to one, with twice the number of incompetent underlings that an efficient man would require of practised hands. Neither must we disregard the fact that on prompt, decided RESPONSIBILITY, depends alike the safety of the public and the interests of the shareholders.

If we cease, then, to look for that Utopian Board, at whose description your readers may smile; if we consider Railway Directors as we usually find them to be, I think we shall place little confidence in the practical working of the Birmingham and Gloucester system. When a man duly educated for his post, and giving his whole time to his duty, on whose tried conduct rational reliance may be placed, is appointed to the head of any railway department, the shareholders and the public may be sure that they have the full benefit of RESPONSIBILITY. When a Director full of other occupation, and who can only devote a limited portion of his time and attention to railway business, has that attention directed, not to the general business of the line, to the prudent appointment and general supervision of efficient officers, but to the details of any particular department, with which years of schooling at the Company's expense can only make him very superficially acquainted—the responsibility of all parties is weakened, and evil must inevitably result.

I appeal to the accounts furnished to the next half-yearly meeting of the Birmingham and Gloucester Railway, a line whose capabilities of traffic are, perhaps, not exceeded by more than half-a-dozen in the kingdom, for the confirmation of my views.

I am, Sir, your obedient servant,
AN ADVOCATE OF RESPONSIBLE MANAGEMENT.

June 8, 1842.

BIRMINGHAM AND DERBY RAILWAY.

To the Editor of the Railway Times.

SIR,—It does not very often happen that the purport of what a person says at a public meeting is quite correctly stated, unless his words are given. I beg leave to state (though it is a matter of but little consequence), not only that the words attributed to me at the late special general meeting of this Company do *not* convey the purport of what I said, but that I did not make the assertion they contain. What I said was this:—"That I considered the present as probably *the most unfavourable moment* in the history of the railway, past, present, or future, for raising shares at such a discount as would make them marketable; and that I thought it might be better—if there were not more serious objections to such a plan than I was aware of, certainly more advantageous to those proprietors who might not wish to extend their interest in the concern—to raise the sum required by shares, which should have a guaranteed rate and priority of dividend; an operation to which the state of the money market was favourable, and which I knew many proprietors would prefer to issuing shares at such an enormous discount."

The rate of discount, in fact, is immaterial to those proprietors who take their proportion of the new shares; but some may not be able to do so, and it is desirable that none should be obliged to do so in order to secure themselves against the depreciating effect of so great a discount upon the shares they at present hold. The sum to be raised, and not the rate of discount, is the measure of disadvantage to the *Company*, amongst the members of which all the new shares are sure to be taken up; and *that* has had its full effect upon the price of the old shares by the passing of the Act of Parliament—perhaps more than its due effect, as it will be generally supposed that the whole sum authorised to be raised is required to meet existing or approaching liabilities, which is not the case. But it seemed to me that, with regard to *individuals*, it it would be more fair to raise such part of the money as might be wanted, by such means, offering a secure and eligible mode of investment, as might not produce any further depreciation of existing shares. On the plan adopted of course there must be a depreciation of the old shares proportionate to the advantage given to those who become holders of the new shares. The time I thought unfavourable for raising shares at a discount, on account of the depressing circumstances which affect railways generally, especially those of the midland districts, and certain disadvantages affecting this railway in particular, which I think may be, partially at least, removed. I also considered that in important measures of this kind the *intelligent and deliberate* assent of the proprietors generally should be obtained, and not merely that formal assent which is procured from general meetings, without any previous knowledge, and without even an hour's time for consideration, of the subject, however important and however complicated, and which Directors, forming always a large proportion of such meetings, and absolutely fore-armed with proxies, can almost uniformly command, whatever may be the nature of their proposals. For these reasons I supported the amendment of Mr. Crawshay. I see no material disadvantage to the Company, as a Company, in the particular mode of creating shares proposed by the Directors, that could have been avoided by adopting any other mode, but I should like to see individual interests more carefully protected; and these I fear to some extent—I trust within narrow limits—must suffer by the plan now to be acted upon.

I am, Sir, yours, obediently,
J. N. KAHRS.

June 7, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—In offering a few remarks upon the disputes at present existing between the Croydon, Greenwich, and Brighton Companies, I beg leave to state in the first place, that I have no interest whatever, either directly or indirectly, in any of them—excepting that as one of the occasional travellers on them it would be to my interest, in common with the rest of the public, to see the Companies as prosperous, and the fares as low, as I really think by proper management they might become. I have mentioned the prosperity of the Companies as being a benefit to the public, because unless the business is profitable, the safety and comfort of the passengers are sure to be neglected eventually, in the same manner that nobody can depend upon being well supplied by a tradesman who is not making a fair profit upon the articles he sells. Now, the point at issue between the Greenwich and Croydon Companies is the amount of toll to be paid by the latter to the former. The highest amount allowed by Act of Parliament is 4½d., and this has been demanded by the Greenwich Company.

The reason given by them for demanding such a toll, which does most certainly appear rather extravagant for 1¾ miles of railway, is, that being compelled to furnish a double line for the especial accommodation of the Croydon and Brighton Companies, they have a right to be re-imbursed for such a heavy expense by a proportionably high toll. This doubtless *appears* to be a very feasible reason, but it may well be questioned whether it will bear being strictly examined. The first question which an unprejudiced person would naturally ask, in order to inform himself thoroughly upon the subject, would be—What made this double line of railway so peculiarly expensive? Answer—Because the property in and about London is so very valuable, and much money was required for compensation to the owners of that which was required for the railway.

Question 2nd—Why was this double line required? Answer—Because Parliament did not think it safe to allow 12 Croydon trains, 9 Brighton ditto, as well as perhaps the same number of Dover trains, to run *on* and *cross* the same lines of railway on which Greenwich trains were running every quarter of an hour?

Question 3rd—What reason was there for all these Companies wishing to run upon this line of railway? Answer—Because this line ran up to London Bridge, and therefore was a most eligible approach to London.

Now, it is evident from this way of stating the question, that though the near approach of this railway to London was undoubtedly the cause of an unprecedented expense in making the line, yet it is at the same time the cause also of an unprecedented traffic, as to number of passengers at least, passing over it; and that consequently this number of passengers ought to be the source from which the Greenwich Company should derive their recompense; not, however, by exacting a toll utterly disproportionate to their length of line, since they cannot expect to be paid both ways—namely, by an immense number of passengers, and by a dispropor-

Digitized by Google

tionate toll upon each also. Indeed, upon their principle, 2s. ought to be charged for going over Waterloo Bridge, and 1d. for going over Battersea; or at least Waterloo Bridge ought to be double in charge to Vauxhall, because it cost more, "the approaches to that part of London being so very expensive." It may be said, that this is against my argument, because Waterloo Bridge pays its proprietors most miserably; but I answer to that, "Would it pay *better*, or, indeed, nearly so well, if the toll was 1s.?"

At every one of the stations on the Croydon Railway, the train receives a fresh accession of passengers, of whom at least 19 out of 20 would go on to the Greenwich Railway if this unhappy dispute were settled, but from whom, in proportion as the station is nearer London, the Croydon Company receive a continually diminishing fare; and yet the Greenwich Company, not content with having these minor streams of passengers carefully collected and brought to their own toll-gate, demand an extravagant price for letting them pass through, which will in all probability before long divert the stream into another channel.

The Croydon Company have made every kind of offer to the Greenwich; either to pay them a fixed sum, or to lower the fares on their railway materially, if the latter Company will lower their toll; but the answer has invariably been, "Pay us 4½d. a passenger." The meaning of which is, that the Croydon Company are to run at cheap fares that the Greenwich Company may have a chance of charging a dear toll upon the number of persons allured by the low fares of the Croydon. Does not this appear rather one-sided justice? The Greenwich advocates urge also as an argument, that the Croydon Company have refused either to lower their toll of 1s. on the passengers by the Brighton, or to accept a certain annual sum for their railway altogether. This is undoubtedly true; but there is another fact which the Greenwich advocates forget to specify, which materially alters the case, namely, that the Croydon Company have offered to reduce their toll, if the Brighton will reduce their unreasonably high fares in proportion—as it is self-evident that the reduction in the toll could never be compensated unless by such a reduction in the fares as would bring on a great increase in the number of passengers. This proposal, which the Croydon, as toll receivers, have made to the Brighton, as toll payers, is precisely what they wish the Greenwich, as toll receivers, to make to them, as toll payers; but it never has been made, and has always been rejected when proposed by the Croydon.

The object of the Brighton Company in not raising their fares for passengers between London and Croydon (as the Croydon Company did upon the Greenwich toll being raised), is evidently to endeavour to "drive the Croydon Company off the road," and compel them to accept their offer of 5 per cent. on the money expended in making their line, and give up the business entirely into their hands. That this must be their object is evident, since the clear receipt they derive from a second-class passenger at present, after paying tolls and duty, is, I believe, as near as possible, ½d.

Now, it is very possible that they may effect this object, and indeed I think the Croydon Company would be wise to take the 5 per cent. directly; but I ask what would be the effect upon the Greenwich receipts? As soon the Croydon trains ceased running, up would go the fare by the Brighton.

There would then be no stopping trains every hour in the day at Norwood, Anerly, Sydenham, the Dartmouth Arms, and New Cross, to tempt passengers as much as possible, and by affording every accommodation, render the different neighbourhoods eligible as places of residence for those whose business required them to reside near London. It is my firm belief that if the Brighton Railway had it to themselves, they would not have half the number of stopping trains that the Croydon run, and the consequence would be, that the Greenwich would find out, when it was too late, that they had killed the goose which laid the golden eggs.

Why, therefore, cannot this Company see that it is to their interest to encourage as much as possible every Company which runs upon their road to lower their fares, and thus render it the cheapest, as it is indisputably the most convenient, outlet from the metropolis? At all events, why cannot they give a low toll, and consequently a low fare, a trial?

Why cannot they say to the Croydon Company, "If you will reduce your fares to 1s. 6d. and 1s., for first and second-class, we will reduce our toll to 2d., for the space of one year, which will be a fair criterion whether we shall gain or lose by such a reduction."

Nobody could pretend that the loss on such a temporary experiment could be great, as even the most violent advocates of a high toll would allow that the increase of passengers would *nearly* cover the deficiency on the toll derived from each, while those who advocate low fares maintain that it would do *much more*.

I cannot, therefore, conceive any rational objection to trying the scheme for such a short period, and no time would be so eligible as the present, when the summer is just at hand.

As the Croydon Company moreover have shown every disposition to *act* upon their declared preference for a low rate of fare, by charging only 1s. and 9d. for first and second-classes respectively upon the 8 miles of the line which is exempt from this heavy toll, namely, from Croydon to New Cross, I really must say, that the Greenwich Company does appear to be in fault in this vexatious dispute; and it is in this conviction that I have ventured to hope that you will find room for this, I am afraid, tedious detail; since to you, as well as to all the advocates of cheap fares on railways, it must necessarily be annoying to find that the only Company which has evinced any disposition to give the public the full benefit of railway travelling, should be prevented from even making an experiment as to the correctness of such a view of the subject, by circumstances over which it has no control.

I remain, Sir, yours, &c.,

BETA.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—The free scope you have given to the discussion of the toll question, may have led many of your readers to the satisfactory conclusion that much may be said on both sides. If the Directors of both Companies are really desirous of setting this question at rest, and of promoting the interest of the shareholders, they had better make a weekly return to you of the tolls, receipts, and number of passengers, from each station on their lines, compared with those of the previous years. A direct appeal would then be made to the pockets of the shareholders, a mode of treatment which has been known to produce the most astonishing effects in the worst cases of political fever, and which might in this case being both parties to the mortifying conclusion which it is reported a certain unnameable personage was forced to come to, when, after having subjected a pig to the operation of shaving, he was heard to exclaim, that there had been more cry than wool.

I am, Sir, your obedient servant,

F.

June 6, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—You see no injustice in the Croydon Railway Company wishing to pass over the Greenwich at the same rate per mile as over their own, although the part of the Greenwich over which they have to come has cost four or five times as much as the Croydon. Now, I ask you whether this is not contrary to the principle which regulates all private partnerships, and, if I mistake not, all public Companies similarly situated?

For instance, in partnership, if one partner advances double the amount of another, does he not invariably either get *interest for his additional capital*, or a *double* share of the *profits*? Let the Croydon Railway propose the same principle of division of income, and I am mistaken if it would not be accepted. Again, is not the wharfage on steam-boat passengers, and the dues on goods, and also dock dues, &c., higher in London, in consequence of the great cost of such works in that locality, than they are in the country sea-ports; but on the Croydon principle they should be the same? Again, are not the dues upon goods in transit through the kingdom notoriously regulated by the cost of the works through which they have to pass? For instance, the dues upon goods from Sheffield to Hull are as much for the first six miles as the whole of the other 70 miles which they have to go, because the first part is through an expensive canal, the latter is principally river navigation; but on the Croydon principle they should be the same. The principle which the Croydon Company advocate seems beautiful enough in theory, but practically could not but be unjust, and I am of opinion, will never be sanctioned by the legislature. And as the Croydon Grange-road Bill is lost for one year at least, I would recommend them to make a fair offer for the whole Greenwich line (the cost being the basis of the offer), by which considerable expenses would be saved and the Management concentrated, and the apparently interminable war between the Companies thereby brought to an end.

I am, Sir, yours, &c.,

A. B.

Sheffield, June 6, 1842.

Kibblesworth Colliery Railway.—The opening for coal traffic on the Kibblesworth line of railway took place on Monday, in the presence of the owners, Mr. Southern, the managing partner and viewer of the colliery, and Mr. John Bourne, the Engineer of the railway. The morning being favourable, an immense concourse of people assembled to witness the event, which was enlivened by Messrs. Hawthorn's amateur band attending and playing appropriate tunes. The train for the procession, consisting of trucks fitted up with seats for the owners and their friends, accompanied by the band, being ready, preceded by waggons filled with coals, many pieces weighing about a quarter of a ton each, it moved off from the colliery about half-past eleven, and descended the inclined plane in beautiful style to the Team River, where it was attached to a rope 2,200 yards in length, worked by a stationary engine of 80-horse power, erected at the Black Fell. The signal having been given that all was ready, the train was again put in motion, and ascended the inclined plane to the Black Fell, passing underneath the new carriage-road at Longacres, also underneath the Durham old and new turnpike roads. * * The gentlemen afterwards returned to Kibblesworth Hall, where a handsome entertainment was prepared by the owners. Refreshments were also provided for the workmen, and their wives and daughters were invited to tea at the Hall, terminating the day by dancing.—*Newcastle Journal*, June 4.

London and Brighton Railway.—The new approach to the railway terminus from the upper end of North-street, is in a state of considerable forwardness. For some time the cut from the middle of Air-street through Petty France and Durham into North-street, has been open, and the continuation of the road along the front of Windsor-terrace into North-lane is nearly completed. It has been for some days past open to foot-passengers, and the carriage road will be finished by the end of the week. This portion of the road has been widened, by setting back the western wall of the Hanover burial-ground, and the road has been lowered several feet, making Windsor-terrace really what its name purported it to be—a terrace. The road across the field between North-lane and Gloucester-lane, is also set out, running into the open piece of ground directly opposite the terminus, and likewise branching off right and left into Surrey-street and Frederick-gardens.—*Brighton Gazette.*

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

2. *Minus* toll to London and Birmingham 10*l.* 4*s.* 9*d.*
3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.
4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*
8. Receipts include the Northern and Eastern toll, &c.
12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134‡ (83‡+21+31.)
14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 903*l.* 16*s.* 11*d.* per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half year's traffic, amounts to 130*l.* per week.
15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.
17. The 35*l.* 5*s.* 9*d.* from goods, &c. is for toll only.
18. Ten per cent. is the maximum dividend allowed by the Company's Act.
19. Deduct from receipts 48*l.* 1*s.* 6*d.* for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10*s.* per cent., but to the original shareholders it is equal to 12*l.* 15*s.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.
20. The dividend is from the opening, and on the old shares alone.
21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.
22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17*s.* 1½*d.* had been earned prior to July 31st, 1841.
23. Capital of 993,300*l* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.
24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.
25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.
26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16*s.* 1*d.* The receipts given are however those from the railway only.
27. The 4,253*l.* 12*s.* 9*d.* are the receipts after deducting omnibus charges, and payments to other Companies.
28. The receipts for goods, &c., include, carriages, 36*l.* 1*s.* 0*d.*; horses, 39*l.* 14*s.* 6*d.*; dogs, 1*l.* 10*s.* 0*d.*; parcels, 237*l.* 12*s.* 0½*d.*; cattle, 59*l.* 4*s.* 6*d.*; corn, 5*l.* 9*s.* 0*d.*; heavy goods, 40*l.* 1*s.* 0*d.*; coal and lime, 83*l.* 3*s.* 7*d.*— Total, 870*l.* 15*s.* 7*d.*
31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows— Passengers, 2,431*l.* 15*s.* 7*d.*; carriages and horses, 108*l.* 15*s.* 2*d.*; parcels, 168*l.* 4*s.* 10*d.*; mails, 50*l.* 5*s.* 9*d.*; merchandise, 920*l.* 11*s.* 11*d.*; minerals, 232*l.* 1*s.* 5*d.*; cattle, 69*l.* 2*s.* 10*d.* — Total, 3,980*l.* 17*s.* 6*d.*; including North Midland proportion of Manchester and Leeds traffic, amounting to 126*l.* 11*s.* 2*d.*
32. The receipts are after deduction of Liverpool and Manchester toll.
33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4*d.* on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.
34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).
35. The returns are inclusive of Manchester and Birmingham toll.
38. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

Eastern Counties' Railway—*Week ending May 29—Receipt from Passengers (number of passengers, 16,042), 978l. 16s. 6d.*
Dublin and Kingstown Railway.—*Week ending May 31—Receipt from passengers (number of passengers, 38,281), 1,079l. 2s. 8d.*
Dundee and Arbroath Railway.—*Week ending May 28—Receipt from passengers (number of passengers, 5,510½), 2,108l. 9s. 10½d.; goods, 61l. 7s. 9½d.; parcels, 11l. 12s. 9½d.; total, 276l. 10s. 5½d.*

TO CORRESPONDENTS.

Expositor *will oblige by giving us the means of communicating with him.*

Grantham on Iron as a material for Ship-building.—*A small work with this title has been forwarded to us. It embodies the substance of a communication laid before the Polytechnic Society of Liverpool, of which the author is President, and will be found well deserving the notice of those interested in the subject of which it treats.*

Birmingham and Gloucester Railway.—*Several letters on the affairs of this railway must (at least for the present) stand over.*

Junius *must give his name and address, before we can entertain his communication.*

W. *must, we think, be in error. The returns are given pretty regularly; at least they are always given when they reach us.*

An Old Subscriber.—*We shall endeavour to comply with our correspondent's request, although, as he must be aware, the matter does not depend upon us.*

Spectator *should attend the meeting on Wednesday next, and put his questions there.*

K. W.—*We are sorry to be obliged to defer our correspondent's interesting letter till next week.*

A Croydon Shareholder *on the Grange-road Approach Bill shall appear next week.*

Duplex.—*The length referred to is about 6 miles, and the gradients are* not *unfavourable.*

One Interested.—*We see no reason to doubt that the work will be finished by the time stated, especially should the present weather continue for some time longer.*

Fracture of Locomotive Axles.—*The correspondent who dates from Cheapside will find in the correspondence from Messrs. Bury and Dockray, which appears in another column, a more detailed account than the* Times *supplies of the experiments to which he alludes.*

P. P. *(Leeds.)*—*We do not know the Consulting Engineer's private address, but a letter addressed to the care of the Secretary would, we have no doubt, be duly forwarded.*

Enquirer.—*We believe the scheme for crossing Dartmoor by railway has been entirely abandoned. To the other question—Yes.*

The City Railway *is dead and buried long since. We know nothing of the present position of the* Westminster *scheme to which* C. F. *refers, but we believe it is not likely to be proceeded with for some time.*

Junction of the Manchester Railways.—*An article on this subject from the* Manchester Guardian *shall appear as soon as possible.*

Quintus.—*The further capital was raised under the powers of a second Act of Parliament, passed in* 1838 *or* 1839. *The shares were at that period more popular than now.*

We wish all our correspondents would write legibly, upon one side only of the sheet, and not use the thin paper now becoming so fashionable. The additional postage would not be much, and a vast deal of needless trouble to us and our printers would be avoided.

*** Our publisher will gladly give double price for any one of the following numbers, to enable him to complete sets. For the year 1838—January 13th, 20th, and 27th; February 3rd and 10th; and October 27th. For the year 1842—February 26th.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES .	**113,374**
Railway Magazine . .	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showthe ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, JUNE 11, 1842.

THE important case relative to the rating of railways, in which the South-Western Company were the defendants, has at last been settled by the decision of the Court of Queen's Bench, and will of course affect not only the other portions of that particular line, but the future assessment of railways generally.

Divested of technicalities, the principal point upon which judgment has been given seems to be this: The authorities of a certain parish had rated the Company to the relief of the poor at the proportionate amount, earned in that parish, of the whole *receipts* derived from the working of the entire railway. The Company, on the other hand, contended that they were fairly rateable upon such proportionate sum of the *tolls* alone as would have been earned in that parish by the Company, supposing that, as apparently provided for in the Company's Act, the Company had merely made the railway, and allowed other parties to use it upon payment of the tolls prescribed by such Act. In support of this view of the case, was urged the fact that the legislature had ordered accounts distinguishing between mere tolls, and charges for carriage including tolls locomotive power and other items, to be kept for the inspection and information of the overseers of the parishes through which the line runs. The Court decided, however, in favour of the principle adopted by the parish; that is, that the general receipts of a Company, subject to proper deductions for the cost of earning them, and not the tolls exclusively, subject to like deductions, are rateable. The main ground upon which the decision of the Court seems to have been founded was the fact, that the Company must be, or at least for the present *were*, the sole occupiers of their own property—the competition originally contemplated by the legislature, in granting permission to other parties to run their own engines and carriages upon the line under certain conditions, being practically unattainable.

This decision, as we understand it, assumes that the same principles of rating are applicable to the common case of a farm, house, shop, &c., and to the novel case of a railway. It will occur to our readers to ask whether, in rating farms, houses, shops, &c., in future it will be competent for the overseers to rate their entire receipts, deducting the costs of earning them; and whether it will be also competent to an occupier of such to show that the receipts do not exceed, or are less than, the expenditure—and so as to establish an immunity from assessment. If any such general effect as this be produced, the general principle of rating seems likely to be placed in considerable difficulty. In the case of railways at

Digitized by Google

least where the receipts may be less than the cost of obtaining them, so long as this decision stands there can, we suppose, be no liability to rate.

Elsewhere we give a full report of the decision of the Court. The arguments on both sides have been detailed in a previous number of our journal.

THE Act for the Norwich and Yarmouth Railway is now secured. We sincerely congratulate the railway world upon the occasion, both because it is the first new line that has been brought before Parliament since the "10 per cent." clause came into operation, and also because the principle on which it is to be carried out augurs well for the introduction of a more economical system of railway construction for the future, by which alone we can hope for any material extension of these invaluable undertakings.

The Norwich and Yarmouth is to be a single line of above 20 miles in length, the movement of the trains being regulated through the medium of the Electric Telegraph.

We are truly glad to see this system adopted by the Messrs. STEPHENSON, who have had ample opportunity of arriving at a sound judgment of the practical value of the telegraph in developing the arrangements on the London and Blackwall Railway, where it has been tested, under trying circumstances, since the opening of the line. By trusting to it for directing the traffic of a single way, the Engineers of the Norwich line have confirmed, in the most decided manner, our own favourable opinion of the practical simplicity and certainty of this invention. Mr. BIDDER'S evidence on these points before the Committee bore out, we are told, the view we have already taken, that a single line with the electric telegraph is superior in security and efficiency to a double line without it. By the reduced cost of construction consequent upon adopting the single line, and a strict surveillance over the outlay, we anticipate a speedy revival of that favour with which railway speculations were regarded before the fallacy of "estimates" had enlightened and alarmed the public.

Although the additional charge of the telegraph will scarcely equal the interest for a single year on the capital saved by its adoption, any important saving in its construction becomes an object of importance, by extending its sphere of usefulness. We noticed in the *Morning Herald* of Monday an account of some experiments recently tried in Hyde Park, which might lead to the hope that the expensive process of insulating the telegraphic conducting wires might be dispensed with; but the experimenters were evidently persons wholly unacquainted with the scientific investigations that have been made on the subject of electric insulation, and the practical results already attained. The object of the parties was to confirm the well-known fact, that earth or water might be employed as a conductor of the electric fluid. Prior to 1820 Mr. RONALDS ascertained this point, by experiments carried to a considerable extent, in which the *Thames* formed one part of the conducting circuit; and the principle has been long in practical use on the Blackwall Railway, where some of the telegraphs are worked with a single insulated wire which conducts the electricity to the distant station, whence it is made to return by the earth. This plan may be economical in reducing the number of wires, but the protecting tube is still requisite to conduct the insulated wire by which the electricity must travel to the distant place at which the signal is to be given, after which it is immaterial whether it finds its way back by another wire, or by the earth, or by water. But the insulation of the *outgoing wire* must be *very perfect*, or the fluid will take a *shorter course* through any badly insulated points *into the ground;* and the proportion that does so will increase with the length of the wire, because the resistance opposed to the passage of the electric fluid by the wire is increased, whilst the facility for escape remains the same, till at length the escape of the electric fluid, which is almost imperceptible in a short circuit, as in the experiment of blowing up a small ship under water at the Polytechnic Institution (where both conducting wires are plunged *un*-insulated into water), increases to such an extent that no perceptible quantity would reach the point at which the signal is to be given. Moreover, the galvanic fluid decomposes water in passing through it, and the oxygen of the water so liberated, combining with the metal of the conducting wire, rapidly destroys it.

Water is, in fact, the greatest enemy to be feared near an insulated conductor, as the Hyde Park experimenters would have discovered, if they had used miles instead of yards of wire. This, however, is a subject which has undergone, and is still undergoing, very minute investigations. Almost every known material has been tested and classed according to its insulating or conducting powers—the experiments being tried in connection with wires of 100 and 200 miles in length. We shall have frequent occasion to revert to this very interesting and very important matter.

THE history of railways—growing up so rapidly as they have done within the space of a very few years—presents many odd features amongst the individuals who have become a part of that history. Like the colonists of Texas and other hotly-disputed territories, broken men have gathered together from all parts to make inroads in a new field of progress, in some cases incited by their non-fitness for the work, and in many more, by their strong desire to lay violent hands on large profits accruing through the ignorance of those entrusted with the expenditure of shareholders' money. We do not profess to rank ourselves amongst the number of those who would exclude the skilful, because irregularly trained, but we could wish to see proper tests of capacity and knowledge instituted as a principle of Railway Management, in order to close the door against jobbing and peculation. We wish to see men chosen, fitted for their employments, instead of seeing employments filled up with unfitting men, wanting a means of living, and provided with it at the expense of the railway community, because they happen to have relatives or patrons in railway administrations. The waste of money caused *directly* by this process is a mere trifle compared with the huge *indirect* waste, and it would be much greater economy for shareholders at once to set apart an annual sum to be divided as sinecures, amongst the dependents of their administration, provided they might thereby ensure an honest and efficient executive.

Apart from the regularly employed railway managers and officials, there is a class of people hanging loose as it were on the skirts of railways, much as sharks follow vessels, on the constant look-out for waifs and strays, hunting up odd jobs, feeing understrappers to ferret out projected contracts and purchases, buying condemned stores at half price, getting up plans to suit particular contractors, selling articles on commission, like "Hodge's razors," steel-like iron, and iron not worth stealing; "bread and butter springs," with alternating plates of iron and steel, and when complained of, telling the storekeeper of the victimised Company that it is an improved mode of making springs tough and safe; giving lists of requisites wanted for stock to innocent store-clerks, in the green promise of unripened storehood, and taking consequent orders, as a grateful return for their kindly instructions—for a ten years' stock of files that belie the fabled words of Æsop's file, inasmuch as they will neither cut iron nor steel. These people designate themselves as commission agents, and bring thereby great scandal on the *bona fide* travellers of manufacturing firms; but they, nevertheless, are tolerated for their utility to certain parties requiring indirect gains. One example may suffice.

A railway, which shall be nameless, required carrying stock. A commission agent on the alert, applied to a contractor, who promised a per centage on all the orders he obtained. With this promise he hurried to an influential party dealing in the materials to be made up, who promised a per centage on all the materials he could sell. To another individual he promised the orders for the minor manufactured articles, for a further per centage. A fee secured all the private information as to time, and competition was put out of the question by overruling authority. The result was, the commission agent pocketted a very heavy per centage, and the Company paid for it in the excess of charge upon the whole of their carrying stock, in order that sundry individuals might "do business."

We have been led to these remarks by some inquiries we have been making respecting Mr. J. C. HADDAN, the writer or godfather of a letter which appeared in our last week's number. We suspected at the time, from the difference between the writing and the signature, that it was done to order, as a regular matter of business, on which Mr. HADDAN had his commission. The result of our inquiries corresponds with our previous suspicions. Mr. HADDAN has no doubt furnished the writer with what he calls "facts," and also with his special pleading, leaving the literary portion to the writer's own taste. Having been informed that Mr. HADDAN occasionally wrote C.E. after his name, we wished to know how he obtained that designation, supposing that so "large a mouth" must at least have some corresponding proportions to warrant the *ex cathedrâ* tone of his strictures on railways and railway improvements. We find, however, that Mr. HADDAN'S original vocation was connected with the bar; but finding the process of copying unsuited to an original mind, he abandoned the bar and applied himself to bar iron, making his first studies in it in the drawing-office of the Great Western Company. His genius soon soared to higher flights, and he twisted bar iron into various forms, till he produced a railway wheel, which he describes in his letter as "*my own patent vent spoke wheel.*" What "patent vent" means we do not quite understand, as to our mind the wheel bears a very strong resemblance to Losh's, with the external corner of the spokes off. Perhaps Mr. HADDAN means, that by this contrivance he obtains a "vent" for his wheels.

We believe, as we stated last week, that Mr.

Digitized by Google

HADDAN'S present chief occupation is as designer, draughtsman, factotum, and commission agent to Mr. JOSEPH WRIGHT, whose great wealth probably indisposes him to the details of his contracts. At all events, whenever Mr. WRIGHT attends a Railway Board, Mr. HADDAN is introduced by him as his "mechanical man," and in the numerous drawings which he forwarded to us, and which he stated were of Mr. WRIGHT'S designing, we find his own more prominently put forward —"Sketched and drawn by J. C. HADDAN." "WRIGHT and HADDAN" are known as inseparables wherever railway contracts are rife, and the scenes in the waiting-rooms when this excitable gentleman takes the part of his employer against all rival contractors are described to us as humourous in the extreme: and we doubt not that this, his first appearance in print, will call up many a smile amongst those who have witnessed his personal displays. Mr. HADDAN'S "hearty concurrence in our commendation of the whole of the arrangements of the South-Eastern line" we have no doubt will be duly appreciated by the Directors, when it is brought under their notice.

We beg to assure Mr. JOSEPH WRIGHT, that we are very unwilling to mix him up with the doings of this his most uncivil "Civil Engineer;" but he must to a certain extent be held responsible for the acts of his servants, and if he cannot contrive to set bounds to the exercise of Mr. HADDAN'S exuberant temperament, he should at least disclaim any participation with him. Our pages are at all times open to fair and temperate discussion, and when called upon for "justice" in our Editorial capacity, we are always ready to administer it—though in the present case, Mr. JOHN COOPE HADDAN, Civil Engineer, will feel that "he has got justice, more than he desired." We trust it will be a lesson to him to curb his rash humours, and keep is carping spirit in check.

Two letters from the Messrs. ADAMS will be found in another page.

Since the foregoing was in type we have received a second letter from Mr. HADDAN, which we append to those of the Messrs. ADAMS. We do not know that it requires any special notice from us. Mr. ADAMS, jun., seems to have answered some of the points by anticipation, and no doubt will next week do whatever further he may deem needful.

WE gave last week a concise account of the Parliamentary proceedings upon the dismissal of the Bill of the Croydon Railway Company for the Grange-road approach. This Bill was rejected expressly and solely on a point of form, and we are gratified to perceive that all the absurd allegations of breach of faith on the part of the Croydon Company, and invasion of the rights (?) of the Greenwich Company, were entirely abstained from by its opponents in the House of Commons. Not a word was uttered against the propriety of the measure, nor any excuse offered for opposing it but a possible infringement of the rules of the House. Upon this ground we must confess there was reason in the opposition—if, as we understand, there were clauses in the Bill which could only properly belong to a Railway Bill. The good faith of the promoters in not intending to make this approach into a railway under the present Bill was proved by their consenting to a clause to that effect; but, of course, they could not consent to its being made into a *public* road, or to any clause which should have this same effect, for the reason given by Mr. CUBITT in his evidence before the Committee, because, in that case, it could *never* be made into a railway, which we believe all parties, except the Greenwich Company, agree in thinking to be highly desirable at some time or other.

We think the opposition of the Greenwich Company to this measure has been indiscreet, not to say unwise. Public feeling as to the "monopolising" character of Railway Companies is already sufficiently strong without one of their number putting itself forward to resist what must be an additional convenience to the public, upon the express ground of securing, no matter upon what plea, a confessedly high toll. If the Greenwich Railway can only prosper upon monopoly fares—that is, if it fears the competition of Companies which can afford to work upon cheaper terms, the sooner such competition comes, the better for the public. We can never allow that this ought to be the case, and we were exceedingly sorry to hear the expressions which were drawn from Mr. DARBY by the opposition of this Company to the Bill which was thrown out the other night. Mr. DARBY is a gentleman who has given great attention to railway matters, and would not lightly express himself in the manner he did upon that occasion.

We conclude that, in spite of this check some western terminus must be found, and that shortly, for the Brighton and Dover lines. The full development of the traffic of these railways, and more particularly of the goods' traffic, which is not yet commenced by the Dover Company, will, we suspect, soon prove the perfect inadequacy of the London Bridge station for the accommodation of so much business as, we trust, they will acquire. Already we hear loud complaints of the crowded state of the present approaches; the indisposition of gentlemen to send their carriages and their families into such a vortex of confusion, is a growing one; and we observe that the Dover Company have already made arrangements with Messrs. HORNE and CHAPLIN for conducting their west-end traffic to New Cross. If any considerable number of passengers are to be carried by these Companies, there is no question but a toll of 4½d. per passenger must be a great additional inducement to them to seek, by every means in their power, to avoid it: and that these means will be found for so short a distance, sooner or later, there can, we think, be little doubt. That a Company, situated like the Greenwich Company, should attempt under these circumstances to keep up anything like a monopoly price, appears to us to be little short of madness. One would think the policy of this Company would prompt its Directors to say to the other Companies, "Do not lay out your money in any other terminus; bring all your traffic, east or *west*, to our line, and we will make it worth your while; we will ask for nothing more than our small share of the profits; nay, we will abate something of this share, if you will bring all your business to us." This, we apprehend, would be the language of men wise in their generation, and it amazes us much that they should hold the opposite language—that they should say, "If you bring your traffic to us, you shall pay us *more* than our share, we will have some part of your share as well as our own; and, because our railway has cost more money, in proportion, than either of yours, in order that it might have a share in the profits of *each* of yours, so will we have not only a *share* of each, but a *larger* share of each than our proportionate length warrants." The public may rest assured that a western terminus will soon be found to the Brighton, Croydon, and Dover lines, and if passengers cannot be cheaply conveyed to London Bridge, they will at least find their way more easily to Westminster.

After all, the grand promoters of the Grange-road approach are the Greenwich Railway Directors, and the only thing at all likely to endanger the formation of so great a convenience to the public is, that these gentlemen should cease to hold office—because we can well perceive that the proprietors or parties interested in the Greenwich Railway, might easily offer a bribe to the other Companies in the shape of cheap conveyance, which would induce them to put the public off, for a time at least, with less convenience, rather than spend their money without immediate advantage of some sort to their constituents.

THE question of a direct mail steam-packet communication between Cork or Waterford, and some suitable port on the English side of the Bristol Channel, is at present exciting very considerable attention, and the Report of the Parliamentary Committee appointed to inquire into the subject, and which it is expected will be made in the course of the ensuing week, is anxiously looked for by those who are more or less interested in the decision. Among the foremost of the advocates for the direct communication are the Directors of the Bristol and Exeter Railway, who, on Tuesday last, presented to the House of Commons, through Mr. DIVETT, member for Exeter, the petition which we subjoin.

Liverpool, it appears, has four lines of mail communication with Ireland, while Bristol, and the whole of the west of England and Wales, enjoy but one—and even that one, although exceedingly imperfect and insufficient, is in danger of being withdrawn, with a view to carry the communication from the west of England to the south of Ireland, *via* Liverpool, and as the petitioners allege, at a great waste both of time and money.

We understand that the object of the Bristol and Exeter Railway Company would be to get Uphill appointed as a packet station, and the facility of that place, its proximity to the railway, as well as to South Wales (being only 9 miles from Sully, near Cardiff), certainly point it out as very desirable; but this being a consideration of only secondary importance, is not adverted to in the petition.

Cork and Waterford would no doubt contend for the preference on their side of the water, but this also is subordinate in importance to the main question of the establishment of a direct mail steam-packet communication between the south of Ireland and some port in Somersetshire.

Increased facilities, rapidity, and economy of intercommunication, would unquestionably very much increase the activity of commerce and correspondence; and we trust, therefore, that the question will receive from the Committee that full, fair, and impartial investigation which its importance demands.

We are happy to find, from the petition, that the works of the railway between Bridgewater and Taunton are so far advanced as to render a further opening during the present month no longer problematical. We believe the 7th of next month was the day agreed on with the Great Western Company. The whole line to Exeter is expected to be finished early in the summer of 1844, the Company "having ample funds for this purpose at their disposal"

Digitized by Google

We wish we could see any indications on the part of the people of Cornwall and Devon still further to extend this important line of communication. The parties most interested seem, however, to have gone to sleep, and it will be well for them if the ruin of their best hopes do not produce a most unpleasant waking.

The following is the petition :—

To the Honourable the Commons of the United Kingdom in Parliament assembled,

The humble Petition of the Directors of the Bristol and Exeter Railway Company, respectfully sheweth—

That this Company has already expended upwards of a million of money in the construction of about 45 miles of railway between Bristol and Exeter.

That a distance of 33 miles, to Bridgewater, has been in active traffic for about a year past.

That a further portion of 11 miles, from that town to Taunton, will be opened in the course of the present month.

That another considerable portion will be opened next spring, and that your petitioners, having ample funds for this purpose at their disposal, confidently expect to complete the entire line to Exeter early in the summer of 1844 ; when the journey from London to Exeter will be made in about 7 hours.

That this rapidity of communication between London and the west of England, opens the way to a proportionably rapid, cheap, and easy intercourse between the metropolis, South Wales, and the whole of the south-west of Ireland, the counties of Cork, Kerry, Clare, Limerick, Tipperary, Kilkenny, Wexford, and Waterford.

That the transit from these ports to a port in the Bristol Channel is at all times comparatively safe and easy.

That there are now no less than *four* lines of mail communication between Ireland and the north, and *only one* between Ireland and the south-west of England.

That it would be not only great injustice to the south of Ireland, and to the south-west of England, to withdraw the present limited, imperfect, and very inadequate means of direct communication ; but that the increasingly important relations between the two countries imperatively require all practicable extension and improvement of the facilities of intercourse.

That the direct communication is practicable in about half the time and at about half the expense attending the journey by way of Liverpool.

And that your petitioners therefore respectfully and urgently entreat your honourable House to instruct your Committee to further consider the great importance and desirableness of establishing a direct line of communication between the West of England and the South of Ireland.

And your petitioners will ever pray, &c. &c.

A MOST important point has just been gained by the patentees of the Atmospheric Railway, to obtain a fair practical trial of the invention. Mr. BRUNEL, of the Great Western Company, has recently returned from Italy, whither he had gone to inspect the country for a line of railway communication, which it is intended to construct for the purpose of connecting Genoa with Milan and Turin ; and we understand that he proposes to apply the Atmospheric principle to a portion of the line where a mountain steep is to be passed. Water power, of which there is great abundance, will, it is understood, be employed in working the air-pumps. The length of the line from Genoa, including an extension to Lake Maggiore, will be about 150 miles. A railway from Milan to Venice is now in course of construction.

A valued correspondent informs us, that it is the intention of Mr. VIGNOLES to give a formal and detailed paper on the subject of the Atmospheric Railway at the approaching meeting of the British Association, at Manchester, to be illustrated by models, and large working drawings and diagrams. "It is expected [says the same party] that, among the numerous Engineers and scientific and practical men who are in the habit of attending the sittings of the mechanical section of the Association, a lively discussion will be raised, which will not fail to bring forth all the arguments *pro* and *con*. The number of railways at present contemplated on the continent, in Russia, Poland, Austria, Bohemia, Prussia, Hanover, in Italy, and especially in France, will involve the expenditure of such large sums of money, that the questions of economy in construction, and in working, that will be raised by this discussion, cannot fail to draw the attention of the Government and the Engineers of these countries to the consideration of this principle—a principle which we believe is fast making way with the public in general, as it seems to have for some time been advancing in estimation among many of the most scientific men in Great Britain and Ireland, and with some of our leading Engineers. We have already mentioned the commencement of operations, on the extension of the Dublin and Kingstown Railway to Dalkey, for laying down the railway to be worked by Atmospheric pressure. We are informed, on undoubted authority, that serious proposals are before a company of proprietors of a public work, not a great distance from London, which will probably lead to a most important step in advance for the illustration of this principle on a still more extended scale."

Another trial of the Atmospheric apparatus was made yesterday, at Wormwood Scrubbs. Among the gentlemen present were Professors Babbage, Wheatstone, Daniell, and Vignoles, C.E. ; Lord Clements, M.P. ; P. Ainsworth, M.P. ; — Vernon, M.P. ; J. W. Rendel, C.E. ; Charles Manby, C.E. ; the Rev. J. Barlow, Mr. Avigdor, &c. &c.

A WEEK or two ago we noticed the proposal for constructing a branch railway to Evesham, in Worcestershire, in connection with the Birmingham and Gloucester Railway. The Engineer's Report has since been forwarded to us, from which we find that the length of the proposed branch would be 8¾ miles, and that the cost of construction is estimated at (in round numbers) 70,000*l*. The calculations as to traffic bring out a gross annual amount of about 11,000*l*.

We further learn that the country has been surveyed by the Engineers, and plans and books of reference lodged agreeably to the Standing Orders of Parliament for the next Session. We should regret to find so promising a project miscarry from want of that local support which, we fear, is indispensable to the success of all railways hereafter to be constructed. Doubtless it would conduce not a little to the speedy filling-up of the subscription list, if the Birmingham and Gloucester Company would follow the example of the London and Birmingham in the case of the Leamington Union branch, and at once agree to lease the new line at an annual rental sufficient to ensure a fixed interest, even if that interest should not be very large. We well know that the Gloucester Company are not in the most flourishing condition themselves, but we do not believe that in this case they would be incurring any risk, while there is a fair prospect of great ultimate benefit to all parties. It is a pity that it should be necessary to hold out so many inducements to the promotion of an important local improvement, but so it frequently is; and probably the borough of Evesham will form no exception to the general practice.

A SHORT conversation took place last night in the House of Commons, with reference to the further consideration of the Railways' Regulation Bill, which has already been so repeatedly postponed. Mr. GLADSTONE, on the part of the Government, expressed a wish that the House should meet at 12 o'clock this day to discuss the measure, as in the present press of public business he apprehended that it could not for some time be discussed on any of the evenings usually appropriated to Government business. Mr. HUME and Mr. LABOUCHERE objected that this course would interfere with the previous arrangements of honourable members, and ultimately it was understood that the House would meet this day week to take the question into consideration.

IN the Court of Queen's Bench yesterday, a rule was granted to show cause why the inquest held on the bodies of the parties killed by the late falling in of a tunnel on the South-Western Railway should not be set aside. The argument was, that *the jury had not distinctly stated in whom the property in the chalk which fell was vested!* Could anything show more completely than this the absurdity of the present law of deodand?

—o—

SEVERAL petitions were presented to the House of Commons on Tuesday night with reference to Post-office communication with the west of England, and among others was one from the Directors of the Bristol and Exeter Railway Company. They were all referred to the "Select Committee on Post-office Communication." We have alluded to this subject elsewhere.

—o—

IN another page will be found a short notice of the meeting of the Dundee and Arbroath Railway Company, extracted from a local paper. We have been favoured with the sight of a private letter to a gentleman in town, in which some farther details are given. The writer says :—"I had anticipated for some time that the Report would not be favourable, and I regret to say that it has turned out to be less so than I had ventured to predict. The revenue for the past year amounts to :—

	£	s.	d.
"Passengers, 9,917*l*. 14s. 11½d. ; parcels, 624*l*. 14s. 5½d. ; goods, 2,782*l*. 7s. 7d.	13,324	17	0
For carrying the mail	300	0	0
Cartages and rents	161	9	7½
	£13,786	6	7½
Expenditure (particulars annexed)	11,067	7	9
Excess of revenue over expenditure..	£2,718	18	9½

which is scarcely 3 per cent. on the original capital of 100,000*l*.

"This being the state of matters, the Directors recommended that no dividend be paid this year, which, after a good deal of discussion, was agreed to, and the surplus was placed to the reserve account.

	£	s.	d.
"Engine expenditure	2,503	7	10½
Carrying account	1,847	11	9
General charges....	521	6	10
Maintenance of way....	1,155	10	1
Salaries....	968	12	6
Mileage duty	1,854	16	10
Feu duties	583	15	3½
Compensation account	173	16	2
Interest	1,932	15	3½
Repairs on property and stations	96	9	4
Insurance....	39	5	0"

THE practice of "locking-in" has now been discontinued on the Great Western Railway. On the mo-

Digitized by Google

tion of Sir R. H. Inglis, copies have been ordered "of any communication from the Board of Trade to the Railway Companies, and of the replies on the part of any of the same, in reference to the practice of locking both the doors of the railway carriages, or otherwise confining the passengers travelling thereby." The Rev. Sydney Smith has addressed a second letter on this subject to the *Morning Chronicle*. There is a good deal of wit and a great deal of irreverent flippancy in the communication, but the following passages, for which alone we have room, are *in substance* much to the point:—

"There is, in the first place, the effect of imagination, the idea that all escape is impossible, that (let what will happen) you must sit quiet in the first-class No. 2, whether they are pounding you into a jam or burning you into a cinder, or crumbling you into a human powder. These excellent Directors, versant in wood and metal, seem to require that the imagination should be sent by some other conveyance, and that only loads of unimpassioned, unintellectual flesh and blood should be darted along on the western rail; whereas, the female *homo* is a screaming, parturient, interjectional, hysterical animal, whose delicacy and timidity monopolists even (much as it may surprise them) must be taught to consult. The female, in all probability, never would jump out; but she thinks she may jump out when she pleases; and this is intensely comfortable.

"There are two sorts of dangers which hang over railroads. The one retails dangers, where individuals only are concerned; the other wholesale dangers, where the whole train, or a considerable part of it, is put in jeopardy. For the first danger there is a remedy in the prudence of individuals; for the second, there is none. No man need be drunk, nor need he jump out when the carriage is in motion; but in the present state of science it is impossible to guard effectually against the fracture of the axletree or the explosion of the engine; and if the safety of the one party cannot be consulted but by the danger of the other, if the foolish cannot be restrained but by the unjust incarceration of the wise, the prior consideration is due to those who have not the remedy for the evil in their own hands."

—o—

A CORRESPONDENT states that a trial took place yesterday at the Euston-square station of the London and Birmingham Railway, of a powerful fire-engine built for that Company by Mr. Merryweather, of Long Acre. This engine is the largest ever constructed for land service in this or any other country; it is mounted on railway wheels, and fitted with shifting spring buffers, for travelling safely on the line to any part where its services may become needful. A number of Railway Directors, Government officers, and scientific gentlemen were present at the trial. The engine being manned by 40 of the railway servants, threw a jet of water 1¼ inch in diameter upwards of 100 feet high; 1¼ inch jet was projected still higher; and, subsequently, two jets of three-quarters of an inch each were simultaneously delivered at the first-named altitude. The fore-part of the engine contained a hose-reel (the invention of Mr. Baddeley), upon which 400 feet of leather hose is kept joined up ready for use, from which any required quantity can be run out in a few seconds. The whole of the arrangements for adapting this engine to the particular service to which it is destined, as well as its general appearance and the excellence of its performances, gave very great satisfaction to the spectators. This engine is intended more particularly for the protection of the works at the Euston-square and Camden-town stations, but it will be readily available on any part of the line.

RAILWAY OFFENCES AND OFFENDERS.

ON Monday last a "respectable" person named David Ellis was fined 20s., and in default of payment sent to prison for seven days, by Mr. Long, of the Marylebone Police Court, for an attempt to defraud the London and Birmingham Railway Company, by riding from Coventry without paying his fare. The case was very clearly made out.

On the same day, and by the same magistrate, two brothers, aged 15 and 12, named Dickinson, were fined 10s. each, for throwing stones upon the railway, between Camden Town and Euston-square. It appeared that this dangerous "amusement" had become very common. The fine was mitigated, solely in consideration of the youth of the offenders, the magistrate remarking, that, had they been of more mature years, he should have inflicted the maximum penalty.

PROCEEDINGS IN THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVE-HILL RAILWAY (ROAD AND SHIPPING PLACE).

June 3.—Report, that the Committee met this day pursuant to their adjournment, and were unable to form a quorum of the Committee, in consequence of two of the members having ceased to be members of the House; Report to lie on the table.

June 6.—Leave to Committee to proceed with four members on Friday; time enlarged for Committee to report till Wednesday, 15th June.

BRISTOL AND GLOUCESTER RAILWAY.

June 3.—Lords' amendments agreed to.

LIVERPOOL AND MANCHESTER RAILWAY.

June 7.—Bill read a second time and committed, and referred to the Committee of Selection.

June 9.—Bill referred to Mr. Greene, Viscount Sandon, and Sir Howard Douglas.

Committee to meet on Thursday, 23rd June.

LONDON AND CROYDON RAILWAY (GRANGE-ROAD APPROACH), (No. 2).

June 3.—Report further considered. Motion made and question proposed, "That the amendments made by the Committee to the Bill be now read a second time." Amendment proposed, to leave out from the words "That the" to the end of the question, in order to add the words "Report be taken into further consideration upon this day three months," instead thereof. Question put, "That the words proposed to be left out stand part of the question." The House divided; Ayes 88, Noes 148; words added; main question, as amended, put and agreed to; Report to be taken into further consideration on this day three months.

LONDON AND GREENWICH RAILWAY (No. 3).

June 3.—Petition of Robert A. Wainewright, Clerk to St. Thomas's Hospital, against the Bill; to lie on the table.

June 6.—Bill reported, and re-committed to the former Committee; leave to Committee to sit and proceed on Friday next.

Petition of Robert A. Wainewright, against the Bill [presented 3rd June], referred to the Committee on the Bill; counsel ordered.

Petition of Commissioners for Paving, &c., the east division of Southwark, against the Bill; referred to the Committee on the Bill; counsel ordered.

June 7.—Ordered, that the minutes of evidence and the proceedings of the Committee on the London and Greenwich Railway (No. 1) Bill, in the present session, be referred to the Committee on the London and Greenwich Railway (No. 3) Bill.

THAMES HAVEN DOCK AND RAILWAY.

June 3.—Bill reported; to be ingrossed.

June 6.—Bill read a third time and passed.

WARWICK AND LEAMINGTON UNION RAILWAY.

June 6.—Message from the Lords, that they have agreed to the Bill with amendments.

June 7.—Lords' amendments agreed to.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

WE have much pleasure in giving insertion to the following:—

To R. Creed, Esq.

London and Birmingham Railway Office,
Wolverton Station, May 25, 1842.

MY DEAR SIR,—I send, for the information of the Board, the particulars of an experiment which was made on Monday and Tuesday last, at this station, on engine No. 18; and as the result proves that a fracture may occur in the fore-axle, without any serious consequence to engines of the description used by the Company, I doubt not that it will be found exceedingly interesting at a time when the public mind is so much excited by the recent accident on the Paris and Versailles Railway.

I must premise, that engine No. 18 was selected for the experiment because she had been sent to Wolverton to undergo a thorough repair; and it was further decided to substitute for her fore-axle one which, having been erroneously made a quarter of an inch less in diameter than the prescribed dimensions, had been long since laid aside.

The axle thus selected was cut circularly through, by a tool three-eighths of an inch wide, close to one of the journals, and to within half an inch of the centre of the diameter, leaving, therefore, an intervening thickness of one inch of metal connecting the partially severed parts.

The engine, in this state, was sent from the station towards Roade; the fore-axle broke in two as intended, at the point where it had been divided, but the occurrence had no apparent effect on the movement of the engine, which continued its course till it reached Roade, when it was crossed from the down to the up line, and returned in safety to Wolverton.

On Tuesday, at half-past one p.m., the engine, with its divided fore-axle in precisely the state in which it had been left the day preceding, was started from Wolverton, with six waggons of wheels and axles—making a gross load of 32 tons, exclusive of engine and tender With this load the engine attained a speed of 25 miles per hour, and arrived safely at the Watford station, distant 34 miles. Soon after leaving Watford, and when it was again running at a speed of 25 miles per hour, one of the front wheels slipped off the rails, and the engine was delayed seven minutes until it was replaced. The engine again proceeded towards London; but at about two miles beyond the Harrow station, where the line is on transverse sleepers, the wheels once more slipped off the rails, and the engine, in that state, ran upwards of 200 yards before it was stopped. In 20 minutes it was again lifted on to the rails, and started for Camden, where it arrived in safety before 5 o'clock.

This experiment, tried as it purposely was on an engine thoroughly out of repair, with a divided axle reduced three-eighths of an inch in length, and more likely, therefore, to slip off the rails, may be considered to have established the important fact that the Company's engines are not liable to fall down because a fore-axle may by possibility break.

The circumstances connected with the experiment are not likely to occur in ordinary practice, for the following reasons:—

1st. The engine was in a state to require that it should be taken off the road.

2nd. The fore-axle was below our standard size. And,

3rd. It was cut in two in the place most likely to cripple the engine if a fracture were to happen, but not where it would probably take place.

Digitized by Google

In conclusion I have to observe, that from July, 1837, when the line was opened, to the present period, there has not been a single instance of an accident to our fore-axles; that where crank axles have broken, the engine has invariably been driven on its own wheels to Wolverton for repair, and in most instances has taken its train to a station; and I may add, that of the few cases of fractured cranked axles *two only* have occurred to passenger engines.

Thus the following important facts may be regarded as established:—

First—That of the engines in use on the London and Birmingham Railway the fore-axles have *never* been broken.

Second—That when experimentally broken under the most unfavourable circumstances the engine was not disabled. And,

Third—That in the only two cases where the crank axles of passenger engines have been broken the engines were not disabled.

I am, dear Sir, yours, faithfully,
(Signed) EDWARD BURY.

To E. Bury, Esq.

London and Birmingham Railway, Camden Town, May 30, 1842.

MY DEAR SIR,—I was at Wolverton on Tuesday the 24th instant, and saw engine No. 18 preparing to start on an experimental trip to Camden station.

Mr. Parker, foreman of the shops, informed me, that by your directions the fore-axle of the engine had been cut through, for the purpose of ascertaining, 1st, whether the engine would, in that state, keep the road; and 2nd, in case the engine did get off, whether it would roll over, or retain its vertical position.

Although I had myself no doubt as to the results of the experiment, yet being aware that they would, in all probability, have an important effect in establishing or condemning the use of engines of this construction, I was led, in consequence, to inspect the engine very minutely.

The engine No. 18 is mounted on four wheels; diameter of the driving wheels 5 feet 6 inches; that of the others (or fore-wheels) 4 feet; the framings and bearings are inside the wheels. I found the fore-axle cut through, about 3 inches inside the bearings of the near wheel; the longer section of the axle had dropped about half an inch below the shorter one. As I had expected that the bearing was sufficiently broad to retain the axle in its truly horizontal position, even when cut through, I made particular inquiries as to the state of the brasses, and was informed that they were much worn; in fact, the engine had been sent into the shops for the express purpose of having them renewed, but that it had been determined to try the experiment before the execution of any repairs.

After satisfying myself on these points, I went to Pinner Park gate, to inspect the position of a proposed new station; whilst there No. 18 came up, with a train of six loaded goods' waggons. I got on the engine, and when we had proceeded about 6 miles, we ran off the road; the speed at the time was from 15 to 20 miles an hour. The engine went about 200 yards before it was brought to a stand, striking, in its passage, against the chairs and sleepers with great violence. It was evident from the motion that for some considerable portion of this distance, the engine was fairly forced forward by the momentum of the train behind, none of the waggons of which, or the tender, having followed the engine off the road.

On examining the engine after the accident, there was no appearance of any derangement of the machinery; the tires of the wheels were deeply indented by coming in contact with the chairs.

The engine maintained her vertical position, was replaced upon the rails in about 20 minutes, and proceeded to her destination. Whilst upon the journey, I did not notice any unusual motion; and had I not seen that the fore-axle was severed, I should not have been aware of the fact.

On the whole, I consider the experiment as highly satisfactory, for although I did not expect that the engine would have gone off the road, yet her having done so was a much more satisfactory test of its safety as a passenger engine, than could otherwise have been attained.

Had there been anything in the construction which would render it liable to upset, I feel persuaded that the violent action of the train against the foot-board must have produced that result. And as this point could never have been determined until an engine with a broken axle had run off the rails, the experiment was so far conclusive.

I believe that if the brasses had been in good order, or if the axle had been cut away at the back of *both* the wheels, and removed altogether, the engine would not have gone off the road; for the tendency of the longer section of the axle was to throw the wheel to which it was attached out of its vertical position, and to bring the flanch in close and continuous contact with the rail, thus greatly increasing the probabilities of the wheel mounting the rail on meeting with any obstruction, however small.

I am, &c. &c.,
(Signed) ROBERT B. DOCKRAY.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—It is surprising to what extent the jobbers in the London and Brighton Railway have succeeded in raising and depressing the market prices according as it most suited their interests. At present the parties for the fall seem to have it their own way, but it is only fair to look calmly on each side of the picture, and I think it can easily be proved that the shares of this concern, instead of declining, ought to undergo a material and immediate advance. The great bugbear at present seems to be the cost of the line. Let us examine it.

The amount expended actually, in round numbers, is	£2,150,000
But though the railway is in work throughout, it may require a little extra to make it complete; suppose we add 200,000*l.*, for it cannot be much more	200,000
And we have a total of	£2,350,000

This is, undoubtedly, a large sum, but let us bear in mind that we have a tributary Company (the Dover) who must pay toll for a portion, nearly one-fourth the entire length,* and, according to their own public statements, they value the portion for which they have to pay us at 350,000*l.* It is more likely to be over than under, but taking their own figure, it reduces the actual cost to the Brighton shareholders to about 2,000,000*l.* Now for the traffic. The line is quite new; for the opening last year was so ill-timed that no criterion can be formed from its working. But even calculating from its first opening, which is less than a year ago, and when no goods were carried, we find the receipts of a most satisfactory nature. At present, under every disadvantage, it yields upwards of 3,000*l.* per week, and as the season is only beginning, I should not be surprised to see it reach 5,000*l.* or 6,000*l.* The South-Western was placed precisely in the same position on opening, and there is no doubt the traffic of the Brighton will keep improving in the same manner as the South-Western line. It is worthy of remark that the traffic of the Brighton line is of the most remunerating description, viz., passenger. A great development is anticipated in merchandise, &c., as soon as the communications with France and the continent, by way of Shoreham, are fairly established; but I repeat, the present receipts are almost entirely from through passenger traffic, the best of all. Compare these results with other concerns, the Edinburgh and Glasgow for example, at present so favourite a line. The cost is about 1,500,000*l.*, and the receipts 2,000*l.* and odd per week; or compared with the Brighton line, the cost is as three-fourths, whilst the receipts are only two-thirds. The nature of the traffic, too, how different! With the Edinburgh and Glasgow Railway it is questionable if a good deal of their traffic pays at all, such as cattle, low classed fares, &c., which form the bulk of their receipts. And yet the Edinburgh and Glasgow shares are above par, whilst the Brighton are forced down by hungry speculators to near 30 per cent. below. Ought not these lines rather to change places on the share-list? The passenger traffic on the Brighton line is considerably better than that of the North Midland or the Manchester and Leeds; and, in short, I do think it bids fair to become as considerable, or nearly so, as that of the South-Western.

* This is a mistake. The Dover Company will pay *no* toll.—ED. R. T.

Yours, &c.,
A BRIGHTON SHAREHOLDER, BUT NO JOBBER.

Liverpool, June 6, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I observe in your last Saturday's paper, that you doubt the receipts of the Brighton Railway ever averaging 4,000*l.* per week, and you remark that they have not yet averaged 3,000*l.* I hope better for the future, and on these grounds, viz., because the receipts for *one* week previous to the accident in September were, I believe, above 3,700*l.*, which, considering its being so recently opened, and the number of coaches that were still running on the road, must not be considered the maximum; also, I recollect that there was no goods' traffic worth notice in that amount.

Since that period until a short time back, a series of misfortunes on it and on the Croydon line ensued, so that *public confidence* was almost lost. *This* is partially restored, but the accommodation at the London station is still very deficient—the season for Brighton has not begun—the goods' traffic is not obtained, because the Company cannot at present take it, and yet the weekly receipts are above *your* average. I fully agree in the remarks you have so frequently made on the sad management of this concern for the unfortunate shareholders, of which body I am one; the outlay has been quite enormous, but if a proper watch be for the future kept, I think *we* shall get fair interests, and that anybody purchasing at the present price could not run any risk whatever.

I am, Sir, your obedient servant,
X.

June 7, 1842.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.

To the Editor of the Railway Times.

SIR,—This much-neglected railway is likely now to turn out *a good thing* to speculators. Whatever has been hitherto thrown away, the sum expended in obtaining the last Act has been well bestowed. They have, by this, taken a new stand; and, at present prices, the shares are windfalls: as the sale of the properties and rights, which is about to take place, must be very remunerative to those who purchase under 60*l.* per share. I understand that the Bristol and Gloucester Company have passed their Bill to raise funds for the purchase of one portion, a few days ago. The Great Western are in treaty for the other unfinished portion; and that part which is finished yields dividends of 2*l.* 10s. per share per annum.

I recollect that the Leeds and Selby, after being long at a great discount, 40 per cent. or more, started up to within 5 of par on being leased to the York and North Midland. So will it be with the Cheltenham Union, which has hitherto disappointed or disgusted investors and speculators from its sudden and unreasonable fluctuations and reverses.

The *original* shareholders may not gain much; but recent purchasers will have very handsome profits within the next few months.

I am, Sir, yours, &c.,
B.

MR. ADAMS'S BOW-SPRINGS, &c.

To the Editor of the Railway Times.

Sir,—In your last week's paper appears a letter from a Mr. J. C. Haddan, commenting on the Dover Railway carriages. With the question of the manufacturers, or designing the carriages, or any of the multifarious questions Mr. Haddan discusses, I will not trouble myself or your readers, leaving it to the manufacturers to manage these matters themselves. The only question that interests me is that of mechanical construction, which Mr. Haddan, anxious only for the safety of the public, seems to disapprove, at least in the item of bearing springs.

We have the value of Mr. Haddan's testimony as to "the success which has attended the use of the bow-springs for small private four-wheeled carriages," but he disapproves of their use for railway carriages. His opinion is corroborated by many railway carriage builders, who, with few exceptions, consider bow-springs to be admirably adapted for private carriages; but the contrary for railway carriages. In the case of private carriage builders there is a remarkable conformity of opinion diametrically opposite. They mostly consider bow-springs admirably adapted for railway carriages, but entirely unfitted for private carriages. Now, I beg Mr. Haddan to understand that I am very far from attributing either "obstinacy or prejudice" to either of these sets of gentlemen. Any of them will apply bow-springs, when ordered by their employers; but as they are not bow-spring manufacturers themselves, it is but natural they should prefer using springs which issue from their own stores.

Mr. Haddan, as an engineer, ought to understand the *rationale* of a spring, viz., *a yielding material of perfect flexibility, adapted to its given load; passing through as much space as will effectually prevent shocks; working with the minimum of friction; and possessing such an amount of free elasticity as will constantly restore the spring to its true form after the pressure is removed.* A spring, thus formed, will have the most perfect effect in *converting percussion into simple increase of pressure.* Whether the spring be used for a carriage running 8 miles or 80 miles per hour, the principle remains the same, but the greater the speed the more perfect should be the flexibility; and as shocks, both on railways and highways, are of compound character—lateral, vertical, longitudinal, and diagonal—it follows, as the night the day, that the best-adapted spring is that which furnishes universal yielding in every direction.

Any competent mechanic who has examined the bowspring will at once pronounce that it is the only carriage-spring on railways which complies with the whole of these conditions. And now to the question of safety.

The springs of the bow-springs are attached to a chain of strong links connected with the scroll irons. By this process the body rests on the springs, through the medium of the links; and if the springs were wholly removed, either by what Mr. Haddan calls "snapping," or intentionally, the wheels and axles attached to the links would run on just as securely, though not so smoothly, as with the springs in their places—the links being really a stronger connection than what are called axle guides, viz., the vertical forks in which the axle boxes slide up and down. This was some time a problem, speculation being afloat as to the damage which might ensue in case of breakage: but practical verification has now been more than once obtained, that bow-springs may be broken by violence at high velocities on railways, without doing any damage beyond the loss of the spring-plate—and which, moreover, may be replaced within three minutes, supposing a duplicate to exist at a station, or to be carried by the train. In one of the cases of breakage to which Mr. Haddan alludes, the spring was broken in three pieces by passing over a girder, and subsequently the carriage returned over the same line, in its broken state, without the passengers who were at the opposite end being conscious of the injury. Before any springs were thus broken, the safety might be considered a problem; it may now be taken as a demonstration.

Apart from all this, Mr. Haddan should, as a mechanic, be well aware that, at a small additional expense, the springs may be so guarded as to render them far safer than any other spring, and this without impeding their action.

The bow-springs all undergo, or ought to undergo, a certain test or proof, before they leave the factory—*i. e.*, they are subjected to a greater amount of pressure in a screw press than can possibly take place on the carriage when the frame is forced down upon the axle boxes, which is the limit of the space the springs can pass through.

There are but two modes in which springs can be broken after undergoing this test.

First, by violence in striking some obstacle.

Secondly, by some concealed flaw in the metal.

This last may always be detected by examination, as it is only by very gradual process that it increases.

Out of 1,328 bow-spring plates for railways which have been manufactured in England, there have been but five breakages. Two of these cases were by violence on girders, and three from flaws. Not a single spring has ever yet been broken, that I am aware of, by any process of wear or fair usage; and none, that I am aware of, betray any signs of deterioration by wear.

I have no doubt this statement will be very satisfactory to Mr. Haddan, whose great anxiety for the public safety is manifest throughout his long letter. His benevolence of mind will no doubt prove its own reward.

I remain, Sir, yours, obediently,

WILLIAM B. ADAMS.

June 6, 1842.

Mr. ADAMS'S BOW-SPRINGS, &c.

To the Editor of the Railway Times.

Sir,—In your last week's paper, Mr. J. C. Haddan makes a statement of what he terms facts. With your permission I will add to his facts certain other facts, which may have escaped his memory, and which his anxiety for justice will lead him to be grateful to me for placing before the public. As I have now been for four years engaged in the manufacture of bow-spring carriages, both for common roads and railways, I can speak from my own knowledge as to almost every circumstance respecting them.

Mr. Haddan first came to this factory about three years back, alleging that he made it a rule to hook himself on to rising or successful people. After this he disappeared again for a time, till bow-springs were first adapted for the Hamburgh and Bergedorf Railway. This circumstance made him very enthusiastic in their favour, and also in favour of the patent buffers, which were brought into use a short time previously by Capt. Laws of the Leeds and Manchester Railway. Mr. Haddan prepared a drawing of a railway carriage, with his own patent polygon spoke wheels and bow-springs. A model of the buffer-spring was prepared for him, with which he prepared to travel the country, as commission agent for the sale. Mr. Haddan even persuaded Mr. Wright to adopt it, on commission, when suddenly all his pleasantness was turned to gall and bitterness, because Mr. S. Adams tendered to a Railway Company an improved design for a waggon, interfering with one Mr. Haddan had prepared, and on which he was to receive commission. Mr. Haddan, on this, in a state of violent excitement, proclaimed his determination to extinguish bow-springs and buffer-springs alike throughout the length and breadth of railways, by exposing their utter worthlessness, and his last week's attack appears to be the first opening of his trenches.

Mr. Haddan talks of the experimental journey to York. He might have added the circumstance that the spring was broken by violence on a girder, and that the carriage, notwithstanding, performed its journey.

It is quite true that Mr. S. Adams tendered for the Manchester and Leeds carriages and did not obtain them, but it is equally true that Mr. Haddan attended the Board with Mr. Wright for the same purpose, and they were in the same predicament. The contract was carried off by Messrs. Bramah, Fox, and Co., whose tenders are invariably lower than those of other builders. Though without bow-springs, the carriages will be fitted with Adams's buffing-springs.

While on the subject of broken bow-springs, it will be as well to record the amount of them.

The first broken spring occurred to a carriage truck belonging to the Birmingham and Derby Railway, by coming in contact with a girder on the York and North Midland line. The second, on the same girder to the Manchester carriage, as mentioned above. The third to a carriage truck on the South-Eastern, by faulty workmanship. The fourth and last to a carriage belonging to the York and North Midland Railway, by faulty workmanship. Four separate breakages have thus occurred, and no accident resulted from them.

By his inuendo on the subject of wheel selling, he refers to Mr. S. Adams. Pity he should not tell the plain truth. A set of wooden wheels were ordered for the North Midland Railway; the wheels were manufactured by Messrs. Lloyds, Fosters, and Co., who also manufactured Haddan's patent polygon spoke wheels. By mistake they were addressed "Midland Counties' Railway, Derby," instead of "North Midland Railway, Derby." Mr. Bell, the Superintendent of the Midland Counties', wrote to say the wheels had not been ordered and would be returned. Mr. S. Adams then asked Mr. Bell to place them under a carriage. That gentleman declined, and the matter was rectified by passing them over to the North Midland. Mr. Haddan has committed the error of substituting the words London and Birmingham for North Midland.

It was at least an honester blunder when he threatened Messrs. Lloyds, Fosters, and Co., that they should make no more patent polygon spoke wheels if they presumed to manufacture wooden wheels for Mr. Adams.

Apologising for taking up your time and space with matters so merely private, pressed on me by Mr. Haddan's attack,

I am Sir, yours, respectfully,

W. A. ADAMS.

159, Drury-lane, London, June 8, 1842.

MR. ADAMS'S BOW-SPRINGS, &c.

To the Editor of the Railway Times.

Sir,—I beg to thank you for the insertion of my letter in the *Railway Times* of the 4th instant, and for the very kind and flattering remarks with which you drew attention to it—but for which it would most likely have escaped the notice of your readers. In these remarks there are two or three *trifling mistakes* which I am anxious to correct.

After stating your *motives* for inserting my letter, you remark, "It is simply necessary to state that Mr. Haddan is the commission agent of Mr. Joseph Wright, the railway carriage builder, to account for the annoyance which he feels, and which he has not sense enough to conceal, at the success of a rival builder, from whom he appears to have no commission."

This is not the fact: I am not a commission agent for Mr. Wright, either directly or indirectly, unless the *selling* Mr. Wright's wheels and various descriptions of ironwork can constitute me his agent—in which event I am equally the commission agent of Mr. Adams himself, as the wheels (including the very wooden wheels so flatteringly mentioned by you in your leader of the 28th of May), axles, steps, general ironwork, and leather straps (for the carriages built by Mr. Adams), were furnished through me, and *I have received my commission upon them.*

You continue, "although, if we have not been very much misinformed, it is not Mr. J. C. Had-

Digitized by Google

dan's fault, nor owing to any peculiar bashfulness on his part, that he does not at this moment draw a commission from these same bow-springs." The following letter will, I think, convince both you and your readers that you *have been "very much misinformed."*

"I hereby agree to make to Mr. J. C. Haddan a commission allowance of three pounds per cent. on all orders obtained through his means, for the patent shifting fulcrum buffing and traction springs, as well as for the patent under bow bearing-springs.

"SAMUEL ADAMS.

"159, Drury-lane, London, April 20, 1241.

"The commission not payable until the amount is settled."

I have never sold one spring; the reason why, I will explain on a future occasion, should the *threatened castigation* of Mr. Adams render it necessary.

As, Sir, you have impugned my motives for writing the letter of the 2nd of June, I will state them in a few words. I was anxious that it should be known that the Dover carriages had my wheels, which fact the leading article in your paper of the 28th of May (professing to give an account of the opening of the Dover Railway) never mentioned, although *wheels* were alluded to. The publication of the fact that my wheels are almost exclusively used on the Dover Railway is quite as important to me as the announcement may be to Mr. Adams that his bow bearing-springs and his shifting fulcrum buffing and traction springs are under the Dover carriages. In giving a statement of the carriages, I could not omit naming Mr. Wright and the other makers, without subjecting myself to the imputation of *merely puffing* my wheels. Mr. Wright needs no praise from me; his carriages will speak for him; nor need he or I fear the competition of Mr. Adams. His first order for *carriages* will, in all probability, be his last, that is if good workmanship is to form an ingredient for *the future*.

I had also another motive in writing—that of drawing the attention of your readers to the source of the bow-spring puffs, by suggesting the *probability* that Mr. Adams was and is his own trumpeter, which probability your remarks on my letter will, I think, tend to strengthen; for I will ask, how could *you*, Sir, (unless by communicating with Mr. Adams himself between the receipt and publication of my letter) know that "*Mr. Haddan is Mr. Wright's Commission Agent*," or that "*Mr. Haddan could not draw a commission from Adams's bow-springs.*"

Your "*Sic* in MS." will induce me to use more caution in future in examining copies made by stationers; my blunder, in calling my wheels "vent" instead of "bent" spoke wheels, would then have been avoided. *Perhaps* this copying by a stationer may have led you to imagine that I *fathered what I never wrote.*

At the conclusion of your remarks you furnish your readers, "*as a point of interest*," with returns of Adams's springs made in England since September, 1838. Could you not still further oblige by stating, in your next publication, how many carriages of every description are now actually running on bow-springs *in England?* Is not the number under 50, instead of "332," as the return would lead any casual reader to imagine? If the number of *broken springs*, and those now *for sale* (in consequence of being disapproved of), were added, the return would be much more complete.

I am, Sir, yours, most obediently,
J. C. HADDAN.

29, Liverpool-street, King's Cross, June 8, 1842.

P.S. The original letter from Mr. Adams may be seen on application as above.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—I am induced, from the independent position you have taken in the railway world, to hope that you will allow me, through the medium of your valuable paper, to call the attention of the holders of the original shares in the Blackwall Railway to the manner in which one of the principal objects for which this railway was constructed has been brought into operation. I allude to the encouragement the Directors hold out to steam-boat proprietors to land and embark their passengers at the Brunswick Pier, and thus to afford the public a cheap, convenient, and rapid access to the very heart of the City, without being exposed to the inconvenience of landing at the crowded wharfs at London Bridge, or of being detained in Pool. I trust a few remarks may contribute to convince my brother shareholders of the poor chance we now stand of ever receiving a dividend adequate to the capital we have invested, if the present system continues, and also may rouse them to use their exertions in developing the immense resources that our railway undoubtedly possesses.

	Fares.
Blackwall Railway and steamer to Greenwich takes half an hour	8d. and 10d.
Sunday	10d. „ 1s.
By Greenwich Railway to ditto, including 10 minutes for walking over the Bridge—25 minutes	6d. „ 9d.
Steamer from London Bridge—35 minutes to 1 hour	„ 6d.
Blackwall Railway and steamer to Woolwich, Charlton, 45 minutes to 1 hour	8d. „ 10d.
Sunday	10d. „ 1s.

Now, Sir, is it reasonable to expect that a resident at or in the neighbourhood of Greenwich will pay 4d. a day in order to patronise the Blackwall Railway, or that he will, during the hot season, prefer walking over London Bridge (supposing the Blackwall Railway to take him for 6d.), to a pleasant sail across the river. Again, will a man bringing his family down to enjoy the park of a Sunday, and who has most likely not too much money, pay 8d. each more than he can go by the steamer for?

All I think we can ask of the Directors is, to make such arrangements as will enable us to compete for a part of the traffic of the 60,000 or 70,000 persons who come down weekly to Greenwich during the summer months. Can any greater proof exist of the opinion of the Directors themselves as to the importance of low fares, than that they are now running their own boats to Gravesend at the same reduced fares as they did last year, although it is well known they lost money by doing so.

The railway is also suffering from three other causes. 1st, The want of proper advertisements being put into the papers, giving a plain account of all steamers, &c., which leave the different termini. 2nd, That porters, &c., should be placed at the terminus to carry luggage to and from the steamers, &c., free of all expense, and with as little trouble to the passengers as possible—for it is not to be expected that a gentleman will give himself the trouble, and go to the expense of having his trunks placed on and taken off the railway carriages, and also have to pay 4s. or 5s. for his family being conveyed to Blackwall, when he can embark at London Bridge, and only lose half-an-hour, at a period of the day when time is not of much importance to him. 3rd, The Directors seem to consider the Brunswick wharf, with regard to the Gravesend trade, as being their own peculiar property, and will only allow the Star and Diamond packets to embark passengers at those hours which will interfere the least with their own boats, and at the same time will allow them to land their passengers whenever they like. Now, Sir, as I suppose the Directors pay 600*l.* a-year for the use of the pier, in order that the Company may derive all the advantages from it that it is in the power of the steamers to afford, I cannot see any reason why they should refuse to let a boat embark passengers every quarter of an hour, if such an offer should be made to them. It might also be advisable to grant the General Steam Navigation Company, and other large Companies, a free use of the pier until the public become aware of the great advantages that they will derive by going by the railway. If the expenses of the pier are paid by a small allowance upon each passenger, it is all that we ought to look for. We are not wharfingers, neither do we look for a dividend from that source. I am, Sir, your obedient servant,

F.

June 3, 1842.

GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—I think your correspondent "Mercator" has good ground for complaining on behalf of the public, of the contracted accommodation afforded by this Company; and I very much doubt whether the proprietors have not equal reason to complain on their own account. For *each* passenger on whose fare the *difference* between the first and second-class carriages is gained, the *whole* fare of *several* second-class passengers is lost. The plan might answer if there were no competing line; but must, I conceive, in existing circumstances, be as prejudicial to this line as it is advantageous to the North Midland and the Leeds and Manchester lines. Certain it is, that by those two lines (notwithstanding all the discomforts of the last-named line) hundreds of passengers, from London and from Derby, reach Manchester, and go even to Liverpool, every week, who would pass by the Grand Junction line if its arrangements and its cost did not repel them.

I am, Sir, your obedient servant,
NON-MERCATOR.

BIRMINGHAM AND DERBY JUNCTION RAILWAY COMPANY—SPECIAL MEETING.*

A SPECIAL general meeting of the proprietors of this Company was held at the Waterloo Rooms, Birmingham, on Thursday, June 2, for the purpose of considering and determining upon the creation of new shares in addition to the present capital, and also for the purpose of authorising the raising of a further sum of money on mortgage, under the provisions of the Company's Act.

HENRY SMITH, Esq., Chairman of the Board of Directors, having taken the chair, said, that he could not better state the object for which the meeting was called, than by reading one of the resolutions passed at the general meeting of proprietors held on the 16th of February last. At that meeting it was resolved "that the Directors be authorised to apply to Parliament for powers to raise an additional capital of 100,000*l.*" They had, in consequence, applied for and obtained the necessary powers from Parliament for raising the additional capital, and with it, of course, the usual power of borrowing which generally accompanies Acts of this kind. The Act was then on the table, and having been obtained, it became the duty of the Directors to consider what course it would be desirable for the Company to take, and to submit their plans to a special meeting of the shareholders to be called at as early a moment as possible. It was for that object that the present meeting had been convened, the notice calling it having been published in the manner required by the Act. As he had already observed, power was given them to raise an additional capital of 100,000*l.*, accompanied with power to borrow on mortgage of the undertaking to the additional amount of 43,334*l.*, such being the balance of the gross sum of 300,000*l.* which would be thus raised on debenture. It was not, he believed, necessary to allude to the circumstances which had rendered desirable the obtaining of this new Act, because those circumstances had been very fully stated and discussed at several former meetings of the proprietors; but he might observe that in the opinion of the Directors of the Company, the circumstances which called for this application to Parliament

* We gave in our last number a sketch of the proceedings at this meeting, but from the late period of the week at which the meeting took place, our report was necessarily brief. We now therefore give a more detailed account, for which we are indebted to the *Midland Counties' Herald*.—ED. R. T.

Digitized by Google

rendered likewise necessary the immediate exercise of the power with which they were invested. The purposes for which that power was granted were the discharge of existing liabilities of the Company, and the completion of such further works as were required. Having stated, as he was authorised to do by the Board of Directors, that the necessity for the immediate discharge of the liabilities of this Company was such as to require the most early creation of the capital which could be effected, it only remained for him to state the manner in which the Board were unanimous in recommending that the power given them by the Act should be exercised. He was sure that it was unnecessary for him to say that the Directors, individually and as a body, regretted, in common with the other proprietors, the necessity which was imposed upon them of adding such an amount to the capital stock of the Company, and while that stock was in so very depressed a condition. The present stock of the Company consisted, nominally, of 6,300 old shares, reduced to 6,228—72 having been forfeited for a considerable period. There were likewise 6,800 third shares created, under the Act of 1840, making the stock of the Company equal to 8,494 whole shares. The Directors, therefore, proposed to create an additional number of 25,484 new shares, to be distributed amongst the present proprietors at such a rate as would enable them by this issue to raise, as nearly as possible, the sum of 100,000*l*. These shares would be issued at 3*l*. 18*s*. 5*d*. each, but ranking, nominally, in the stock of the Company as 1-8th shares of 12*l*. 10*s*. each. They would be offered in the first instance to the existing proprietors, *pro rata*, and in case any number of the proprietors declined accepting them, the residue should then be offered, as nearly as possible in the same proportion, to those proprietors who had availed themselves of them; and if, after this second appropriation, there should still remain any residue, they would be disposed of by the Directors in such manner as they deemed most conducive to the interests of the Company. They also proposed to pay a dividend on such proportion only of the new shares as might be paid up, estimating them, as he had already stated, nominally at 12*l*. 10*s*. each. The Directors likewise recommend the borrowing of an additional sum, in order to enable them to defer making calls upon the proprietors. Some calls would be necessary at first—perhaps a call of 1*l*.; but by borrowing also they would be enabled to ease the proprietors in the other calls. Such was the plan which the Directors had to propose, the adoption of which they would submit to the proprietors. The Chairman concluded by reading a resolution embracing the plan explained by him.

Mr. J. L. Prevost, in seconding the resolution, expressed his approval of the proposed plan. The issue of the new shares would be an additional security to those who might be disposed to lend money on the Company's debentures; besides which, he did not see how they could possibly avoid adoping the course pointed out. As he understood the Chairman, the Directors would not call, in the first instance, for more than 1*l*. on the new shares, and it was to be hoped that for some considerable time they would have no more to pay.

Mr. Crawshay said that he now heard for the first time the course proposed to be adopted by the Directors. Whether this was the case with his hon. friend Mr. Prevost, he knew not; but disastrous and wretched as the concern was, and rendered so, as he could only believe, by the management of the present Directors, who had only a small interest in the undertaking, he confessed that he could not take their opinion on so momentous a proposition as that which had just been submitted to the meeting. He thought the plan should be printed and circulated amongst the proprietors, who would thus be afforded an opportunity of reflecting on it before they came to any definite resolution upon the subject. At the same time he considered that notice of such an important proposition should have been given them by the Directors, before they were called upon to adopt it. Gentlemen would bear in mind that *quoad* this capital, it affected not only those who might be disposed to take it, but those who would be unable to do so; and that, in addition, they were going to raise it at an enormous sacrifice. He had not had, for his own part, time to consider the plan; he also thought it was due to the shareholders at a distance, that they should have an opportunity of considering it, which might have been done before; and he therefore felt called upon to move, as an amendment, that the proposition of the Directors be printed and circulated amongst the proprietors, and that this meeting be adjourned for ten, fourteen, or twenty-one days, or a month, whichever period the meeting decided upon, in order to afford time for considering the plan proposed for their adoption. If it was quite fair, he should like to know how long it was since the proposition had been agreed to by the Board itself?

The Chairman said, he did not know whether this was a question which should be put, although it was one which he would have no difficulty in answering.

Mr. Crawshay thought it was a question which ought to be answered. If the Chairman was not prepared to tell him that the Directors had maturely considered the proposition, he should certainly not be a party to its adoption.

The Chairman replied, that there were Directors of other Railway Companies present, who would be competent to judge whether it was customary for questions of this kind to be put to the Board, after they had come to a definitive resolution. The question had long been discussed, as to the best course to take, but in a case like this, with a fluctuating market, the Directors would not have been justified in coming to a final determination, or making known the determination to which they had come, till the latest possible period. They came to that conclusion yesterday, and had the worthy proprietor attended the meeting of the Board, and acted as a Director himself—an office which he had held for several months—

Mr. Crawshay here interrupted the Chairman. He had not held the office, and he would not allow it to be said that he had done so. He had declined acting with the present Board, and he had therefore no means of knowing what the proposition was till the present moment. He believed this was quite a late decision on their part.

The Chairman—I said it was.

Mr. Crawshay—Then we are called on very unduly to fall into it. When the propriety was already so depressed in the market, they were now called upon still further to lower it. But he had various other reasons, besides the want of sufficient time for consideration, to urge against this proposition. First, he objected to it on account of the depression of the stock, produced by the disappointment of the passenger traffic which they were led to expect on the opening of the new line, and also by the fact that the intermediate stations were not yet finished, preventing the concern from having the chance of that improvement which was anticipated. There was also a want of organisation of the goods' traffic, the very warehouses and stations not having been in use more than three or four weeks. In addition to this, there was the general depreciation of all property of this description, affecting every railway in the kingdom more or less: and altogether a more disadvantageous time could not, in his opinion, have been selected for carrying into effect the plan proposed than the present moment. The canal, too, he understood, which was expected to bring so much traffic to the line, was still to be completed, as well as the station at Birmingham, in addition to which he should like to have a Report from their new Manager before anything further was done; and if in the course of a month they were able to give the proprietors some hope for the future, for they had little consolation in reflecting on the past, they might then put out their new shares under more favourable circumstances, but at the present time they could not issue them at much less than 70 discount. He, therefore, considered that if they could raise the money they required for the immmediate wants of the Company it would be better to do so, as they would not at all events be in a worse position at the end of three or four weeks than they were at present. He was most anxious for the chances of this month's delay, in order to see if they could not get out the shares to better advantage; and he knew that the opinions be expressed were in accordance with those of the shareholders in London, and some of the largest proprietors.

After the lapse of some time the Chairman read the amendment, and asked if any gentleman wished to second it.

Mr. Routh said, he would do so with pleasure. He thought before proceeding to issue shares at such a discount they ought to reflect well, and know something more of the prospects of the concern than they did at present. Great dissatisfaction had been expressed at the former management of the railway; they were now under a different system, of the working of which, from what he had seen, he augered well. He, therefore, thought it would be as well, before coming to any decision on the proposition submitted by the Directors, to hear from the new Manager what was his opinion of the prospects of the concern, and what changes or improvements he was disposed to recommend. He did not at the present moment deny that the course recommended was not the best that might be adopted, but he thought it required at least time for consideration; and he should like to know what inconvenience could result from giving the proprietors at large that time to think of it which the Directors did not themselves appear to have had; but, at all events, it behoved the proprietors to consider the subject well. If the prospects held out should not be disappointed, he was sure they might expect to issue the shares at a better price than they could now do. The delay, even of a fortnight, would enable them to see matters more clearly, and he had, therefore, much satisfaction in seconding the resolution.

Mr. Prevost thought it of the utmost importance that the shares should be issued now, and at the amount proposed. The delay of a month, in the present depressed state of trade, could make no material difference; the Manager would not be able to report much more favourably by that time; and, taking all the circumstances into account, he saw no reason to give way to the amendment. He was not much acquainted with the details of the money market; but leaving the matter in doubt for a month would, in his opinion, do more to depress the stock of the Company than deciding upon the point at once.

Mr. Kahrs, of Derby, said he felt reluctant, in the presence of so many shareholders who were much more deeply interested than himself, to trouble them with any remarks on the question before the meeting; but the state of things was such as to make even the smallest shareholders cautious with respect to the course they should take upon the present occasion. It seemed to him that this was the most inauspicious period in the whole history of the railway that they could have selected for issuing new shares, and he believed the proprietors generally would feel hereafter very severely the effects of issuing these share at such an enormous discount. The Committee appointed to investigate the state of the Company, made a Report as to its future prospects, from which it appeared that the concern was to pay 6½ per cent.; and the Directors, in their half-yearly Report, confirmed that statement; but if the new shares were issued *pro rata*, at the discount proposed, they would be paying a dividend at something like 15 per cent. to such proprietors as might apply for them; while the measure would operate very prejudicially to those who did not think proper to take them. He thought, on the whole, that the state of the market, with regard to the shares of the Company, was as bad as it possibly could be for trying the experiment of issuing new shares.

Mr. Routh observed, that before he left London several large shareholders urged strongly upon him the propriety of submitting a proposition for guar-

Digitized by Google

assessing the holders of the present shares a certain amount of interest. The subject was one, however, that called for further consideration.

Mr. PREVOST thought those guarantees would lead to a very invidious classification of shareholders.

Mr. CRAWSHAY again expressed his objection to the new shares being issued at a discount of nearly 70.

The Rev RILAND BEDFORD begged to be allowed to say that he did not, so far as he was able to judge of the proposition, see any objection to it whatever. It might in the end turn out to be advantageous, but he felt very great objection to a body of gentlemen being called upon without any previous notice to pass such a resolution at once. It was a matter of great concern to many, and he thought the shareholders ought to have some further time to consider it. He could not conceive what object there could be in keeping things of this kind so quiet till the last moment; for one of the Directors, of whom he had made some inquiries that very morning, although he answered him very courteously, declined giving him the slightest information upon the subject.

Mr. JOHN YATE LEE considered that the Directors were bound in justice to the proprietors to keep their counsel upon the subject, and withhold the information till the last moment, otherwise parties would take advantage of the proposed issue of shares to depress still further the Company's stock in the market. The proprietors had had sufficient time for consideration. He knew that the Company required money, and he had considered for some time how it was to be raised. A similar question might have occurred to others, and hearing that morning the plan which the Directors had to propose, he thought it was one of the best that could be framed. The same plan had been adopted by other Companies; the borrowed money might be easily raised at the present time; besides which, he did not think that the prospects of the Company would be likely to be altered even if they waited for the next six months.

The Rev. Mr. BEDFORD said that his objection was not to the matter being kept a secret till the present moment, but to the proprietors being called upon to decide upon the question that day.

Mr. CRAWSHAY felt confident that if they came to a decision on the point on the present occasion, it would be in opposition to the wishes of the largest shareholders in the Company, from whom they took away all hope of success, by saying that they did not think the affairs of the Company would be altered in six months.

Mr. LEE—I meant "materially" altered.

Mr. CRAWSHAY—They could not be asked to put the shares out at less discount than 68*l.* 12*s.* 5*d.*, and when they looked to the small number of shares held by the Direction, it was not, he thought, too much to ask time to consider. There was not a Direction in the kingdom that held so small a number of shares as the Direction of the Birmingham and Derby Company.

Mr. ROUTH hoped that the Directors would not feel that there was any personal hostility against them, and as he saw a gentleman in the room connected with the Stock Exchange, he would take the liberty of asking him what he thought was the opinion of the London shareholders upon the subject?

Mr. SAMUEL DEZOETE, the gentleman referred to, replied that he believed the London shareholders might wish to have the matter deferred, but he did not himself see what benefit would accrue to the Company from the delay.

Mr. ROUTH—Will there be any possibility of borrowing money on loan notes?

Mr. DEZOETE—I fear not; from the state of the shares at the present moment it would be impossible to effect it.

Mr. CRAWSHAY—Then that will be a hard case against those who cannot afford to take those new shares.

Mr. ROUTH felt particularly anxious upon this subject; for, as one of the Committee appointed to report on the state of the concern, and having expressed an opinion that a great improvement would take place when the new line was opened, he considered, in now voting for the issue of new shares at so large a discount, that he was completely falsifying the opinion he gave in that Report. He, therefore, wished to be informed whether anything had occurred to alter the position of the Company, and the prospects which the Committee had been induced to hold out since they had made their Report? They had stated that until there was an independent station they could not expect any proportion of the goods' traffic, but that when the new line and terminus were finished, an increase would take place. Were they wrong or right in coming to that conclusion? If right, his opinion was, that they should stave off the period for issuing new shares at so large a discount.

The CHAIRMAN, after waiting a few moments in order to afford any other gentleman who might wish to do so an opportunity of expressing his opinion upon the subject, said that he had paid as much attention as he was able to the observations which had been made, both in favour of the proposition and in opposition to it. Before he said one word in reply, he wished to assure Mr. Crawshay personally that when he alluded to his being a Director, and that he had not attended the meetings of the Board, he meant nothing personally offensive. He now again expressed his regret that he had not attended their meetings, for having in writing accepted the appointment, having received notice of their meetings, and not having declined to act, he was glad to think that he was still a member of the Board. With respect to the question before the meeting, Mr. Routh had asked whether anything had occurred to alter the position or prospects of the concern, so as to falsify the Report which the Committee had made in reference to the expected increase of traffic on the opening of the new line. He (the Chairman) did not recollect the exact words of the Report, but he was not aware of any hopes having been held out by the Directors that any other than a gradual improvement could be expected to take place. That gradual improvement was taking place, as would be seen when they compare their present receipts with those of corresponding periods of the past year, and the twelve months preceding; but they could not, and they did not expect the traffic to be developed at once on the opening of the new line. There was a great deal to be done in diverting the goods and passenger traffic from the old channels and modes of conveyance to the railway. The attention of the Directors was being directed to this important object, and the consequence was that a steady improvement was taking place in the receipts of the Company. But there was one point which appeared to have been lost sight of entirely in the discussion of the subject, and that was the fact that comparatively no trade was at present being done throughout the country—a state of things which affected the interests of their line very seriously, inasmuch as they depended a good deal on the carriage of goods out of Birmingham. In the event, however, of trade improving, he saw no reason why they should take so gloomy a view of the matter. He wished here to assure Mr. Routh, and every gentleman who took up opinions against the Directors, that they did not think of hostility; for although expressions were occasionally used which showed no very friendly feeling, and might sometimes give pain, while they could not fail to interfere with the calm discussion of the subject before them, yet the Directors lost sight of all expressions of temper, viewing it as a matter of business, their great anxiety being to carry out the concern to the best of their judgment; and in reply to the observation as to the small stake in the concern held by the Directors, he believed it was a larger stake, compared with their capital, than was held by the Directors of any other Company. No body of men could have discharged their duty more faithfully or conscientiously; but if the meeting considered that they did not hold a sufficient stake in the concern to make them trustworthy, or if they thought they did not possess judgment enough to make them good Managers, then, on these grounds, they would be justified in displacing them; but if they judged otherwise, if the Directors still possessed their confidence, he saw no reason why they should postpone their decision on the proposition which had been submitted to them. It was said that the Directors had not given sufficient notice of what they were going to do, but he confessed that he had never heard a charge with greater surprise than that; knowing, as he did, the excitement which announcements of this kind immediately produced in the share market, and knowing also that parties, not shareholders, were constantly on the look-out to take advantage of any temporary depreciation in the shares of this or any other Company, it was surely the duty of the Directors to take every means to make all the proprietors acquainted at the same time with their proposition. They had informed them of the time of their meeting, and the object for which it was called; but if they had previously told them what they were going to propose, the inexperienced shareholder would have been placed at the mercy of those individuals connected with the Stock Exchange, who were in the habit of taking advantage of such operations; and the Directors would have rendered themselves liable to the censure of the body at large. With respect to the advantages of delay, he would observe that their shares were at about the same discount as they had been for the last eight or nine months, and he did not expect that any material advance in their price would take place in the course of a month. But it was not on this ground that the Directors recommended the adoption of the proposition before the meeting, but on account of the liabilities which they had incurred, which were falling due every day, and which they had not otherwise the means of discharging. They had also stations and other works to finish, to carry out which they had deferred the payment of the last dividend, to the inconvenience, as he was aware, of many of the proprietors. It was said, that if the debentures were now issued it must be at a great sacrifice, but he was happy to say that it was not so; the debentures could be issued at 5 per cent.; but those who were disposed to lend, naturally looked for that security which accompanies debentures, and required them to create that additional capital by the issue of shares to the proportionate amount of that loan. The whole of that amount they could have on debentures to-morrow, if they created the shares to-day. He believed that keeping such matters in hot water would be the most effectual way of injuring the Company, and therefore, acting on behalf of the Board of Directors, representing their views, and speaking most conscientiously, he hoped the meeting would not come to a vote to adjourn the question without the most mature consideration. If they decided to defer the matter, he was bound to say, as the Chairman of the Board of Directors, that he did not see any way out of the difficulties in which such a course would involve the Company.

The amendment was then put to a show of hands, and negatived by a large majority, only four hands being held up in its favour.

Mr. CRAWSHAY then demanded an examination of the proxies: he did not care whether he was beaten or not, for, as he had already observed, the matter would not be allowed to rest there.

The examination of the votes and proxies was then proceeded with; and, on the amount of shares held by a considerable shareholder being called over, a short discussion arose as to his right of voting, he not having paid up his calls on the new shares.

Mr. CARTER, Solicitor to the Company, said that the Directors had formerly submitted a case to the eminent barrister (Mr. Austin) which embraced this point, which, with the opinion thereon, he proceeded to read to the meeting. It appeared from Mr. Austin's opinion of the clause in the Act, that shareholders who had neglected to pay their calls on any new shares were disqualified from voting in respect of the old shares, although all calls on the latter might have been paid up.

Digitized by Google

At the close of the examination, the result was found to be—

For Mr. Crawshay's amendment—

	Persons.	Votes.
Present	4	171
Proxies	14	262
	18	433

Against the amendment—

	Persons.	Votes.
Present	29	510
Proxies	45	638
	74	1,148

The amendment was consequently declared to be lost, and the original question was then put and carried; and thanks having been voted to the Chairman and Board of Directors, the meeting separated.

PARISIAN BITUMEN COMPANY. — The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3	0	0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1¼ inch thick, per superficial yard	0	4	6
Paving pathways, granaries, warehouses, &c., 1½ inch thick, per square yard	0	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0	5	6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

TO ARCHITECTS.—SEYSSEL ASPHALTE COMPANY, CLARIDGE'S PATENT, established March, 1838, for working the Mineral Asphalte Rock of Pyrimont Seyssel.

This valuable material has been extensively used since its first introduction into this country for the following purposes:—Foot pavements, public and other; in the carriage approach to mansions, garden walks, and terraces; the flooring of kitchens and other basement office; salso of coach-houses and stables, dog kennels, barn floors, cow-houses, piggeries, poultry-houses, tun-rooms and maltings; for roofing, covering of railway and other arches, the lining of under-ground cellars near rivers to prevent the ingress of the tides; also in covering the ground line of walls, to prevent damp rising, thereby rendering the basement stories in the worst situations both dry and warm. It is an excellent cement, as applied to docks, breakwaters, or walls built for resistance to the encroachments of the sea, lining of tanks, fish-ponds, and other hydraulic purposes.

Several extensive works have been executed by this Company for the Board of Ordnance and her Majesty's Commissioners of Woods and Forests. The Asphalte has been used at the Thames Tunnel, also at the London and Greenwich Railway, where it has been laid over a surface of 400,000 superficial feet, to prevent the percolation of water; at the Great Western, Birmingham, Midland Counties', South-Western, Brighton, and other railways; at the South Metropolitan, Highgate, and Nunhead Cemetries.

The Asphalte of Seyssel is perfectly free from smell, and is not acted upon by the change of temperature.

Books of testimonials, with scale of prices, can at all times be had at the Company's depot.

J. FARRELL, Secretary.

Stangate, Surrey side of Westminster Bridge, April, 1842.

ARCHITECTS, BUILDERS, AND OTHERS.

For the purpose of securing the use of the genuine article, architects and others are particularly requested to insert in their specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "asphalte" or "bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

SOUTH-EASTERN (DOVER) RAILWAY.—The Official Map and Section of this line, shewing the South-Eastern District of England and part of France, is now ready. On one large sheet, 7s.; mounted, in case, 12s. 6d.; and on rollers, 16s. 6d.

Bell and Wood, 186, Fleet-street; J. R. Jobbins, 8, Warwick-court, Holborn; J. Weale, 59, High Holborn; and Wallis, Brighton; Lower, Lewes; Colbran, Tunbridge Wells; Ward, Canterbury; and at the Office of the *Railway Times*, 122, Fleet-street.

TO BE DISPOSED OF, a STEAM-ENGINE, made by the Horseley Company, in perfect working order; 25 horse power, horizontal motion; erected, regardless of expense, at the Saw-mills, Gloucester, the property now being converted to a different purpose.

Apply to W. P. Price, Esq., Gloucester.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—TENDERS FOR IRON RAILS AND CHAIRS.—The Directors are prepared to receive Tenders for the supply of 2000 Tons of Iron Rails, each Rail to be 15 feet in length and weighing 65 lbs. per yard. The quality of the iron in the rail to be equal to No. 3. The Tender to state in detail the process of manufacture which it is proposed to follow to produce the quality. No Tender will be attended to without this statement, and the Company will stipulate with the party whose Tender may be accepted, that the Company may at any time send an Inspector to the works to satisfy themselves that the specified process of manufacture is fully adopted. The delivery to be distributed over 12 months.

A Tender also will be received for the supply of 650 Tons of Iron Chairs.

The Chairs to be cast with a mixture composed of equal proportions of Scotch, Staffordshire, and Welsh pig Iron, from the cupola or air furnace. The joint chairs to weigh 28 lbs., and the intermediate chair, 18 lbs.

Tenders to be delivered on or before the 11th day of July, 1842, at the Company's Office, in York.

The section of the Rails to be in accordance with a drawing or template, which may be seen at 35½, Great George-street, Westminster; or at the Company's Office, at York, where also models of the Rails and Chairs may be seen, and further explanation obtained.

GEO. HUDSON, Chairman.
THOS. FAULCONER, Secretary.

York, 3rd June, 1842.

BIRMINGHAM AND DERBY JUNCTION RAILWAY COMPANY.—At a Special General Meeting of the Proprietors of the Birmingham and Derby Junction Railway Company, held at the Waterloo Rooms, Waterloo-street, Birmingham, on the 2nd of June instant, pursuant to public advertisement duly inserted,

HENRY SMITH, Esq., Chairman of the Board of Directors, in the Chair;

Resolved—That under the provisions of the Act of Parliament passed in the present session, an additional Capital be raised by Shares, And—

That 25,484 new Shares be created, of the nominal amount or value of £12 10s. each, but upon each of which the sum of £3 18s. 5d. only shall be actually payable; and that the holders thereof be entitled to the full proportionate dividends thereon, according to such nominal amount or value, and as if the whole of such nominal amount were paid; and such dividends to be paid in the proportion which the amount from time to time actually paid up shall bears to the whole of the said sum of £3 18s. 5d.

That such new Shares be offered to the present Shareholders in the proportion of three for every original £100 Share, and one for each of the Shares (thirds) created under the Act of 3rd Victoria, and in such manner and under such regulations as the Directors shall think fit.

That in the event of any such offers not being accepted, the Shares so remaining shall be first offered in like manner to those Shareholders who shall already have accepted any of such new shares, and as nearly as conveniently may be in the same proportion; and any ultimate residue shall be disposed of in such manner as the Directors shall think most conducive to the interests of the Company.

That under the provisions of the first-mentioned Act, the Directors be authorised to borrow, by mortgage of the undertaking, the sum of £43,334, making (with the money already authorised to be borrowed) the sum of £300,000 in the whole.

HENRY SMITH, Chairman.

SCOTTISH UNION FIRE AND LIFE INSURANCE COMPANY; instituted 1824, and incorporated by Royal Charter.

London Offices, 449, West Strand, and 78, King William Street, City.

LIFE DEPARTMENT.

The additions made to the Life Policies granted by this Corporation for the last seven years vary from 41 to 65 per cent. on the premiums paid, and average 54 per cent. on the sums assured—a result, it is believed, far more favourable to the assured than any other Company has hitherto accomplished, when the low rates of premium charged by this Corporation are taken into consideration.

The next division of life profits will take place in December, 1846, being an interval of five years, and persons entering before the 1st of August next will enjoy one year's additional rating, and rank at next division of profits for five complete years.

Forms of proposals may be had at the offices, 449, West Strand, and 78, King William street, City.

F. G. SMITH, Secretary.

The usual commission allowed to Solicitors and Agents.

TO BE SOLD, Two New RAILWAY WAGGONS, with loose sides; will answer for ballasting or coals; 4 feet 8½ inch gauge, on spring bearings, similar to those now in use on the Midland Counties' and London and Birmingham Railways (with wrought-iron wheels).

Apply to A. B., at Mr. Pike's, *Reporter* Office, Derby.

EVESHAM, BIRMINGHAM, AND GLOUCESTER JUNCTION RAILWAY. — CAPITAL, £70,000, in 3,500 Shares of £20 each.—Deposit, 2l. 10s. per Share.

With power to add to their number.

BANKERS.

London—Messrs. Glyn, Halifax, Mills, & Co., 67, Lombard-street. *Country*—Gloucestershire Banking Company, and Herefordshire Banking Company, at Evesham.

Engineer.—John Addison, Esq.
Consulting Engineer.—Captain W. S. Moorsom.
Solicitors.—Messrs. Roy, Blunt, Johnston, and Walton.
Agents.—Messrs. Workman, Evesham.
Secretary.—Henry Stephenson, Esq.

The Borough of Evesham stands in the midst of an extensive and populous district, at present without railway communication.

Considering the facility with which such communication might be obtained, and the comparatively trifling expenditure at which it might be connected with the Birmingham and Gloucester Railway, and so with all the existing important Railways, it is a matter of surprise that such an undertaking has been so long neglected.

The Goods Traffic also of the Evesham district is estimated at a large amount, the greater portion of which is despatched to Birmingham, and thence, by Railway, to Manchester, Liverpool, other towns northwards, and the metropolis.

These facts demand the establishment of some continuous, rapid, and, at the same time, cheap medium of communication between these towns; and it is important to add, that beyond the great local influence which is rallying round it, the undertaking will be aided by the important interests connected with the Birmingham and Gloucester Railway Company.

Which Company have also passed the following Resolution, thereby ensuring to the promoters of this undertaking a certain and profitable return on their outlay, as will appear from the following, viz.:—

Extracts from the Minutes of the Committee, 24th May, 1842.

"The Committee having conferred with the Deputation from Evesham, who laid before them the Resolutions of the Public Meeting held there yesterday, of a Branch Railway to join the Birmingham and Gloucester Railway at Eckington.

Resolved—

"That the Directors of the Birmingham and Gloucester Railway are of opinion, that the formation of the proposed line would be conducive to the interests of this Company, and in the event of its being made, would recommend to their Proprietors to undertake the working of it in common with their own line, under Lease, and on such fair terms as may hereafter be agreed on.

"(Signed) GEORGE KING, Secretary."

It is proposed that the Company shall join the Birmingham and Gloucester Railway at Eckington, and avail themselves of that line, not only as a communication to Birmingham, Liverpool, and Manchester, but to Cheltenham, Tewkesbury, Gloucester, and, in connection with the Great Western Railway, to Bath, Bristol, Exeter, and, by the London and Birmingham or Great Western Railway, to the Metropolis, and intervening counties.

The line of country between Evesham and Eckington (the proposed point of junction with the Birmingham and Gloucester Railway), a distance of 8¾ miles, has been surveyed by the Engineers, and the plans and books of reference lodged agreeably to the Standing Orders of Parliament for the next Session.

Applications for Shares to be made to Messrs. Workman, Solicitors, Evesham; to the Solicitors for the Bill, at their offices, No. 42, Lothbury; or to the respective Bankers.

By order of the Provisional Committee,
HENRY STEPHENSON, Secretary.

TRINITY COLLEGE, DUBLIN.—The Board of Trinity College, Dublin, give notice, that they will proceed to the ELECTION of a PROFESSOR OF ENGINEERING on Saturday, the 2nd of July, 1842.

Applications and Testimonials from Candidates to be sent in, addressed to the Registrar, on or before the 25th June, 1842.

Dublin May 28, 1842.

ON SALE.—A New LOCOMOTIVE ENGINE BOILER, with strong Copper Fire-box, and ready for tubes 2 inches diameter, 2 cylinders 14 in. diameter, suitable for the Boiler, and a part of the works for the Engine, fitted and ready for erecting; 1 pair of wrought iron wheels 5 ft. diameter; also a Tender Water Tank, holding 760 gallons.

Applications, prepaid, to T., Post-office, Warrington, shall have immediate attention.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—The Public are respectfully informed that the TRAINS now RUN from the London Bridge Station as under:—

To Tunbridge, stopping at Reigate, Godstone, Edenbridge, and Penshurst, 9 30 a. m., 11 30 a. m., 2 30 p. m., and 5 30 p. m.

SUNDAYS—8 30 a. m., 6 30 p. m.

From Tunbridge, stopping at Penshurst, Edenbridge, Godstone, and Reigate, 7 45 a. m., 10 30 a. m., 3 p. m., and 6 p. m. Sundays expected.

SUNDAYS—8 30 a. m., 6 30 p. m.

Full particulars and time-tables may be obtained at the London Bridge Station, and at the Offices of the Company, 10, Coleman-street.

By order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, June 1, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive TENDERS for the LOAN OF MONEY, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to GRANT MORTGAGES of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

INTEREST WARRANTS, for the whole term for which the loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers, in London or Manchester, on the half-yearly days on which the interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars, explaining the peculiar eligibility of this Security, may be obtained at the Company's Offices, No. 43, Piccadilly, Manchester; or at the Office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb. 1842.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.
Established by Act of Parliament in 1834.

DIVISION OF PROFITS AMONG THE ASSURED.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834.

In 1841 the Company declared an addition to the Shareholders of one-half of their Stock, and also added £2 per cent. per annum, from the date of the policies, to those parties who had insured with profits.

The Premiums nevertheless are on the most moderate scale, and only a moiety need be paid for the first five years, when the Insurance is for Life.

The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st December 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13s. 4d.
1000	4 Years	80 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq., and E. Lennox Boyd, Esq., of No 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq., *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'Clock.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by couches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

The Train heretofore leaving London at 2 p.m. is now discontinued.

The Train leaving London at 6 a. m. is a quick Train throughout, and is the only Day Train by which Passengers can reach Darlington and Newcastle in the same day.

Coaches leave Newcastle for Morpeth, Berwick, Dunbar, Haddington, and Edinburgh, early in the morning, and during the day.

Time is allowed for refreshments at Wolverton, Derby, York, and Darlington.

GRANGEMOUTH HARBOUR WORKS—TO CONTRACTORS FOR DREDGING.—The Forth and Clyde Canal Company are ready to receive Tenders for carrying on, by Contract, the Dredging operations at Grangemouth, the Contractor to be supplied with the use of the Company's Dredging Machine, Punts, and Steam Tug.

The Specification and form of Tender, &c., may be seen at Mr. MacNeill and Mr. Thomson's Chambers, British Linen Bank Buildings, Ingram-street, Glasgow; and at 9, Whitehall place, London; or in the hands of Mr. Wilson, Grangemouth Harbour Works.

Security will be required for the due fulfilment of the Contract, and for the proper upholding of the Company's Dredge, Punts, &c.

Tenders to be lodged with Thomas Johnston, Esq., Canal Office, Port Dundas, on or before the the 18th current.

Glasgow June 3, 1842.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to June. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s. in cloth 1s. 6d.; on canvass, 2s. 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases. &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex.—Saturday, June 11, 1842.

Sundays—8 30 a. m., 6 30 p. m.

Full particulars and time-tables may be obtained at the London Bridge Station, and at the Offices of the Company, 10, Coleman-street.

By order,

JOHN WHITEHEAD, Secretary.

10, Coleman-street, June 1, 1842.

CEMENT.—MOST IMPORTANT and VALUABLE INVENTION.—To ARCHITECTS, ENGINEERS, CONTRACTORS, BUILDERS, MASONS, PLASTERERS, and the Trade, and also to SHIPPERS. The Patent STUCCO PAINT CEMENT, surpassing every article hitherto introduced, possesses the following extraordinary and valuable properties:—remarkable adhesiveness, fixing most tenaciously to the smoothest surfaces (even to glass). It is perfectly impervious to wet or damp. The more it is exposed to the atmosphere the harder and more durable it becomes. It is perfectly free from any of the caustic qualities of lime, and it may therefore be painted upon as soon as dry, as it is impossible that it can vegetate or change colour, nor can it be affected by frost or heat, or crack, chip, or peel off. To merchants and shippers it must form a most important item of commerce, as it will keep for any length of time as fresh as delivered from the manufactory. With regard to price, it is cheaper than any other cement, and its lasting qualities render it a fortune to builders and others investing capital in building speculations.

The Patentees have appointed Messrs. Mann and Co., 5, Maiden-lane, Queen-street, Cheapside, their sole Agents, at whose warehouses any quantity may be had. Specimens may be seen, and every information afforded.

In Royal Octavo, 8s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

THE CHAIRMEN AND DIRECTORS OF RAILWAYS who do not consider a saving of 50 per cent. in the cost of the fuel used in Locomotive Engines as too minimum a matter for their consideration, and those Engineers who are competent (without requiring the opinons and advice of others) to discriminate between what is essentially and practically good, and what is merely plausible or theoretical, are solicited to inspect the operation of Mr. SAMUEL HALL'S PATENT APPARATUS FOR THE CONSUMPTION OF COAL WITHOUT SMOKE, as applied to two Locomotive Engines on the Midland, and two on the North Midland Railways.

N. B.—The Invention, as applied to a Dyer's Boiler, is in daily operation in Duke's-court, Trafalgar-square, London, from 10 a. m. till 4 p. m.

No. 18, King's Arms Yard, London.

TO RAILWAY COMPANIES, RAILWAY CONTRACTORS, BUILDERS, IRON FOUNDERS, IRONMONGERS, COACH BUILDERS, and GENERAL DEALERS.—Important SALE of SURPLUS RAILWAY STORES, &c. &c., belonging to the London and Birmingham Company, at the Camden Town Station.—Mr. BIRKETT has received instructions from the Directors of the London and Birmingham Railway Company to offer for Sale by Auction at the Store Yard of the Company's Station, Camden Town, on Tuesday, July 12, 1842, and following day, at Eleven, the following very Important PROPERTY, constituting THEIR SURPLUS STORES, and comprising upwards of 150 tons of bar, scrap, and cast-iron; several tons of spring, shear, blister, and other steel; sets of patent carriage springs and axle boxes; a large and varied assortment of ENGINEERING TOOLS and IMPLEMENTS used in the construction and maintenance of Railways.

The articles of ironmongery comprise 2,400 gross of wood screws, about 14 tons of iron pins, nails, and rivets; a large assortment of hinges; sledge and other hammers; anvils, chisels, files, screw and shell augurs; large quantity of chain and iron wire; copper and iron wire gauze, &c. &c.; together with numerous other articles, comprising railway lamps of every variety; larry wheels and boxes, barrow-wheels; drain tiles; tool handles of all kinds; 10 *iron safety chests, with patent rack locks*; about 32,000 oak pales; 28 pieces of American oak; several waggon cloths; articles of office furniture; neck straps, chains, and cloths for horses; 50 hammocks, with mattresses, blankets, &c. &c.; and a large quantity of mens' clothing.

The above property, being nearly all new and of first-rate quality, will be found eminently deserving public notice. As the articles are exceedingly varied, a reference to the Catalogues is particularly requested; and which may be had, 14 days before the Sale, on application at the Storekeeper's Office, Camden Station; at the Company's Stations, Euston-square and Birmingham; at the other Stations on the Line; and of Mr. Birkett, Estate Agent and Auctioneer, Wallingford, Berks.

May be viewed on and after the 5th July, 1842.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by Arthur Freeling.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt and Bogue, Fleet Street; and all Booksellers.

TO RAILWAY CONTRACTORS and Others.—TO BE DISPOSED OF, on very low terms, between 40 and 50 Sets of Second-hand 30-inch Railway Waggon Wheels and Axles, in very good condition, with pedestals and tipping irons.

Apply to Barrett, Exall, and Andrewes, Engineers and Founders, Reading, Berks.

SHEFFIELD AND MANCHESTER RAILWAY.

THE following appears in the *Sheffield Independent*, addressed to the Editor:—

SIR,—A few of your readers, it is likely, take some interest in this line of railway, especially that portion of them who have invested therein, and in giving the following account, though it cannot be regarded as professional, I intend it to be given with so much straightforwardness and truth as to be entitled to general credibility.

It would have been very gratifying to me if I could have commenced my narrative by some notice of operations near home; in place of this, we travel 15 or 16 miles before we are in contact with broken ground. Donford Bridge, at which is the eastern end of the tunnel, I visited nearly twelve months ago, and of course expected now to see there some very palpable extension of the embankment then in course of formation. In this I was at first sight disappointed, its increased length not being more than 20 or 30 yards. The fact, however, is, that this embankment admits of no further extension, for it is already brought to a point at which it meets a hill or bank, which so slopes as to require cutting on the upper side, so that the material being thrown on the lower, the road will be formed. As, therefore, no quantity of material brought from the drifts of the tunnel can be of any service in forming an extension of the embankment, it is turned aside as (what, to speak technically, is called) spoil. The total length of road, including the open cutting, is not, as some have stated, three-quarters of a mile, but something short of half a one. I, and those with me, now entered the tunnel, each being furnished with a candle, the candle serving not so much to keep us in the right direction, as to keep us dry, the floor, indeed, being very wet. In a short time, notwithstanding our precaution, we were thrown into consternation by a blast which took place while yet about 150 yards from us, and which had the effect of blowing out all out lights, but happily none of our brains. On our lights being restored, we proceeded forward to the workmen, overlooked them a short time, left them an acknowledgement, and then measured our steps back, which was about 822 yards. We next went to our inn, which is a very commodious house, recently opened, and is now in course of being fitted. It is situated at the entrance of the tunnel, and can give accommodation, either by night or day, to a large party, if needed. We took our lodgings here, and on the following morning, by six o'clock, we were on our way to shaft No. 5, on reaching which, I and a companion descended. The depth of this shaft is 135 yards; the drifts at the bottom are tolerably dry, and the progress made is perhaps 90 yards each way. The excavation, which is proceeding eastward from this shaft, it is expected will meet that which is advancing westward from the entrance, in about 14 weeks, or the end of September, there being at present about 240 yards of rock unpenetrated. The measures are harder in this shaft than those in the entrance drift; so that, if the same continue to prevail, three yards of the shale will be removed to two of the rock. Shaft No. 4 is down, and the drifts have proceeded about 80 yards each way. Shaft No. 3 is down, and the drifts are about 14 yards each way. Shaft No. 2 is sunk 154 yards, leaving 35 to be sunk. Shaft No. 1 is sunk 148 yards, leaving 34 to be sunk; both these, it is expected, will be down by Christmas. We now reach the western face of the tunnel, and placing ourselves on one of the drags, are pushed along the rails a distance of about 810 yards, when, as in the former case, we find a group of workmen, who, with their faces toward Sheffield, are trying to force their way through the resisting rock. We now return, and are informed that the total of progress made in the drifts collectively on Monday, May 16th, is 2,000 yards. With respect to the embankment at this end, formed of the material from the western drift, I have only to say, that, like the other embankment already spoken of, it cannot be extended further until a bridge or culvert be made that shall give passage to the water flowing from a deep ravine of the mountain. Several of these will be required within a short distance, but which are not yet contracted for. The length of road on this side, as on the other, is approaching half a mile. No one can visit this part of the undertaking, and, seeing what is accomplished, pronounce its completion impracticable. It may require more time than has been allowed in estimates and Reports, but that it can be substantially and economically done, considering the nature of the work, is not in the least to be doubted.

Having now done with the summit tunnel, we take the highway for Glossop and Dinting, and presently we discover newly-driven stakes on the right and left, the work of engineers preparatory to letting, for we were made to understand that the six or seven miles between the tunnel and Glossop are to be let in some month or two. Here I cannot refrain from the observation, that appearances are deceitful, for it is estimated that the cost of this portion of the line will be executed for very little; whereas, left to my own observation and judgment, I should have regarded the expense considerable, on account of the rugged and mountainous nature of the country. To professional men, however, we must defer.

We are now at Dinting, or Gamesley, and the first thing that presents itself is an enormous embankment, brought to the point, or nearly so, whence the piers and arches are to rise in crossing the Dinting valley. The culvert, which had been a disastrous job, is now in good repair. Its length is very great, being more than commensurate with the base of this artificial mountain. The unclassical can scarcely leave this spot, without relieving their astonishment by some such exclamation as, "What a heap of dirt is here!" In passing from the eastern to the western embankment of this contract, we observe the road is made, the retaining walls are being built, and the ballast is in preparation. The workmen, in the cutting, are employed chiefly in sloping the banks, which will occupy them a long time. The masonry, which consists of two bridges, is done, and is firm and good.

Broadbottom must now be spoken of. Here is great activity. Men in such numbers, and machinery so complete, as almost to originate the conviction that the Etherow viaduct will be finished in a month—certainly they go at railway speed. There will be three arches of stone; (perhaps beams, instead of an arch, may be intended for the centre—of that we did not inform ourselves). The piers are rising like mushrooms, and, when done, will appear like pyramids.

We next arrive at the Hattersley contract, the eastern end of which is far advanced, the short embankments and fillings being finished, and the piers of a viaduct which joins upon Broadbottom, being raised to the spring of the arches. The central portion, or tunnel, has been a laborious and unfortunate business, occasioned by the very sandy and fallacious nature of the soil. This tunnel is some 300 or 400 yards long, and the length of finished archway may be about 150 yards. Owing to the great difficulty of tunnelling, the open cutting has been extended; but such is the depth of the cutting, that the day's work of a hundred men seems insignificant. Since the soft measures through which this short tunnel is burrowed, has interposed such serious difficulties, and a delayed opening, let the shareholders be congratulated that the Backbone of England is composed of millstone grit. Taking leave of this excavation, which is eight miles from Manchester, and thirty-two from Sheffield we get upon a pathway prepared for the permanent rails, and on which, by moderate gradients, we descend to Godley. Here, having accomplished our survey of the line in preparation, we turn to that in operation; and with a view to examine, as far as possible, the complained-of masonry, I took my place in one of the stand-ups, in which, for a mile or two, I was rather more joggled about than I liked, owing to some fault, as I thought, attaching either to the line itself or the carriages. On the meanness and impolicy of the stand-ups there is room for a volume of condemnation, though I have none in this letter. The several stations are quite suitable to, and in keeping with, the general condition of the Company's affairs, and especially its exchequer; in other words they accommodate well, and have cost very little money. The masonry which is above ground, so far as I could judge, is not obviously infirm, nor by any means dangerous. A double line of rails is, to a considerable extent, laid down, and in use; for, contrary to my expectation, we met a train which would reach Godley by the time we arrived in Manchester.

The last thing to be noticed is the station at Manchester, which is so far completed as to be usable for passengers. Here is no great redundancy of ornament. It is very convenient and commodious, and to make it so rather than fine has absorbed an outlay of about 100,000*l*. The ugliest feature about it, in the estimation of a Sheffield shareholder, is, that he pays 20 per cent. too much for the use of it. Walking round it, I perceived that the several sides, which are parts of streets, had received significant names, as Birmingham-street, Sheffield-street, Ashton-street.

We are now at the terminus of a line 40 miles long, seven or eight of which are open, four more being intended to be opened about October, or say December. When that is opened, whether we should rest for the present, or proceed, it is exceedingly difficult to decide. That the summit tunnel works should go on until the driftway is made throughout need not be doubted; but it should be well considered, before the Directors commit themselves to the intervening contracts. What are our present funds? what are our probable funds? are no unmeaning questions. The opening to Glossop, we have been told, would pay 6 or 6½ per cent. on the expended capital; and we have been told this by responsible parties. I will be modest, and say four. If we have inevitable difficulties, give us the least. To the Directors we say, take time—dont't hurry, nor wantonly disregard a maxim, which, indeed, it is too fashionable to despise, and to which conduct is traceable a vast amount of the misfortunes of individuals and Companies:—

"Keep within compass, and you shall be sure
To avoid many troubles which others endure."

I am, yours, &c., J. C.

Sheffield.

EASTERN COUNTIES' RAILWAY.

THE whole of the accounts which we have been able to collect of the operations on this important line of railway, are of the most encouraging character. We learn that the works are pushed forward at all points with the greatest activity; so much so, in fact, as to give rise to the hope that the entire line will be completed by the beginning of September, and practicable throughout the whole extent for goods and passengers. The most formidable of the difficulties, at least in the mechanical way, which the Company have had to contend with—the Brentwood cutting—is so far overcome as not to present any obstacles or delay to the completion of the undertaking. The subsidiary railways *in embryo* at present, will, we hope, find enterprising friends to commence them with as little loss of time as possible; and we are more earnest in drawing attention to this point because we are certain the project will not only be of vast benefit to the country, but will prove a most profitable investment to the undertakers. We are glad to learn that the shares of the Eastern Counties' Company are finding their way rapidly into the hands of the Essex capitalists; and though it is quite true the premium upon the shares has not advanced very recently, that may be fully accounted for by the unsettled state of the money market, owing to the unexpected and undigested schemes of the Ministry; but there can be no question that, as soon as affairs become settled, the shares of this railway, which have experienced a depression in common with all other railway shares, will soon be on the advance.—*Essex Mercury.*

THE JUNCTION OF THE MANCHESTER RAILWAYS.

(From the *Manchester Guardian*)

Two years ago we adverted to the importance of a junction, north of the town, of the several lines of railway communication; and, after some delay, caused by the proposition of a southern instead of a northern line, and the preference of the Board of Directors of the Liverpool and Manchester Railway Company for that southern line, it has ultimately been determined, as our readers are aware, to complete the junction, as originally proposed, on the north side of the town. As the whole of the land required for the extension line of the one railway and the junction line of the other has been purchased, with the exception of a few plots in Salford, between Hunt's Bank and the Bolton Railway station, a notice of the intended direction of this connecting link in the great chain of railway communication, traversing the island from north to south, and from east to west, may not be unacceptable to our readers.

THE EXTENSION LINE.

The Manchester and Leeds extension line is to commence at some distance to the east of the present station, viz.: near Ryder's Mill, a little to the north-east of Collyhurst-lane, which the railway crosses by a bridge. For nearly 500 yards up to the goods station, the original line and the extension line will run nearly parallel; the latter being a short distance to the north of the former, and both passing over land, the whole of which is the property of the Company.

The extension line, where it leaves the main line, is to commence on an embankment of about 14 feet, which is gradually reduced till it reaches the surface of the ground, on which it continues through the greater part of the Company's land. On quitting this land, after proceeding to the north of the present engine-house, it passes the north end of Cropper and Back Cropper-streets (which streets will be carried over the railway), and under St. George's Road (near Buckley-street), the road being raised probably five feet for this purpose. The road will be carried over the railway by a neat bridge, with stone facings and iron girders, 191 feet in length. It then proceeds, in excavation; with retaining walls (as near Euston-square, London), through or near the end of several small and ill-defined streets of cottages, lying to the north of St. George's Road, till it reaches a point a little north of Nelson-street. It will next pass on an embankment of a few feet over some vacant land to Lower Tebbutt-street, and there is to commence a viaduct on the east side of that street, the line being carried over it by an iron bridge. On this viaduct it continues to Bromley-street, which it crosses a little to the north of the Manchester Gas Works. It next crosses over Parker-street, Back Irk-street, Ashley-lane, adjoining the burial ground, and Blackley-street (over the last-named street by means of a large iron bridge), and thence, still by viaduct, over several small streets, till it reaches a bend of the river Irk, east of Scotland Bridge, which it crosses twice, by skew arches, at an elevation of about 35 feet, so as to leave ample passage for the river when flooded. Thence the line will be carried over Long Millgate, which is to be spanned by an iron bridge, in the direction of Mill Hill, a little south of Scotland Bridge. It then proceeds close to the south side of the old Town's Mill, and crosses the Irk a third time, at an elevation of about 35 feet, and nearly at right angles, and thence proceeds, still on arches, to within a short distance of York-street, Cheetham Hill—being a distance, on arches, of 670 yards. These arches will, of course, vary, both in height and span, with the nature of the ground and the width of the streets to be passed over; the extreme height being 35 feet, and the average height about 28 feet.

The line proceeds to York-street, Cheetham Hill, beneath which it passes, about 16 feet below the level of the street, a little above the entrance to the burial ground, near Ducie Bridge. Here it will take the line of the division wall between the burial ground and the premises of the Manchester workhouse, and so arrive at the proposed station of the Company in Hunt's Bank, just below the garden of the workhouse, and near the confluence of the Irk and the Irwell.

Some curiosity has been felt as to the gradients of this extension line. On its leaving the main line near Collyhurst-lane, it will descend, at an inclination of 1 in 49, to where it crosses St. George's Road. Thence to York-street the descent is continued at an inclination of 1 in 60; and, from that point to the terminus at the Hunt's Bank station, it will ascend at an inclination of 1 in 132. This ascent to the station will possess the advantages of enabling the trains arriving to ascend it solely by the impetus obtained by their descending the plane of 1 in 60, which will carry them up to the station, and gently stop them there, almost without needing the application of the break; while the departing trains will descend this incline of 1 in 132 of themselves, without the aid of horse or other power, till they reach the endless rope at York-street, where they will be attached, and thence drawn to the junction of the extension with the main line, near Collyhurst-lane. This extension line will have two curves in it; both of which, however, are of so large a radius as to be wholly unobjectionable.

The station, being intended to supply all the requirements for the immense traffic which must be concentrated at one point, will necessarily be very extensive, and cover a large area. The Company have purchased all the land around the house now occupied as their offices, forming a compact plot of about 23,720 square yards, or nearly five acres of land. This plot is bounded on the north by Harrison's Buildings (the cottages in the hollow), on the north-east by the workhouse garden, on the south-east by the workhouse burial ground, on the south by Walker's Croft, which is the street by the bank of the Irk, and on the west by Great Ducie-street. The station will, therefore, be on the east side of Ducie-street, probably a little north of the Flying Horse Inn, and near the road now leading up to the Company's offices, and be approached by an incline from Hunt's Bank or Ducie-street, the rails being about 23 feet above the level of the street. We understand that the distance from the station to the Manchester Exchange has been carefully measured, and found to be just 494 yards.

THE LIVERPOOL AND BOLTON JUNCTION LINE.

As one part of the whole work, we must now notice the "junction line," which is to effect a union between the Liverpool and Manchester, the Bolton, and the Manchester and Leeds lines, by a line extending from the Liverpool line, at or near Oldfield-road, to the central station at Hunt's Bank. This junction line (pursuing the order of our description from east to west) will commence at the Hunt's Bank station, crossing Great Ducie-street, at a level of about 23 feet above the street, and thence passing over the river Irwell, at an elevation of 43 feet, by a handsome bridge nearly at right angles. It then enters Salford, passing through Hardman's brewery, and a little to the south of the Greengate Unitarian Chapel, and will next pass over Greengate, and through the middle of Bell's Gates, at an elevation of 24 feet above the level of the street. Thence over Back Cross-street, Catliffe and Palmer-streets, to Gravel-lane, over which it passes (near the foot of Thompson-street), upon skew arches, about 22 feet above the level of the street. It then continues its course over Legendre, Bury, Union, Deal, Foundry, and Hardman-streets, all at sufficient elevation, till it reaches Chapel-street, which it will cross diagonally, on skew arches, from the corner of Cooke-street to that of Quay-street, at an elevation of upwards of 23 feet. It then crosses Wilkinson, Johnson, Spaw, and New Bailey-streets, all good elevations—some as much as 25 feet; and thus it reaches the station of the Manchester and Bolton Railway, on the west side of New Bailey-street.

The line through the whole of this distance is proposed to be carried on arches, at an inclination, from the Hunt's Bank station to Legendre-street, Salford, of 1 in 761; and for the remainder of the distance the line is to be horizontal. The length of this junction line is to be exactly half a mile. A communication will thus be effected between the Manchester and Leeds and Manchester and Bolton Railways.

The route from the Bolton station to the Liverpool line is not, we believe, definitively fixed; but we understand it is likely to be carried along the side of the Bolton line, by arches, over the north-west side of Upper Booth-street (the street between the Bolton line and the New Bailey wall), and thence, instead of the direction originally proposed—which was to enter the Liverpool line a little to the east of Cross-lane Bridge—it will cross over Irwell-street, by a substantial bridge, and cross the fields and waste ground in a direction nearly due south-west, and enter the Liverpool line at a point a little east of where it crosses Ordsal-lane. The decline from the Manchester and Bolton to the Liverpool and Manchester line will be about 1 in 195; its length, about 790 yards; the length of the "junction line," from Hunt's Bank, about 2,370 yards; and the total length of the extension and junction lines, from Collyhurst-lane to Ordsal-lane, nearly 2½ miles—in fact, about 4,040 lineal yards.

The whole of the land between the Bolton and Liverpool lines belongs to the Bolton Company, with the exception of one field, adjoining the Liverpool line, which is the property of the Old Quay Company. As we stated on Saturday, agreements have been entered into for the whole of the required land between the two lines; and a Bill is now before Parliament to confirm those agreements. With respect to some of the property in Salford, we now learn, that several of the owners are asking sums which the Company are not disposed to give; and that there will consequently be inquiries, as to the value and amount of compensation, before a sheriff's jury, some time in the present month.

THE BIRMINGHAM AND THE SHEFFIELD JUNCTION LINE.

We have still to notice the proposed junction line from the station of the Manchester and Birmingham, and Sheffield, Ashton-under-Lyne and Manchester Railways, in Store-street, London Road, to the station of the other lines in Hunt's Bank. Originally it was proposed to carry such junction across in a northerly direction from the temporary station of the Birmingham line in Fairfield-street, to the present station of the Leeds line near St. George's Road; but the extension of the latter line to Hunt's Bank has induced a change of plan; and we believe the following will be found a tolerably correct statement of its course, &c., according to the plans lodged with the Clerk of the Peace, preparatory to the application to Parliament for an Act in the next session.

The carrying a junction line on arches over that part of the town between the two stations, would obviously be so obnoxious a proposition, and would receive such strenuous opposition from various quarters, and indeed from the town generally, that it could never be seriously entertained. It is therefore proposed to form the junction by a tunnel, in a direct line from one station to the other. Passengers are to descend from the Manchester and Birmingham, or the Sheffield line, by a vertical hoist, on the side next Sheffield-street, nearly opposite Boad-street. The level of the tunnel here will be about 67 feet below that of the railway, and 45 feet below that of Sheffield-street. The tunnel, which will be about 20 feet high, and of the ordinary width for two lines of rails, will then pass, in the form of a curve, having a north-westerly direction, under the following streets, &c.:—Under Lomas, Store, and Junction-streets; under the Ashton Canal and Whittle-street; then under a branch of the Rochdale Canal, China-lane, Stanley-street, and Port-street, where the level of the rails in the tunnel will be about 48 feet below the level of the street, Newton-street, and then under the centre of Stevenson's-square, crossing Spear-street, and continuing below the centre of Hilton and Thomas-streets, till it comes to Milk-street, when it goes under the buildings on the south-side of

Digitized by Google

Thomas-street, crossing under Soap-street, and passing below Shudehill, in a transverse direction, between Bradshaw-street and Nicholas Croft. Thence it will proceed under Snow-hill, Garden-street, and beneath a part of Back Clock-alley, below and across Holgate-street and Todd-street, between the Lamb public-house and the Collegiate Church Sunday School, and under some cottages at the opposite corner of Todd-street and Long Millgate. It will then pass under and across Long Millgate, near the surface. The roof of the tunnel will here be covered with iron girders, and Long Millgate will be raised about 18 inches. The railway then, in geological phrase, "crops out," comes into daylight and open cutting, for a distance of about 34 yards, and is carried over the river Irk, by a bridge of one arch, of a slight angle, and about 40 feet span; the level of the rails being about 21 feet above the surface of the water. The line is then carried over Walker's Croft (which will be lowered about five feet) by another arch, and thence on embankment for 107 yards to the station of the Manchester and Leeds Company at Hunt's Bank, to which the passengers will be raised by another vertical hoist. The length of the tunnel will be 1,539 yards, or about 7-8ths of a mile; and the whole junction, 1,708 yards, or 52 yards short of a mile. The inclination of a great portion of the tunnel will be 1 in 1,124, falling towards the Leeds line; but, a short distance from the Leeds station, the incline is reversed, and it falls from that station with a gradient of about 1 in 90. The object of these gredients is to act both in stopping arriving trains, and in giving impetus to starting ones. The only alterations proposed to be made in the level of the streets are two, viz., the raising one portion of Long Millgate about 18 inches, and the lowering of Walker's Croft about 5 feet. Of course it is premature to speculate on the probable time for the completion of this undertaking. We believe a considerable portion of the tunnel will lie under the rock.

In conclusion, we may express our gratification at the commencement of so important a line of railway junction and communication being effected within the town—indeed, so near the very heart of the town, yet at so comparatively small a sacrifice of valuable property. The centrality of the Hunt's Bank station, and the advantages we have adverted to, will be the more striking when it is considered that it will be the point from which the transit from this town will be commenced on the following railways:—Manchester and Leeds Railway, and thence to Selby and Hull; also by the junction with the great eastern lines of railway from London northward to Scotland; with the North Midland and its extension southward towards Birmingham, Derby, and the Midland Counties; and with the York and North Midland line to York, Newcastle, and Edinburgh. The Manchester and Bolton Railway, with its continuation to Preston and Lancaster. The Liverpool and Manchester Railway, with the Bolton branch; the North Union to Wigan and Preston, and thence to Lancaster, Carlisle, and Newcastle, and the north-western line to Scotland. The Manchester and Birmingham and Grand Junction lines to Birmingham, and thence by the London and Birmingham line to the metropolis; together with several minor branches on these great lines. The Sheffield, Ashton-under-Lyne, and Manchester line, so far as it extends (at present to Godley). All the passengers arriving by these various lines will also be brought to one general focus, in the very heart of the town, and the centre of its traffic.

We understand there is every reason to believe, that in the September of 1843, both the Leeds extension and Liverpool junction lines will be completed, the chain of railway communication have its last link added, and railways be open in one continuous line from the Humber to the Mersey; from the Thames to the Forth and the Clyde; while all the great towns of Great Britain—London and Bristol, Birmingham, Liverpool, Manchester, Leeds, and Hull, Glasgow and Edinburgh, will thus be placed in closer connection and more rapid communication with each other.

THE PROPOSED EVESHAM, BIRMINGHAM AND GLOUCESTER RAILWAY.

On Tuesday a meeting of proprietors and occupiers of lands on the line of this proposed railway, and of other persons opposed to the project, was held at the Angel Inn, Pershore, to consider the measures to be adopted in consequence of the announced intention of the promoters of the undertaking to apply to Parliament for an Act; on which occasion there were present C. E. Hanford, Esq., Captain Moorsom, B. Workman, F. Woodward, E. Marriott, Compton Hanford, J. Phipps, F. Holland, M. B. Cooper, F. Davies, G. Hudson, Nathan Izod, J. Woodward, F. T. Elgie, J. and R. Varden, J. Saunders, W. H. Chambers, J. Addison, Esqrs., &c. &c.

Mr. Hanford, having been called to the chair, said that this meeting originated from one which had been held a short time ago at Evesham, and that it had been called to give the promoters of the proposed railway an opportunity of convincing them (the meeting), if they could, of the propriety of altering the determination which they came to a year ago, namely, to oppose the formation of a railway from Evesham to the Birmingham and Gloucester Railway at Eckington. After a few more preliminary observations, the worthy Chairman said that he should be glad to hear any observations which any gentleman might wish to offer.

Mr. Workman remarked that he and the other promoters of the measure came there to hear what arguments could be brought forward against that which he must consider a public good, to listen to them attentively and respectfully, to meet them candidly, and to endeavour to remove them.

The Chairman, after saying he had hoped that the promoters of the measure had come prepared to remove the objections which it was known the owners and occupiers entertained, proceeded to observe, that if they had objected last year their position was still further strengthened now. Last year there was nothing said about a difference of opinion in Evesham, but now it was known that one party there wished the line to run towards the north, and another towards the south. Then, again, there were no less than three other projected lines to be taken into consideration, each of which would effect Evesham; viz., the line from Dudcot to Worcester, a line from Leighton Buzzard, by Buckingham, to Worcester, and a line from the London and Birmingham Railway to Leamington, the inhabitants of which latter town, the meeting might be assured, would not rest satisfied till it had been extended to Stratford, and so through Evesham into South Wales. From these and other circumstances, he thought they ought to oppose the project more strongly than they had done before, for assuredly it would be the course of wisdom and of policy to pause before they committed themselves to the present scheme.

Mr. Workman then rose to speak. He had been deputed by the inhabitants of Evesham and its neighbourhood to state their position and views with respect to this subject, and first he would beg to ask Mr. Hanford, as a general proposition, if he did not think that railways were a benefit to the community at large?

The Chairman—Yes.

Mr. F. Woodward—I say no.

Mr. Workman resumed by observing that Mr. Hanford's answer had relieved him from a great weight, and then proceeded to contrast the attendance at Evesham market (formerly allowed to be the second in the county) now with what it had been some years ago, ascribing the decline to the fact of the farmers of the Cotswold Hills, &c., having improved facilities for communicating with other towns. Evesham now laboured under considerable depression, and, such being the case, was it astonishing that its inhabitants were anxious to take advantage of any undertaking that held out a hope of restoring its former prosperity? He then referred to some of the advantages which might be expected to flow from the proposed railway. For instance, coal could be sold in Evesham for 14s. or 14s. 6d. per ton, which would probably bring back the farmers from the hilly country, as they could carry their corn to Evesham market and take back cheap coal. He did not deny that other lines of railway had been projected, but a line two miles from the town would be of little more benefit to them than one fifty miles off, and they must forgive the inhabitants of Evesham if they preferred a present good to a prospective advantage. He would remind them that the promoters of the measure had no wish to interfere with private rights, but they must recollect that a railway must go over *some* person's property, and he thought that no one had cause to make great complaint, seeing that if his land was taken he would not only receive its full value, but also compensation for supposed injury; besides which, if he did make some sacrifice, he would have the satisfaction of knowing that it was for the public good. He was glad that Mr. Hanford had said that railways were a benefit to the country ("hear, hear," from the Chairman) because he was the largest landowner on the proposed line; and he was assured that if that gentleman was convinced that the present project was for the public good, he (the Chairman) would not allow his private feeling to influence his opinion. (Cheers.) It had been said that there was disunion in Evesham on the subject, but he was able to state that there was no difference of opinion about the necessity for a railway (hear, hear); and as to the minor consideration respecting the way in which the line should run from Evesham, that had been amicably settled at a large meeting held the previous evening, when it was unanimously decided that the line to Eckington was the most eligible. This was no mere speculation: the names of the parties who ushered it into existence sufficiently showed that. There was Mr. Roy (of the highly respectable London firm of Roy, Blunt, Johnson, and Walton), a man of large property in Cheltenham, and who had been publicly mentioned as a candidate to represent that town in Parliament; Mr. Cabbell, a very wealthy man residing in the metropolis; and Mr. Rudge, one of the largest landed proprietors in the locality.

Mr. F. Woodward—Was the railway sought for by the inhabitants of Evesham?

Mr. Workman replied, that though it might not have emanated directly from the inhabitants of Evesham, the project had taken deep root among them. Mr. W. then referred to the advantages which had been found to accrue wherever a railway had been formed, but the near approach of our time of publication prevents our following him in detail, a remark which will apply to the whole of the proceedings. He next said, they were at liberty to deviate from the proposed line if necessary, which might enable them to meet the objections of some of the landowners; in fact, this licence had allowed them to alter their original determination to such an extent as to cause Dr. Beale Cooper, with great liberality, to say that he was no longer an opponent of the line.

The Chairman remarked that he had a letter from the Doctor, which threw a somewhat different light upon the matter.

Mr. Workman replied that the Doctor had not only so expressed himself, but had attended several meetings of the Committee. He then proceeded to read the names of the proprietors whose land would be touched by the line, observing, when he came to Mr. Hanford's, that, without fulsome compliment, he would, nevertheless, express the pleasure he felt at knowing that he was the greatest landowner to be effected, for every one would rejoice that his lot had fallen on a goodly heritage. (Cheers) He was sure that when he (the Chairman) came to consider the question, if he could but be convinced that the project would be for the public good, he would not, after being actively employed during a long life for the general welfare, destroy in after life that which it had been his study to promote for so long a period. (Renewed cheering.) The next point upon which Mr. Workman dwelt was, the employment which the formation of the railway would afford, referring to our rapidly increasing population, and to the opinions of our public men, to show how necessary it was to extend

Digitized by Google

capital in employing the people, concluding by observing that, though the inhabitants of Evesham had formerly expressed an opinion in favour of a railway to Oxford, their patience had now become exhausted, and it behoved them not to follow the example of the dog and the shadow in the fable, but to seize hold of a present benefit. In a moment or two Mr. W. rose again to explain that, when he admitted that the project had not been started by the inhabitants of Evesham, he had overlooked the fact that they had sent a very numerously signed document (dated January, 1840) to Mr. Addison, urging him to promote the measure.

The CHAIRMAN, after thinking Mr. Workman for the manner in which he had alluded to him, said that though it behoved them to merge their private interests in the public good, yet they ought not to forget the proverb, "Be just before you are generous." The absence from Evesham of the Cotswold farmers, was more, he thought, to be attributed to the railway from Stratford to Moreton than to that from Birmingham to Gloucester. With respect to the carriage of coal, they ought to remember that the river Avon offered a much better medium than a railway: and then again, the profits of a railway were calculated more from passengers than goods' traffic.

Mr. R. VARDEN, as the Port Dynllaen Railway had been alluded to, begged to explain that the project had not been abandoned, but at the present moment a Parliamentary Committee was inquiring into its merits, consequently he thought it would be well for the inhabitants of Evesham to be very cautious how they pledged themselves to a short branch, when a main line might not be beyond their reach. Mr. V. then read an extract from the Government Commissioners' Report, eulogising the line from Dudcot.

Mr. F. WOODWARD thought that Mr. Workman had not given them any reason why they should agree to the proposed line. If it were a great line extending from east to west and north to south, then owners and occupiers of land might submit to the sacrifice and inconvenience, but when it was to be a mere branch of eight or nine miles only, he thought they ought not to agree to it. As to its paying, that was quite out of the question, for some of the great lines even did not give a fair return for the capital invested in them. The Grand Junction and Great Western shares were falling (or had been lately), while the 100*l.* shares in the Gloucester and Birmingham might be had for 50*l.*

Captain MOORSOM rose with a very great deal of satisfaction, because he saw in the chair a gentleman from whom, during the last five years, while a large public work was in progress, he had always received the greatest attention and kindness, and he could say that he should call, after that meeting, with as much pleasure at Woollas Hill (the seat of the worthy Chairman) as if it had never been held, consequently, as far as personal feeling was concerned, he was assured they were unanimous. (Cheers.) The Captain then went into the general question at considerable length. He was surprised that the Chairman had not been better supported, for he expected he was coming into a hornet's nest, and was much pleased to find that such had not proved to be the case. They ought not to throw any obstacles in the way of the employment of capital in this country, for if they did capitalists would invest their money in foreign speculations. So far from all landowners being opposed to railways, he could tell them of a noble Lord in Cornwall (where they had been making great exertions to procure a railway, in order that they might not become isolated), who said he would not only take shares to the amount of 10,000*l.*, but give them the land to boot, if they would but construct a railway through his estate, so convinced was he of the benefits which would flow from it. Reference had been made to the Gloucester and Birmingham Railway. He was happy to state, and he was glad of the opportunity to say so, that he had a large stake in that undertaking. More than that, he had the pleasure of informing the meeting that he received 4 per cent. for his money, and that he looked upon it as a safe investment for the advantage of his children. A railway to Port Dynllaen had been spoken of, but he would ask how they were to get capital to form such a line, and what was the probability of its paying? Why, that line would be 200 or 300 miles long, and he had been working like a slave for two years, backed by nearly the whole body of the landowners in Cornwall, and had not yet succeeded in getting a line of 100 miles only in length, though it was of the greatest importance it should be constructed! After alluding to several railways which were supported by goods traffic, he said they (railway engineers) must suit themselves to circumstances (hear, hear), which, he was free to admit, they had not always done. (Hear, hear.) If he had to make the Birmingham and Gloucester Railway over again, he would lay it down upon a single rail. (Hear, hear.) He was not so cognizant of the management of the latter line as he had formerly been, but he did know that an agreement had been signed by which the Company undertook to deliver coals in Cheltenham at 14s. 6d. per ton, and he hoped, eventually, that they would have coal depots at every station along the line, so that farmers would be able to carry their corn to these points, and take back coal. There were no physical difficulties in the construction of railways which they could not overcome, but there were moral obstructions which it was difficult to contend with, and that was the position in which they stood at present. He felt that the landowners and occupiers had not been sufficiently consulted.

The CHAIRMAN observed that his land had been surveyed without his having received the slightest information.

Captain MOORSOM felt that a trespass had been committed, but still they must bear in mind, that Parliament made a survey imperative whether the landowners gave their consent or not. After some further observations, the Captain concluded by observing that he did not come there in the objectionable character of an engineer, but that he was present, at considerable inconvenience, to give any information he could: he was, it was true, connected with the Gloucester and Birmingham Railway, but he would remind them that that Company did not say "We will force you to have the railway," but merely, "If you will construct the line, we will work it for you at a fair rental."

The CHAIRMAN said that every individual present must feel great respect for Captain Moorsom both as a civil and as a military engineer, but still, with all due deference to the Captain, he had not heard anything to induce him to alter his opinion. He did not think a sufficient case had been made out to justify the interference with their land. There was no ulterior advantage hinted at, but merely the petty interest of the small town of Evesham: if it could be shown that parties would unite and agree upon a general line which would benefit the whole neighbourhood, then he would bow to the arrangement, even if it involved the pulling down of his house. (Cheers.) He fully agreed in the necessity of employing the people, and in the advantage attendant upon the expenditure of capital, but then it ought to be a beneficial expenditure. He certainly thought it would be most wise for the inhabitants of Evesham to pause and consider how much more it might be to their interest to unite in carrying out a great line.

Mr. ELGIE next rose to address the meeting. After contrasting the benefit expected to accrue to Evesham from this "wild scheme," in comparison with that which would flow from the line to Dudcot (and which the inhabitants of Evesham at a public meeting agreed to support), Mr. Elgie said that the passenger traffic had been thrown overboard.

Captain MOORSOM—No.

Mr. ELGIE replied that no one had ventured to say anything about passenger traffic, and that nothing was mentioned about it in the prospectus. This was no wonder, for where were the passengers to come from or go to? Not from Evesham to Worcester, for they could drive there in their gigs in quite as little time as they could be conveyed there by this railway. Mr. Workman had said that they might as well have a railway fifty miles off as two miles, and he could well understand that observation, living, as he did, in Worcester. Then, if it were wished the line should go from Evesham towards the north, why did it not go to Spetchley? If to the south, why not to Ashchurch? Why stick at Eckington? But then it had been said that the Birmingham and Gloucester Railway Company would not support any other line, and that they would secure, yes, *secure*, to the shareholders good interest for their money. (Hear, hear, from Mr. Workman). He thought that, when his friend Mr. Workman cheered, he would have known, from the experience of the last five years, that much faith could not be placed in the word of the Birmingham and Gloucester Railway Company, particularly as exemplified in their transactions with the city of Worcester. (Cheers).

Captain MOORSOM rose to order. They had gone on with perfect good humour hitherto, and he trusted that nothing would occur to mar it. There was much, he could assure them, to be said on both sides of that question.

Mr. ELGIE thought he was quite at liberty to speak as he had done. When they knew what had occurred at Worcester, and when they were now told that the same Company had entered into an agreement to deliver coals at Cheltenham at 14s. 6d. per ton, was it not reasonable to adduce the instance of the bond to show that the agreement might share the same fate? On what did the arrangement with Cheltenham rest? Why, on the word, or security, or agreement, of the same Company who failed to fulfil their bond; and therefore he thought he was justified in making the allusion. Mr. E. then pointed out at great length the advantage which would accrue to Evesham from a great line of railway, and concluded by urging many reasons why it would be politic for the inhabitants of that borough, instead of spending 70,000*l.*, without the slightest prospect of return, to husband their resources for the purpose of assisting in carrying out a railway which would benefit the whole district.

Mr. F. HOLLAND had listened patiently to all that had been said, but could not perceive that the advantages to be derived from the scheme would be at all commensurate with the disadvantages which would flow from it. If it were otherwise, as an individual he would surrender his individual interests for the public good. At all events, while competing lines were spoken of, the least they could do would be to wait, and watch the progress of events.

Mr. F. DAVIES wished to ask Captain Moorsom if the Company would deliver coals in Pershore at 13s., or a mile and a half off, on the other side of a hill up which it was almost impracticable to bring them, and where it was necessary for them to pass through a turnpike? If they had a railway at the upper end of Pershore, they would be as well off as they expected to be in Evesham when they had the projected line in operation. He trusted the affair was not a hole-and-corner proceeding to shut out Pershore, for they had horticultural produce to send to Birmingham as well as the good folks at Evesham.

Captain MOORSOM replied that he thought the Company would not agree to deliver coals in the town at 14s. 6d. per ton, adding, that if the inhabitants of Pershore were inclined to support the proposed line, it might be deviated a mile for their accommodation.

Mr. GEORGE HUDSON said, by whom has this railway been concocted? By Mr. Rudge, of Evesham. And for what? To carry the potatoes and cabbages of Evesham to the Birmingham and Gloucester Railway. (Laughter.) Since this project has been going on, I took the opportunity of seeing several of the gardeners, and they said that the railway would not be of any advantage to them. They did use the railway at one time, but the imposition was so great that they were obliged to take to their carts and horses again, and found it much cheaper than the line. We must all have been struck with

Digitized by Google

the most fascinating manners of Captain Moorsom —(laughter)—but we know that when a man comes to ask a favour he must possess the manners which the honourable Captain has shown this day. He will, no doubt, lay hold of the minds of some, but I must say, that if some gentlemen are taken by his winning manner, I am not; for one of the Birmingham and Gloucester Railway Directors said to me the other day, "George, never mind; let 'em go on. It will never answer, and we shall take it from them at about 1½ or 2 per cent." (Much laughter.) He also said that when the line was first taken into consideration, it was to carry corn from Gloucester to Birmingham, but we all know that a great deal of corn has not been taken. Where are the profits?—they are over the left shoulder—(laughter)—and though Captain Moorsom is having 4 per cent., two of my brothers-in-law (Weedon and Winterbotham, with whom I conversed last week, and who are not likely chaps to be taken in) have each lost 7,000*l.* by it. One of them is lately dead, poor fellow, because the harrass of it killed him. Mr. Hudson concluded by saying that it would do Mr. Workman and Mr. Rudge good to go on with the scheme, because the latter would be able to raise his rents, which he had already done, from 7*l.* to 15*l.*

Mr. Addison, in reply to Mr. Elgie, said, that a line to Spetchley would cost double the money, while the traffic would be no more, and the conveyance could only be towards Birmingham. If the junction had been at Ashchurch, then Birmingham would have been left out. He should like to know how the capital was to be got to form a line to Dudcot?

Mr. Varden explained that all the points were now under the consideration of a Parliamentary Committee.

Mr. Addison resumed by stating that Mr. Elgie was in error in supposing that the passenger traffic had not been taken into consideration, for he had shown that 80 coaches passed through Evesham in the course of a week, and he had formed his calculations accordingly.

Mr. Workman rose to reply. Mr. Hudson was in error when he said that Mr. Rudge had raised his rent from 7*l.* to 15*l.*; and as to the poor gentlemen who was deceased, he had died several months ago, and not as recently as Mr. H. stated. Much had been said about the scheme not paying, but surely that was of no consequence to the gentleman who came there to oppose the project, for they could not be expected to take shares; but to show that all did not entertain that opinion, he was authorised by the respectable deputation from London to state that 1,200 shares had been disposed of, and that he then held in his hand applications for 150 more.

Mr. Holland—How many from Evesham?

Mr. Workman—I am not at liberty to say.

Mr. Chambers—I wish you were.

Mr. Workman resumed: The landowners over the intended line from Evesham to Eckington had not opposed, but on the contrary had encouraged, the making of the railway from Birmingham to Gloucester; they had secured to themselves a cheap and expeditious mode of conveyance, but they had thereby raised a competition to the Evesham gardeners which was highly detrimental, and now refused them a participation in the benefits to be derived from such a conveyance. Other opponents of the undertaking seemed to go upon the selfish principle that because they could not benefit by a railway, the inhabitants of Evesham ought not to have one. Then, again, was it likely the Government would grant a line from Dudcot to run parallel with the Great Western? The cost was also a great point. The Great Western had cost nearly 60,000*l.* per mile, while that to Eckington would cost after the rate of 8,000*l.* only. It was fair to assume that a line from Dudcot would be as expensive as the Great Western; which of the two, therefore, was the most likely to ensure the best return for capital employed? As to the probability of its not paying, it ought to be remembered that the Gloucester and Birmingham Company would take the line on a lease, and though that line was not paying now it was probable when it was open to Bristol that it would be one of the best in the country. The people of Evesham were obliged to the meeting for their advice though they might not be inclined to follow it, and perhaps they would allow him respectfully to offer some in return, which was, to remember that the opposition of landowners to projects of this nature in the House of Commons (mentioning several instances, particularly the Coventry and Warwick) had failed, and only entailed expense on its originators.

The Chairman observed, that probably the parties alluded to by Mr. Workman were in a different situation to the landowners at the present meeting. If the line from Leamington should eventually come to Evesham, and he could be convinced that from thence to Eckington was the best mode of communicating with the great railways, then his opposition would give way.

Mr. Workman, in concluding his reply, said that the whole of that day's proceedings were more calculated to depreciate the project in the eyes of the public than to have any substantial weight with the House of Commons.

Mr. James Saunders begged to mention more in detail one of the proposed lines which had been alluded to by the Chairman. Its advantages were that it would be the shortest line from Worcester to London by 18 miles (being only 112 miles long), and a more direct line to Dublin than the one from Dudcot. It proposed to strike off from the London and Birmingham line at Leighton Buzzard, by Winslow, Buckingham, Brackley, Banbury, Shipton, Campden, Evesham, and Pershore, to Worcester.

The Chairman, after reiterating his opinion that the Evesham folks should not hastily agree to the branch, said that since he had alluded to Dr. Beale Cooper's letter to him the son of that gentleman had come into the room, and as the latter had given his sanction, he would read it to the meeting.

The letter was accordingly read, and as it contained so different an account of the proceedings of the public meeting at Evesham to that which Messrs. Workman, Chambers, and Addison stated had taken place, Captain Moorsom recommended Mr. M. B. Cooper to request the Chairman to withdraw it. This led to some personalities, Mr. Cooper asserting that his father had been put on the Committee without his sanction or knowledge, after he had left the meeting, while other gentlemen said that his name was read over in his presence, and referred to the fact that the Doctor had attended several Committee meetings, which he certainly would not have done had he not considered himself a Committee man. The letter was eventually withdrawn, and, after some further explanations, a resolution (which will be found in our advertising columns), condemnatory of the scheme was carried by the meeting, some ten or a dozen landholders and occupiers voting for it, and no one against it.

Mr. Workman, after eliciting the fact that the resolutions had been prepared before the meeting was held, moved, and Mr. F. Woodward and Captain Moorsom contended for the pleasure of seconding a handsome vote of thanks to the Chairman, which the latter suitably acknowledged, after which the meeting broke up.—*Worcestershire Chronicle*, June 15.

THE ANTI-SUNDAY TRAVELLING AGITATION.

The following handbill has, we understand, been extensively circulated in the neighbourhood of Newcastle:—

"*Solemn Warning for Sabbath Breakers—God coming in judgment!!*—As revealed by the sudden destruction of nearly one hundred immortal beings on the Paris and Versailles Railway, on Sabbath the 8th instant, and also in the destruction, by fire, of the Sabbath-breaking town of Hamburgh, and the death of many of its inhabitants.

"These awful calamities, so dreadful to think upon, are only the execution of the just sentence of Jehovah, whose wrath is treasured up against the day of his vengeance, and to be poured out upon every soul which lies under the curse of his broken law.

"Fellow-Countrymen! God marks the filling up by England of the measure of her iniquity. Her Sabbath railway trains, Sabbath pleasure parties, Sabbath-opening news-rooms, Sabbath crowded race-courses, are all recorded; the measure may soon be full; tremble, then, oh fellow sinner! in an accepted time, 'For behold the day cometh that shall burn as an oven, and all the proud, yea, and all that do wickedly, shall be as stubble: and the day that cometh shall burn them up, saith the Lord of Hosts.'—Malachi c. iv.

"Fellow-Sinners! remember this—the righteous God will vindicate his authority either in your eternal damnation or in your salvation through sovereign and unmerited grace, grace which is now offered to you, 'Believe on the Lord Jesus Christ, and thou shalt be saved.'—Acts c. xvi. v. 31. Reject this offer, and the sentence of condemnation rests upon you, for 'He that believeth not is condemned already.' The sentence is pronounced, and must have its full accomplishment either by the death and atonement of the Lord Christ answering its demands on behalf of the sinner that believeth, or by that sinner, if an unbeliever, drinking for ever out of the cup of God's fury, wrath, tribulation, anguish, and woe, as his portion in the lake which burneth with fire and brimstone.

"Christians and Christian Ministers, by name, flatter not yourselves that because you are known amongst men as amiable, charitable, temperate and respectable, and not distinguished by the open profligacy of the Sabbath breaker, the drunkard, the unclean and vicious, that you are therefore safe from the judgments of God. According to your privileges so is your responsibility. Can you be in Christ and at peace with sin? Nothing but 'the Ark' will save you from the deluge of Jehovah's wrath which awaiteth the ungodly. The high mountains to which an infatuated world looks with complacency will not avail you then. See that you have entered into the ark of safety. Have you been inconsistent, joined unto idols, at peace with the world, neglectful of opportunities, murderers of souls? Oh repent! be at peace with God. Cast yourselves unreservedly on the Lord; for he alone is able to sustain you when the great day of his wrath shall come.

"Fellow-Sinners and Christians! suppose you that those unhappy souls, which have perished, were sinners above all others because they suffered such things? 'I tell you, nay: but, except ye repent, ye shall all likewise perish.'—Luke c. xiii. v. 5.

"Newcastle-upon-Tyne, May 18, 1842."

Atmospheric Railway.—The Atmospheric Railway is expected to form a prominent subject of attention at the approaching meeting of the British Association. Mr. Vignoles, C.E., the Professor of Engineering at the University College, whose enlightened advocacy of this system, in the face of much prejudice and hostility, does him infinite credit, has announced a paper on the subject, to be illustrated by models and working drawings on a large scale. It is mainly owing to the exertions of this gentleman, next to those of Mr. James Pim, the public-spirited Treasurer of the Dublin and Kingstown Railway, that it has been resolved to make the trial of this system on the branch line from Kingstown to Dalkey. We are glad to learn that Mr. Brunel has also become a convert to its merits—so far, at least, as to recommend it during his recent professional tour in the south of Europe as the only practicable method of establishing a railway communication from Genoa, through the passes of the Appenines. The Prussian Government have had it under their consideration to give it a trial in a part of the Rhenish provinces, where the actual character of the country opposes similar obstacles to the laying down of railways on the ordinary plan, and have consulted Mr. Vignoles on the subject; but their determination on the subject has not as yet been made known.—*Mechanics' Magazine.*

NORTHERN AND EASTERN RAILWAY COMPANY—SPECIAL MEETING.

A special general meeting of the proprietors of the Northern and Eastern Railway Company was held on Wednesday, at the London Tavern, Bishopsgate-street, William Crawshay, Esq., in the chair, "for the purpose (as stated in the advertisement) of determining the manner in which the shares in this Company which have been forfeited shall be disposed of; the Act of Parliament leaving it discretionary with the Directors to adopt either public or private contract. Also, for the purpose of discussing the propriety of putting out, in such manner as may be then agreed upon, the remaining shares of this Company over which the Company have control, without sale. And in the event of such decision being come to as will enable the Directors to issue all the remaining shares, to determine the propriety of proceeding forthwith in the execution of the railway to Ware."

The meeting was well attended.

The Secretary (William Bourne, Esq.) having read the advertisement convening the meeting,

The Chairman said, the Directors, in conformity with the general principle upon which they at all times proceeded, namely, of consulting the proprietors and acceding to their wishes on every point of importance connected with the business of the Company, had called them together on this occasion to receive their instructions as to those shares which must be disposed of, and those also which might for the present remain dormant. The proprietors were aware that certain shares had been declared forfeited, and the forfeiture confirmed, and indeed every necessary form for their alienation from the original holders complied with, except the fact of sale prescribed by the Act of Parliament. There were in this position 3,186 shares of 50*l.* each, and upon these the amounts paid were, upon 240 shares 5*l.* per share; on 1,055 shares 4*l.*; on 444 shares 3*l.*; and on 1,398 shares 1*l.* 10*s.* each. These shares had all, as already stated, been formally forfeited, but must be sold before the property of the original holders in them could be destroyed. It was the opinion of the Directors that such sale should now take place, in order that those who had not stood by the undertaking, but had abandoned it in the time of its distress, might not step in to participate in any future benefit which might arise. To effect this object the Directors had drawn up a scheme which they would now submit to the proprietors, it being fully understood that they merely offered it as a recommendation to their co-proprietors generally. If the majority of the present meeting did not feel disposed to entertain it, the Directors merely claimed the right of offering their votes as individual shareholders. With the permission of the meeting he would now read the plan, and then it might be discussed either in whole or clause by clause, as should be deemed fit. The honourable gentleman then read as follows:—

"It is proposed by the Board of Directors, that the 3,186 shares of 50*l.* each, which are required by the Act of Parliament to be sold to make the forfeiture of the same complete, shall be sold by private tender, to be made to the Board of Directors on or before the 6th day of July next, and to be opened at one o'clock on that day. That a deputation of five shareholders, not in the Direction, to be named in this room by the shareholders, be authorised to attend the Board meeting at such opening of the tenders, at the Company's rooms at the Shoreditch station. That the tenders be for any number of shares not exceeding the whole. That the highest tender, if accepted, be entitled to the first allotment, and so on, according to the price, if the first tender does not embrace the whole. That notices be inserted in the public papers, and that circulars be sent by post to each shareholder, inviting tenders for the said shares, or any part thereof, upon the following conditions:—

"The payment of a deposit of 5*l.* per share upon the acceptance of the tenders on the 29th instant, for which a receipt will be given at the time by the Secretary, the further payment in three instalments of 10*l.* each on the 1st days of January and July, 1843, and January, 1844, and the balance on the 1st day of July, 1844, without interest.

"The said shares to be entitled to an equal participation of dividend with the other shares in this railway, in proportion to the amount paid up upon the respective shares after the dividend for the half-year ending 30th day of June next.

"The said shares to be registered immediately in the names of the parties purchasing, or their assigns, and to be transferrable in all respects as the other shares in this concern, the instalment now fixed being considered as, and in lieu of all, calls.

"The Directors recommend that the notices and circulars inviting tenders for the said shares, should expressly state that they are not bound to accept any tender, unless it be considered eligible by them."

Perhaps the first point to be determined was, whether the shares ought to be sold at all at the present moment. The Directors were of opinion that a sale ought to take place, because in the first place they were anxious to have at hand available means from the proceeds of such sale; and secondly, because, as already hinted at, they were desirous that no benefit should hereafter accrue to the parties who had deserted the Company in its difficulties.

Mr. Harvey presumed that these were not all the shares with which the meeting had to deal on the present occasion, as intimated in the advertisement.

The Chairman said, these were all that the Directors considered it absolutely necessary to deal with at the present time. There were besides, 958 shares which had never been appropriated, or which at least were at this moment in the Company's hands unconditionally.

A good deal of conversation ensued as to the price at which the different classes of shares should be disposed of. Mr. Gurdon, and others, appeared to think that a distinction ought to be drawn between the shares on which 5*l.* had been paid and those upon which fewer instalments had been advanced, as the price offered would be in proportion to the amount already paid. It was explained by the Chairman, by the Deputy-Chairman (William Marshall, Esq., M.P.), and others of the Directors, that the shares now proposed to be tendered for would be regarded as 50*l.* shares fully paid up so soon as the last instalment set down in the scheme were made good, and that it mattered nothing to the purchaser whether 1*l.* or 5*l.* had been paid by the original holder, *that* being a question simply between such holder and the Company. It was further explained, that the interest which had accrued on the arrears of calls in respect of these shares would probably amount to as much as the excess over the present market price.

Mr. Prance wished to know, if in the opinion of the Company's legal adviser it were indispensable that a sale should take place.

The Solicitor (— Maynard, Esq.) said, it was to be inferred from the provisions of the Act that a sale must take place. The Directors were ordered, in the event of default, and after certain forms had been complied with, to dispose either by public auction or private tender of the shares in arrear, returning to the original holder any surplus that might arise from such sale over and above the amount of his arrears and interest, and in his opinion the Company could not get rid of the equitable right of these original holders if a *bona fide* sale did not at some time or other take place. Of course, the time of the sale was in the discretion of the Board or the proprietors.

Mr. Prance doubted whether such sale was compulsory at any future period, if it were notorious that a sale at the time when the forfeiture was confirmed could not have been effected. He was anxious that the opinion of counsel should be taken upon this point.

Mr. John Williams said, a large number of the shares referred to had been paid for by him by checks on his bankers, and no one could have any claim upon such shares but himself. After the kindness which he had met with from the Directors and the proprietors at large, he should have great pleasure in signing any document which could at all facilitate the future disposal of these shares. (Hear, hear.)

Mr. Vizard (late Solicitor to the Company), as knowing something of the affairs of the railway, had no hesitation in expressing his opinion that a sale must take place, although the period of sale depended of course on the Directors.

It was explained that the shares now under discussion were not abandoned by the original holders.

Capt. Probyn suggested that some protection should be afforded to the original proprietors by fixing a minimum price.

Mr. Barclay wished to know if anything had occurred to alter the opinion of the Directors as to the impolicy of re-issuing these shares at a discount.

The Chairman replied in the negative.

Mr. Barclay said, the Chairman had invariably protested that he would not continue to hold the office of Chairman if any more shares were issued at a discount. (Hear, hear.)

The Chairman did not believe that these shares *would be* issued at a discount.

In the course of a conversation which followed the Chairman said, he should be very glad to take the shares at 5 discount.

It was further explained that the average amount of calls paid upon the shares now under discussion was 2*l.* 16*s.* each.

Mr. Prance wished to know if a sale would have been absolutely necessary, supposing the shares to have continued at 20 or 30 discount.

The Solicitor—Yes, certainly.

A Proprietor thought some plan might be arranged whereby the shares might be appropriated among the present proprietors.

Mr. Marshall said, the words of the Act were imperative; there *must* be a sale.

Mr. Barclay said, the South-Eastern Company had been placed in a precisely similar position, and yet *they* had appropriated their shares.

The Chairman said, if he were a holder of shares under such circumstances, and the shares got to a premium, he should not hesitate to make a claim for them.

Mr. Gibbons again suggested the propriety of taking the opinion of counsel.

In answer to a question from Mr. Shuter the Chairman explained, that out of a total number of 14,400 shares, there were 9,052 registered in the books of the Company.

In answer to further questions,

The Solicitor said, he was quite satisfied that a sale must take place, and he thought it most in accordance with the practice of the Courts that a sale in which the *bona fides* was unquestionable should be made, so as to give to the parties interested beyond the present proprietary the best chance of securing the largest surplus which was practicable.

Mr. Smale, as a Director of another Company, thought it most important that it should be decided whether a sale must of necessity take place. In the South-Eastern Company the forfeited shares had been issued at 25*l.* when the market price was 28*l.*

Mr. Barclay would again inquire whether there was anything in the financial position of the Company to render a sale at the present time indispensable.

The Chairman said there was not, but the Di-

Digitized by Google

recters wished that the responsibility in respect of these shares should rest on *somebody*.

A PROPRIETOR thought there was no occasion for an immediate sale, as it was not likely that the shares would speedily rise to a premium, so as to render it worth the while of the original holders to interfere.

Mr. BARCLAY was sure the shares of the Company would have been at *par* if it had not been for this threatened flooding of the market. He had again and again heard the Chairman say he would be no party to the issue or re-issue of shares at a discount, and yet it was now proposed to have recourse to such a step. He did not know from what quarter the large number of shares that had lately been thrown on the market had come.

The CHAIRMAN had no hesitation in saying that he had recently sold 200 shares. After his connection with the Board commenced, he had purchased 200 additional shares, and these he had now sold at 2*l.* discount. The 400 shares which he had guaranteed to hold till the final opening of line he still continued to hold. The present recommendation of the Board had not been the cause, but the effect, of the sale of his 200 shares, for it had been seen that if the forfeited shares could be issued on such terms no loss would accrue to the Company. The purpose for which he had taken these shares had been answered in the opening of the road throughout. (Hear, hear.)

Mr. PRANCE was disposed to pay great deference to the opinion of the Company's legal adviser, but if that gentleman's views were correct, the consequences to the other Companies who had not ordered a sale of forfeited shares might prove overwhelming. He was anxious, therefore, that the opinion of counsel should be taken, first, as to whether a sale were necessary at all; and secondly, if so, whether an appropriation among the existing proprietors would not be sufficient. He could not help thinking that the impossibility of selling the shares upon almost any terms, at the time when the forfeiture was confirmed, would absolve the Company from the necessity of selling them at this time, or at any future period.

Mr. VIZARD would repeat his opinion that a sale must take place, and no other than a *bona fide* sale could meet the object of paying back to the original shareholders any surplus that might remain after paying off arrears and interest which had accumulated. He thought any scheme of appropriation would virtually be a fraud on the original holders. (Hear, hear.)

After some further conversation,

Mr. GURDON said, he had understood that a certain amount of money had been borrowed at 6 per cent. interest on the responsibility of individual Directors, and he wished to know if the instalments on the shares now proposed to be issued were required to make good the repayment of this amount.

The CHAIRMAN said, the total amount thus borrowed was 150,000*l.* Of that sum, 50,000*l.* became due on the 16th of September next; but the same amount of debentures, payable on the same day, had been sold to a public Company, and the one would meet the other. The remaining 100,000*l.* was due on the 27th of February next.

Mr. MASTERMAN, jun. (a Director), was opposed to the present issue of these shares, although if they were to be issued he thought the plan proposed very judicious. The honourable gentleman then expressed his regret at differing on this question from the majority of the Board, and contended that no misfortune could arise to the general property, even supposing the original holders hereafter to lay claim to their shares, inasmuch as they would have to pay up the full amount of arrears, and interest thereon, which interest would amount to between 9,000*l.* and 10,000*l.* He argued, that immediately it became worth the while of these parties to reclaim their shares they would do so. At the same time, as certain of the Directors had very handsomely incurred large responsibility on behalf of the Company, he should not object to the proposed measure if it were deemed necessary to meet such responsibilities. The honourable gentleman concluded with a handsome compliment to the Chairman, to support whose measures, he said, was generally his pride and pleasure.

Mr. VIZARD was quite ready to sanction the plan proposed, if it were necessary thus to relieve the Directors from individual responsibility, but he should protest against applying the funds so raised to an extension of the line.

The CHAIRMAN said, the Directors had no wish to extend the line without the full sanction of the proprietors; at the same time he might state that there were no means, save by the issue of these shares, of meeting the 100,000*l.* due in February next.

Mr. VIZARD inquired whether this responsibility might not be met by the issue of further debentures.

The CHAIRMAN said, they had issued all the debentures authorised by the Company's Acts.

After some further desultory discussion,

Mr. HARVEY moved the following resolution:—

"As it appears to this meeting upon the representation of the Board of Directors, that there are 3,186 shares of 50*l.* each upon which certain calls have been paid, say—

Upon 240 shares	£5	0	each.
1,055 "	4	0	"
444 "	3	0	"
1,398 "	1	10	"

and that such shares have been declared forfeited, and have passed the requisite forms for such forfeiture being complete, except so far as relates to the sale of the same—Resolved, That the Directors be authorised and directed, and they are hereby authorised and directed, to dispose of the same in manner directed by the Act of Parliament."

Mr. SHUTER seconded it.

Mr. GIBBONS proposed as an amendment, that the meeting be adjourned for a fortnight, and that in the meantime the opinion of counsel be taken as to the necessity of a sale, and whether an appropriation among the proprietors would suffice.

Mr. PRANCE seconded the amendment.

The CHAIRMAN begged to state that, if on a show of hands there were anything like a respectable minority for the amendment, the Directors would not insist upon going to the vote, as it was their wish to be guided in all things by the opinions of their constituents.

Several proprietors having spoken against any further delay in settling the question, the amendment was handed to the Chairman, who, on seeing that it had been altered so as to adjourn the meeting to the 1st of January next, withdrew his proposition as to the vote.

The amendment was ultimately put, when only 4 hands were held up in its favour.

The original motion was then put, and carried *nem. con.*

The CHAIRMAN expressed his opinion that the consideration of the question as to the disposal of the remaining 958 shares had better be postponed. There were also 1,124 shares held by Mr. Williams, which it had been agreed at the last general meeting should not be interfered with just yet.

Mr. GILBERTSON was very sorry that the other object of the meeting—that for which he had attended—should be thus postponed. He had for a long time resided at Hertford, and was satisfied that, containing as that town did about 6,000 or 7,000 inhabitants, an extension of the line to their neighbourhood would be highly beneficial to the Company. The honourable proprietor, who stated that he had only recently become a shareholder, then adverted to the facilities which such an extension would offer to parties visiting Christ Church Hospital and others, and said he had understood that the Company were compelled, if they made the branch to Ware, to extend it to Hertford before they could derive any benefit from it.

The CHAIRMAN supposed the honourable proprietor was aware of the impediments which had been placed in the way of the Company by the Commissioners of the turnpike-road.

Mr. GILBERTSON was aware of the impediments, and much surprised at their existence. He had conversed on the subject with some of the trustees of the road, and had been told by them that if they had thought the Company meant to make a stopping place at the spot where the railway would cross the road, they would not have offered any opposition.

The ENGINEER (J. P. Bidder, Esq.) said, he had distinctly informed the Commissioners that there would be a stopping place there.

Mr. GILBERTSON thought the Commissioners must have been asleep at the time.

The ENGINEER said, they were not asleep, but on the contrary, "wide awake." ("Hear, hear," and a laugh.)

Mr. KENNARD said, the difficulty could be got over by working the two miles on the other side of Ware by horse power.

The CHAIRMAN, in answer to questions, explained that the 958 shares above referred to would, if distributed, give 1 to every 10 shares now registered, and expressed his readiness to take his own quota at *par*, upon the same terms as to payment as those to be disposed of under the first resolution.

Some conversation followed as to the mode to be adopted in tendering for the shares referred to in the first resolution. The Chairman said, he had no objection that they should be disposed of by auction in open meeting. Ultimately it was judged right to leave this matter to the discretion of the Directors.

Messrs. Harvey, Shuter, Gurdon, Stobart, Nash, and Smale, were unanimously appointed the deputation to be present at the opening of the tenders. The day originally fixed was the 29th instant, but on the suggestion of several proprietors, the time was extended to the 6th of July.

Mr. GIBBONS suggested that no tender should be accepted under 4 discount.

The CHAIRMAN was quite ready to accede to this proposition. He should oppose selling at a greater discount.

Mr. GIBBONS inquired what was the total amount hitherto expended on the line, and what additional sum would be required.

The CHAIRMAN said, the total amount already expended was 817,300*l.* He would leave the Engineer to state what further sum would be necessary.

The ENGINEER said, there was only one account unsettled. It was to the amount of 12,000*l.*, and included the maintenance of the permanent way for a year.

The CHAIRMAN said, the Directors would have been glad to lay before the meeting a full statement of the total cost, but the general meeting would shortly be held, by which time they hoped the accounts would finally be settled.

Mr. KENNARD said, as reference had been made to the shares held by Mr. Williams, and as the further time allowed to that gentleman for their redemption would shortly expire, perhaps the Chairman would state what had transpired at the Board on the subject.

The CHAIRMAN had no hesitation in saying that he looked upon Mr. Williams as an honest and deserving man, who had done everything in his power to benefit the Company. (Applause.) He (the Chairman) had hitherto opposed an extension of time to Mr. Williams, and he had done this out of cold justice to the other proprietors, but now that they had given Mr. Williams a glimpse of Canaan, he thought it would be extremely ungracious were they to refuse to afford him a little further time to realize what he had so long looked for. With these views he (the Chairman) should, at the proper period, have great pleasure in moving or seconding a proposition to grant Mr. Williams a still further extension. (Renewed applause.)

Mr. NASH would willingly second such a proposition.

The CHAIRMAN said, it must, for the present, be merely a matter of conversation, but the subject could be brought forward at the approaching general meeting.

Mr. WILLIAMS expressed his acknowledgements for the kindness which had been shown to him,

Digitized by Google

and said he had no doubt he should ultimately be able to complete his engagements.

Mr. SMALE inquired if any arrangement had yet been come to with the Eastern Counties' Company with respect to the toll.

The CHAIRMAN had hoped to be able at this meeting to announce the final settlement of the question, but as he could not do so, he felt bound to tell the proprietors why the negociation had "gone off." There were only three small matters to settle between the Companies, and the Solicitors of each were placed in communication to draw up the agreement, when all at once the Eastern Counties' Directors insisted, as a *sine qua non*, that the Northern and Eastern Company should pay the whole of the Government passenger duty over the Eastern Counties' Railway since the opening of the Northern and Eastern line — the point, which it would be recollected, had long been in dispute— although the arrangement for a reduction of toll was only to have effect for two years. The Northern and Eastern Directors very naturally resisted such a proposition as unjust, unless the Eastern Counties' Directors would in a similar way make a *post facto* arrangement with respect to the toll. A communication had been sent last night to Mr. Theodore Rathbone (Deputy-Chairman of the Eastern Counties' Railway Company) at Liverpool, and upon that gentleman's answer it would depend whether the negociations should be resumed. As the half-yearly meeting was so near, perhaps the discussion of the matter had better be postponed. He was of opinion, that subsequent to that period the Northern and Eastern Company must adopt vigorous measures for the prosecution of the goods traffic from the terminus of their line at Stratford. (Hear, hear, hear).

Mr. SMALE was of opinion, that whoever counselled the raising of the fares on the Northern and Eastern line had inflicted much injury on the Company. (Hear). He resided near the line, and could state that the omnibuses were now as much crowded as ever.

The CHAIRMAN would assure the honourable proprietor that the Company had suffered no injury in respect of the traffic beyond Ponder's End.

Mr. SMALE said, the loss of even that traffic was a loss of thousands yearly to the Company. He much regretted the delay that had occurred in arranging with the Eastern Counties' Company.

The CHAIRMAN said, the blame did not rest with the Northern and Eastern Board. He firmly believed that if the matter now in dispute were settled, something new would be discovered to-morrow to impede the progress of the arrangement. It was part of the proposed agreement between the two Companies that the Northern and Eastern should be at liberty to erect a station and take up passengers at Stratford, but the Eastern Counties' Directors had insisted that this station should not be used for passengers going northwards. Anything more preposterous could not well be imagined. (Hear, hear.) Again, the Northern and Eastern Directors had proposed that the second-class fares to Edmonton should be 10d., but Mr. Rathbone—so arbitrary were that gentleman and his colleagues—had struck out the 10d. and insisted upon a 9d. fare. (Cries of "Shame, shame.")

Mr. SMALE was quite sure that the Eastern Counties' Railway Directors in following such a course were "cutting their own throats." (Hear, hear.) At the same time he could have wished that the Northern and Eastern Company had not raised their fares, because, by doing so, they not only lost a large traffic, but disgusted many persons with the railway, as was proved by the fact that gentlemen in the neighbourhood of the line had established common road coaches rather than be at the mercy of the Railway Company. He thought that, even if they had to pay an exorbitant proportion of their receipts to the Eastern Counties' Company in the shape of toll, they should not have reduced the amount of accommodation to the humbler classes, since it could have been continued without loss to the Company.

The CHAIRMAN said, a part of the traffic could not have been carried on without loss, if 4d. per passenger were paid to the Eastern Counties' Company.

Mr. KENNARD said, the distance to Edmonton was 9 miles, and for less than half that distance the Eastern Counties' Company demanded nearly as much for toll alone as the Company who supplied the locomotive power throughout were to receive altogether.

Mr. SMALE again urged the expediency of low fares, and said he had been told by the treasurer of Covent Garden Theatre that more money had been received after the two shilling and one shilling galleries were thrown into one, and the price of admission fixed at one shilling, than when both were distinct.

The CHAIRMAN, in assuring the honourable proprietor that the subject should continue to receive the best consideration of the Directors, jocularly observed, that Madame Vestris's reductions had resulted in bankruptcy.

In answer to a question from Mr. Gilbertson, it was stated that the question of the branch line to Ware would probably come before the half-yearly meeting. That gentleman appeared to think that an arrangement with the Turnpike Trustees might now be effected.

On the motion of Mr. Smale, a vote of thanks to the Chairman and Directors was unanimously passed, and the meeting separated.

RAILWAYS—THEIR CLAIM UPON THE SUPPORT OF THE PUBLIC.

LETTER I.

To the Editor of the Railway Times.

SIR,—Amidst the numerous discoveries which so strongly mark the present age, there are none more prominent or important than the beautiful and ingenious inventions by which steam has been rendered available for the purposes of locomotion. Whether we regard them for their practical utility—as lasting monuments of the skill and perseverance of man—or as public works indicative of the character and genius of the nation, they are equally deserving of admiration. There cannot be a more pleasing occupation for the reflective mind, than to study the many surprising contrivances which have here been adopted, in order to enable art to overcome the difficulties of nature. The obstacles presented by rock, river, mountain, forest and valley, have yielded to the enterprise and genius of man, and railways are now spreading in every direction, bringing the inhabitants of this small though powerful island still closer together, and conferring upon them all the benefits which necessarily follow increased facilities of communication.

But a short time ago, and who, save the sanguine few, regarded railways otherwise than as a vague and fruitless speculation? Our fathers, quietly seated in their stage coach, with its 12 or 14 passengers, moving along at the rate of 8 or 10 miles an hour, vainly imagined they had arrived at the *ne plus ultra* of travelling; and so wedded were they to this now nearly obsolete mode of conveyance, and so forgetful of the fact that increased civilisation always demands increased conveniences, that they deemed it not only their interest, but their duty, to oppose the formation of railways by every possible means. Had it not been for the intelligence and perseverance of our merchants and capitalists, this absurd and vexatious opposition would never have been overcome, nor should we now have the satisfaction of seeing our railway trains with 200, 300, and in many instances 400 passengers moving along with ease and safety at speeds varying from 20 to 35 miles an hour.

One would imagine that the benefits of railway communication are so obvious as to be apparent even to persons of the most obtuse understanding, but when we find members of our legislature, who from the high position which they occupy are naturally supposed to be men of intelligence and education, gravely asserting that railways, so far from being beneficial, are positively injurious to the country, it is high time to show the fallacy of such hasty assertions, by instituting a comparison between the coaching and railway systems, and pointing out a few of the more important advantages which have resulted from the introduction of the latter.

1. And first as to *speed*. The average speed of coaches, under the best and most favourable arrangements, seldom exceeded 10 miles an hour, or, including stoppages, little more than 9. The rate of travelling upon railways is about 25 miles an hour, being nearly two-thirds faster than the coaches. The journey from London to Birmingham by coach occupied from 13 to 14 hours; it may now be performed with ease by railway in 5½ hours. In like manner the journey from London to York, which formerly occupied 25 hours, may now be traversed in little more than 9½ hours. The distances between these towns are therefore, for all commercial purposes, diminished nearly two-thirds since the formation of railways.

Now it needs no very great stretch of the intellect to discover how this "annihilation of time and space" benefits the man of business He can perform his journies in much less time than they before occupied—the sum total of his hotel bills is greatly diminished—and his travelling expenses altogether much reduced. I was told by a commercial gentleman a short time since, that he could now complete in one month the same journies which before required three months, and could transact a greater amount of business than he formerly did with half the amount of travelling expenses. And what is the effect of this? He is enabled to sell his goods at a cheaper rate, and at the same time reserve to himself a larger profit. Thus seller and consumer are both benefitted by railway communication.

Another important result of this speed is the rapidity with which intelligence of moment may be conveyed to the most distant parts of the kingdom. Of this the *Mechanics' Magazine* records a striking example: The *Great Western* steamer arrived in King's-road, Bristol, at half-past 10 p.m.; dispatches were immediately forwarded to the *Times* office in London, where they were delivered the next morning at half-past 5. They were printed and issued, and a copy of them in the *Times* newspaper was lying in the cabin of the *Great Western* by one o'clock, p.m. "These [remarks the Editor of the *Magazine* referred to] are the wonders of steam navigation, steam travelling, and steam printing." An equally extraordinary instance occurred on the arrival of the *Caledonia* from America, by which intelligence was expected respecting the trial of Mc Leod. An express train left Liverpool at 45 minutes past 10, p.m., and arrived in London at half-past 5, a.m., thus performing the journey of 209 miles in 6¾ hours.

Another obvious advantage resulting from the rapidity of railway transit is the conveyance of fish, fruit, eggs, and other perishable commodities, in a state of perfect freshness, to distant markets. By means of the Grand Junction and London and Birmingham Railways great quantities of fish have been conveyed to Birmingham, Coventry, Wolverhamption, &c. &c., which, from its cheapness, has proved an incalculable boon to the poorer class of people. By an article which appeared in the *Railway Times* some time since, I perceived that an arrangement had been recently made by some of the Lancashire Railway Companies with the Flamborough and Filey Fish Company, for the purpose of supplying Huddersfield, Manchester, and various other places contiguous to the railways, with fish caught on the previous evening. By this plan, as these Companies truly stated, they "place within the reach of the most humble class the means of obtaining cheap and nutritious food." The Eastern Counties' Railway, when completed, will also be a valuable means of conveying fish from the distant parts of Yarmouth and Harwich, and thus will not only minister to the conveniences and luxuries of the wealthy, but confer its benefits upon the poor. Great quantities of eggs and fowls are continually imported from Ireland, and conveyed to

Digitized by Google

the inland towns by the united aid of steam navigation and railways. These benefits cannot be correctly estimated until the whole chain of railway communication is completed: it will then be seen how deeply the public is indebted to that system, which has been truly called "the greatest modern result of the genius of man."

Many other advantages might be pointed out which have resulted from railway speed; one more, however, will suffice for the present purpose. A merchant in Birmingham receives an order from an American correspondent which is to be completed by a given time, and shipped by a certain vessel. Before the completion of the Grand Junction Railway he was compelled to close the order a week before the vessel sailed, that the goods might arrive in Liverpool in time for shipment, the carriage by canal occupying four or five days. The consequence of closing the orders thus prematurely was, that the merchant was frequently compelled to omit many articles, often those of the greatest importance. But as he can now have his goods conveyed to Liverpool by railway in a few hours, he is enabled to keep his orders open some four or five days longer than he formerly could. This extension of time, especially at periods when trade is brisk, is a great advantage, both to merchant and manufacturer.

I am, Sir, your most obedient servant,

E. D. C.

Stratford, June 2, 1842.

ASSESSMENT OF RAILWAYS.

To the Editor of the Railway Times.

Sir,—We have now the judgment of the Court delivered upon this subject, founded upon the case of the parish of Mitcheldever and the South-Western Railway.

It seems, then, that the rent of the railway is to be looked at as a whole, including any profit which may arise from the use of power and carriages upon it; in other words, that amount is to be the value of it which any solvent tenant would give for the occupancy of it, he paying all outgoings, and a deduction being allowed as directed by the Parochial Assessments Act. This was the view I first took of it, as described in my letter to you of the 22nd January last, with this exception, that I wished the amount of interest paid to the proprietors annually to be the criterion of the value after deducting a sum from that amount for a tenant's risk and profits.

Then the division of this sum amongst the parishes is to be governed as follows, viz:—That proportion of the total net receipts is to be the assessable amount in every given parish which the *toll* collected in that parish bears to the whole toll of the line. Thus, if the parish A collects 7, and the whole toll collected is equal to 70, the Company will be assessed in the parish A to an amount equal to one-tenth of the *net receipts*. Under this arrangement, if, unfortunately, any particular parish happen to have no station in it at which toll could be taken, although many miles of railway may run through it, the Company will not be assessed one farthing for the land they occupy, and which before they took it from the parish, used to help to support the poor. Now, it has been held that the railway is to be looked at as letable as a *whole*, including the carrying department, and yet the assessment of it to the poor is only to be available to those parishes in which the money happens to be collected. It appears to me, that if the concern is to be looked at as a whole, it will be hard upon those parishes who contribute to form part of that whole, but who do not happen to have a money-taking place in them, that they should not have an advantage equal to the proportion of property laid out in them.

What is the fare paid at parish A a consideration for? Is it for being conveyed through that parish only? No, it is for passing through other parishes also, which, according to the law now laid down, will receive no help from the Company towards the relief of the poor, highways, &c., and yet without these parishes the parish A would not be in a situation to receive the fare. The mere arbitrary fact of the money being payable in any one particular parish, owing to a building in the shape of a station being erected there, ought not to exclude an adjoining parish from the advantage of assessing the railway, for without their portion of the railway no money would be taken at that station.

It seems to me that the comparison drawn by Mr. Hill in arguing this case does not apply to a continuous line of railway. He says, "two farms belonging to one farmer, though extending through two parishes, there being in the one highly cultivable land, and the other stretching over a long extent of moor, it could not be said, and never was said, that the rating was to be one-half of the aggregate; it must be on the value of each in its separate parish." In the case of the farms, each may be carried on independently of the other. In the case of the railway, the portion in the parish A would be useless without the portion in parish B, and the gross rent of the railway therefore, I submit, *ought to be divided in proportion to the money laid out in the letable part of the railway, in each parish respectively.*

I think Mr. Editor, that as this railway property is of a novel description, it admits of new rules being laid down to meet the case, and I cannot help feeling that the mode of meeting the question as pointed out in my letter of the 22nd January last, would be a fairer course of proceeding than leaving some parishes without any remuneration at all. To carry out my plan, it would be necessary for an apportioner to be appointed by the Government who should go through the whole line, with the view of ascertaining how much letable property has been created in each parish, and to examine the accounts of the Company to ascertain the net income. The expense to be paid equally by the parishes and the Company, each parish's proportion being settled according to the amount of assessment, and deducted by the Company when the rates are paid, the Company paying the whole to the apportioner.

Since writing the above I have been told that the word *receipts* means *traffic*, and that the net total rent is to be divided amongst the parishes in such proportion as the traffic in any particular parish bears to the whole traffic upon the whole line; and that it is not the act of taking the money alone which is to be indicative of the earnings of the railway within a parish.

Now, if this is to be the interpretation of the judgment, let us see how it would operate.

For the sake of simplicity, suppose a railway to run through two parishes the same distance, and the traffic to be the same; of course upon the above principle each parish would assess the railway to the same amount. But, then, suppose 50,000*l.* laid out in the one parish, and none in the other, in the shape of stations, warehouses, &c. (*all of which are taken by the tenant, and are included in the net rent*), where would be the justice of allowing each parish to assess the railway at the same sum?

Then, again, will it bear out its own principle, that the *property in each parish is to be assessed according to its earnings within the parish.* Here a general letting of the whole line is to be supposed, and the rent of it is to be ascertained by deducting the general expenses from the total receipts. Now, in the case I have been drawing of the two parishes as above, the line in the one parish may cost to keep it in repair considerably more than the line in the other; indeed, may be so expensive as to consume the whole of its receipts, yet upon the principle of taking the traffic as a gauge it would be receiving more than its net earnings. If the line in each parish could be let independently of the remainder, and the expenses easily ascertained, then the principle of *earnings* might apply. But what does the Court say, "*We must therefore say whether this is not one entire rent*, though in the mode of dealing with it by the defendants it may be artificially divided into several separate lines of receipt. If it is, to deal with it only according to that artificial division would *be to break up all the rules which have hitherto governed Courts.*"

The only way to work this principle would be, to ascertain the amount of money taken in respect of the traffic within a parish, and to deduct therefrom the expenses of that particular part of the line; but can that be conveniently done, when it is considered that there are expenses *out* of the parish going on, in the shape of stations, warehouses, Management, and other matters which will readily occur to the reader, common to the whole line, and without which the earnings in this particular parish would not take place?

These considerations lead me back to reflect whether any injustice would be done to any party by allowing the respective parishes to assess the railway in the manner I have, upon a former occasion, suggested—upon the principle, in fact, which will guide the shareholders themselves, and which is practised generally in all cases of partnerships, viz., that according to the capital each partner may invest in the business, such a proportion of the profits shall such partner divide. Such proportion of the property as shall be created in each parish, such a proportion of the net proceeds shall each parish be empowered to assess the railway.

Let the railway be assessed to that amount of the *net rent* in any particular parish, which the money laid out in *the letable* part of the railway in that parish bears to the whole amount laid out in creating the *letable* part of the whole railway.

"This property should consist of all the buildings and machines fixed to them, the land at the current value in the parish, and its additional value owing to its containing the rails, sleepers, blocks, &c., for the use of which a rent could be obtained. Neither cuttings, nor embankments, nor bridges, nor viaducts, should be brought into the calculation, because no more rent would be given whether the railway ran on arches, through a cutting, or on plain ground; but, on the contrary, would rather be a reason for a tenant declining to give so much rent, if on arches or in cutting, because of the repairs which arches or cutting would require."

I have confined my observations principally to the question of how the *net rent* is to be divided amongst the parishes, because there seems to be no doubt now, that whatever sum the railway will produce (making of it what a tenant can as a railway), such sum is to be considered the rent of it. Just as the rent of a farm is ascertained; it is "such a sum that may be left after paying all outgoings, and a fair remuneration to a tenant for management."

I am, Sir, yours, &c.

CHARLES PENFOLD.

Croydon, June 8, 1842.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.

To the Editor of the Railway Times.

Sir,—I am unfortunately a shareholder, but fortunately a small shareholder, in this railway, and having lately received a circular apprising me of an intended meeting for the creation of new stock, to raise an additional capital of 100,000*l.*, I gave the subject some consideration; but I viewed my interest in the concern as too trifling to justify me in advancing publicly my individual opinion upon the best mode of raising the sum required.

I certainly entertained a strong opinion that a principle was involved in the question, and I so expressed myself to other shareholders, but I should still deem it presumptuous in me to put forward my own views if I did not observe, by the published proceedings of the late meeting, that there had been other persons, even capitalists, who had taken the view which I had pertinaciously in my own neighbourhood advocated.

Looking at our stock at a discount price of 50 per cent., and knowing that the required additional capital must be procured, I considered that, according to the practice of other Companies in raising capital while their shares were at a discount, two modes had been, and might be in our own case, adopted; the one, by the means taken at the recent meeting of further depreciating the capital to a discount of about 69 per cent.; the other, by an issue of preference shares, carrying a certain rate of interest, such as 5, 6, or 7 per cent. upon the sum to

Digitized by Google

be paid. I am ready to admit that, provided every shareholder would and could take his *pro rata* proportion, it is immaterial as between themselves which plan is adopted; *but the point for which I contend is, that it is the duty of the Directors to take such one of the two available methods of raising the sum they require as will do the least injury or injustice to the shareholders generally.* As a shareholder, I attended one of the meetings held since the creation of the third shares, and inquired if the then authorised capital would be all that would be required, and was publicly answered by the Chairman that it would. In consequence I held my shares, and I might have been so circumstanced as that to advance more money might have been impossible. It may possibly be so at this moment with some shareholders.

If therefore by one mode, such as shares carrying 6 per cent. interest, it is practicable for the shareholder whose means are exhausted to raise his *pro rata* proportion by having an unexceptionable security, through the medium of his new stock, to offer for the sum required, and by the other mode, viz., the one adopted of issuing at the enormous discount of 68*l.* 12s. 8d. per cent., it is possible that the public may not be certain that such shares will yield a dividend of 5 or 6 per cent., the needy shareholder who, in the former case, would not be injured, will, in the latter case, not only hesitate in taking his new stock, but may find difficulty in raising the means to pay the requisite call, without selling at a considerable sacrifice his original stock.

There is, too, another reason why preference interest shares, either indefinitely or for a term of years, are preferable to the common depreciating discount principle, viz., that a different calculation will arise, and the public who take different views may act according to those views upon two kinds of stock; and that portion of the public who have faith in what the traffic will be some 5, 10, or 15 years hence, are at liberty to purchase the original stock in accordance with their views, while the cautious 5 per cent. investor, who will risk nothing, and wishes to gain nothing beyond his certain 5 per cent. return, will adhere to the proference shares carrying 5 per cent.; and if the preference shares carry interest beyond 5 per cent., the latter class of investors will not object to pay the proportionate premium necessary to secure them.

I contend, therefore, that if in the case of the Birmingham and Derby Railway Company, they had issued preference shares at 50 per cent. discount only (being the market price of the original stock), carrying interest at 6 per cent. upon the sum to be paid, they would have afforded every shareholder the opportunity of offering unexceptionable security for his *pro rata* additional capital.

If I had not faith in the ultimate success of this line, I should not refuse to accept shares so issued; if I had faith, I should not only take such shares, but should secure the original shares also, at a corresponding price, to the extent of any convenient means. The Manchester and Leeds Company, with their 100*l.* shares at 5 discount, issued 25*l.* shares at *par*, with 10 per cent. interest upon a 2*l.* call only for five years, and such shares were rapidly taken up. And why? Because the public had faith that at the end of five years the original shares would be above *par*. The 25*l.* shares rapidly rose to a premium, and (although I admit that the Leeds Company had far superior prospects) I doubt not, if the Birmingham and Derby Company had issued their 12*l.* 10s. shares at the discount price of their original stock only, with a 7 per cent. interest for 7 years upon the sum to be paid, such shares would have commanded a premium, without that corresponding depreciation of the original stock which the present plan of creation of capital at an enormous discount is likely to produce. I do not profess to be well versed in these matters, but I have probably said enough to induce you, or some able correspondent, to take up the subject, and determine by which of the two modes the least injustice is inflicted. I am, Sir, your obedient servant,

A SMALL SHAREHOLDER.

11th June, 1842.

SAFETY OF RAILWAY TRAVELLING.

To the Editor of the Railway Times.

SIR,—The question of locking-in being now settled, there is one other question which has been proved to be of the greatest consequence to the safety of railway travelling.

In almost every serious accident that has occurred, the lives lost have been those of the passengers in the first carriage or two in the train; and yet, though it has been repeatedly mentioned in the public prints, few of the Railway Companies have adopted the precaution of placing empty or light luggage carriages next the engine. The additional expense could be but little, and all experience shows that it would be the saving of very many lives.

In several instances besides the locking-in, Railway Directors have stood out against experience and public opinion, till Government has found it necessary to interpose by a circular letter, which, I believe, means, "If you don't do as we recommend, we shall bring in a Bill to compel you." And depend upon it, if the public will submit to it. This putting passengers next the engine will be continued till we have a second Reading tragedy, or, as Sydney Smith says, till some person of rank is killed, and then "everything will be put in order." But why should lives be thus sacrificed—is it for the trifling additional expense? I hope not. I cannot believe that men of such standing as our Railway Directors, even *though* acting in a body, could satisfy themselves with such an excuse. It is probably because they have not taken the trouble to make the necessary arrangements, or, indeed, to think seriously about it. Then the sooner they do so the better.

Why not send a carriage or two next the engine with parcels or luggage? I have not the slightest objection to my portmanteau being "made an example of" in case of emergency, but I have *personally* a very great objection to being smashed into a mummy or blown to the devil.

I am, Sir, yours, &c.

D. R.

June 9, 1842.

P.S. I may mention that I am much more interested as a proprietor than a traveller, but I consider the ultimate interests of Railway Companies and the public one and the same.

THE LATE ACCIDENT ON THE PARIS AND VERSAILLES RAILWAY.

To the Editor of the Railway Times.

SIR,—The Paris and Versailles Railway accident is fast sinking into forgetfulness, and, to appearance, without the realisation of your wish "that some competent Englishman would throw a light upon the subject." As, however, I am sure the least information will be acceptable, I beg to inform you that a friend of mine has just arrived from the continent, on whom I can rely, and who was on the spot at the time, and in the daily habit of travelling on that line, and who states that the waggons of that Company (which were the foremost and principal vehicles that were destroyed) were all padded thickly with straw—covered with a thin canvass and print calico, and that when the concussion took place the straw padding necessarily burst its fragile binding, and became scattered amongst the coke and cinders. Hence the rapid conflagration!!

After such information I trust the British public, seeing albeit that English railway carriages are not of straw, will not allow such a firebrand as the *Very* Reverend Sidney Smith to inflame their fears, as he would their bodies, with his reiterated false assertions, and *very funny* misrepresentations, to say the least of which appear to be more the writing of a Beelzebub (*ecce* the taste for burning) than those of a Divine, who, in the wildness of his effusions, "longs for a Bishop—a brother chip—to be burnt," that his flock may be the better preserved; he, of course, not aspiring to the vacant see, having (if he is to be believed) declined that honourable distinction "a long time ago." Truly the poor fellow is to be pitied. Escaping being "done brown," the "dreadful effects of the imagination" has now pictured to him the certainty of—as the sailor would call it—the capsising of the carriages with the wrong lock uppermost, when he (the unfortunate Sidney), "travelling like a Solan Goose,"—

"Eating the air of promise with supply,
Flattering himself with project of a power
Much smaller than the smallest of his thoughts,
And so, with great imagination,
Proper to madmen, led his powers to death,
And winking, leaped into destruction."

And thus exit the Reverend Sidney Smith, Dean of St. Paul's, &c. &c. Verdict—Accidental! Deodand—15d. upon the lock!

I remain, Sir, your obedient servant,

K. W.

Wanborough, June 9, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—How often has "A. B.'s" question been asked? how often answered? and yet is it repeated with a pertinacity that is really fatiguing during this warm weather. There is, there can be, "no injustice in the Croydon Railway Company wishing to pass over the Greenwich at the same rate per mile as over their own, although the part of the Greenwich over which they have to come" may have "cost four or five times as much as the Croydon," and for this simple yet obvious reason, that the *same rate per mile* would give the Greenwich Company *a receipt per mile* four or five times *larger* than the receipt per mile on the Croydon Railway. And I would ask "A. B." whether this is not in accordance "with the principle which regulates all private partnerships," and should regulate "all public Companies similarly situated," namely, that the partner advancing double the amount of another should either "get *interest for his additional capital*, or a *double share* of the profits," which is in effect the division of profits proposed by the Croydon Company? The principle which the Croydon Company advocate will be found on examination not only "beautiful in theory," but just in practice; and must therefore receive the sanction of every right-minded man. The Greenwich Company will do well to consider that, although "the Grange-road Bill is lost for one year," the Croydon Railway Extension is probably thereby but little delayed.

I am, Sir, yours, &c.

C. D.

GREAT NORTH OF ENGLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—In answer to my inquiry (through the medium of your valuable publication) as to the cause of the uniformity in the passenger receipts on the Great North of England Railway, Mr. O'Brien, the Secretary, gives an explanation in your last which, I am sorry to say, leaves me as much in the dark as ever. He states, that he is obliged to forward the weekly receipts to you before the *clearing-house* returns for the Saturday previous are received, and until these arrive there is a small branch of the parcel trade of which he does not know the exact receipt; therefore the pounds only are returned. In this statement only Saturday's receipts are alluded to, consequently, as there is a uniform amount added weekly for carrying the mails, the other *six days'* receipts must be singularly regular in never having shillings or pence.

I am, Sir, your obedient servant,

J. A. G.

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

2. *Minus* toll to London and Birmingham 11*l.* 16*s.* 3*d.*

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 903*l.* 16*s.* 11*d.* per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half year's traffic, amounts to 130*l.* per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 36*l.* 5*s.* 10*d.* from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1*s.* 6*d.* for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10*s.* per cent., but to the original shareholders it is equal to 12*l.* 15*s.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17*s.* 1½*d.* had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the foot-path, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16*s.* 1*d.* The receipts given are however those from the railway only.

27. The 4,551*l.* 8*s.* 9*d.* are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 29*l.* 15*s.* 6*d.*; carriages, 26*l.* 17*s.* 0*d.*; dogs, 0*l.* 19*s.* 0*d.*; parcels, 244*l.* 16*s.* 11*d.*; cattle, 22*l.* 10*s.* 6*d.*; corn, 3*l.* 15*s.* 4*d.*; heavy goods, 430*l.* 12*s.* 3*d.*; coal and lime, 83*l.* 5*s.* 7*d.*— Total, 842*l.* 12*s.* 1*d.*

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows— Passengers, 2,395*l.* 9*s.* 0*d.*; carriages and horses, 139*l.* 9*s.* 11*d.*; parcels, 144*l.* 13*s.* 4*d.*; mails, 50*l.* 5*s.* 9*d.*; merchandise, 1010*l.* 2*s.* 3*d.*; minerals, 259*l.* 4*s.* 11*d.*; cattle, 58*l.* 1*s.* 0*d.* — Total, 4,057*l.* 6*s.* 2*d.*; including North Midland proportion of Manchester and Leeds traffic, amounting to 118*l.* 5*s.* 6½*d.*

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4*d.* on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 538,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

36. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

Grand Junction Railway.—*Week ending June 4—Receipt from passengers, parcels, and mails, 7,614l. 1s. 11d.; merchandise and live stock, 1,614l. 15s.; total, 9,228l. 16s. 11d.*

Brandling Junction Railway—*Week ending June 4—Receipt from Passengers (number of passengers, 9,696), 351l. 12s. 3d.; goods, coals, &c., 548l. 12s. 5d.; total, 900l. 5s. 8d.*

TO CORRESPONDENTS.

Expositor *will oblige by giving us the means of communicating with him.*

W. L.—*We feel much indebted to this correspondent. If he could simplify the tables, and give an explanatory introduction, we should have great pleasure in publishing them.*

Birmingham and Gloucester Railway.—*We were about to publish the letter of* A Shareholder *(Gloucester) received a week or two since, but cannot understand the arrangement of his tables. Will he make them more clear.*

Birmingham and Derby Railway.—*In Mr. Kahrs' letter, published last week,* "absolutely *fore-armed*" *with proxies, should have been* "abundantly *fore-armed*."

Great Western Railway.—*A correspondent complains very strongly, and very justly, that since the "locking up" system was discontinued on the Great Western Railway, the friends of passengers are not allowed to go on the platform to see them off. He says, he himself was compelled to take out a carriage ticket the other day in order that he might look after the luggage of two lads. He recommends the adoption of the Eastern Counties' Company's plan of giving a pass ticket to such parties.*

Hall's Smoke-Consuming Apparatus.—Jacob, *who writes in censure of this arrangement as applied to an engine at Derby, must see that his statements ought to have the authority of a name to render them of due weight.*

A Constant Subscriber.—*The advertisement appeared in the* Railway Times *of the 8th of January,* 1842.

K. W.—*We do not think our correspondent's addition to his letter would be an improvement. We feel obliged for his attention in the matter of the back numbers.*

Thames Haven Dock and Railway—Unus de Pluribus *is quite right. The man is very eccentric. His most recent scheme is (seeing that, as he says,* he *has been ill-used by the Eastern Counties' Company) to bring an independent line into London to the mouth of the Regent's Canal, then to purchase and drain that artificial river, and lay down in its bed a line of rails to communicate with the London and Birmingham!! A writ de lunatico inquirendo has been issued against many a poor fellow on account of "eccentricities" less absurd.*

Tyro.—*It is quite evident that our correspondent is not (to use his own phrase) "up to the tricks" of some of the parties to whom he alludes. The individual to whom he specially refers, has, unquestionably, no clear discrimination as to the meaning or utility of the word "principle" in mechanics, whatever he may have in morals, and his practice is rather that of the "circumventor" than of the legitimate "inventor." These two words strike us as a very apposite distinction made by a friend of ours, in order to draw the line between original men and their imitators. It may readily be seen, by inspecting the patent-list, that so soon as an original* inventor *has "made a hit," he is immediately followed up by a whole host of* circumventors, *eager to devour all the advantages. Upon this principle Mr. A. B. always keeps an open patent on hand, into whose gaping jaws—inscribed with some such title as "Uncertain Improvements in Machinery," involving a large margin—he throws indiscriminately all the emanations of his own brain, and also all the "unconsidered trifles" he may pick up while on his roaming expeditions over railways, fancying, after the slip slop fashion of all unprecise minds, that they are of his own production. It was in some such mode that an article used on railways, similar to one invented by C. D., and manufactured by E. F., found its way into a patent of Mr. A. B's, without any one dreaming of it, till the contractors for supplying it to a particular Company were made aware of it by being threatened with an action for damages.*

*** Our publisher will gladly give double price for any one of the following numbers, to enable him to complete sets. For the year 1838—January 13th, 20th, and 27th; February 3rd and 10th; and October 27th. For the year 1842—February 26th.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES .	**113,374**
Railway Magazine . .	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus show the ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, JUNE 18, 1842.

SINCE the publication of the remarks in last week's paper on the decision of the Court of Queen's Bench relative to the principle of rating railways, we have again maturely considered the matter, and the great importance of the subject will be our excuse for venturing on further observations.

An attentive perusal of Lord DENMAN'S judgment, after reading the arguments of counsel, to be found in the *Railway Times* of the 29th January last, has impressed us with the conviction that his Lordship's reasoning is illogical, and his decision erroneous.

Reviewing shortly the nature of the contest, it will be observed that both the contending parties agreed that the provisions of the General Parochial Assessment Act were to be applied to the case as containing *one* clear principle of assessment, and that the standard of rating should be, in the words of that Act, "the rent at which the hereditaments (the railway) might reasonably be expected to let from year to year, free of all usual tenants' rates and taxes, and to the commutation rent-charge, if any, and deducting therefrom the probable average annual cost of the repairs, insurance, and other expenses necessary to maintain them in a state to command such rent."

It seems also to have been admitted on both sides that a rate is not to be measured by the mileage of a railway in a parish as the proportion of a rent to be fixed for the whole line, but according to the "actual earnings" (Lord DENMAN'S expression) of the Railway Company in that parish. This principle is unquestionably correct, and had it been properly laid down by the counsel of the South-Western Railway Company, and illustrated with a knowledge of facts and practice as exhibited daily in the working of every railway in the kingdom, the judges must, we think, have arrived at a decision opposite to that which they have announced upon the great struggle in this case, where the parish authorities maintained that, adopting the provisions of the General Assessment Act and the principle of rating the actual earnings made in the parish, the rate was to be fixed in respect of an annual rent calculated on the basis of including the whole amount of profits received by the Company from tolls, and also from haulage of passengers and goods; and where, on the other hand, the Railway Company maintained that, adopting the like principles of rating, the rate was to be made in respect of an annual rent calculated on the basis of the tolls only receivable by the Company, excluding the receipts arising from haulage.

The radical defect in Lord DENMAN'S judg-

Digitized by Google

ment throughout, and hence his illogical reasoning, consists in his not distinctly defining receipts from tolls and receipts from haulage; in not pursuing to their true respective sources—*land* the one, and locomotive *steam power* the other—whence these receipts proceeded; and in not clearly seeing that haulage receipts are not obtained from the *occupation* of the railway, but from the use of it as a public highway. In all parts of the decision, it will be observed that his Lordship rather indiscriminately uses the words "profit," "receipt," and "earnings," not weighing upon each occasion the exact and extreme accuracy of expression required from the Court when dealing with any one of those terms, or with the matters which require the use of one of those terms.

It is also obvious, as will be further explained hereafter, that Lord DENMAN seems to have misunderstood the intention, and slurred over the reading, of the clause in the Act of Parliament as to the separation of toll receipts from haulage receipts, or his Lordship could not have stated these words contained in his judgment:—"To meet the case of the Company holding both characters (owners of the way, and carriers upon it), the 157th section of the Act has provided, that where they shall carry for their own profit, separate accounts shall be kept by them, as if the conveyance of the goods and passengers had been effected by other persons, *to which separate accounts* the overseers of the several parishes through which the railway passes shall have free access."

Such expressions of condemnation from us, towards a judgment proceeding from lawyers of eminence like the Judges of the Court of Queen's Bench, may appear arrogant; and we should regret to use them did we not know that these erudite men feel a pride in admitting that they may have been wrong, and that there are not any decisions requiring so much their own anxious revision as those pronounced by themselves. This is the true and graceful humility of great learning; and we should be neglecting a solemn duty if we did not boldly point out, in a case of so much importance to Railway Companies, that which we deem to be erroneous.

It appears to us manifest, that the rating must be on the net annual tolls receivable, or upon an annual rent based on these tolls, exclusive of the receipts from haulage; and that any different principle of rating produces injustice to Railway Companies, and to the parishes through which railways are constructed, and is in violation of the clear intention of the legislature to be found in all the Acts for incorporating Railway Companies. This mode of rating on the basis of tolls would not of course include buildings for stations, warehouses, buildings for repairing engines and carriages, and for holding stationary engines, watering places, &c. &c. All these buildings would, irrespective of the railway, have to be rated by the several parishes in which they were situated upon the ordinary principles by which buildings are rated, and having reference to the other ratings in such parishes. With respect to these buildings, the parishes would simply have to decide their letting value per annum; what the Companies would give for such buildings if erected by others for them, and what they would ask for them as rent if letting them to others. The assessment of these buildings would be thus fixed, without the least reference to the tolls for the use of the railway, the receipts from haulage, or the general earnings of the Company, whether profitable or not. And in considering the rating of the railway itself, these buildings ought to be wholly excluded from consideration. Lord DENMAN has evidently fortified his own mind with the belief, that the South-Western Railway Company were to be considered in law as the occupiers of the railway as well as the owners, chiefly from their possession and use of the several buildings, appendages, and approaches, placed at all parts of the rail way where they would be convenient. But his Lordship has thus confused two things quite separate in themselves. The buildings the Company cannot be forced to be let to any body. The Company can prevent any person entering them or using them, and they literally are occupied by the Company in the true sense of the word occupation; and whatever advantages are derived from these buildings, are from their use and occupation. But the railway apart from the buildings, with free access to and from it, the Company are forced to allow any man to use who conforms to the provisions of their Act of Parliament.

Lord DENMAN, however, uses the following observations, and others of a like character:—

"It will be observed that the lands and the buildings are included in one rate, and that the value of them is partly made up from the use of them, in connection with other buildings in another parish. Can it be truly said to make any difference that that is so, when both are in the same occupation, and are used for the same purpose?

* * * * * *

We cannot strike out a portion of a rate because it would not have existed but for the occupation of buildings in another parish. That occupation does exist, and therefore it must be taken into account."

From these remarks it will be observed that his Lordship mingles the receipts from the Company's railway with their occupation of buildings as leading to these receipts, and having done so, he is drawn into the conclusion that railway buildings, tolls, and haulage receipts, are all of them the possessions of one great trading concern, drawing profits from *land and buildings, ownership and occupation*, and therefore that the rating must be on their whole earnings, or upon a rent fixed on the basis of those earnings. Had his Lordship avoided the beginning of error, he would then not have rushed as he has done into a mass of wrong conclusions. Clearly the Court should, after laying down the two principles to which we have first adverted, have proceeded to state and demonstrate that the buildings of different kinds belonging to the Railway Company had nothing to do with the main question. The Court should have said that these buildings were to be assessed separately, like any other buildings belonging to other persons, and the suppositious case might, as matter of illustration, have been strongly put and pushed home, that if a Carrying Company had erected buildings and stations, &c., adjoining those of the Railway Company, such Carrying Company would be rated for those without reference to the profits or earnings they made by carrying passengers or goods on the railway, or upon any neighbouring turnpike-road, or any neighbouring canal.

Then further, in order to pursue a train of right reasoning, we think the Court should have looked at the main object of the Act of Incorporation of a Railway Company, about which not one word is said in the judgment, and scarcely in the argument, and should have deliberated whether the police regulations and provisions for public safety, commented upon by Lord DENMAN, had the least bearing on the proper mode of assessing the rate.

The judges would have found that the Act of Incorporation of a Railway Company is almost entirely, from beginning to end, for the sole purpose of constituting an ownership in a road, with a right to take tolls for its use, the maximum of which are stated.

Its first provisions raise money which is to be applied only for constructing a railway, and not for the purposes of providing the plant of a carrier's business.

Then follow provisions to make the railway, and to settle all questions with owners and occupiers of land through which it passes.

Then provisions to regulate the internal concerns of the Corporation.

Then provisions to levy tolls on passengers and goods for the use of the railway, and to levy rates for wharfage in cases of the accommodation of wharfage being given.

Then follow some further general provisions for punishing trespassers on the railway and offenders of various kinds, and this may be called the whole scope and contents of the Act, with the exception of a few clauses which permit the Company to use locomotives or other means of haulage on their own line, and to make such charges as they think fit for such haulage, whether of passengers or goods.

It is thus evident that the legislature was, as its object, only creating a Company for making and maintaining, and keeping open, a railway road, and that the power to the Company to become carriers upon this road is merely incidental, and in this respect not a single restriction is imposed upon them, nor the slightest care taken of the public, except that the Directors are prevented from having smoky chimnies.

This might have made the Court seriously think that the legislature purposed only by the Act of Incorporation to create a *toll-producing landed property*, as liable to parish rating; and the Court would equally have seen that every provision in the nature of police regulations, or for the punishment of offenders, was strictly applicable to preventing damages to the railway works, and preserving the road clear and unmutilated for the purpose of travelling; and that any stranger Carrying Company using the road would have the benefit of all the effects produced by such a police establishment as the Act of Incorporation rendered requisite, just in the same manner and to the same extent as would the Railway Company itself. If a carrying business required extra policemen, clerks, and porters, the judges would have seen that these were incidental to the carrying business only, and not a necessary adjunct upon the ownership or even the occupation of the railway, and they could not have been led into any confusion of ideas, such as certainly appears to have affected Lord DENMAN, when he uses these expressions:—

"The Act is framed with some regard to the interests of the public. The alarming risks that might otherwise be incurred are provided against, and many regulations of police are made for that purpose, regulations which the defendants are charged with enforcing, and which render it doubtful whether to lessees could be delegated the performance of that trust. These are considerations which make us pause in giving assent to the argument of the defendants."

From this investigation, then, we are led to the single, separate, and narrowed question in the case, and upon its consideration it is almost self-evident, we should say, that the basis of rating must be the toll receipts only. And our first reason for thinking so is, that this is directed by the legislature. We say *directed* by the legislature, because we think it is im-

Digitized by Google

possible to give any reasonable construction of the clause which orders the Company to separate their toll receipts from their haulage receipts, and to exhibit their toll receipts to the parish overseers, except that the legislature intended the toll receipts only to be rated and not the haulage receipts. Lord DENMAN, in his judgment, uses the expressions formerly quoted, stating that the Act directs the separate accounts to be kept, *and both accounts* to be open to the inspection of the overseers. But this is not the reading of the clause, nor its intent. The clause is as follows:—

"And be it further enacted, that in all cases in which the said Company shall carry for their own profit any passengers, cattle, or other animals, goods, wares, or merchandise, articles, matters, or things, a separate account shall be duly kept, showing the amount of the rates or tolls which have been received by the said Company, or which would have been received by them for the use of the said railway, in respect of such passengers, cattle, or other animals, goods, wares, or merchandise, articles, matters, or things, if carried by any other party or parties; and the overseers of the poor of the several parishes and townships through which the said railway shall pass shall have free access to, and liberty to inspect, the same at any time," &c. &c.

It is clear from this clause that the Company are bound to separate the two classes of receipts, yet the toll receipts only are to be exhibited. "The same" in grammar can only cover the last, and indeed sole, antecedent—being the toll receipts; and a Railway Company could refuse to exhibit their account of haulage receipts to the spectacled eyes of overseers. This, we contend, is the grammatical construction of the clause; but that its intent is this must be obvious from the fact remarked upon by Mr. Justice PATTESON during the discussion of the case, that "if the keeping of these separate accounts is solely for the purpose of ascertaining what the Company actually receives, it is merely requiring a troublesome calculation for no earthly purpose. If the rating is to be on the whole amount which the property would obtain in the way of rent for the use of the railway by a tenant, and not merely for the right to receive the tolls, the keeping of these separate accounts would not assist the overseer in making the rate in any way whatever."

Argument on the question need not really be carried further, but it is strictly relevant to it, and elucidates it further, to add that if a Carrying Company (not being the Railway Company) having stations, buildings, and approaches on a railway, and paying tolls for its use, can be assessed to rates for its stations and buildings only, which is an indisputable proposition, and not on its haulage receipts, how can a Railway Company, using their own line for a carrier's business, be with justice placed in a different situation?

Another circumstance is conclusive to our mind for rejecting the doctrine that the haulage receipts are not to be included in fixing the rating, which is not only, as suggested in our last week's paper, that the parishes would get no rate at all if the general expenses of a Railway Company exceeded its general receipts; but as the earnings in each particular parish are, according to the decision of the Queen's Bench, to be the criterion of rating, it is evident that a parish through which the railway ran on a level might be heavily assessed, while the parish which had an inclined plane, so expensive to work that no profit could be there made, would not be able to rate the railway for a single shilling. The gradients in each parish must become a material element in assessing the rate, if the net earnings of all kinds are to be put together and assessed for the quantum of the same realised in each parish; whereas if the directions of the legislature be followed, and tolls alone assessed, the gradients, let them vary as they might, would not affect the question in the least, and the several parishes would always have something to assess, and the Companies always have to each parish something moderate and just to pay.

A SPECIAL meeting of the Northern and Eastern Railway Company was held on Wednesday last, the proceedings of which will be found duly recorded in another part of our present number. Some of the questions incidentally raised possess considerable interest.

It appeared from representations made by the Chairman, that a certain number of shares had been declared forfeited in default of the payment of various calls, and that the forfeiture had been confirmed by the proprietors, but that before the original holders of such shares could legally be divested of their interest in them, it was the opinion of the Directors and their legal adviser that the shares must be sold, either publicly or privately, as the Directors might deem fit or the proprietors desire. This opinion was grounded on the clause of the Company's Act which provides, that a defaulter shall be entitled to whatever surplus the sale of his shares may produce over the amount in arrear and the interest thereon accruing.

Some of the gentlemen present appeared to think that the forfeited shares might legally be apportioned among the existing registered holders without the process of a sale, but the opinion of the Company's Solicitor leaned the other way. It was argued that, if such appropriation of shares were illegal, other Companies would be placed in a very awkward predicament. We do not think, however, that any great apprehension need be entertained on this point. We believe it is provided in the great majority of Railway Acts that the Directors may "dispose of" or "deal with" forfeited shares in whatever manner they or their constituents may judge most desirable; and even were it otherwise—even were a sale indispensable—we cannot suppose that, under the circumstances, a court of equity would interfere in behalf of those members of a joint-stock body who had left their co-proprietors in the lurch, by neglecting to make good their engagements, and who had moreover tacitly consented to the confiscation of their interest by allowing the forfeiture and its confirmation to pass without protest. Even in the Northern and Eastern case, the Directors have full power to fix the price at which the forfeited shares shall be reissued; and it would be well if law matters generally presented as little special pleading as would be required to convert into a sale the appropriation for which some of the proprietors contended.

Apart from all legal questions, we think the Northern and Eastern Company have acted very judiciously in at once getting rid of the large mass of shares which it was known impended on the market. We need scarcely say that, in general, we would pay but small respect to the convenience or advantage of share-speculators. Such parties are not to be looked upon as the legitimate promoters of railway enterprise; in fact, share gambling was heretofore the great incubus upon the progress of the railway system; and although the evil has now to a great extent worked its own cure, it still exerts far too prevalent and too baleful an influence. At the same time, the state of the market is not wholly to be overlooked by a discreet Board of Management. There may be—indeed, there must be—instances in which parties, having every disposition and intention to remain permanent investors, are compelled to dispose of the whole or a portion of their shares; and if, in the arrangements which it is the province of Directors to bring before their constituents, it can be so managed that such persons shall reap a benefit, or at least be guarded against loss, it is on every account to be desired. We have no doubt that the plans of the Northern and Eastern Directors will, in this instance, prove beneficial to all parties. Judging from the mode in which the present Board have hitherto conducted the affairs of the Company—raising the undertaking from a state of virtual bankruptcy to a high position in public estimation—it were an extreme lack of liberal consideration to doubt of a successful result in the case now under notice.

We confess that we were not a little disappointed at the small attention (or rather, we should say, the *no* attention) which was bestowed at Wednesday's meeting on the proposed branch line to Ware and Hertford. We readily admit that the Directors have been much impeded in their proposed operations by the opposition of a local body rejoicing in the dignity of Turnpike-road Trustees, or Commissioners, or some similar title, and if these same Trustees were to be the only sufferers, we should by no means feel sorry that they were allowed to repent at leisure of their precipitate proceedings; but we cannot shut our eyes to the fact that an important district of country is, through the folly of these parties, shut out to a great extent from the facilities of railway locomotion, and that as a necessary consequence the Company are debarred from a legitimate source of revenue. We trust, therefore, that *some* means—we do not pretend to say *what*—will speedily be devised to overcome the obstacles which at present stand in the way of the branch line. The main obstacle is, we believe, the crossing of a turnpike-road on a level. We are by no means favourable to such an arrangement, but we understand that, in this instance, it can scarcely be dispensed with; and as the trains would not run very frequently upon the branch line, all danger might easily be obviated.

Some remarks were made at the meeting calculated to mislead all parties interested in the question, viz., that those who advised the raising of fares in November, 1841, had done an injury amounting to many thousands of pounds to the Railway Company. The following statement of facts, which have been furnished to us from a highly respectable quarter, will throw some light on the toll question generally, and upon the assertions referred to:—

Receipts at Lea Bridge in seven months ending 31st May, 1841	£529	
Ditto at Tottenham	467	
Ditto at Edmonton	371	
Ditto at Ponders' End	673	
Ditto at Waltham	1,521	
Ditto at Broxbourne	3,577	
		7,338
Assume that there would be the amount taken for passengers going to said stations as came from them	7,338	
		14,676
Toll paid to the Eastern Counties' Company for said passengers	£2,554	
Government duty	941	
		3,495
Net receipt		£11,181
Receipts at Lea Bridge in seven months ending the 31st May, 1842	494	
Ditto at Tottenham	446	
Ditto at Edmonton	226

Ditto at Ponder's End	635
Ditto at Waltham	2,235
Ditto at Broxbourne	8,942
	7,967
Assuming, as in 1841, that the traffic would be as much *to* the said stations as *from* them	7,967
	£15,934
Toll paid to the Eastern Counties' for said passengers	£2,090
Duty to Government	620
	2,710
Net proceeds in 1842	13,224
Net proceeds in 1841	11,181
Gain by raising the fares	£2,043

A very important matter cursorily alluded to during the proceedings of the special meeting was the "toll question," as between the Northern and Eastern and Eastern Counties' Companies. Upon the general merits of the matter at issue we need not now enter, our opinions having been fully and repeatedly expressed in a case very nearly alike. Nor would it be fair, absolutely to condemn the toll-receiving Company solely upon an *ex parte* allegation of the toll-paying Company; but, *if* the statements made at the meeting are borne out by the facts of the case, we cannot help thinking that the Directors of the Eastern Counties' Company will find it rather a difficult matter to justify their conduct in this respect to their constituents or the public These differences between Companies, the ought to be so closely and so cordially united are very much to be deplored, and as we have repeatedly predicted will, if persisted in, lead to external interference such as both parties will ultimately have reason to regret. Pity it is that there should be so little of the spirit of conciliation exhibited between contiguous Managements. On each side there too often is shown a disposition to drive what the Chairman of the South-Eastern Company recently characterised as "sharp bargains," the bargainers apparently overlooking the fact that more may be, and generally is, lost, through the feelings which such conduct seldom fails to excite on both sides, than can ever be gained by even a successful effort to profit at a neighbour's cost. We would fain hope that the Croydon and Greenwich dispute is not about to be imitated on the other side of the river.

We give up some considerable portion of our space to a notice of a meeting which has taken place during the present week at Evesham, with reference to the project for constructing a branch line from that borough to the Birmingham and Gloucester Railway. We hope it may be the last meeting of the kind to which we shall have occasion to advert, for we should be sorry to find that the inhabitants of other districts certain, like Evesham, to be advantaged by the establishment of railway facilities, should thus turn round upon those who would be instrumental in benefitting them—of course benefitting at the same time themselves. The "moral" of the Evesham meeting is this—that those who figured thereat are blind enough not to consult their own interests, and too bigotted to allow other parties to help them. They are of the class who, because they cannot attain all they could desire, *therefore* refuse what is within their reach. They wish to have a main line of railway carried through their precincts, but, until they can persuade capitalists to look upon Evesham and its resources in a very different light than at present, we fear they must rest satisfied with a subsidiary railway, or none at all. And why should they not be content with a branch line? Certainly the public spirit of the good folks of Evesham holds out but little encouragement to the undertaking of any extensive scheme for their peculiar accommodation. They may succeed—we hope and believe they will not—in strangling the present project in its birth, but how much nearer will they thereby be brought towards the realisation of their wishes? They may disgust and drive away from the project parties who, with proper patronage, might confer a lasting benefit on the neighbourhood in the establishment of this branch line, but their main project—the railway *via* Evesham to the Welsh coast—will be as far off as ever: nay, this very apathy in securing present benefit will tell against them in more ways than one on future occasions. We hope the inhabitants of Evesham are not "led by the nose" in this matter. There are strong symptoms of personal pique in the getting up of the present opposition.

Meantime it is gratifying to know, as well from information derived from private sources as from the proceedings borrowed from a provincial contemporary, that the project is meeting with a fair degree of support, the shares having already been subscribed for to some extent. We are satisfied, from inquiries which we have made it our business to institute, that the speculation offers a very good prospect of pecuniary success, *provided the estimates of construction are not materially exceeded.* It is for the parties upon whom the preparation of these estimates has devolved to see that nothing has been omitted—nothing slurred over—no attempts made *à la Rastrick*, to "lead" (dupe, some people would call it,) shareholders into the scheme. They may rest assured that should *their* estimates prove as faliacious as those of the profession generally, a heavy reckoning awaits them. And this consideration we would impress upon the minds, not only of the Engineers and other parties connected with the Evesham and Eckington junction, but of those to whom the carrying out of the Yarmouth and Norwich, the Warwick and Leamington, and other nascent schemes, may happen to be entrusted.

On the occasion of a visit the other day to witness an exhibition of the Atmospheric apparatus on Wormwood Scrubbs, we were forcibly struck with the deplorable condition to which the property of the West London Railway Company has been reduced. Into the causes of the present position of the undertaking we do not at this moment desire too curiously to inquire, our object being rather to stimulate the existing proprietors to some step which shall *give a chance* of retrieving their past losses.

We have said before, and we cannot but repeat, that the scheme was most injudiciously planned at the outset, and as an additional misfortune, we fear that the gradients were laid out more with a view to professional *eclat* than to the pecuniary interests of the subscribers. It is useless, however, *now* to dwell upon these points. The money of the original proprietors has been expended, and the line remains (as we believe Mr. Duncan the able and intelligent Solicitor of the Company not long since characterised it) the "laughing stock" of all who see it.

Might not some plan be devised to induce the public to take up the scheme? We say the *public*, for we have very small hopes of anything being done by the proprietors. They are too much disappointed—and good reason they have had to be so—with the course hitherto adopted by the Management, to leave any chance of success with *them*. But we are inclined to think that a well-digested plan for rendering the property available would at this moment meet with due consideration. Of course the original holders would not object to any scheme which gave them the reversion, however remote, of any benefit from their investments. As matters now stand, the whole of the property will speedily revert to the owners of the adjoining lands, and nothing will remain for the proprietors but the odium of having been connected with a Company who not merely failed in their object, but who left the demands of their creditors unsatisfied.

We grant that much of the money that has already been expended has been expended very injudiciously; but surely there is value for one-half, and something like 50,000*l.* is a very fair premium for speculation. We have no doubt whatever that were the concern to start *de novo* from its present position, it would answer exceedingly well, the original holders of course waiving for a time all their rights—the more especially as it seems that an extension to Knightsbridge could easily be secured.

One thing, however, is indispensably necessary in all future proceedings. *The existing Management must be wholly and at once got rid of.* Nothing less will suffice to give the scheme the least chance of success. Estimable as some of the present Directors are, not only in their private but in their official capacities, the whole concern has become so tainted, that nothing short of a thorough "clearing out" will do. The great incubus on the undertaking has always been its Board of Direction. Less promising schemes, better managed, have been carried out—with what profit to the proprietors we do not presume to say. We strongly urge this matter upon the attention of influential capitalists. Upon the money *now* to be advanced—some 25,000*l.* or 30,000*l.*—we are convinced an ample return would be secured, else were the projectors and Parliament very wide of the mark; nay, it is all but certain that were the line completed, one or other of the great Companies would find it to be to their interest to take it up.

The Railways Regulation Bill is, as we stated last week, to be further considered, and we hope its progress very much advanced, to-day. The proposed motion of Lord Robert Grosvenor in Committee has been considerably extended. It now runs thus:—

"And be it enacted, that when two or more Railway Companies whose railways have a common terminus, or a portion of the same line of rails in common, or which form separate portions of one continued line of railway communication, shall not be able to agree upon arrangements for conducting their joint traffic with convenience to the public, so far as the same relates to the booking of passengers, the running of carriages, or the removal of luggage and passengers, it shall be lawful for the Lords of the said Committee, upon the application of any of the parties, to take cognizance of the questions in dispute; and if they shall find that any one of the said Companies has granted to any other of the said Companies any accommodation in regard to the booking of passengers, the running of carriages, or the removal of luggage and passengers, and has refused to grant the same accommodation on the same terms, as nearly as circumstances will permit, to any other such Company, it shall be lawful for the Lords of the said Committee to order the same to be granted to the Company complaining of such refusal, and to order and determine whether the whole or what proportion of the expenses attending on such arrangements shall be borne by either of the parties respectively; and if any Railway Company shall refuse or wilfully neglect to obey any such order made upon or against such Company by

Digitized by Google

the Lords of the said Committee, pursuant to this provision, such Company shall forfeit to her Majesty the sum of 20*l.* per day for every day during which such refusal or neglect shall continue; and every such penalty may be recovered in any of her Majesty's Courts of Record."

WE were quite aware that advantage would be taken by the *soi-disant* Saints of the late lamentable accident on the Versailles Railway, occurring as it did on a Sunday, to forward their peculiar views, but we confess we were *not* prepared for anything so glaringly bigotted as a printed handbill which has been forwarded to us from Newcastle, and which we publish elsewhere, discloses.

To reprint in full this admirable specimen of Agnewism is best to counteract the object with which it is professedly issued. The subject is much too solemn for banter, else is there ample scope for it in this northern anathema. To the agitators, individually, we would earnestly recommend the words of the poet—

"Let not this weak and erring hand
Presume THY bolts to throw,
Nor deal damnation round the land,
On each I judge Thy foe!"

THE alterations and additions at the Euston Station of the London and Birmingham Railway alluded to at the last general meeting have been commenced. The new arrangements will, we understand, combine great accommodation with a neatness and elegance of design seldom equalled, every regard being likewise had to economy of construction.

—o—

THE exhibition of the Atmospheric apparatus at Wormwood Scrubs has become quite popular. On Monday there was a further trial, and among other gentlemen present we observed the following:—Earl Fortescue; Earl of Sheffield; Hon. Captain Howard; Hon. John Fortescue; Sir Isambard Brunel; Count Torano and suite; Prof. Braschmann (of Moscow); Major General Pasley, Inspector-General of Railways; Captain Romilly; Rev. John Barlow; Prof. Mosley; Messrs. Babbage, F.R.S.; Dollond, F.R.S.; Galloway, F.R.S.; Bryan Donkin, C.E.; Mylne, C.E.; C. Vignoles, C.E.; Jerdan; R. Hutton, &c.

—o—

HER Majesty made her first railway trip on Monday last on the Great Western Railway, and we have no doubt will in future patronise the line as extensively as does her royal consort. The Queen Dowager, it is well known, is a frequent traveller by the London and Birmingham Railway, and has more than once testified her extreme satisfaction with the arrangements of the Company. On Wednesday last her Majesty Queen Adelaide went down by the South-Western Railway for the first time, *en route* for the Isle of Wight.

—o—

IT will be seen from a statement in another page that Sir Robert Peel has made an excellent beginning in loans to Irish Railway Companies, by complying with a request of the Dublin and Drogheda Company. It is quite absurd to hope that anything like a general system of railway communication can thus be carried out in Ireland, but it is better than nothing.

—o—

IN the House of Commons on Thursday, on the motion on Mr. Peers Williams, a copy was ordered "of the correspondence between the Lords of her Majesty's Treasury and the Lords Commissioners of the Admiralty, referred to in a letter dated Admiralty, the 2nd day of December, 1839, signed J. Barrow, and directed to Rear Admiral Sir James Alexander Gordon, K.C.B., &c. &c. &c., contained in a return to an Address of the House of Commons, dated the 7th day of August, 1840."

—o—

IT will be seen from a notice under the head of Railway Adjudications, that the case of Lord Howden against the original promoters of the York and North Midland Railway, has at length been finally settled—the House of Lords having confirmed the decision of the lower Courts.

—o—

THE Great Western Railway receipts are this week the largest of any, amounting to upwards of 17,170*l.* The Ascot Races, of course, caused the augmentation. The London and Birmingham, and other northern lines, are taking less money than at the corresponding period of last year, the dissolution of Parliament having *then* swelled the receipts.

RAILWAY OFFENCES AND OFFENDERS.

LAST week, at Huddersfield Guildhall, Thomas Ragg was charged by Mark Gledhill, one of the policemen on the Manchester and Leeds Railway, with walking on that line in Bradley Wood, on the previous Saturday evening. The defendant did not deny the fact, but said he lived at Deighton, and was a stranger; seeing the policeman, he went to him to inquire his road, and did not walk above six yards on the line. The officer did not press for the full penalty, as the Company only wanted to let the public know that they had no right there at all. The defendant was convicted in the mitigated penalty of 5s. and expenses, 9s.

AT the Moat Hall, Colchester, on Monday last, a complaint was made to the Bench by a number of labourers on the Eastern Counties' Railway, that Anthony Sedgwick, a ganger, had absconded with 48*l.* belonging to the labourers he had employed, and who were consequently left destitute. It was stated that the defaulter was engaged by Mr. Faviell, and hired about 40 men on his own account, whom he engaged to pay fortnightly; and on Saturday he received the above sum for that purpose, but with which he decamped. The Mayor told the labourers he was very sorry the Court had not the power to assist them; for, as their contract was not with Mr. Faviell, that gentleman was not bound to appear to a summons.

Last week William Matthews and James Knight, sons of respectable farmers, were taken before the county magistrates, for trespassing on the Great Western Railway, near Chippenham, and fined 10s. each and costs.

PROCEEDINGS IN THE HOUSE OF COMMONS ON RAILWAYS.

BELFAST AND CAVE-HILL RAILWAY (ROAD AND SHIPPING PLACE).

June 13.—Bill reported; Report to lie on the table.

DUNDEE AND ARBROATH RAILWAY

June 10.—Message from the Lords, that they have agreed to the Bill with amendments.

June 13.—Lords' amendments agreed to.

GREAT NORTH OF ENGLAND RAILWAY.

June 14.—Message from the Lords, that they have agreed to the Bill with amendments.

June 15.—Lords' amendments agreed to.

LONDON AND GREENWICH RAILWAY (No. 3).

June 16.—(Re-committed) Bill reported; clause added; Bill to be ingrossed.

YARMOUTH AND NORWICH RAILWAY.

June 10.—Message from the Lords, that they have agreed to the Bill with amendments.

June 13.—Lords' amendments agreed to.

DUBLIN AND DROGHEDA RAILWAY.

THE London correspondent of the *Dublin Mercantile Advertiser* says:—

"Yesterday the following gentlemen attended at the residence of Sir Robert Peel, as a deputation upon the part of the Dublin and Drogheda Railway Company, to seek from Government a loan towards the completion of the works now in so advanced a state:—Lord Talbot de Malahide, Mr. James Hans Hamilton, M.P., and Captain Taylor, M.P., county of Dublin; Mr. Grogan, M.P., city of Dublin; Sir William Somerville, Bart., M.P., Drogheda; Mr. Mark Philips, M.P., Manchester; Messrs. George Alexander Hamilton, George Macartney, P. Eckersley, and John Macniell.

"When the deputation was ushered into the presence of Sir Robert Peel there were in attendance with the Right Hon. Baronet, the Chancellor of the Exchequer, Lord Eliot, as Chief Secretary for Ireland, and the official persons from the Exchequer Loan Office.

"On Mr. George Alexander Hamilton reading the application, which sought for 150,000*l.*, to be advanced at the rate of 15,000*l.* a quarter, or 60,000*l.* in 12 months during two years and a half,

"Sir Robert Peel expressed the pleasure it gave him at once and unhesitatingly to accede to the application, as he had been fully satisfied, by his inquiries, of the respectability of the parties concerned, and of the success of the undertaking in which they were engaged. He (Sir Robert Peel) felt particularly happy in at once complying, and he wished it to be regarded as an evidence of the sincerity with which he had, on a former occasion, expressed his opinion as to the mode of introducing railways into Ireland. He had, he repeated, no doubt of the success of the enterprise, and from that success he would venture to anticipate the extension of the system they were introducing, and which he would be most desirous to promote, namely, private enterprise, combined with, and aided by, public loans.

"The deputation shortly after withdrew, greatly delighted with the result of their mission."

It is impossible [says the Editor of the paper above-named] to over-estimate the value and importance of the principle which Sir Robert Peel has put into practical operation in this instance. As regards the Dublin and Drogheda Railway, the large advance will secure the more speedy completion of the line, in which, as our readers are aware, such great progress has already been made. But, in a national point of view, the liberal principle of advances, now adopted by the Government, will give every fair encouragement to legitimate undertakings.

In conclusion, we may congratulate the Irish people upon the complete success of the application made by the deputation of the Dublin and Drogheda Railway Company.

[Since the above facts became known in Dublin, the Drogheda Railway shares have sprung up from 13*l.* to 18*l.*, and are in a fair demand on the Stock Exchange.]

GREAT WESTERN RAILWAY.—The travellers on this line will be glad to learn that immense numbers of men are now employed on it from Bristol to near Paddington, in many instances appearing at every mile or two, investigating, correcting, and repairing even the smallest sinkings or irregularities that may have resulted from the newness of some of the works, earth, or embankments, or from the late severe and very trying winter. And they are particularly attending to projecting stones in cuttings—removing those, for instance, between Bristol and Bath hitherto *propped* up, and entirely removing some partial landslips, cutting drains for landsprings, &c.; all useful and commendable works, and proper to give the completest confidence to travellers.—*Berkshire Chronicle.*

Digitized by Google

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Can any of your readers explain to me why it is that the traffic on this line has fallen this year so far short of the Chairman (Mr. Houldsworth's) anticipations? He counted upon an average weekly receipt, during 1842, of 5,000*l.* Hitherto the average is under 4,200*l.* Some time ago, when loud complaints were being made of the enormous excess of cost of construction, the shareholders were assured that the traffic too would be enormous. Can it be that our Directors are equally at fault in their calculations of traffic as they were in regard to cost of construction?

A great deal has been said respecting the cost of the Brighton line, but were not the estimates furnished the shareholders in the Manchester and Leeds line nearly as much exceeded? If so, pray who is to blame; and cannot you oblige us by sifting this matter?

I am, Sir, yours, &c.,

A DISAPPOINTED SHAREHOLDER.

June 16, 1842.

MR. ADAMS'S BOW-SPRINGS, &c.

WE ought perhaps to apologise to our readers for devoting further space to Mr. Haddan's letters, but as Mr. H. promises that the present communication shall his last on this topic, we make room for it, giving his *italics* and all.

To the Editor of the Railway Times.

SIR,—In reply to your witty remarks on my letters and *myself*, I beg to state, distinctly and unequivocally, that *I have never sold any goods whatever to any storekeeper of any railway, either directly or indirectly*, and that *I have never received one sixpence commission for any stores sold by any other person to the Brighton* (to which railway I imagine your remarks allude) *or any other railway*; and that *I have never given one farthing* (beyond a sixpence or shilling for civility and attention) *for information of any sort whatever*. As to my private history, you have been misinformed.

You have made a small blunder in your concluding paragraph, which but for the "*sic* in MS." I should not have noticed. The sentence should be, "keep *his* carping spirit in check;" you have it, "*is* carping spirit."

Your printer, or my stationer, has made a mistake in my last letter which quite changed my meaning. It is in the paragraph which commences with "I am not a commission agent of Mr. Wright." The sentence should be, "unless the selling to Mr. *Wright* wheels, &c.," instead of "unless the selling Mr. *Wright's* wheels, &c."*

The letter of Mr. W. B. Adams needs no reply; it is a mere repetition of the merits of his bow-springs, which your readers must by this time know by heart. The reference to me as an *Engineer* and as a *Mechanic* is very flattering.

The letter of Mr. W. A. Adams abounds in inaccuracies, which I cannot avoid noticing. I deny most distinctly ever having "alleged that I made it a rule to hook myself on to rising or successful people;" this is mere imagination on the part of Mr. Adams; even *if true*, Mr. W. A. Adams should be silent on his own merits—as a *puff*, however, it is pretty well. I was never enthusiastic in favour of bow-springs, I always entertained an opinion that *they would not do* for four-wheeled carriages. To having once entertained a good opinion of the buffing-springs I plead guilty. This was *before* any trial had been made; more than one breakage and a trial of them against the old fashioned buffing-springs have proved to me that I was wrong in forming this hasty opinion. It was not the *mere tender* by Mr. S. Adams for a waggon, but the way in which he became possessed of the information to enable him to do so, that I complained of. I never threatened to "extinguish bow-springs," or any nonsense of the sort. *I did not threaten* Messrs. Lloyds, Foster, and Co., that "they should make no more polygon spoke wheels if they presumed to manufacture wooden wheels for Adams." What I did state was, *that I thought it unfair for Lloyds to make Adams's wheels* CHEAPER *than mine, and that if they continued to do so it would* COMPEL *me to look out for a cheaper maker*. This was in consequence of Mr. W. A. Adams declaring, "that he was determined to make railway carriages for less than Mr. Wright, and to sell his wheels cheaper than me."

Mr. W. A. Adams states, that he has been four years engaged in the manufacture of bow-spring carriages, both for common roads and railways. This is a *little mistake;* he had not made a single railway carriage four months since. He has lately managed to pick up a little information in Mr. Wright's yard, and now dubs himself a railway carriage builder of "four years standing."

Parties contemplating a trial of the bow-springs have only to wait until the 12th of July, when some are advertised to be sold by auction at Camden Town, by Mr. Birkett, for the London and Birmingham Company. The advertisement was in your paper of the 11th inst.

As this is the last letter with which I shall trouble you and your readers, I trust you will find a little corner for its insertion, and in so doing oblige

Your most obedient servant,

J. C. HADDAN.

29, Liverpool-street, King's Cross,
June 15, 1842.

* The "mistake" was *not* the printer's.—ED. R. T.

MR. ADAMS'S BOW-SPRINGS, &c.

To the Editor of the Railway Times.

SIR,—In last week's number, in giving the return of broken bow-springs, I omitted to mention one on a foreign line, but I have not yet had particulars further than a request to ship duplicates, in case of fracture.

Mr. Haddan seems by his second communication to your pages to be a very incautious commission agent, betraying so very publicly the secrets of his employers. With regard to his own wheels, I suppose that of course he received patent right on them, but I now for the first time learn that he has received commission on the wooden wheels and iron work. If he has lead the parties to believe that he had any influence in the giving out of the orders he has greatly deceived them.

As regards the straps: Mr. Haddan called here in company with the strap maker, and, after solicitation, obtained an order for straps to the amount of 12*l.* 16s., on which by his own account he will realise 6s. 4½d.

If on inquiry I find his assertions in other respects to be correct, it will be deducted from the manufacturers' accounts, leaving it to them to make Mr. Haddan refund.

I remain, Sir, yours, respectfully,

W. A. ADAMS.

159, Drury-lane, June 14, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—The shares of this line having lately attracted much attention, and undergone serious fluctuation, I am induced to trouble you with a few remarks on the subject.

The line, 46 miles in length, is opened throughout; but from the inconvenient terminus at Edinburgh, it will doubtless, as soon as opportunity offers, be extended 1½ miles into the heart of the town.

The capital of the Company consists of—

18,000 whole shares, of 50*l.* each	£900,000
18,000 quarter shares, of 12*l.* 10s. each	225,000
And loans amounting to	375,000
Total	£1,500,000

which sum the Directors say they think will suffice to finish off the 46 miles.

The fares being exceedingly moderate—only 8s. first class—it may be assumed that the charges on this line, exclusive of interest on loans, will amount to at least 50 per cent. of the entire traffic returns. In this view of the subject, the gross annual returns, in order to pay 5 per cent. on the capital of 1,500,000*l.*, would require to be 150,000*l.*, or a weekly average, summer and winter, of 2,885*l.*

The receipts of the last eight weeks have scarcely varied, but since the first week in May have rather tended downwards, from about 2,200*l.* to about 2,000*l.*—the last return. In a new line this falling off is singular, and the more so when the splendour of the recent weather is considered.

One reason of the line having so immediately developed itself may be found in its first opening having been for the entire length; still it was only a natural expectation that the traffic would have improved under the twofold influence of time and the advance of the season. However, it would appear that the intercourse between the two towns is small, and that the favourable symptoms at the outset arose from the mere curiosity of the Edinburgh people to go along a railway, there being no other railway in that quarter—unless the Dalkeith, on which the carriages are drawn by a horse.

The Edinburgh and Glasgow folks hold little more than a fourth of the shares, the other three-fourths being held in Lancashire and London. The Scotch do not entertain a favourable opinion of the line at *par:* and although they were thought to run it down, from the circumstance of having allowed their southern neighbours to take so large a proportion of the shares, events seem to justify the opinion they gave, in which they may have been guided by the sad fate of the "Edinburgh and Glasgow Union Canal," the 50*l.* shares of which are worth only 16*l.*

I am, Sir, your obedient servant,

SCOTUS.

June 16, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—To me it is at all times interesting to read (which I do regularly) your valuable journal, and I am frequently amused to notice how parties disagree with respect to *probable results*.

Now, with regard to the Brighton line and its *probabilities*, your correspondent "X." thinks WE shall get a fair interest, "if a proper watch be for the future kept." Now, to him the returns may appear, and may be, very fair; but I very much doubt if the great body of shareholders will think so. However, from what the fair interest this half-year is to come we may now assume, without much room for error—but the future time alone can show.

Another correspondent, "A Brighton Shareholder *but no Jobber*," is surprised that the "Jobbers" have so well succeeded in raising and depressing these shares, and thinks the shares ought to *rise* instead of *fall*, and that very materially, and at once too; but why should they?

For my part, Mr. Editor, I can see no reason in referring to, or indeed that we have much to do with, the Parliamentary estimate, now that the line itself has been in full operation nearly 12 months, and the traffic in a great measure developed itself, giving us *bona fide* grounds to argue as to the next, or rather first, dividend. Suppose we take the

Receipts from the commencement of this year to the 4th June (which average about 2,245*l.* per week), they amount to	£89,406
And allow the next 3 weeks and 5 days to receive (*which is a moral impossibility*)	15,000
Which gives a total of	£64,406
Deduct working expenses at 33 per cent., (though I suspect they will be more)	21,252
Leaving a balance of	£43,154

to be divided amongst (according to "Gulielmus's" mode of reckoning) 48,500 shares—in short, equal to about 1*l.* 2s. 6d. per share, without anything in the way of reserve fund.

With this prospect, I cannot think there is much room for a speedy rise, to say nothing of additional capital and *sealed-up* mysteries.

I am, Sir, yours, &c.,

CIVIS.

Liverpool, June 15, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Were you now to set about calling the attention of the shareholders of the Brighton Railway to the fact of their interests being sacrificed by the Directors running no cheap trains, they would have cause to thank you in a few months hence.

Have the Directors an interest in keeping Brighton wholly aristocratic? Have they property which would suffer in value by an influx of 20,000, or perhaps six times that number, per week of non-aristocratic cockneys?

I am surprised that no notice should have been taken of the insult to the inhabitants of London and Brighton, in the Directors offering them the facility of being conveyed behind goods' trucks, and landed at their destination at 2 o'clock, A.M.! Really it would appear as if this were offered for the express purpose of excluding the working classes from Brighton, and affording the Directors an excuse for doing so—or an opportunity of pointing to the train and exclaiming, "See, we give facilities of conveyance at cheap rates, and none avail themselves of them!"

It is high time the absurd management of this line were put an end to. Let there be at least two trains each way per day, consisting of second and third-class carriages only, at a charge of, say, 7s. 6d. and 4s., or if going and returning same day, 13s. and 9s., and let the present first-class trains still continue to run, and I have no doubt the weekly receipts will be trebled.

I am, Sir, yours, respectfully,
A SHAREHOLDER IN THE BRIGHTON RAILWAY.

Glasgow, June 14, 1842.

SOUTH-EASTERN RAILWAY—SHORT CUT TO BOULOGNE *via* RYE.

To the Editor of the Railway Times.

SIR,—I observed last week a paragraph in a Sussex paper stating, that the Mayor of Rye had received communications from certain parties at Boulogne, saying that if the people at Rye would provide that there should be sufficient conveyances to take passengers from Rye to the railway, they at Boulogne could provide that there should be steam-packets between Boulogne and Rye. Now, of the advantages of this line of communication few persons are aware, and I would wish to bring it particularly under the notice of the Directors of the South-Eastern Railway, in order that they may secure *a much greater* traffic upon their line *this summer* than they will be able to get by the mere internal traffic of the country. First, the trains from London go down to Tunbridge in two hours; it is scarcely *thirty-one* miles from the station at Tunbridge to Rye *by the shortest road*, and the journey might *now* be very easily performed from London to Rye in *five hours and a half*; when the line is open to Staplehurst that would save more than another half hour, and when they get it open to Smarden the journey to Rye would be accomplished in four hours and a half from London. The passage from Rye to Boulogne is just five miles longer than it is from Dover, but as the tide runs so strong against a packet coming from Dover, and rather in favour of one coming from Rye, the passage can be made in a shorter time. It is true that the tide runs very strong in their favour in going *from* Boulogne *to* Dover, but the passage from Boulogne to Rye would not upon an average take so long a time as it does *from* Dover *to* Boulogne.

I know it is the fashion with those who are interested in other communications to run down Rye Harbour, but the harbour is good enough for all ordinary purposes. The mail packets from Ostend have come into it in the last two winters, when they dare not attempt to go near Dover. A packet of ordinary speed with double engines (not single engines, like the ones that Mr. Frewin had about four years ago) would always save their tide from Boulogne, and get *quite up to the town*, except in very low tides, which happen for about three or four days in a month, when the passengers could land at the lower end of the harbour (as in the lowest tides there is always plenty of water for more than a quarter of a mile up the harbour), and be brought up to the town in coaches and flys, &c.

There is another advantage which Rye has over Dover, and that is, that there are *no harbour dues* upon packets *not* taking goods; but at Dover they pay 3d. a ton *in*, and ditto *out*, which upon a packet of 80 tons comes to more than 300*l.* a-year. The most important thing for the Directors of the South-Eastern to arrange is, that they should have a train ready to leave Tunbridge as soon as the coaches come up from Rye with passengers from the packet, even if it is at ten o'clock at night, so that they may get up to London without loss of time. They would always know at what time the packet would be in, by having time-tables made out every month.

I am, Sir, your obedient servant,
EXAMINER.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Notwithstanding the seemingly too flattering statement on the merits of the South-Eastern Railway, given to your readers in your last number, I think it may with justice be made still more flattering.

Is there not a mistake, for instance, in converting the borrowed money into shares, when, however well the railway pays, only 5 per cent. becomes a charge?

We shall suppose that the Parliamentary estimated traffic is realised,

Say	£350,000
Less charges, 33 per cent.	116,000
Total	£234,000
Interest on borrowed money at 5 per cent. on 700,000*l.* in round numbers	34,000
Leaving	£200,000

or 3*l.* 11s. 5d. per share, which is upwards of 14 per cent. on its present value; for there are, I believe, notwithstanding the statement of your correspondent, not more than 56,000 shares.

The decline in price, I am aware, is temporary. Those who have bought for investment will be patient under it. It is the rash and reckless speculator who has done the harm, by not being able to pay.

The revised estimate of traffic shows 382,000*l.* We can afford, if necessary (which I think it will not be) a reduction of 52,000*l.* per week on this, or even double, and still enjoy ample remuneration for our money—and the time, too, near at hand.

Had I been able to attend the meeting I would have asked when the goods' traffic was likely to come upon the line, and even to know, from our well-informed Chairman, what was likely to be its amount. I am much mistaken if, in the end, this traffic alone will not pay a dividend of 2½, or more, per cent. on the present value of the shares.

I am not accustomed to this kind of correspondence; and as I write more for the sake of receiving than of giving information, I hope you will have the goodness to point out where I am wrong.

I am, Sir, yours, &c.,
A SHAREHOLDER FROM THE COMMENCEMENT.

June 7, 1842.

CROYDON RAILWAY AND GRANGE-ROAD APPROACH BILL.

To the Editor of the Railway Times.

SIR,—A few facts came out at the late meeting of the South-Eastern Company about the Grange-road approach scheme, which, I think, are vitally important to the Croydon shareholders. It appears from that Report it was always intended this so-called *road* should prove to be nothing less than a *railway*, which it was stated at the meeting would cost, with stations, about 280,000*l.*; and, if we allow for the usual excess of cost over estimates, which appears now to be quite a matter of course, we may fairly put down the cost at not less than 300,000*l.* It was also stated, that the Croydon Board had already promised to pay one-half of this sum. Now, as a shareholder in the latter Company, I am desirous of knowing what advantages are to arise from paying this enormous sum of money. It cannot be said, that it will prevent the South-Eastern or Brighton Companies making a branch line from Croydon to the Elephant and Castle (should this *millein* scheme ever be attempted); for it was distinctly stated by the Chairman of the former Company, that when the proper time arrived, this could be done, and "the Grange-road would be abandoned." Under these circumstances, I would ask, what will this branch railway, which will cost 150,000*l.*, be worth to the Croydon Company? Why, not a bunch of dog's meat! Other disadvantages attend this project. The Croydon Company are to lose 1½d. per passenger upon those who go by the Grange-road (see Chairman's speech, South-Eastern Railway Company), which is one-eighth of their toll; and as the Brighton Company are expected to avail themselves of the approach, there will, of course, be a further loss of one-eighth portion of the toll paid by them. If anything more could add to the absurdity of the scheme, it is the fact that there are already seven stations on this little line, and the addition of two more (there must, of course, be some sort of station at the junction at Corbet's-lane) will make *nine* stations for a railway only 10½ miles in length!! I must say, too, that the manner in which this project has been brought before the Croydon proprietors does not maintain the high character of the Chairman of this Company. It was stated at the last half-yearly meeting, that a Bill was before Parliament to obtain a road approach to the railway at Corbet's-lane for the convenience of those Companies using the Croydon line; the portion which the latter Company was to pay, was stated to be 15,000*l.* Not one word was then said about a railway, although it it evident it had been decided upon, and the Croydon Board had promised the South-Eastern Company to pay half the expense of making it. A special meeting is some little time afterwards called to obtain the consent (required by Parliament) of the proprietors to the Bill; it was then for the first time stated, that this road *might* be made a railway, but nothing explicit could be obtained. A general impression appeared to be, that should a railway be made instead of a road, the expenses would be comparatively trifling; not a syllable was said about 150,000*l.* being required to make the same. Now, in all this there appears too much of what is called "*managing a proprietary.*" We have seen too much of this of late years, and I had hoped our Board at least would have been free from the imputation. The attempt, however, has failed, and Parliament has, by rejecting the Bill by a large majority, stamped with ignominy this not very respectable scheme. I would ask, why did not the Croydon Board confine their application for a road only? If they had, the Bill would have passed, and good faith would have been kept with all parties. Let me briefly advert to the past history of the Croydon Railway. This line was by its original projectors expected to cost 150,000*l.*, but after the most lavish expenditure, and several fresh creations of capital, the cost has nearly reached 700,000*l.* (I very readily allow this has not occurred under the present management); and now, after a period of seven years has elapsed since the commencement of the undertaking, and numerous disappointments, it was hoped the time had arrived when the proprietors might expect some return for their money. That hope is be extinguished by a new scheme, which will require a *further* call upon them of 150,000*l.*, and will assuredly, if carried into execution, destroy all chance of a profitable return for the money expended. In addition to this, the shareholders have before them the fact, that they will shortly be required to make good the expenses attending the slip at New Cross.

I have heartily concurred in the policy that has been hitherto pursued by the Croydon Board with the Companies connected with them, and my con-

Digitized by Google

fidence has only been lessened by the present case coming out in all its bearings.

I am, Sir, yours, &c.

A CROYDON SHAREHOLDER.

June 8, 1842.

CHELTENHAM AND GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent "B.," who describes this "good thing to speculators," which, as he states, "has hitherto disappointed or disgusted investors and speculators," should in charity and truth have given some reasonable data for investments in the railway.

How stand the facts? The original number of shares was 7,500, all subscribed for; and of this number 4,500 have been forfeited and 2,000 have been re-issued—making the present number of shares, good and bad, 5,000, upon which 80 per cent. has been called, and the remaining 20 per cent. must be paid within nine months, to meet the over due bills of the Company. The return for all this outlay, during the remaining 5½ years' lease to the Great Western, is 17,000*l.* income, less, what may be required for Directors, Solicitors, Engineers, Secretary's and office expenses, without contemplating any further failure of the Swindon embankment, &c. &c.

Your "B." correspondent talks of "the Bristol and Gloucester Company having passed their Bill to raise funds for the purchase of one portion." If he means from Stonehouse to Gloucester, I can assure him the Cheltenham have nothing to sell but their Act of Parliament. He also observes, that "the Great Western are in treaty for the other unfinished portion," by which, I suppose, is meant the Sapperton tunnel and the Stroud Valley. It is true the Cheltenham have expended about 15,000*l.* upon the tunnel, but I think it unlikely the Great Western will be found in a sappy mood to repay this outlay. In what way, therefore, are speculators to profit by investing in the Cheltenham? During the next 5½ years, 2 or 2½ per cent. will probably be paid upon the 100*l.* shares *paid up*; after which, should the Great Western renew their lease, the same income, with deductions, may be anticipated, but nothing beyond.

If "B." is informed of the machinery of this railway, he must be aware that the time has arrived for the Secretary to issue his missives to the reluctant shareholders who have not paid the back 7½ per cent. instalment, and who, to avoid legal proceedings, are in many cases obliged to sell to satisfy the new call. I hope this is not "B.'s" position; but whether it is or not, neither the railway public nor the shareholders of the Cheltenham are likely to be influenced by his recommendation "to purchase."

I am, Sir, yours, &c.,

AN ORIGINAL SUBSCRIBER.

London, June 13, 1842.

CHELTENHAM AND GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I agree with your correspondent "B.," that the new Act does very much alter for the better the prospects of the proprietors of this unfortunate railway; who, previous to its being passed, had no hope of more than 2½ or 3 per cent. for their money. I mean the *original* shareholders. Purchasers at the late prices, which if I am not mistaken have been upwards of 60 and are at present quoted at 50 discount, get a good return of from 9 to 10 per cent. per annum from the finished portion. The dividend which is payable on and after the 24th instant is upwards of 12 per cent. per annum on the late price of 20*l.* per share; and this, resulting from a lease of which six years are unexpired, forms a very fair security for purchasers, were there no other temptations to buy. But what I reckon the greatest inducement, in accordance with your correspondent "B.," is the favourable alteration in prices which will result from the abandonment of the unfinished portions of this railway to other parties. A power of redemption will be required; whereby, if needs be and it is worth while, the finished railway can be bought back on equitable terms within a distant period. The present outlay and liabilities will be repaid in some way or other to the shareholders, and compensation to the amount of 80*l.* per share will thus come into the hands of those who may have purchased at 30*l.*

The tactics of the proprietors therefore at present is to hold all their shares firm, if possible, until the special meeting takes place and the negociations are concluded. Original shareholders by buying as many as they can at the present prices will thus *average* their stake and come in too for a "bit of fat."

I am, Sir, yours, &c.,

VERB. SAP.

June 14, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—Allow me to present you with the following rare specimen of Management:—

June 13th, 4.45 p.m.—The *Star* packet called at the Brunswick Wharf on her way to Gravesend, when her ropes were thrown into the water, and the passengers were obliged to scramble over the side of the vessel.

June 14th.—Same time; ditto, ditto, with a free use of the vulgar tongue.

June 15th.—I was informed that the packet would call in; for some unknown reason she did not, and I was detained three-quarters of an hour.

June 16th, 9 a.m.—Sixteen passengers landed in boats at the risk of being swamped, because the *Gem* is not allowed to call at the wharf; but I had the satisfaction of hearing that a boat is to be *allowed* to call for passengers between 4½ and 5 p.m.

I remain, Sir, your obedient servant,

F.

June 16, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg to offer a remark or two relative to the putting up by allotment a number of Northern and Eastern Railway shares.

It has long been known that the above-mentioned have been for disposal; that calls thereon, variable in amount, are in arrear; and that default of payment has compelled the Board to borrow on interest at the rates of 5 and 6 per cent.; that the railway is now so prosperous as to admit of liberal dividends; that moreover such dividends will shortly be enhanced by goods coming on the line, a material aid to the passenger traffic; that some time back the Board and other influential proprietors agreed, under their respective signatures, not to bring shares on the market *below par*—and yet, at the meeting of the 15th instant, the Chairman admitted he had recently sold, at 2 discount, of his holding 200 out of his 600 shares.

Now, to treat at this juncture for the sale of a large number of forfeited shares at a fixed price, *at* or *below* par, precludes the Company for ever from the re-imburtement of interest on arrear calls, whereas were the step deferred until the rate of dividend established the shares at a premium, the Company would redeem this serious deficiency of interest, as was very sensibly intimated by Mr. Masterman. The impolicy and injustice of this dispersion of shares now is so openly apparent, that I am surprised the proposition was countenanced at the meeting, and more particularly as the dividend *improperly* accrues to the *new holders, pari passu* with *the existing proprietary*, although the latter will have paid up long before the new proprietary will have made good their position. Truly, before adopting this unjust procedure, it behoves the gentlemen to whom our interests are confided, discreetly to protect the same to the best of their ability, and that they will re-consider the matter is the earnest wish of

A SHAREHOLDER.

June 16, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—It will be gratifying to many of your readers to hear of the steady improvement in the traffic returns of this well-conducted line.

I believe the following summary of gross returns may be relied upon, namely—

Nine months from the opening to Broxbourne, 12th September, 1840, to 13th June, 1841, 17,910*l.*; or, average per week, 459*l.* 4s. 7d., which average gave a dividend of 7s. 6d. per share.

Six months, 13th June to 12th September, 1841, 23,243*l.*; or, average per week, 894*l.*, gave a dividend of 15s. per share.

Six months, 27,702*l.*; or, average per week, 1,065*l.* 9s.

The improvement during three of the latter *six* months, namely, 13th March to 12th June, 1842, is so important, partly occasioned by the completion of the line to *Hockeril*, as to afford the hope of such an improved dividend for the half-year terminating 30th instant, and to indicate how *premature* was the step contemplated by the Directors at the special meeting of the proprietors on the 15th.

It is much to be hoped that the strong adverse feeling then manifested, will induce the Board to reconsider and postpone the suicidal measure of dispersing further shares, at least until the public is fairly conscious of what return the traffic is equal to in the shape of dividend.* It may shortly verge on, or exceed, 10 per cent. per annum, in which case, surely it would be policy to rest on borrowed capital, easily attainable at moderate interest on such satisfactory security.

I am, Sir, your obedient servant,

COMMON SENSE.

June 16, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—At the risk of being deemed obtuse in comprehension, I cannot refrain from commenting on a somewhat extraordinary admission from the Chairman of *the Northern and Eastern Railway, that "he had diminished his holding in that Company from* 600 *to* 400 *shares, at* 2 *discount!"*—a proof of simple-mindedness that spoke volumes as to *his estimate* of the propriety of the measure it was the object of the special meeting to move and carry. Unhappily the effect has sent them to four-fifths discount! I do hope this disastrous consequence of a device so imprudent will disabuse the minds of such gentlemen as at the meeting inadvertently acquiesced in a scheme woefully pernicious to the many for the benefit of a wealthy few; especially to such as may be compelled to realise on their shares long before the latter can recover from this uncalled-for pressure.

I am, Sir, respectfully yours,

FAIR PLAY.

June 16, 1842.

RAILWAY ADJUDICATIONS.

SIMPSON AND OTHERS *v.* LORD HOWDEN.

House of Lords, June 15.—This was a writ of error on a judgment of the Exchequer Chamber. In this case the plaintiffs in error had, with other persons, formed a Company for the making of a railway from the city of York to Altofts and Normanton, in the county of York. The defendant in error was the owner of certain lands lying along the line of the proposed railway, and he became one of the dissentients by whom the Bill was opposed. The Directors, desirous of getting rid of this opposition, entered into an agreement with Lord Howden, proposing to give him the sum of 5,000*l.* for the probable injury he might receive from the adoption of a substituted line, which substituted line was to be proposed to the legislature in a Bill of the following session, provided that Lord Howden would not oppose that which was then before Parliament. This agreement having been entered into, Lord Howden withdrew his opposition to the Bill, which was soon afterwards passed. The Directors

* The average gross returns for 13 weeks, March 13 to June 12, 1842, was 1,238*l.* per week!

Digitized by Google

did not ultimately adopt the line originally proposed in the Bill, nor the substituted line which had been described in their agreement with Lord Howden; and they, therefore, refused to pay him the money mentioned in the agreement. He brought his action on the agreement, and the Directors pleaded first, that they had not adopted the line in respect of which the money was to be paid to Lord Howden; and secondly, that the agreement in question had been made without the knowledge of Parliament, or of the other proprietors of lands through whose property the line of railway was to pass. Lord Howden demurred to these pleas, and the case was argued before the Court of Queen's Bench, where the action was brought, and the chief points raised were that the agreement was illegal, first, because no parties were at liberty to enter into such an agreement, the purpose of which was to affect the proceedings of the legislature by keeping the legislature ignorant of what was really intended to be done; and secondly, because Lord Howden was himself a member of the legislature, and such an agreement would affect the performance of his duty as such. The Court gave judgment on the first of these points in favour of the Directors, on the ground that the agreement was illegal, as it tended to keep the legislature ignorant of the real intentions of the parties, and was meant to be the means of procuring from the legislature a Bill for a line of railway, that was not intended to be used, but was to be set aside in the following session for a substituted line. On the second point the Court gave no opinion, merely observing that it was not necessary to decide that point, but that there did not appear to be any law or decision which prevented a Peer from protecting his own interest as any other individual might do. Lord Howden carried the case by writ of error to the Exchequer Chamber, where Lord Chief Justice Tindal delivered the judgment of the Court, which reversed the decision of the Court of Queen's Bench, on the ground that the pleas did not allege that at the time of making the agreement the parties intended to keep the legislature ignorant of its stipulations. The Directors then brought the present writ of error to this House, alleging that the judgment of the Court of Exchequer Chamber was erroneous.

The Solicitor-General, Mr. Pemberton, and Mr. Addison appeared for the plaintiffs in error, and Mr. Kelly and Mr. Bethell for the defendants in error.

The arguments were not concluded when the Court rose.

Thursday, 16th.—The House again assembled this morning, when Mr. Bethell was about to resume his argument, but was stopped by the Lord Chancellor, who pronounced the following judgment:—

"We have consulted the learned judges on this case, and they are unanimously of opinion that the judgment of the Court of Exchequer Chamber must be affirmed, with costs and interest," in which Lord Brougham and Lord Campbell concurred.

THE QUEEN *v.* THE SOUTH-WESTERN RAILWAY COMPANY.

Court of Queen's Bench, June 16.—Mr. M. D Hill moved for a rule to show cause why an inquisition, taken before the Coroner for South Hants, should not be set aside, on the ground of irregularity and insufficiency in the finding. The accident which occasioned the death was the falling in of a large quantity of chalk on the line of the railway, and which falling in was occasioned by continued wet weather. The jury had returned a verdict stating the manner in which the accident occurred, and the inquisition stated that the chalk was the property of the Directors of the South-Western Railway Company, or their assigns. This was an insufficient finding, as it did not state with certainty in whom the property in the chalk was vested. This was the more important as the 324 Geo. IV. directed the inquisition to be certified into the Exchequer, for the purpose of the process issuing for the recovery of a deodand if any should be declared by the jury. The deodand here had been fixed at 50*l.*, and on the uncertain finding as to the property above stated, the Crown would issue process for the recovery of the deodand. This finding was clearly irregular.—Rule granted.

EDINBUBGH AND GLASGOW RAILWAY.

This splendid road has now been open a quarter of a year, last Saturday being the termination of the first 13 weeks. The interest which the public feel in this great undertaking is only commensurate with the advantages which it is conferring on the east and west coasts of Scotland, and the beneficial influence which it is destined to exercise on the two great communities of Glasgow and Edinburgh. Its statistics, therefore, will always be a subject of interest. The first quarter is developing, in an extraordinary degree, one of the properties of railways—their power of creating traffic. On this line it will be difficult to estimate the extent of this power, or to define the period of its greatest activity. During the first quarter the Company had carried 132,024 passengers, consisting of 24,413 first class, 34,016 second class, 73,595 third class; the first class being 18½ per cent., the second class 25¾ per cent., and the third class 55¾ per cent. The money received from these passengers stand in the inverse ratio—the first class yielding 42½ per cent., the second class 33½ per cent., and the third class 23¾ per cent. This is an important feature in the character of its passenger traffic, and can only receive explanation by supposing the great proportion of the first and second classes being thorough passengers. Accordingly the average fare of each passenger of the different classes verifies this explanation: The first class averages 5s. 10d. each passenger, the second class 3s. 3d. each, and the third class 1s. 1d. The first week's passengers of the quarter were 5,561, the last week's passengers of the quarter were 13,147. The season of the year will partly account for this great increase; but the same reason may be alleged for an increased progression during the next quarter. The goods and cattle traffic department is gradually forming itself; but, notwithstanding its immaturity and the short time since it commenced, which was some time after the opening of the line, the revenue is already equal to a fourth of the passenger receipts.—*Glasgow Chronicle.*

A FEARFUL RIDE.

[From the *Ithaca, New York Journal.*]

The Ithaca and Oswego Railroad, as it comes into this village, descends in less than half a mile nearly 500 feet by means of two inclined planes. The cars on their arrival at the upper engine house are detached from the locomotive, and permitted to descend to the lower engine house under the control of brakes. From the lower engine house, which is at the top of the first inclined plane, the passengers are bought to this village by stage. This is done because of the great steepness of the lower inclined plane, it descending 450 feet in the distance of 1750, or nearly at an angle of 45 degrees to the horizon. No person of sane mind would venture his neck by going down this inclined plane, as, in case of the car becoming detached in descending, it would inevitably be dashed into atoms.

On Saturday last the car, containing eleven passengers, was detached as usual at the upper engine house, but it was found that the brakes did not operate, and that the car was hastening with constantly-accelerated rapidity towards the brink of the lower inclined plane. The forward brakeman leaped from the car for the purpose of throwing it off the track by means of a beam, but he stumbled and failed in his object. The other brakeman sat at his post like a hero, calling to the passengers to jump and save themselves. On went the car with dreadful rapidity, and one by one the passengers threw themselves out.

The Hon. Amasa Dana leaped from the car as it passed through the lower engine house, and there also the brakeman sprang for his life. One man alone was unable to escape before the car, which was already outstripping the wind, made the plunge down the lower plane. The whole length of this was traversed almost in an instant. About 100 feet from the bottom the car left the track, dashing to pieces the iron wheels on which the engine rope plays, and splintering the beams which bound the tracks together, until it reached the foot of the plane, where it was dashed into a thousand fragments. One of the car wheels was shivered to pieces, the heavy iron axletree broken, and scarcely any one piece of the body left entire.

We saw the wreck, and if a bomb shell had burst in the car it could not have more completely demolished it. In the midst of the fragments the man who descended with the car was found, his arm broken above and below the elbow, and his head severely fractured. Medical assistance was at once rendered, and there is some hope of his recovery. His name is Babcock, and he is a relative of Mr. Eber Babcock of this village. During the delirium occasioned by the blow, the wounded man kept constantly repeating words as if endeavouring to stop a team of horses.

Judge Dana was but slightly hurt, although several of the passengers who sprang from the car were severely, but not dangerously, injured.

Mr. B., whose escape with life is little short of a miracle, was, at the time our paper went to press, gradually improving, and confident hopes are entertained of his recovery.

London and South Western Railway.—*Nine Elms Station, June* 15, 1842.—The Queen Dowager and suite arrived at the London Terminus of the South-Western Railway, Vauxhall, at half-past ten, A.M., and started in a special train previously ordered at 36 minutes after ten to Southampton. The train consisted of the guard's carriage in front, two first-class carriages, and the State carriage, the latter decorated with exotics and other choice flowers. A platform was erected across the station covered with crimson cloth. Several of the Directors were in attendance to receive her Majesty. Mr. Gooch, superintendent of the locomotive department, drove the engine; and Mr. Martin, general superintendent, and Mr. Stovin, superintendent of traffic, went with it. Her Majesty arrived at Southampton at 5 minutes past 1 o'clock, having performed the journey in two hours and twenty-five minutes; and she was pleased to express her satisfaction both as to the arrangements made for her reception and the ease and rapidity of her journey. The never-failing attention and efficiency of the carriage-master, Mr. Davis, did not pass unobserved.—*Morning Chronicle* of Thursday. [Our daily contemporary has omitted to give the name of a most excellent officer of the Company, Mr. Beathe, superintendent of the carriage department, who we have reason to know exerted himself most strenuously, in conjunction with his colleagues, in making the necessary arrangements for her Majesty's reception.—Ed. R. T.]

—o—

The Iron Trade.—The depression in the iron trade in this neighbourhood (Wolverhampton), continues, we are sorry to report, with unmitigated severity. Two or three more blast furnaces have been put out, occasioning the discharge of several hundred hands, while the stocks of iron on hand are unprecedently large, and unsaleable at any figure. More than 200 miners, we understand, are employed in stone-breaking at the union poor-house, and the applications for relief exhibit a considerable increase. In this district the want of work occasioned by commercial inactivity is materially increased by the competition of the Scotch ironmasters, who, owing to favourable local circumstances, are enabled to send inferior qualities of iron into the market much below the cost of manufacture here. Work to a limited extent, however, we can state upon the best authority, may be obtained in lower part of the county, at wages not quite so low as in this neighbourhood.—*Wolverhampton Chronicle.*

PROPOSED PLEASURE EXCURSION.

A VERY delightful and a very uncommon trip is announced between this and Holyhead, and back again, to take place on Monday next, the 20th instant. It will partake of all the enjoyment of a party of pleasure, and as many persons of the first fashion and agreeability—ladies as well as gentlemen—take an interest in the voyage, and have already enrolled their names as intended participators in the pleasure, there is no doubt that claimants, to the full extent of the number to which the party is to be limited, will be but too anxious to secure places. It is proposed by the Committee of Management that the splendid steam-ship, the *Princess Royal*, shall leave Kingstown at eight o'clock, a.m., and return by half-past four in the afternoon. The trip will combine business with pleasure—for, now that the question of the quickest mode of communicatiyn between the two countries is pending, it is a matter of vast importance to have the capability of crossing and re-crossing the Channel in nine hours practically proved. This could only be done by a first-class steamer, and it will be matter of boast to those who join in the excursion, that they constituted one of a party who left Dublin at eight o'clock in the morning—landed in Wales—walked through Holyhead—and returned to Dublin at half-past four in the evening of the same day!—an achievement never before performed, and not likely ever to be done again. We cannot imagine anything more delightful than such a trip, in such weather as this, and with so charming a party.—*Dublin Evening Mail.*

The Board of Directors of the Belgian Railway has adopted the following additional means of security on the north line:—It consists of a species of tower placed on the tender, rising above the chimney of the engine, on which is seated a watchman, who, from his elevated station, can see the whole road to great distance. He carries a horn, with which he can immediately warn the engineman to stop the motion, should he perceive any obstacle in the way, or any accident likely to occur.

LONDON AND BIRMINGHAM RAILWAY.—NOTICE is hereby given, That a Special General Meeting of Proprietors of the London and Birmingham Railway Company will be held, in pursuance of the provisions of the Acts of Incorporation, at the Euston Station, London, on Friday, the 1st of July next, at Eleven o'Clock in the Forenoon, the Chair to be taken at Twelve o'Clock precisely, for the purpose of determining the steps which it may be expedient to take in virtue of the powers granted to the said Company, under the Act of this session, "for making a Branch Railway from the London and Birmingham Railway at Coventry, to communicate with the towns of Warwick and Leamington, in the County of Warwick."

GEORGE CARR GLYN, Chairman } of the Board
JOSEPH F. LEDSAM, Deputy Chairman } of Directors.
R. CREED, Secretary.

Office, Euston Station, June 17, 1842.

RAILWAYS.—ASSESSMENT OF THE POOR RATE UPON RAILWAYS.—A Report of the case of the QUEEN against the SOUTH-WESTERN RAILWAY COMPANY, decided this present Trinity Term in the Court of Queen's Bench: By CHARLES JAS. GALE, Esq., of the Inner Temple, Barrister-at Law. Price 2s., stitched.

*** This case decides the mode of assessment of a railway to the poor-rate, also the mode of assessment in each parish.

S. Sweet, 1, Chancery-lane; A. Maxwell & Son, 32, Bell Yard; and V. & R. Stevens and G. S. Norton, 26 and 39, Bell Yard, Lincoln's Inn.

THE THAMES TUNNEL IS OPEN TO VISITORS DAILY (Sunday excepted) from Nine in the morning until dark, and lighted with gas.

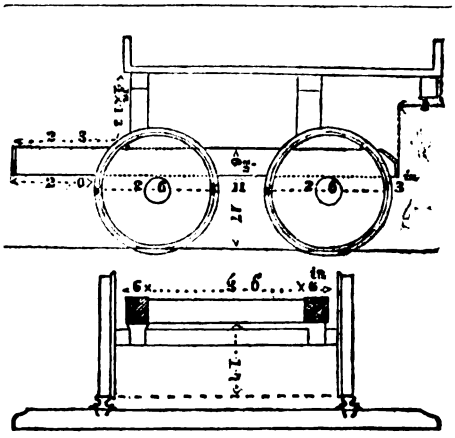
The present entrance is on the Surrey side of the river, close to Rotherhithe Church. The Tunnel is now completed, and is 1,200 feet in length. Admittance, 1s. each.

By order of the Board of Directors,
J. CHARLIER, Clerk of the Company.

Company's Office, 2, Walbrook Buildings, City,
May, 1842.

N.B. Conveyances to Rotherhithe, by Omnibus, from Piccadilly, Charing Cross, Fleet street, and Gracechurch-street; and by Steam-boats to the tunnel pier at Wapping, from Chelsea, Vauxhall, Lambeth, Hungerford, Adelphi, Old Shades Pier, and London Bridge. Books, with Plates descriptive of the works, are sold at the Tunnel, Price One Shilling.

LONDON AND BLACKWALL RAILWAY.—CARRIAGE OF GOODS.—The Company is now ready to CARRY GOODS, with expedition and economy, to and from the Brunswick Wharf, Blackwall, and the East and West India Docks.—Every information as to the terms, &c., may be obtained at the Company's office, 60, Fenchurch-street.



By order of the Board,
JOHN F. KENNELL, Sec. pro tem.

June 7, 1842.

LONDON AND BLACKWALL RAILWAY COMPANY.—NOTICE is hereby given, That a SPECIAL GENERAL MEETING of this COMPANY will be held on Tuesday, the 28th day of June instant, at Twelve for One o'Clock precisely, at the London Tavern, Bishopsgate-street, in the city of London, for the purpose of taking into consideration the power given to this Company by the Act of Parliament passed in the present session, entitled "An Act to alter, amend, and enlarge the powers and provisions of the Acts relating to the London and Blackwall Railway," to Borrow on Mortgage or Bond such Sums of Money as shall be authorised by an order of a General or Special General Meeting of the Company, not exceeding in the whole the sum of £66,000, and to make such order thereon as may be determined by the said Meeting.

Dated this 15th day of June, 1842.

WILLIAM ROUTH, Chairman.

RAILWAY EARTH-WAGGONS.—WANTED, from 200 to 300 in good working order, and which will bump with those shown in the accompanying sketch. Apply, by letter giving full particulars, to Messrs. Grissell and Peto, Lambeth, London.

GENERAL RAILWAY MANAGER WANTED.—The Northern and Eastern Railway Company are desirous of engaging a Manager whose exclusive employment must be in the Company's service. The Salary will be £300 for the first year, with a House and allowance of Coal and Candles; and if at the end of that period his services are approved, the salary will be increased to £400 per annum. Any person considering himself well qualified for, and desirous of, such an engagement, may apply by letter addressed to the Directors at their Offices at Shoreditch, stating former occupation and qualification to undertake the Management of the Goods and Passenger Traffic, the Superintendance of the Mechanical and Engineering Department, and general care of the Company's property and concerns.

References and Testimonials to be stated, and Security will be required to the extent of at least £1,000.

By order of the Board of Directors,
WILLIAM BOURNE, Secretary.

Shoreditch, London, 16th June, 1842.

THE SHEFFIELD AND ROTHERHAM RAILWAY COMPANY are wishful to borrow a sum of Money on their Mortgage Debentures, at 4½ per cent. interest, for a term of five or seven years, at the option of the lender, and in amounts of not less than 300*l*.

The Interest on the Company's Mortgage Debentures falls due on the 30th of June and 31st December, and is always paid punctually to the day.

The Money is wanted in order to pay off part of their original loan upon certain of the existing Mortgages now about falling due, and which the Company decline to renew at 5 per cent.

Application to be made personally or by letter to the Company's Secretary, Mr. Thomas Pearson, at Sheffield, or to us,

THOMAS BADGER, Rotherham, } Law Clerks.
HENRY VICKERS, Sheffield, }

Sheffield, June 17, 1842.

N.B. To persons at a distance it may be necessary to state that this Railway has been in operation nearly four years, and has paid its proprietors very handsome dividends after payment of all interest on loans, and expenses.

NORTHERN AND EASTERN RAILWAY.—NOTICE is hereby given, That in pursuance of a Resolution passed at a Special General Meeting of Proprietors of this Company, held at the London Tavern, Bishopsgate-street, on Wednesday the 15th day of June, 1842, authorising and directing the disposal of 3,186 forfeited shares of £50 each, the Directors will meet at their offices in Shoreditch on Wednesday the 6th day of July next, to consider any Tenders which may be made for the whole or any part of the above Shares, on the following conditions:—

1st. The payment of a deposit of £5 per Share, upon the acceptance of the Tenders on the above-named day, for which a receipt will be given at the time by the Secretary. The further payment, in three instalments of £10 each, on the 1st days of January and July, 1843, and January, 1844, and the balance on the first day of July, 1844, without interest.

2nd. The said Shares to be entitled to an equal participation of dividend with the other Shares in this railway, in proportion to the amounts paid up upon the respective Shares, after the dividend for the half-year ending the 30th day of June instant.

3rd. The said Shares to be registered immediately in the names of the parties purchasing, or their assigns, and to be transferrable in all respects, as the other Shares in this concern, the instalments now fixed being considered as, and in lieu of all, Calls.

4th. The Directors are not bound to accept of any Tender unless it be considered eligible by them.

Tenders to be delivered sealed, addressed to the "Directors of the Northern and Eastern Railway Company," and endorsed "Tender for Shares," at the Company's Offices, Shoreditch, before 12 o'Clock, on or before Wednesday the 6th day of July next.

By order of the Board of Directors.
WILLIAM BOURNE, Secretary.

London, 16th June, 1842.

EAST CORNWALL MINING ASSOCIATION.—The Trustees and Directors hereby give NOTICE, That a General Meeting of the Association will be holden on Tuesday, the 5th day of July next, at the Office of the Association, 34, Birchin-lane, London, at Twelve o' the Clock precisely, for the purpose of submitting the accounts of the Trustees, and of consulting the Shareholders on the affairs of the Association, and as to dissolving the same.

The Shareholders are requested to bring their Certificate of Shares with them, and to produce the same at the Meeting.

16th June, 1842.

TENDERS FOR LOANS.—THE GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY COMPANY being authorised by an Act, 5 Vic., cap 29, Sess. 1842, to raise an additional Sum on Mortgage, are now prepared to receive Tenders for Loans, in Sums not under £500, and for periods of two, three, or four years. The Tenders must state the rate of Interest expected—not exceeding 4½ per cent. per annum.

Applications are requested to be sent to the Secretary, at the Company's Office in Glasgow, who will give all necessary information.

By Order,
J. FAIRFULL SMITH, Secretary.

Bridge-street, Glasgow, 8th June, 1842.

SCOTTISH UNION FIRE AND LIFE INSURANCE COMPANY; instituted 1824, and incorporated by Royal Charter.

LONDON BOARD.

Charles Balfour, Esq.	Robert Murray, Esq.
J. Deans Campbell, Esq.	R. Oliverson, Esq.
J. Gordon Duff, Esq.	Divie Robertson, Esq.
Robt. Gillespie, Esq.	H. F. Sandeman, Esq.
James Gooden, Esq.	John Small, Esq.
John Kingston, Esq.	Daniel Stoddart, Esq.

SUTHERLAND MACKENZIE, Esq., Manager.

London Offices, 449, West Strand, and 78, King William Street, City.

LIFE DEPARTMENT.

The additions made to the Life Policies granted by this Corporation for the last seven years vary from 41 to 65 per cent. on the premiums paid, and average 14 per cent. on the sums assured—a result, it is believed, far more favourable to the assured than any other Company has hitherto accomplished, when the low rates of premium charged by this Corporation are taken into consideration.

The next division of life profits will take place in December, 1846, being an interval of five years, and persons entering before the 1st of August next will enjoy one year's additional rating, and rank at next division of profits for five complete years.

Forms of proposals may be had at the offices, 449, West Strand, and 78, King William street, City.

F. G. SMITH, Secretary.

TO MANUFACTURERS OF GRANT'S PATENT FUEL, AND OTHERS.—One Hundred Thousand Gallons of Coal Tar for Sale.

Apply, prepaid, to Mr. J. O. N. Rutter, Gas Works, Black Rock, Brighton.

Steam-boats are at present advertised to arrive from the undermentioned places (weather, &c. permitting) for the trains which leave Greenock at the hours specified below; but Third-class Passengers will NOT be booked with the boats at the hours marked †:—

Gourock.	Helensburgh.	Roseneath and Row	Gareloch Head.	Rothesay and Dunoon.
8 30 a.m.	8 30 a.m.	8 30 a.m.	8 30 a.m.	8 30 a.m.
†10 30 —	10 30 —			†10 30 —
	12 30 p.m.			
1 30 p.m.				1 30 p.m.
	3 30 —	3 30 p.m.		
6 30 —				6 30 —

By the above arrangement, Passengers coming from the Watering-places on the western coast, leaving Greenock by an early train, and joining the Edinburgh and Glasgow train at Eleven o'Clock, can remain in Edinburgh 4 hours, and return to Greenock the same night: or leaving Edinburgh by the 7 a.m. train, can remain 4½ hours in Greenock, and return to Edinburgh in the Evening.

FARES.

Between Glasgow and Greenock, First Class....2s. 6d.
Second Class..1s. 6d.

Between Glasgow and Greenock,
Gourock and Helensburgh....Third Class.....6d.
Row, Roseneath, Garelock Head,
Dunoon and Rothesay.....Ditto.....9d.

For the sailing of the Liverpool, Irish, and Highland Boats, which vary according to the state of the tide, see their advertisements.

Passengers are booked conditionally, that is to say, in case there be room in the carriages for which they have been booked.

It is particularly requested that passengers, in going to and from the steam-boats, will use all convenient expedition, that the regularity of the communication may not be interfered with.

Passengers booked for places beyond Greenock are requested, on paying their fares, to observe that they receive Two Tickets, as, unless they are provided with a proper steam-boat ticket, as well as a railway ticket, they will be required to pay a second time.

The railway ticket is to be delivered, when demanded, to the Ticket-Collector on the railway, and the steam-boat ticket to the Captain of the steam-boat.

Children under Ten Years of age, if with their parents (but not more than one child with one passenger), Free; from Ten to Fourteen Years of age, Half-price. No half-price in third-class carriages.

Passengers' personal Luggage, not exceeding 112lbs., or 10 cubic feet, will be conveyed free. If above that weight or measure it will be charged at the rate of 6d. per cwt., or 2d. per cubic foot, at the option of the Company's agent, The Company do not hold themselves responsible for luggage, unless booked and paid for according to value.

Dogs and animals are not permitted to be taken into a first-class carriage.

Passengers at the intermediate stations should arrive ten minutes before the time when the train is expected.

Goods of every description are carried by this Company—See Rates of Carriage. Light Goods requiring extra dispatch will be taken, at any hour, by the passenger trains.

Passengers should bring the exact amount of their fares, to avoid delay in giving change at the counter.

By Order of THE DIRECTORS.

Greenock, May 28, 1842.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.—NOTICE is hereby given, That, in pursuance of a Resolution of the Board of Directors, Proprietors of New Shares in the said undertaking are required, on or before Tuesday, the 5th day of July next, to pay into any one of the under-mentioned Banks, the sum of £3, as a Fourth Call on each New Share held by them respectively, viz.:—

Edinburgh } Royal Bank of Scotland.
Glasgow.. }
Greenock—Any of the Banks there.
Liverpool—Liverpool Commercial Bank.
Lancaster—Lancaster Banking Company.
London—The Chief Office of the London and Westminster Bank, Throgmorton-street.
Dublin—To Messrs. Labertouche and Stafford.
Londonderry—Branch of the Provincial Bank of Ireland.

Discount at the rate of 5 per cent. will be allowed on all payments made previous to the said 5th July; and the Bankers have been instructed to charge interest from that date until payment.

By order of the Board of Directors,
WYNDHAM HARDING, Secretary.

Railway Office, Greenock, May 26, 1842.

THE ROYAL SCOTTISH SOCIETY OF ARTS. Instituted 1821; Incorporated 1841.

LIST of PRIZES for SESSION 1842—43.

THE Royal Scottish Society of Arts proposes to award Honorary Medals and Pecuniary Prizes for approved Communications.

No Prize to exceed Thirty Sovereigns.

The attention of the Fellows and of the public is directed to Inventions, Discoveries, and Improvements in the Mechanical and Chemical Arts in general, and also to means by which the Natural Productions of the country may be made more available; and in particular to—

Experiments applicable to the Useful Arts.
Inventions, Processes, or Practices from Foreign Countries.
Practical details of Public or other undertakings of national importance—not previously published.
Methods of Economising Fuel, Gas, &c., of preventing noxious Vapours from Manufactories, of procuring small, intense, and uniform sources of Heat.
Improvements in Instruments for Measuring minute quantities of Heat—in the manufacture of Iron and other Metals, in the making and tempering of Steel; in Calotype, Daguerreotype, and Electrotype; in the preparation of Lime and Plaster for Fresco Painting, and for appropriate tools for laying the plaster with precision; in Electric, Voltaic, and Magnetic apparatus; in Pavements, in Balance or Pendulum Time Keepers, in Taps and Dies, in Glass and Porcelain; in Land, Marine, and Locomotive Steam Engines and Railway Carriages; in Railway Telegraphs and Signals, &c. &c.

KEITH PRIZE.

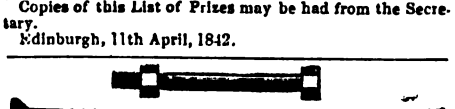
The Society will also award the Keith Medal, value Thirty Sovereigns, for any important Invention, Discovery, or Improvement in the Useful Arts.

GENERAL OBSERVATIONS.

The Keith Medal may be awarded for any communication which shall comply with the terms of the announcement of that prize, although falling under any of the above specified subjects.

The descriptions of the various Inventions, &c., to be full and distinct, and when necessary, accompanied by Specimens, Drawings, or Models.

The Society shall be at liberty to publish in their Transactions copies or abstracts of all papers submitted to them. All Models, Drawings, &c., for which Prizes will be given, shall be held to be the property of the Society—the Society being in the practice of taking the value of the Model into account in fixing the amount of the Prize.



All communications must be written on foolscap paper, leaving margins at least one inch broad on both the outer and inner sides of the page, so as to allow of their being afterwards bound up with others; and all drawings must be on Imperial drawing paper, unless a larger sheet be requisite.

All communications to be lodged as soon after the 1st of November, 1842, as possible, in order to ensure their being read during the Session; but those which cannot be lodged so early will be received till 1st March, 1843.

Communications, Models, &c., to be addressed to James Todd, Esq., the Secretary, 21, Dublin-street, Edinburgh, postage or carriage paid.

Copies of this List of Prizes may be had from the Secretary.

Edinburgh, 11th April, 1842.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws, Screw Bolts, Spikes, &c. for Railway and other purposes, also Boiler Rivets, &c.

TO BE DISPOSED OF, a STEAM-ENGINE, made by the Horseley Company, in perfect working order; 25-horse power, horisontal motion; erected, regardless of expense, at the Saw-mills, Gloucester, the property now being converted to a different purpose.

Apply to W. P. Price, Esq., Gloucester.

EVESHAM, BIRMINGHAM, AND GLOUCESTER JUNCTION RAILWAY.—CAPITAL, £70,000, in 3,500 Shares of £20 each.—Deposit, 2l. 10s. per Share.

PROVISIONAL COMMITTEE.

London.

Benjamin Bond Cabbell, Esq., F.R.S., Chairman.
W. H. Chambers, Esq., R.M.S., Deputy Chairman.

Country.

Thos. White, Esq., Mayor, Chairman.	R. Ashwin, Esq.
Dr. Beale Cooper.	A. New, Esq.
N. Hartland, Esq.	N. Izod, Esq.
James Ashwin, Esq.	Mr. Jno. Smith.
J. M. G. Cheek, Esq.	Mr. W. S. Kinsey.
Jno. Thomas, Esq.	Mr. Jno. Humphriss.
T. N. Foster, Esq.	Mr. J. Hill.
W. Crowther, Esq.	Mr. A. H. Wright.
	Mr. Henry Burlingham.

With power to add to their number.

BANKERS.

London—Messrs. Glyn, Halifax, Mills, & Co., 67, Lombard-street. *Country*—Gloucestershire Banking Company, and Herefordshire Banking Company, at Evesham.

Engineer.—John Addison, Esq.
Consulting Engineer.—Captain W. S. Moorsom.
Solicitors.—Messrs. Roy, Blunt, Johnston, and Walton.
Agents.—Messrs. Workman, Evesham.
Secretary.—Henry Stephenson, Esq.

The Borough of Evesham stands in the midst of an extensive and populous district, at present without railway communication.

Considering the facility with which such communication might be obtained, and the comparatively trifling expenditure at which it might be connected with the Birmingham and Gloucester Railway, and so with all the existing important Railways, it is a matter of surprise that such an undertaking has been so long neglected.

The Goods Traffic also of the Evesham district is estimated at a large amount, the greater portion of which is despatched to Birmingham, and thence, by Railway, to Manchester, Liverpool, other towns northwards, and the metropolis.

These facts demand the establishment of some continuous, rapid, and, at the same time, cheap medium of communication between these towns; and it is important to add, that beyond the great local influence which is rallying round it, the undertaking will be aided by the important interests connected with the Birmingham and Gloucester Railway Company.

Which Company have also passed the following Resolution, thereby ensuring to the promoters of this undertaking a certain and profitable return on their outlay, as will appear from the following, viz.:—

Extracts from the Minutes of the Committee, 24th May, 1842.

"The Committee having conferred with the Deputation from Evesham, who laid before them the Resolutions of the Public Meeting held there yesterday, of a Branch Railway to join the Birmingham and Gloucester Railway at Eckington.

Resolved—

"That the Directors of the Birmingham and Gloucester Railway are of opinion, that the formation of the proposed line would be conducive to the interests of this Company, and in the event of its being made, would recommend to their Proprietors to undertake the working of it in common with their own line, under Lease, and on such fair terms as may hereafter be agreed on.

"(Signed) GEORGE KING, Secretary."

It is proposed that the Company shall join the Birmingham and Gloucester Railway at Eckington, and avail themselves of that line, not only as a communication to Birmingham, Liverpool, and Manchester, but to Cheltenham, Tewkesbury, Gloucester, and, in connection with the Great Western Railway, to Bath, Bristol, Exeter, and, by the London and Birmingham or Great Western Railway, to the Metropolis, and intervening counties.

The line of country between Evesham and Eckington (the proposed point of junction with the Birmingham and Gloucester Railway), a distance of 8¾ miles, has been surveyed by the Engineers, and the plans and books of reference lodged agreeably to the Standing Orders of Parliament for the next Session.

Applications for Shares to be made to Messrs. Workman, Solicitors, Evesham; to the Solicitors for the Bill, at their offices, No. 42, Lothbury; or to the respective Bankers.

By order of the Provisional Committee,
HENRY STEPHENSON, Secretary.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

Digitized by Google

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive TENDERS for the LOAN OF MONEY, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to GRANT MORTGAGES of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

INTEREST WARRANTS, for the whole term for which the loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—TENDERS FOR IRON RAILS AND CHAIRS.—The Directors are prepared to receive Tenders for the supply of 2000 Tons of Iron Rails, each Rail to be 15 feet in length and weighing 65 lbs. per yard. The quality of the iron in the rail to be equal to No. 3. The Tender to state in detail the process of manufacture which it is proposed to follow to produce the quality. No Tender will be attended to without this statement, and the Company will stipulate with the party whose Tender may be accepted, that the Company may at any time send an Inspector to the works to satisfy themselves that the specified process of manufacture is fully adopted. The delivery to be distributed over 12 months.

A Tender also will be received for the supply of 650 Tons of Iron Chairs.

The Chairs to be cast with a mixture composed of equal proportions of Scotch, Staffordshire, and Welsh pig iron, from the cupola or air furnace. The joint chairs to weigh 28 lbs., and the intermediate chair, 18 lbs.

Tenders to be delivered on or before the 11th day of July, 1842, at the Company's Office, in York.

The section of the Rails to be in accordance with a drawing or template, which may be seen at 35½, Great George-street, Westminster; or at the Company's Office, at York, where also models of the Rails and Chairs may be seen, and further explanation obtained.

GEO. HUDSON, Chairman.
THOS. FAULCONER, Secretary.

York, 3rd June, 1842.

TO ARCHITECTS.—SEYSSEL ASPHALTE COMPANY, CLARIDGE'S PATENT, established March, 1838, for working the Mineral Asphalte Rock of Pyrimont Seyssel.

This valuable material has been extensively used since its first introduction into this country for the following purposes:—Foot pavements, public and other; in the carriage approach to mansions, garden walks, and terraces; the flooring of kitchens and other basement office; salso of coach-houses and stables, dog kennels, barn floors, cow-houses, piggeries, poultry houses, tan-rooms and maltings; for roofing, covering of railway and other arches, the lining of under-ground cellars near rivers to prevent the ingress of the tides; also in covering the ground line of walls, to prevent damp rising, thereby rendering the basement stories in the worst situations both dry and warm. It is an excellent cement, as applied to docks, breakwaters, or walls built for resistance to the encroachments of the sea, lining of tanks, fish-ponds, and other hydraulic purposes.

Several extensive works have been executed by this Company for the Board of Ordnance and her Majesty's Commissioners of Woods and Forests. The Asphalte has been used at the Thames Tunnel, also at the London and Greenwich Railway, where it has been laid over a surface of 400,000 superficial feet, to prevent the percolation of water; at the Great Western, Birmingham, Midland Counties', South-Western, Brighton, and other railways; at the South Metropolitan, Highgate, and Nunhead Cemetries.

The Asphalte of Seyssel is perfectly free from smell, and is not acted upon by the change of temperature.

Books of testimonials, with scale of prices, can at all times be had at the Company's depot.

J. FARRELL, Secretary.

Stangate, Surrey side of Westminster Bridge, April, 1842.

ARCHITECTS, BUILDERS, AND OTHERS.

For the purpose of securing the use of the genuine article, architects and others are particularly requested to insert in their specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "asphalte" or "bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

LAND-SURVEYING AND LEVELLING.—KING'S COLLEGE, LONDON.—The long Vacation Class for practical Field Work will this year commence on Tuesday, the 5th day of July next, and will be continued four days in the week for six weeks, under Mr. Henry Castle, Lecturer at the above Institution, and author of a Treatise on Land-Surveying and Levelling.

Apply at the Secretary's office; or at the Lecturer's residence, 30, Queen-square, Bloomsbury.

Fee—£5 5s.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

Actuary and Secretary—Mr. W. L. NEWMAN, York.

London Agent for the Life Department—Mr. EDWARD HENWOOD, 46, Watling street.

The attention of the public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

FIRE INSURANCES are also effected by this Company, on the most moderate terms.

FARMING STOCK Insured without the Average Clause.

Prospectuses, with the Rates of Premium, and every information, may be had at the Head Office in York, or of any of the Agents.

ON SALE.—A New LOCOMOTIVE ENGINE BOILER, with strong Copper Fire-box, and ready for tubes 2 inches diameter, 2 cylinders 14 in. diameter, suitable for the Boiler, and a part of the works for the Engine, fitted and ready for erecting; 1 pair of wrought iron wheels 5 ft. diameter; also a Tender Water Tank, holding 700 gallons.

Applications, prepaid, to T., Post-office, Warrington, shall have immediate attention.

SOUTH-EASTERN (DOVER) RAILWAY.—The Official Map and Section of this line, shewing the South-Eastern District of England and part of France, is now ready. On one large sheet, 7s.; mounted, in case, 12s. 6d.; and on rollers, 16s. 6d.

Bell and Wood, 184, Fleet-street; J. R. Jobbins, 3, Warwick-court, Holborn; J. Weale, 59, High Holborn; and Wallis, Brighton; Lower, Lewes; Colbran, Tunbridge Wells; Ward, Canterbury; and at the Office of the *Railway Times*, 122, Fleet-street.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways, Corrected to June. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Bailliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton-street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

THE ATMOSPHERIC RAILWAY.—On Wednesday next will be published, by Weale, Architectural Library, Holborn, a Second Edition of a Letter to the Right Honourable the Earl of Ripon; by JAMES PIM, Jun., M.R.I.A., Treasurer of the Dublin and Kingstown Railway Company. Illustrated by four large Plates; price One Shilling and Sixpence.

June 17, 1842.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex.—Saturday, June 18, 1842.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dixham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

NORTHERN AND EASTERN RAILWAY COMPANY.—The undersigned being about to form a List, in conjunction with an eminent Capitalist, to tender for the forfeited shares in the above Railway, such of his friends who intend to propose for a portion of the Shares will inform him of the amount of their subscription, *before* the 29th instant.

THOMAS ALLSOP.

34, Cornhill, June 23, 1842.

THE CHAIRMEN AND DIRECTORS OF RAILWAYS who do not consider a saving of 50 per cent. in the cost of the fuel used in Locomotive Engines as too minimum a matter for their consideration, and those Engineers who are competent (without requiring the opinions and advice of others) to discriminate between what is essentially and practically good, and what is merely plausible or theoretical, are solicited to inspect the operation of Mr. SAMUEL HALL'S PATENT APPARATUS FOR THE CONSUMPTION OF COAL WITHOUT SMOKE, as applied to two Locomotive Engines on the Midland, and two on the North Midland Railways.

N. B.—The Invention, as applied to a Dyer's Boiler, is in daily operation in Duke's-court, Trafalgar-square, London, from 10 a. m. till 4 p. m.

No. 18, King's Arms Yard, London.

TO RAILWAY COMPANIES, RAILWAY CONTRACTORS, BUILDERS, IRON FOUNDERS, IRONMONGERS, COACH BUILDERS, and GENERAL DEALERS.—Important SALE of SURPLUS RAILWAY STORES, &c. &c., belonging to the London and Birmingham Company, at the Camden Town Station.—Mr. BIRKETT has received instructions from the Directors of the London and Birmingham Railway Company to offer for Sale by Auction at the Store Yard of the Company's Station, Camden Town, on Tuesday, July 19, 1842, and following day, at Eleven, the following very Important PROPERTY, constituting THEIR SURPLUS STORES, and comprising upwards of 150 tons of bar, scrap, and cast-iron; several tons of spring, shear, blister, and other steel; sets of patent carriage springs and axle boxes; a large and varied assortment of ENGINEERING TOOLS and IMPLEMENTS used in the construction and maintenance of Railways.

The articles of ironmongery comprise 2,400 gross of wood screws, about 14 tons of iron pins, nails, and rivets; a large assortment of hinges; sledge and other hammers; anvils, chisels, files, screw and shell augurs; large quantity of chain and iron wire; copper and iron wire gauze &c. &c.; together with numerous other articles, comprising railway lamps of every variety; lorry wheels and boxes, barrow-wheels; drain tiles; tool handles of all kinds; 10 *iron safety chests, with patent rack locks*; about 32,000 oak pales; 28 pieces of American oak; several waggon cloths; articles of office furniture; neck straps, chains, and cloths for horses; 50 hammocks, with mattresses, blankets, &c. &c.; and a large quantity of mens' clothing.

The above property, being nearly all new and of first-rate quality, will be found eminently deserving public notice. As the articles are exceedingly varied, a reference to the Catalogues is particularly requested; and which may be had, 14 days before the Sale, on application at the Storekeeper's Office, Camden Station; at the Company's Stations, Euston-square and Birmingham; at the other Stations on the Line; and of Mr. BIRKETT, Estate Agent and Auctioneer, Wallingford, Berks.

May be viewed on and after the 5th July, 1842.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by

FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ARTHUR FREELING.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt and Bogue, Fleet Street; and all Booksellers.

TO RAILWAY CONTRACTORS and Others.—TO BE DISPOSED OF, on very low terms, between 40 and 50 Sets of Second-hand 30-inch Railway Waggon Wheels and Axles, in very good condition, with pedestals and tipping irons.

Apply to Barrett, Exall, and Andrewes, Engineers and Founders, Reading, Berks.

THE RAILWAYS' REGULATION BILL.

House of Commons, June 18.—The order of the day was read for the House going into Committee on the Railways' Regulation Bill.

Mr. HARDY wished to inquire whether when her Majesty had travelled from Slough to London, on the Great Western Railway, proper care was taken to prevent her Majesty's carriage from coming into collision with the engine.

Mr. RUSSELL (Chairman of the Great Western Railway Company) said, there were two carriages between her Majesty's carriage and the engine, and there was not the least risk of a collision.

Mr. HODGSON HINDE then moved the insertion of the following clause:—

"And whereas, by various Acts relating to Railways, it is provided that the Companies shall cause to be painted on boards, and to be affixed, and continued and renewed as often as the same shall be obliterated or defaced, to or upon every toll-house or building at which any rates or tolls shall be collected or received, in some conspicuous place, in large and legible characters, an account or list of the several rates and tolls which the said Companies shall from time to time direct and appoint to be taken; and whereas, it is for the public convenience that the said list of rates and tolls should be printed and affixed within every station-house or other place where such rates and tolls shall be payable: Be it enacted, that it may be lawful for any Railway Company to affix such printed list of rates and tolls in a conspicuous situation within every station-house or other building where such rates or tolls are collected, instead of affixing such boards, painted as aforesaid; and that such Company shall be held to have complied with the provisions of the said Acts as effectually as if the said table of rates and tolls had been painted on boards and affixed to such toll-house or building; and that such rates or tolls shall be payable, and may be demanded and taken during the time in which such printed lists are affixed as aforesaid, in the same manner as they are authorised to be demanded and taken during the time that such boards shall remain so affixed."

Dr. BOWRING said, the question was the greater or less convenience of the public, and as it appeared to him that the existing practice would afford the greatest security against imposition, he should oppose the insertion of this clause.

Mr. WALLACE opposed the clause.

Mr. GLADSTONE opposed the clause. The object of the Bill, as might be gathered from the preamble, was to make provision for the public safety, and he thought that was the object which they should keep in view. Whatever might be the abstract merits of the clause, he could not think that that was the proper time for discussing it, and he hoped the Hon. Gentleman would not persevere. The clause was foreign to the purposes of the Bill.

Mr. DARBY thought the safety of the public was the most important object, and the clause appeared to him likely to distract attention from it.

After a brief conversation between Lord R. Grosvenor and Lord Seymour,

The Committee divided, when there appeared—

For the clause	5
Against it	107
Majority against the clause	102

Mr. DARBY moved the following clause:—

"And be it enacted, that whenever it shall appear to the Lords of the said Committee that the line of any railway is carried so nearly parallel to, or at so short a distance from, any turnpike or public carriage or bridle road, as seriously to endanger the public safety, it shall be lawful for the Lords of the said Committee to call on the Directors of any such railway to erect and maintain a sufficient fence between the line of railway and any such turnpike, carriage, or bridle road, as the nature of the case may require."

MR. GLADSTONE was not opposed to the clause, but he hoped his honourable friend would not press it on the Committee, because the object of it was already provided for in the particular Railway Acts. The power given to two justices by these particular Acts was sufficient. In these cases, too, the Board of Trade had been accustomed to act by suggesting necessary precautions, and in all cases those suggestions were attended to by the Railway Companies.

After a few words from Mr. Hindley,

Mr. RUSSELL confirmed the statement of the right hon. gentleman as to the readiness of the Railway Companies to comply with the suggestions of the Board of Trade. He thought the danger, too, from this cause, had been much exaggerated.

A desultory discussion followed, but ultimately,

Mr. PALMER withdrew his clause.

Mr. CRAVEN BERKELEY was understood to withdraw the clause, of which he had given notice, making it incumbent upon all Companies applying to Parliament for any new Act, or amendment of their original Act, to make provision for maintaining the poor, and those applying for parochial relief, caused by the introduction of labourers into the different parishes through which the railway passes, in the same manner as has heretofore been the case in Canal Acts.

Mr. STAFFORD O'BRIEN rose to move the insertion of a clause to prevent the locking of the door of any carriage containing passengers, on the side nearest those stations at which such carriages stop. If the right hon. gentleman would say that he could command every Company to cease locking their carriage doors at any time he pleased, without the insertion of this or a similar clause, he should consent to withdraw his motion; but unless that could be accomplished, he thought it to be his duty, for the protection and safety of the immense mass of people who travelled by railway, to press this motion to a division. He need not refer to particular cases in proof of the necessity for such a clause; the recent Paris case must live in the recollection of them all; but even without that example of the destructive consequences, he thought it must be evident to every one that it was a most dangerous thing, and a thing unattended with any good consequence, to lock the doors of the carriages. He thought the safety of the public was concerned, and that this matter required the particular attention of the House.

Mr. RUSSELL was understood to say that in the Paris case, which had created so much consternation in the minds of the public, the whole of the carriages were second-class carriages, where the whole top and sides were open; and the persons inside, if they had apprehended danger, might have got out with as much chance of safety by those openings as by the doors if they had been unlocked. He held in his hand a paper containing a list of the accidents which had occurred on the Great Western Railway, and these ran, "jumping out of carriage whilst train in motion," "attempting to get into carriage whilst train in motion," &c., whilst not one accident had yet occurred on that railway whilst the doors were locked which would not have occurred if the doors had been unlocked. He contended that it was far safer to lock the doors than to leave them open.

The clause was read a first time; and on the question that it be read a second time,

Mr. GLADSTONE thought the practice of unlocking one door having been adopted the locking ought not to be resumed. The question was not whether the matter of the clause was objectionable or not, but whether there should be any legislative enactment on the subject or not. It had been thought advisable by a Committee which had reported on the subject, that compulsory powers should not be given to the Board of Trade. That would be throwing upon a Government office responsibilities which should devolve upon the Directors of Companies alone. He would remind the House that the Inspector of the Board of Trade had recommended the practice of locking the doors; and this fact showed, at least, that the subject was one of much difficulty. Under those circumstances, he did not think it advisable that the House should now pass any law which would prevent any further consideration of the matter.

Captain LAYARD said that he was decidedly in favour of the practice of locking up carriages on railways, inasmuch as he thought that it contributed on the whole to the greater safety of the public. He had lately been travelling on the line to Liverpool, and an accident having occurred, the passengers, finding the doors of the carriages open, leaped out. Now, if a train had been passing at the time the most serious consequences might have resulted. As it was, one gentleman had lost his hat—(laughter)—and in looking for it he ran the risk of losing his head in addition.

After a few words from Sir C. Burrell and Mr. C. Russell, which were inaudible in the gallery,

Mr. M. MILNES said that public opinion was so decided on the matter that it must be effected. It was necessary that a compulsory power should be given to the Board of Trade to act in the matter on their own responsibility.

Sir R. PEEL said that, if the principle of defining by legislation what the regulations should be according to which railways should be conducted, the next accident that occurred some gentleman would come forward with a new clause to prevent the recurrence of such an accident, and thus it would be on every such occasion. He thought that the persons who travelled by railways were the best guardians of their own safety, and he saw no necessity whatever for any legislative regulations on this matter. When the Committee on Railways sat last year they had come to the unanimous determination that security to the public would be best insured by giving to the Board of Trade a power enabling them to make suggestions, so as in fact to aggravate the responsibility of Railway Companies. It was by far the best way to let public opinion, which generally acted in the right direction, set the matter right; and if there were any old ladies or ecclesiastics who were afraid of being locked up, let the Railway Directors and those people settle it between them. ("Hear," and laughter.)

Mr. GRANTLEY BERKELEY wished to ask if any directions had been given to the Greenwich and Blackwall Railway Companies on the subject.

Mr. GLADSTONE understood that the conduct of those Companies had exempted them from animadversion on that point.

Mr. M. PHILIPS was opposed to minute legislation on the subject. He would suggest a test to the Railway Companies to ascertain public opinion. Let them have a certain number of carriages locked up, and a certain number unlocked, and in a fortnight they might discover what was public opinion on the subject, and act accordingly.

Mr. B. ESCOTT would vote for that measure which would give the most unlimited power to the Railway Companies to make any regulations they might think fit. The honourable member who had just sat down was hardly an impartial witness, inasmuch as if he were upset, and the door were locked, he could not get out of the window. (A laugh.)

Mr. M. PHILIPPS had once in a common coach been in the unfortunate position alluded to by the honourable gentleman. He had been upset. In the coach there were besides himself two gentlemen of about the same size as the honourable member. They had attempted to get out together; of course they could not succeed; and he proposed that they should toss up for choice. (A laugh.) Had he known that the door of that coach would have been locked, he certainly never would have booked himself to go by it.

Mr. STAFFORD O'BRIEN denied that he had been induced to propose this clause in consequence of the accident on the Versailles Railway. Public attention had been drawn to the subject long before that accident had occurred. He felt it necessary to say this to vindicate himself from the charge of having proposed this measure hastily and without sufficient grounds.

Mr. RUSSELL rose amidst loud and continued cries of "divide, divide." He stated that the stations on the Great Western Railway had been constructed with a view to the locking up of the carriages on both sides. But he assured the House that the Company would be most happy to act upon the suggestions of the Government, and to carry into effect the intentions of the House. (Hear, hear.)

Mr. R. PALMER, amidst very loud and importunate cries of "divide," opposed the clause.

After a few remarks from Mr. S. O'Brien the Committee divided, and the numbers were—

For the clause	99
Against it	91
Majority against the clause	8

On our return to the gallery we found Mr. PLUMPTRE on his legs, who was moving the introduction of the following clause:—"And be it enacted, that no railway shall be used on any part of the Lord's Day."—"Provided always, and be it further

Digitized by Google

enacted, that nothing in this Act contained shall extend to prohibit the use of any railway on the Lord's Day in cases of charity or necessity." The consequences of allowing trains to run on Sunday, were most dangerous to the public, as well as causing the servants of the different Railway Companies to work seven days instead of six, thereby breaking the Commandments. The Hon. Member concluded by moving for leave to bring up the clause.

Mr. MACAULAY objected to any further legislation with respect to Sunday travelling. Why, he would ask, should one mode of travelling be prohibited and others allowed, especially when that mode caused the least exertion both to man and beast? (Hear, hear.) He trusted the House would not entertain a proposition so futile as that brought forward by the hon. member opposite.

Lord SANDON, with all respect to his hon. friend who had brought forward the question, trusted that the House would not debate it further, because they never could come to any beneficial result.

Mr. PLUMETRE would leave the subject to the Committee to treat it as they might think fit.

Mr. GLADSTONE trusted the hon. gentleman would not press the present clause if he wished at a future period to have the subject calmly discussed.

Mr. V. SMITH objected to the arrogant assumption of the hon. member for Kent that his proposal had the support of all who feared God and honoured Him.

Sir R. H. INGLIS, under all the circumstances, would recommend his hon. friend, the member for Kent, to withdraw his motion.

Mr. M. GIBSON deprecated the practice of bringing forward motions in that House on which it was not intended that the house should divide.

The Committee then divided. The numbers were—

For the clause	8
Against it	105
Majority against the clause	97

Lord ROBERT GROSVENOR then brought forward the following clause, of which he had given notice:—

"And be it enacted that when two or more Railway Companies, whose railways have a common terminus, or a portion of the same line of rails in common, or which form separate portions of one continued line of railway communication, shall not be able to agree upon arrangements for conducting their joint traffic with convenience to the public, so far as the same relates to the booking of passengers, the running of carriages, or the removal of luggage and passengers, it shall be lawful for the Lords of the said Committee upon the application of any of the parties, to take cognisance of the questions in dispute; and if they shall find that any one of the said Companies has granted to any other of the Companies any accommodation in regard to the booking of passengers, the running of carriages, or the removal of luggage and passengers, and has refused to permit the the same accommodation on the same terms, as nearly as circumstances will permit, to any other such Company, it shall be lawful for the Lords of the said Committee to order the same to be granted to the Company complaining of such refusal, and to order and determine whether the whole or what proportion of the expenses attending on such arrangement, shall be borne by either of the parties respectively; and if any Railway Company shall refuse or wilfully neglect to obey any such order made upon or against such Company by the Lords of the said Committee pursuant to this provision, such Company shall forfeit to her Majesty the sum of 20*l.* per day for every day during which such refusal or neglect shall continue; and every such penalty may be recovered in any of her Majesty's Courts of Record."

Mr. GLADSTONE did not deny that there might be cases of the kind to which the clause referred, in which difficulty and inconvenience might result to the public; but he thought the remedy proposed was one which the country would not bear. The subject involved very serious questions of proprietary rights, and he did not think that the Board of Trade was at all a suitable tribunal to adjudicate on such rights. However, he did not say that it was not desirable that the House should take into its consideration the propriety of constituting some tribunal for the purpose. He hoped the noble Lord would not press the clause on the Committee, because the power was one that could not be exercised by the Board of Trade with satisfaction to the country.

Mr. JARVIS did not think the Right Hon. gentleman looked at the clause in its proper light; he admitted the importance of the clause, but he said the Board of Trade was not a competent tribunal to exercise the power, but he admitted it was a competent tribunal to decide between conflicting railways. He should support the clause of the noble Lord.

Mr. DARBY said, there were many cases in which the clause, if carried, would operate most injuriously with regard to the public. If the noble Lord grounded the clause on the inconvenience that was felt on a particular line, it ought to be limited to that line, and not extended generally.

Mr. J. PARKER supported the clause.

Lord SANDON opposed the clause on the ground that, having prevented the Board of Trade from interfering generally with railway management, it would be inconsistent to give them the power of interfering in this particular instance.

Lord SEYMOUR opposed the clause.

Mr. GRIMSDITCH supported the clause, considering it to be absolutely necessary that the Board of Trade should have power to interfere in this instance, such interference being absolutely necessary for the public safety.

Mr. WALLACE thought that the Noble Lord had made out a most excellent case, and that not one word had yet been said in answer to it. When the right hon. gentleman said—"don't let us legislate on these small points, the Board of Trade can do everything so well, and will have only to suggest to the Railway Companies what is right," would the right honourable gentleman say that that interruption should not take place?

Lord CLEMENTS expressed his approval of the clause proposed by his noble friend (Lord R. Grosvenor). He did not think the Right Hon. gentleman should oppose the clause unless he were prepared to bring in a better in its stead.

Mr. T. EGERTON approved of the amendment. He hoped his noble friend would press the question to a division.

Dr. BOWRING said that if was allowed upon all hands that the present system was defective. At the same time he thought it better that the House should not come to a division on the point without further consideration.

Mr. GLADSTONE said that he could not consent to the proposal of the noble Lord. The subject was one which included various considerations, and he deprecated a hasty decision on the matter. He believed that the clause of the noble Lord was one which could not be carried into effect.

The Committee then divided, when the numbers were,

For the clause	40
Against the clause	41
Majority against the clause	1

On the next clause of the Bill being proposed,

Lord HOWICK said that he thought the House should give proprietors of land adjoining the lines of railways the means of recovering compensation for any loss they might sustain by the negligence of the servants of Companies. He understood that it had been decided in a recent case that the Companies were not liable for the injury done to property by sparks issuing from an engine.

Mr. GLADSTONE admitted that the subject was one deserving of consideration. He believed, however, that in the case alluded to by the noble Lord, the injury had been done to a haystack raised immediately by the line of the railway.

After some further conversation, the clause was ordered to stand part of the Bill.

The 15th clause was then struck out, the remaining clauses were agreed to. The Bill passed through Committee, and the House resumed.

PROCEEDINGS IN THE HOUSE OF COMMONS ON RAILWAYS.

BRISTOL AND GLOUCESTER RAILWAY.

June 18.—Mr. Speaker reported the Royal Assent to the Bill.

DUNDEE AND ARBROATH RAILWAY.

THE OLD STAGE COACHES.—At a late dinner given by the Shrewsbury coachmen and guards to the Hon. Mr. Kenyon, that gentleman, in proposing the health of Mr. R. Taylor, coach proprietor, made some interesting statements on the subject of stage-coach travelling. Amongst other things, he said, "As a coach proprietor, Mr. Taylor was one of the most spirited in the kingdom. He had, at one time, two of the best coaches that ever ran in England, the *Hirondelle* and *Wonder*. No coach in England established for itself a higher reputation than the former. On one 1st of May (the precise year he could not recollect) it accomplished its journey of 120 miles in 8 hours and 20 minutes—a speed few coaches could ever boast of. He (Mr. Kenyon) was in Shrewsbury that day, and saw a team of four greys belonging to Mr. Taylor enter the town which had done their 9 miles in 35 minutes. He recollected that there were two ladies inside the coach, who were informed that as that day was appointed for a trial of strength, they might, if they were frightened at the speed, choose any other conveyance they pleased, and should be forwarded on their journey immediately; but their answer showed good blood—they said they were not aware they had come at the great speed they had, and that they preferred going fast. With regard to the *Wonder*, he himself left the Lion Yard, Shrewsbury, one morning at six o'clock, and was at Islington at seven o'clock the same evening—being only 13 hours on the road. On that occasion he was driven by four of the best coachmen he ever saw. Another instance of the reputation the *Wonder* had acquired was given him by his friend Sir Henry Peyton, who had informed him that he had frequently seen persons at St. Alban's regulating their watches by the *Wonder* coach as it came into the town. This was the only instance he had ever heard of a coach regulating the time. It was clear that the coach could not have gained such a name for regularity without good cattle and good coachmen; and it was to the proprietors they were indebted for them."

GREAT WESTERN RAILWAY.—We perceive a paragraph going the round of the papers stating that Professor Buckland has taken upon himself to pronounce the Box tunnel in a dangerous state, and that at some indefinite space of time a fearful accident may be anticipated therefrom. We really think it due to all parties—the Directors and proprietors of, and the passengers upon, the magnificent Great Western line—that the learned Professor should be somewhat more specific in his charges and in his remedies. For ourselves, remembering the confident predictions of another great luminary in science, that steam communication with America was perfectly impossible, we have no great faith in these abstruse speculations. We would infinitely rather rely on the judgment of a *practical* engineer like Mr. Brunel than on the guesses of a theoretical philosopher.—*Bristol Gazette.*

The other day an elderly female left Barnsley for the first time in her life for a trip by the North Midland Railway. When the train had proceeded some three or four miles on its rapid way to Oakenshaw, she exclaimed to some other females who were with her in the second-class carriage, "Ha! for goodness sake just look wot an a meany trees an corn stacks theaze e going to Bairnsla."—*Doncaster Chronicle.*

THE LAW RELATING TO THE RATING OF RAILWAYS.*

[From the *Justice of the Peace*].

THE introduction of railways, as a mode of conveying goods and passengers, having now become common, and it being well known that the user of the land over which they pass renders it rateable to the relief of the poor, it has become a question of very considerable moment to ascertain what is the proper mode of assessing these productive undertakings to the poor's rate. It is the object of the following remarks to assist overseers and others in rating railways correctly:—

And, first, it is to be remarked, that if a railway passes over any portion of a parish, it must be rated as soon as it becomes the source of earning money; if it be not, the rate may be successfully appealed against, upon the ground that a rateable hereditament has been omitted in the rate. And in like manner the rate may be appealed against, if the assessment on the railway be too high or too low; in the former case, the occupier of the railway, and in the latter, the ratepayers of the parish generally would be parties grieved† by the inequality of the rate, and as such they would be entitled to appeal for the purpose of having the rate quashed or amended. Thus it is apparent that the introduction of railways has thrown an additional and weighty responsibility upon overseers, whose duties, although performed gratuitously, are now sufficiently burthensome. The law requires them to make most accurate and just rates; but if, after exercising every care and skill, an assessment be still peccable, the overseers may not always venture to defend it upon appeal, lest, peradventure, they find in the sequel that they have to pay the costs of the litigation out of their own pockets.‡ On the other hand, if the chairman of a board of guardians has issued his fiat requiring the overseer of a litigious parish to pay the contribution due from the parish to the board of guardians, the unfortunate overseer is bound to obey the mandate, lest his own goods and chattels should be seized and sold, under a justices' warrant, to pay the required quota.§ Thus an overseer, like a poor bear at a stake, knows not whether to advance or retreat, he is surrounded by foes on all sides. But this is not the place to enlarge on this subject; it is more fitting to endeavour to show how this new task of assessing railways may be successfully performed.

It will elucidate our subject if we first refer to the words in the statute of Elizabeth, which, in their legal signification, include railways as a subject of rate. This celebrated statute is still operative for the purpose of pointing out what real property is liable to be rated; the parochial assessment Act (6 & 7 W. 4, c. 96) having an express provision that nothing in that Act contained shall affect the principles according to which different kinds of hereditaments were at that time rateable.‖

The 43 Eliz. c. 2 enacts, "that competent sums sums shall be levied for the relief of the poor, by taxation of every inhabitant, parson, vicar, and others, *and of every occupier of lands, houses,*" &c. to be gathered out of the parish according to the ability of the parish.

As it has been already stated, the occupier of a railway is the occupier of lands, within the meaning of this Act of Parliament; and it is now proposed to consider upon what principle the amount of the rate ought to be assessed.

It has long been established, that though by this statute the tax is laid upon the land or house, it is in respect of *the revenue* or *annual profits* which issue from them, and that whether they are produced by nature, or by means wholly artificial; for things very distinct from the natural profits of land are rateable under that name, the land being considered as the principal, the profits of which are augmented by the annexation of the accessary.*

Many cases may be cited for the purpose of establishing this proposition. Thus, springs of water have been treated as a part of the produce of land, and their value must be taken into account when the rate is assessed.† Here the profit is not artificial but natural. There is another class of cases where the profits of land have been increased or entirely created by artificial means, and such land has always been deemed rateable in respect of such profits. Thus, the profitable occupancy of the sub-soil, by means of water-pipes or gas-pipes,‡ or even by the interment of corpses,§ renders the occupiers rateable. So, personal chattels, as machines, when annexed to land or buildings, render the land or buildings liable to be rated according to the increased value which they thereby acquire.‖ Again, any peculiar advantages attendant upon real property, either in respect of its situation or the mode of its occupation, are to be taken into account in estimating its rateable annual value, wherever these advantages would enable the owner of the property to let it at a higher rent than it would otherwise fetch. In pursuance of this principle, it was long ago decided that a canteen, demised with the exclusive privilege of selling liquors, was rateable according to the entire value of the house and privilege;¶ and in more modern times, a public news-room, to which valuable privileges were annexed by Act of Parliament, was held liable to be rated in respect of the value of those privileges.**

The importance of these decisions will at once appear when we reflect that the occupancy of land by means of a railway is made profitable, partly by the annexation of personal chattels to the soil, as the rails and fixed machinery, and partly by the user of the way for the purpose of carrying passengers and goods, protected by certain privileges, which are usually conferred by the Act of Parliament under which the railway has been constructed.

And here it is fitting to remark, that the occupiers of a railway are not liable to be assessed in respect of the locomotive engines, carriages, or other chattel property which they may possess. All these are personal property, and are therefore exempted from the assessment by the provisions of a late statute, 3 & 4 Vict. c. 89, which enacts, "that it shall not be lawful for the overseers of any parish to tax any inhabitant thereof as such inhabitant, in respect of his ability derived from the profits of stock in trade, or any other property, for or towards the relief of the poor."†† What, then, is the proper mode of making an assessment on a railway? To answer this question, reference must first be made to the parochial assessment Act (6 & 7 W. 4, c. 96), which enacts, that "no rate for the relief of the poor in England and Wales shall be allowed by any justices, or be of any force, which shall not be made upon an estimate of the net annual value of the several hereditaments rated thereunto, that is to say, of the rent at which the same might reasonably be expected to let from year to year, free of all usual tenants' rates and taxes, and tithe commutation rent-charge, if any, and deducting therefrom the probable average annual cost of the repairs, insurance, and other expenses, if any, necessary to maintain them in a state to command such rent." It seems, therefore, that a railway ought to be assessed upon such a sum as a tenant from year to year would give for the right to receive the earnings of such part of the railway as lies within the parish, such tenant paying all expenses incident to working the railway, and also all usual tenant rates and taxes, and tithe commutation rent-charge, if any, and deducting from the said rent the average annual cost of the repairs, insurance, and other expenses necessary to maintain the way, its fixtures and appurtenances in a state to command such rent. So far the law may appear to be clear, and there would not, probably, be much difficulty in practice to find the sum at which any portion of a railway ought to be assessed. Serious difficulties have, however, arisen in consequence of the peculiar provisions as to the receipt of tolls, which are contained in many of the Railway Acts. The Court of Queen's Bench, in a very recent decision, The Queen *v.* The London and South-Western Railway Company,* has thrown considerable light on the effect of these provisions, and railways may now be assessed with much greater confidence than they could have been assessed before this case was decided.

It will be most convenient to state, as briefly as possible, how the question arose in the case just referred to.

The London and South-Western Railway was constructed under the provisions of the 4 & 5 W. 4, c. 88. It contains the usual provisions to enable the company of proprietors to construct the railway, to appoint Directors, and generally to enable them to carry on the undertaking with profit to the shareholders.

By sections 149 and 150 the Company are empowered to receive a certain specified tonnage for all passengers, cattle, and articles conveyed in carriages upon the railway, it being evidently contemplated that the carriages and locomotive power should be found by other persons than the Company. But the next section (151) contains the following provision: "that it should be lawful for the Company to provide locomotive engines, or other power, for the drawing or propelling of any goods, persons, cattle, or animals, upon the railway, and to demand such sums of money for the use thereof, as the Company may from time to time fix or require, in addition to the several other rates, tolls, or sums therein authorized to be charged or received."

By section 156 it is enacted, "that it should be lawful for the Company to carry and convey upon the railway all such goods and cattle and other animals as should be offered to them for that purpose, and all such persons as should apply to be carried along the railway; and to demand for the use and benefit of the company for such carriage and conveyance, in addition to the several rates and tolls thereinbefore authorized to be charged, such money as the Company might from time to time fix and require."

By section 157 it is enacted, "that in all cases in which the Company should carry for their own profit any passenger, cattle, or other goods, a separate account should be duly kept, showing the amount of rates or tolls which would have been received by the Company for the use of the said railway, in respect of such passengers, cattle, or goods, if carried by any other party or parties; and the overseers of the poor of the several parishes and townships through which the railway should pass should have free access to and liberty to inspect the same at any time during the first fourteen days in the months of July and January in each year."†

By section 158, the Company are empowered to reduce the rates, tolls, or sums mentioned in sections 149 and 150.

By section 172 it is enacted, "that all persons should have free liberty to pass along and to use the railway with carriages properly constructed, as by the Act directed, upon payment only of such rates,

---

tolls, and sums as should be demanded by the Company, not exceeding the respective rates, tolls, and sums by this Act authorized, and subject to the rules and regulations which should from time to time be made by the Company, by virtue of the powers therein granted."

Other clauses in the statute contain powers to enable the Company to regulate the passage of engines on the railway, the mode of constructing them, and the means by which they were to be propelled; and generally for regulating the passing upon, using, and working the railway; but there are no provisions, enabling other persons than the Company, to use the station-houses, buildings, or approaches, for the purpose of using the railway under the provisions of section 172.

It will be observed, that this Act of Parliament contemplated two modes by which the railway might become profitable; first, to the Company, by the receipt of the tolls and duties granted by sections 149 and 150; and, secondly, to the Company, or to any other persons availing themselves of the provisions of section 172, by the profit which they might derive by providing carriages and carrying passengers, cattle and goods.

In point of fact it happened, as was to be expected from the vantage ground which the Company had secured for themselves, by the provisions of the statute, that all the traffic on the railway was carried on by the Company, to the exclusion of all competitors; and, therefore, when calculations were made for the purpose of assessing 4½ miles of the railway within the parish of Mitcheldever; it was found that there was a startling difference between the rent which a tenant would give for a similar monopoly of the whole earnings of the 4½ miles of the railway, including the profits of the traffic, and the rent of a tenant, whose only profit was to arise from the tolls and duties granted by sections 149 and 150. In round numbers, the rents may be taken to be 3,470*l.* in the former case, and only 1,293*l.* in the latter.

The Company contended that they were not liable to be rated on the larger sum, as it included the profits of their trade as carriers. The parish of Mitcheldever, on the other hand, asserted that this amount constituted the rent which a tenant would give who became lessee of the railway, *with all the privileges of the Company*, and that the Company were therefore rateable in that sum. The result was that a case was reserved at the sessions for the purpose of obtaining the opinion of the Court of Queen's Bench upon this question; and the Court, after hearing the case very ably argued, and after taking time to consider the point, were unanimously of opinion that the Company were liable to be assessed in the larger sum of 3,470*l.**

It may, therefore, be assumed that in all cases where a railway exists under a statute which contains similar provisions to those contained in the London and South-Western Act, the proper mode of assessing the railway will be that which has been thus approved of by the Court of Queen's Bench.

In all such cases, the following mode of making the assessment appears to be correct, *i. e.*, to find the rent which might reasonably be expected to be given by a tenant from year to year for the earnings of such part of the railway as lies within the parish, such tenant being supposed to be capable of deriving all the advantages and profits which may accrue to the Company from the receipt of tolls and the conveyance of passengers, cattle and goods, under the powers of the Railway Act; such tenant paying all expenses incident to the working of the railway† and all usual tenant's rates and taxes and tithe commutation rent-charge (if any), and deducting from such rent such a sum of money as will satisfy the average annual cost of the repairs, insurance, and other expenses necessary to maintain that portion of the way which is supposed to be demised, its buildings, fixtures and appurtenances, in a state to command such rent.

It is obvious that such a mode of making the assessment does not include any portion of the tenant's profits arising from the use of capital or personal superintendence, because he would set aside a sufficient sum to remunerate him on these accounts before he could ascertain the rent which he could afford to give,* just in the same manner as a farmer makes, or ought to make, such calculations before he offers a rent for a farm.

A difficulty may suggest itself as to the mode of ascertaining the amount of the assessment in each particular parish over which the railway passes, but the following observations will perhaps explain this matter.

In the first place, it may be taken to be a well established principle of law that the railway is rateable where the profit is earned, and it makes no difference that the earnings are received elsewhere. This is well explained by a learned judge.† "A farmer is rateable in the place where he grows his corn, and not where he sells it." It therefore makes no difference that a portion of the fares and tolls which are earned in the intermediate parishes are received in London or at any other terminus. And it is the amount of the traffic over the portion of the railway in each parish, taken in connection with the proper deductions, which ought to regulate the amount of the rate. If a portion in one parish is more productive than other portions in other parishes, either because there is more traffic, or because larger tolls are due upon it, or because the outgoings and expenses there are less, it ought to be assessed at a higher proportionate value.‡

The rule laid down in the case of the King *v.* the Inhabitants of Kingswinford,§ although a decision on the subject of rating canals, appears to be precisely applicable to the case of railways.—"The Company ought to be rated in each particular parish, in proportion to the profit which they derive from the land there used by them for the purpose of the canal. If a canal runs through six different parishes, and there is the same traffic through the whole line of the canal, every part of the canal will earn an equal proportion of the tolls; but it may happen, that in that part of the canal situate in one parish, there may be double or treble the traffic which there is in any other of the six. Why are the other parishes to have any part of the tolls earned in that parish? The land in those parishes contributes nothing towards earning the sum derived in the other parish from the use of the land there. The true principle is this, a Canal Company is to contribute to the relief of the poor, in each parish through which the canal passes, in proportion to the profit which they derive from the use of their land in that parish. If the profit arising from a given quantity of land vary in different parishes, the rate must vary in the same proportion."

Overseers must, therefore, endeavour to ascertain the extent of the traffic on that portion of the railway which is within the parish seeking to levy the rate. By the 3 and 4 Vict. c. 97, s. 3 (Lord Seymour's Act) all railway proprietors are required to make such returns of the traffic on the railway as the Board of Trade may from time to time require; and much assistance will probably be afforded to overseers by this useful provision. The expenses of maintaining the same portion of the railway, with its appurtenances, must also be calculated by competent persons, and then the rules already laid down for making the assessment must be observed.

Lastly, it may be useful to remark, that if a station-house, warehouse, or other building occupied with the railway, be built in any parish, it would be right to include its annual value in the assessment. The value of the railway to a tenant consists of its capability to bring in a revenue to the lessee, by means of its use for the purpose of carrying goods and passengers, with certain privileges conferred by Act of Parliament. It is evident that the station-houses, &c. contribute to some extent to the earning of this revenue. Some care may be necessary to find the true annual value of these buildings, but upon principle, there does not appear to be any legal ground for exempting them from the assessment.

RATING OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have perused your remarks upon the judgment of the Court of Queen's Bench upon this question. You think that there is a radical defect in Lord Denman's judgment throughout, and that it consists in his not distinctly defining receipts from *tolls*, and receipts from *haulage*. It seems to me that his Lordship defined them sufficiently, but did not *mean* to separate them. He plainly says—

"It is therefore important to consider how this railway would have been rated if that Act (the Parochial Assessment Act) had not been passed. The defendants would then appear to be carrying on a trade, not therein or thereat, but thereby; a trade not having existence without *buildings* and *land* being attached, and for the sake of which in a great measure the *lands* themselves were occupied in a particular manner. The profits would therefore arise *from them*, and the question would be whether these profits were to affect the amount of rating." In one of the cases cited by his Lordship, he says, "Where a canteen in reality formed part of a house of trade, though in appearances the canteen was separated from the house, Mr. Justice Le Blanc said that the rating was not rating the canteen in respect of the profits of the trade, but only in respect of the rent which the tenant paid for the place where that trade was carried on. In that way the house might be valuable only because it enabled those profits to be raised by its occupier."

Lord Denman then quotes the case of the Trustees of the Duke of Bridgewater:—"There it was held that the rent or sum at which the land might be let, was the proper criterion of value after deducting the expenses of cultivation and the cost of the farmer's subsistence. Now let us apply the principle of that case to the present. There are lines of railway and buildings on certain lands; and the only question is, whether they increase the value of the land on which the rate is to be raised? If they do, to what extent; and to that extent they must be directly or indirectly included in the amount of the value subject to the rate."

The profits are produced on a railway by a constant and attached use of it by carriages running upon it, and without the rails which are laid upon the land, and the carriages upon the rails, the profits would not arise; and, therefore, it is the *land* transformed into a railway from which the profits spring.

A man may rent a house at a certain sum (and be assessed accordingly) with the view only of residing in it, and earn his living away from the house: but transform that house into a manufactory, by which he will gain profits, the house will then command a rent equal to the profits which may arise, after paying the expenses of carrying it on, and the cost of the manufacturer's subsistence.

The Court has distinctly said, therefore, that the account is not to be separated, but the railway is to be assessed upon the basis of the profits upon *hauling*, as well as the *tolls*, at such a sum as a solvent tenant would give for using it in the same way as the Company itself is doing.

With regard to the division of this rent amongst the parishes, and in accordance with the principle which the Court has laid down, viz., that in proportion to the *earnings* of each parish such a participation in the *net rent* of the railway shall each parish have, we can adopt the following method:—

An account can be kept of the receipts taken in respect of the traffic through each parish: an account also of the expenses incurred in keeping up the line, for haulage, and also for the police, but not the management. The form of this account may consist of a column for the gross receipts in

Digitized by Google

each parish; a column for the expenses in each parish as described above; a column for the net receipts in each parish; a column to show the proportion which the net receipts in each parish bear to the total net receipts; and a column to contain the sum at which the railway is to be assessed in each parish. Having the two first columns cast up, we can take the one from the other, and we have the total net receipts, from which a sum for a tenant's subsistence, risk, &c., can be taken, and we then have a net rent. By adding up column 3, we are enabled to insert in column 4 the proportion which each parish has earned of the total net receipts. Thus, parish A has earned of the net receipts 1-5.33, the ratio which 6,000*l.* bears to 33,000*l.*

Then parishes A, D, and G, have stations and buildings in them, valued respectively at the rents set opposite their names. Such amounts these parishes are to assess the railway separately; deducting these amounts from the total net rent, a sum is left to be divided amongst all the parishes according to the proportion shown in column 4.

By this method each parish will receive of the net *rent* its proportion *according to its earnings*, and each parish having stations or buildings in it, will assess the railway for them according to their value.

1. Name of parish.	2. Gross receipts in each parish.	3. Expenses in each parish.	4. Net receipts in each parish.	5. Proportion of the net rent which each parish has earned.	6. Amount at which each parish is to assess the railway.
	£	£	£	dec.	£
A	10,000	4,000	6,000	1-5.33	4,294
B	3,000	1,000	2,000	1-16	1,430
C	900	900			
D	4,500	2,000	2,500	1-12.80	1,780
E	9,000	3,500	5,500	1-5.81	3,936
F	6,000	2,000	4,000	1-8	2,860
G	20,000	8,000	12,000	1-2.66	8,600
	53,400	21,400	32,000		22,900
	21,400				
	32,000	Total net receipts.			
	7,000	Amount deducted for tenant's subsistence, risk, rates, taxes, &c.			
	25,000	Net rent.			
		1,000*l.* rent of stations, buildings, &c., in parish A.			
		100*l.* ditto D.			
		1,000*l.* ditto G.			
	2,100	Portion of net rent to be assessed in favour of A, D, G.			
	22,900	Sum left to be apportioned between all the parishes, according to their *net receipts*, as per column 3.			

If the sum left to be apportioned between all the parishes were to be divided amongst them according to the *gross* receipts (or *gross* toll, as you suggest, which would suppose the judgment reversed), without reference to the expenses—instead of the *net* receipts as I have drawn it out—the principle of *earnings* would not be complied with, inasmuch as a parish cannot be said to *earn* more than the amount left after deducting the expenses.

I must apologise for thus intruding my observations upon you and the public; at the same time I am sure you will allow that it is a question of magnitude and of great complexity; a subject which ought not to be flinched from by those who are interested in it.

I look, therefore, now to your correspondents to point out the defects in my view of the question, and to remedy them accordingly; that when the next rates are made, substantial and indisputable formulæ may be settled, to govern overseers in assessing railways.

I am, Sir, yours, &c.,
CHARLES PENFOLD, Surveyor.

Croydon, June 22, 1842.

RAILWAYS IN FRANCE.—The *Moniteur* of Friday week promulgates the law relative to the establishment of the great railway lines throughout France, and appropriating for their construction a sum of 13,000,000 francs for 1842, and another of 29,500,000 for 1843.

"LOCKING-IN" ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Having remarked how many correspondents of the public journals have taken up the matter relative to railway lockings-in, and which has more particularly gained itself interest through the witty appeals of the Rev. Sydney Smith, and knowing, from observation of the past, that your columns have been noted for the liberal insertion into them of discussions tending both to the interests of shareholders and the rights of the public, in all cases where the mutual advantages of these parties may seem to be at variance, I am induced to request your insertion of the following remarks relative to Mr. Smith's letter, as well as to the causes of the late dreadful catastrophe on the Versailles Railway, and which my position as a Director of a railway may perhaps lead you to suppose are more worthy your notice than those of others less experienced in such affairs.

In analysing in detail Mr. Smith's observations, I shall confine myself to the reverend gentleman's first letter, which is the only one of the three which appears to me to embody any objectionable arguments; and, in doing so, I feel that it would be superfluous to dwell for more than a moment upon the supposition (doubtless jocosely hazarded by the writer) that the Directors of the Great Western *could* possibly be influenced in their decision upon the propriety of the locking-in system by any illtimed or paltry considerations of economy. I have not the honour of being acquainted with any one of these gentlemen; and I hope it may not be deemed presumption on my part to say, that I feel sure, not only that every arrangement in that magnificent undertaking *is* conducted upon a scale of liberality as will readily negative any such imputation, but that the reverend gentleman himself will, when the fever heat of his anti-combustion fears shall have cooled down to the temperate, be the first to acknowledge that any *serious* or unqualified charge of having endangered the life or limb of any of their passengers by an undue parsimony, would enable the Directors themselves, with equal jocosity, to answer Mr. Smith's question "Why" even less wise persons than "Socrates, Solon, and Solomon," ought, occasionally at least, to be *locked-up?* The position which Mr. Smith assumes, and that which I shall first dispute his right to maintain, and which forms the nucleus of his appeals, is founded on what he terms "the affectionate nonsense" of the Directors in exerting "an over-officious care" in the looking of the doors, "as if every one but a Director were a fool or a child;" and that, as "fools there will be on roads of iron and on roads of gravel," "they must suffer for their folly;" that, in fact, there is no good reason why such people should not be allowed, in their fool-hardiness, to expose themselves to danger if they choose to do so. Now, Sir, though I admit that there is nothing positively unjust in allowing fools the free exercise of this pleasant discretion of working out their own destruction, I very much doubt whether this species of Chinese non-interference dogma, which justifies a man allowing another to sink in a stream for the want of the friendly interposition of his walking-stick to save him (the philanthopy of which may be likened to Mr. Smith's view of this subject), be not somewhat of a questionable nature as regards practical humanity in a Christian community. Nay, I cannot conceive how any one who has lived much in the world can blind himself to the *fact* that, throughout all life, if it were not for the coercive care of the wise, the foolish portion of society (which but too largely preponderates) would constantly fall victims to their want of prudence and presence of mind. All laws and regulations, I imagine, whether for locking-up in Newgate, Bedlam, or in "locomotive prisons," as Mr. Smith calls the Great Western carriages, are expressly framed to restrain the vicious, the weak, and the ignorant. If all men were such as Socrates, Solon, Solomon, *and* Sydney Smith, wisdom, like "love," might well "laugh at locksmiths."

I trust that the reverend defensor of the Habeas Corpus Act will admit that it needs not the fiat of an Adelphi Theatre audience to prove, whether phrenologically, or anti-phrenologically, or physiologically, or philosophically, that man shares, with the brute creation the possession of certain animal propensities, and that, whether derived from the peculiar formation of the brain or otherwise, these instincts are not only inferior to those of brutes generally (when unassisted by the moral sentiments and intellect improved by education), but that the first impulses of individuals thus constituted are those dictated by instinct alone; and which naturally impel all ignorant and nervous people to the commission of rash or hasty actions. The preservation of life, next to the desire of obtaining food, is the strongest instinct of man's faculties, so strong, indeed, as when left uninfluenced by the moral and reflecting powers, to impel an individual, placed in sudden danger, towards the immediate adoption of the most apparently plausible remedy at hand, without the slightest consideration of the *result*. Thus we find that weak and nervous people *did* always (usually with fatal effects) leap from tops of coaches proceeding at the speed of 19 miles an hour, when *all but* their *heirs* must have wished that "the affectionate nonsense of the coach proprietors" *had* secured these "fools on gravel-roads" by some sort of a strap to the summit of the vehicle. The same kind of people do, now, at ordinary street fires (and long ere they are threatened by absolute contact of the burning element) precipitate themselves wildly from three-story high windows on to the stone pavement, or the area railings of the street below, where certain extinction of life awaits their flight from danger. Perhaps there is no one instance to be adduced more favourable to the truth of the phrenological principle of the independent action of distinct mental influences than the way in which fear, so necessary when moderate to the preservation of existence, readily and wholly overpowers and silences, for the moment, every other faculty. Soldiers, too, in the ranks of the army, of well-tried courage, have been known not unfrequently, when lacking the assurance of success and safety which the presence of their officers always inspires them with, to run from danger like the merest poltroons.

It has been my lot, Sir, to have served my country in both the army and the navy for a period of about 13 years of my life, and a close study of the characters of the great numbers of men who have successively been under my control, or about me, has convinced me that if head-strong ignorant individuals were *there* allowed to risk the loss of their lives whenever they might choose so to do, *hourly* would be the instances of mutilation and death that would occur. I cannot, therefore, admit that to *warn* people *only* of danger is the *whole* duty of those who are, more or less, held responsible for the safety of others immediately under their charge.

The proof of the wrong of the locking-in system Mr. Smith seems to think is fully substantiated by the suppositious case he puts of two parallel railways, "the one locking, the other not locking" the doors, and the public preferring the latter. Now, this is by no means a logical conclusion. The reverend gentleman must know enough, experimentally, of mankind, to comprehend how the mass of them (for few are given to reflection) more usually *prefer that* which is *least* to their ultimate benefit, whether in spiritual or in temporal concerns. Almost as fairly might it be asked, in return, "Suppose there were two Governments in this country, the one having a Church establishment and the fears of hell; the other neither; which of these two would be preferred by "timid women, drunken men, sages, philosophers, bishops and other combustible beings?"

With regard to the propriety of the locking-in plan, I have always been of opinion that it was a wisely humane and necessary precaution; and though it may be deemed presumption in a Director of a railway to endeavour to controvert the dictum of a Government Inspector, armed too with the

Digitized by Google

collective wisdom of the Board of Trade, and who has been called on, and has given a directly opposite opinion (at least as regards *one side* of the train), I nevertheless do not see any reason, from the arguments offered by Mr. Smith or Major-General Pasley, to alter the view I take of this question. It has been observed by that functionary that as the apprehended danger from unlocked doors applies chiefly to the conduct of ignorant people, who travel in the second-clsss carriages, which are not usually (they always should be) locked, therefore this plea falls to the ground. Now, Sir, though I have contended that the more ignorant a man is the more he is *usually* under the dominion of the animal passions, nevertheless, it happens that this lowest class of persons, travelling in second and third-class carriages, are people who, from their exposure to dangers, as workmen, are not so easily alarmed; that is, do not so readily apprehend danger as those of a better class, many of whom, though they may be rich enough to ride in first-class carriages, have not, peradventure, greater intellectual endowments than themselves, but certainly much more fear of accidents and of death. Now the former, being placed in open second-class carriages, *see* more distinctly the fearful and dangerous consequences of leaping from a vehicle, by which the adjacent objects on the road-side seem to rush with such terrific force, and which is not the case with those who occupy the close carriages, who are often heard to declare, that they are unconscious of the amazing speed of the train.

The next conclusion at which Mr. Smith aims is, I am of opinion, as illogical as the foregoing one, and it is this:—that all who are so weak as to jump from the carriages at speed, are, to use his nomenclature, either "fools, or idiots, or drunkards," and therefore unworthy all this "over-officious care" of the Directors. The mere want of that command over our feelings in moments of danger commonly called presence of mind, and which is, in fact, want of nerve to counteract the sudden impulses of fear, by no means betoken an "idiot," nor is it any proof that the individual is deserving of that disregard for his safety which Mr. Smith seems to consider but a fool's birthright, since *just such* an epithet would thereby attach itself to one of the greatest statesmen England has ever owned; and he, according to this judgment, was the *first* "*idiot*" that fell a sacrifice to this same want of nerve on a railway. While witnessing the experimental passage of a train (though standing at a safe and convenient distance from the rails over which it was about to pass), a sudden failure of his nerves threw him into an agitation of indecision (such as we see frequently influences women, children, and geese, in their preference for the opposite side of the road at the moment the coach is about to pass them on the turnpike), and suddenly endeavouring to cross the line of rails as the train approached, he stumbled in the effort, and the carriages dashing him to the earth, so mutilated his limbs that he died in a few hours after, to the sorrow of a terror-stricken people. Thousands of good and clear-headed men there are, in this country, whose loss would be irreparable, and who, though constantly travelling by railways, have not one whit more nerve than the unfortunate and lamented Mr. Huskisson. Mr. Smith says, that "the very fact of locking the doors will be a frequent source of accidents," and that "the passengers will attempt to escape through the windows." I think any one may see that this likelihood does *not* exist. It is one thing to quietly open a door, and placing your foot on a step, endeavour to leap from the carriage at speed, and another to get head foremost, in haste, out of a window but ill adapted to the sleek form of a combustible bishop. Nay, would the reverend gentleman himself dare to attempt such a harlequin leap?

If all railway accidents were attended with the same peculiarities as that on the Versailles road, much of the prayer of Mr. Smith for a speedy *jail delivery* might be appropriately offered up at the shrine of the presiding genius of the Paddington terminus; but for *one* such accident there will be *one hundred* minor ones of a different character, where, I will venture to assert, the passengers generally would be (and always might be *more* so by proper precautions) in far greater safety in their seats than under any mad attempt to alight; and I desire no better confirmation of the certainty that, in many cases, "women, old people, and the sick," *would*, under any serious apprehension of danger, immediately attempt to leap from the carriages were the doors always left unlocked, than the acknowledgement of Mr. Smith, that "they now live under the recollection, not only of impending danger, but under the knowledge that *escape* is impossible," and which he also asserts, prevents females from travelling by this mode of conveyance, which they consider as "inseparably connected with abominble tyrrany and perilous imprisonment." Such an admission on the part of the champion of old women, bishops, &c., appears to me to be but another most cogent reason for the continuation of the locking-in system. The French accident was rendered especially horrible by the peculiar way in which the carriages became entangled, and from their being heaped up over the furnace of the engine, and thereby becoming ignited. Now, this peculiar feature of that but too horrible drama, a very ordinary degree of alteration in the arrangement of trains would render wholly impossible to again occur; and, therefore, in legislating in respect of the unlocking of doors, we should be adapting the regulations to one particular class of accident only, and which would not suit those of most common occurrence; for it seems quite to have escaped the observation of all parties, that, except on such an occasion as that of the Versailles accident, the liberty to leap from the doors in moments of danger, about which so much needless anxiety is displayed, is one that, when granted, cannot be usefully available.

The ordinary class of railway accidents occur from collision, or from the engine getting off the rails. Now, in either such case it is obvious, to any one conversant with this matter, that not only is the approach of danger not in the least evident to at most two or three persons in the whole train (and that for only a second or two), but that the space of time intervening between the sudden apprehension of a collision and the crash itself, is of so momentary a duration as to render it perfectly impossible for *even one* person to leap out of each carriage ere the train is a shapeless wreck; while any attempt to do so, in such a moment, must inevitably be fatal to the individual. On the other hand (and this is the only occasion when any number of people could at once emancipate themselves from confinement), it might possibly happen that two or three passengers, looking from the side windows, and suddenly perceiving the approach, either a-head or in the rear of a train, or, as frequently happens, a pilot engine, and fancying that a collision was about to ensue, might immediately alarm the passengers by an outery, and cause hundreds of others to leap out one after the other while the train was at full speed, and every one of whom would certainly suffer mutilation or death in so doing. Thus much for the *liberty* of open doors!

Besides the ordinarily steady portion of railway passengers, there is a numerous class of persons labouring under temporary derangements of various degrees—the effects of those high excitements which vast speculation, deep study in science, wild enthusiasm on religious subjects, and dissipated habits of life, are the most common causes of, and which are annually immolating thousands of our countrymen in madhouses. To this class of persons, whom we meet at every corner of the street and in every society, the unusual excitement of railway travelling (with all its wonder-striking speed and mechanism) is well calculated to produce a further derangement of their cerebral functions, and which renders it doubly necessary that increased care be taken of their present safety during a journey.

But we will admit, for argument's sake, that passengers *are* locked-in when a collision takes place, or an engine leaps off the rails and upsets—as in the case of the Brighton accident, when the train was suddenly arrested in its fullest speed—what then ensues? Why, the demolition of a certain number of carriage-ends until the force thus spends itself, and which, owing to the action and re-action of a number of separate vehicles, it does with far less injury than could possibly be anticipated. Of the four carriages whose end compartments were on that occasion destroyed by the shock, not one of them sustained any damage in its centre parts, where passengers (though it did not happen that there were any) might have been seated without sustaining any injury. Nothing can better prove that, terrific as appears the shock of such collisions, it is by no means so exaggerated as not to be so computed as to admit of many efficacious remedies being applied for the future prevention of the loss of life and limb which usually attend these catastrophes; and this brings me to the last and chief point of my letter.

I say that, not only may such accidents as that on the Versailles Railway happen any day on our own roads for the want of a few simple precautions easily to be suggested, and as easily to be applied, but that it is an idle loss of time to trouble ourselves with the *effect* while the *causes* remain unnoticed, and that there is *but one mode* by which the latter can be removed. I have long taken a very lively interest in the welfare of these great undertakings, but I am not one of that bigotted selfish class of Directors who think they are best advocating the true interests of their proprietary, as well as promoting the prosperity of the concern they are appointed to preside over (and these are the points the shareholders are most solicitous about), by endeavouring to justify the many defects in the whole system which now exist, I am fully convinced, rather to the detriment than the advantage of any one Company. I am well aware that the constitution of these bodies, hastily got up as they have been, often to serve the private ends of greedy land-sharks, and reckless unprincipled speculators, is exceedingly defective, and loudly calls for a searching investigation and an extensive reform, and that until Government shall institute such an inquiry, preparatory to the appointment of a Board of impartial intelligent men to supervise the affairs of railways generally, and with full power to investigate their affairs with a view to putting an end to maladministration, as well as to insist upon the adoption of all such courses as are, to the public in general, manifestly required for securing to both parties the greatest possible advantages consistent with the liberty on the one side, and the prosperity on the other, of the subject, there will continue to exist strong cause of complaint on the one part, and of apprehension on the other; and the value of these undertakings, instead of being fairly understood and properly appreciated, will continue to be a species of uncertain and fluctuating property, with which the gentlemen of the Stock Exchange will alone be able to amuse themselves: while, to the more respectable portion of that body the making of this species of property a *mere shuttlecock* must be no-wise a permanent advantage. I regret much to say that I see no other mode of obviating the inconvenience or danger to which the public are occasionally subjected, and which injures equally the traffic of the roads. *Experience has taught me that every attempt of an individual Director to improve the present state of things, or to offer any invention to the public for the greater security of railway travelling (and there are many most obvious to the plainest sense), is but too often met by a pitiful envy, and a spirit of detraction; so that, unless the Chairman himself happens to be a liberal-minded intelligent person, it is vain to hope for the adoption of any improvements, or of any measures of security which do not suit the views of him and his immediate adherents.* I have reason to know that the advocacy for Government supervision of railway affairs of the late Board of Trade was rather the effect of a yielding (Whig-like) to the prejudices of the moment than of a sincere wish to promote the advantages of either party, and which

Digitized by Google

the merciless emasculation of every infant prodigy that Lord Seymour and Mr. Labouchere stood sponsors to will sufficiently prove; but as there is now a fresh set of gentlemen in office, who profess to promote strong government, I trust ere long that they will see the propriety of adopting the course I have here recommended, by a timely application of remedies to the two first causes of complaint, which are the want of a disinterested tribunal to enforce regulations advantageous to all parties, and, so far as human means are available, to obtain for all classes of her Majesty's subjects the largest amount of comfort and security which is consistent with the vested rights and fair profits of the proprietors of these undertakings—*not* as monopolists, but as reasonable speculators—not as the masters but as the servants of a liberal and indulgent public.

I am, Sir, your obedient servant,

G. BEAUCLERC.

A 23, Grosvenor-street, West.

RAILWAY MANAGEMENT.

To Railway Shareholders.

GENTLEMEN,—The present time is, perhaps, the most fit for discussing the above subject, not only on account of the approaching meetings, but in consequence of the depressed state of railway property, a depression principally caused by the manner in which the interests of the Companies are attended to—or rather, un-attended to.

A favourite writer, in an article which made its appearance in one of the monthly periodicals, says, "that a railway is got up by a few scheming parties, for the sole purpose of enriching themselves at other people's expense. Mr. Panter, a sharp-practiced practitioner is suddenly seized with the idea while swallowing his rolls and the news, that a railway is desired between A. and B., two small towns, distant some 30 miles; forthwith he gets a map of the roads, a pocket-book and rule, and starts from his home to communicate his ideas to his neighbour, Mr. Cuffiner, a merchant, a general merchant in fact; and having instilled his opinion into Mr. C.'s mind, these two individuals proceed to issue prospectuses, call meetings, and in short act as 'The Provisional Committee.' The town Banker receives the money, and the town Surveyor views the ground, and of course reports favourably." This sketch goes on to a much further length than the limits of this letter will allow, but the extract is sufficient to show how these things—or the majority of them—are managed. The population is not thought of. The expense of working will be "moderate," and the country is "just the thing," and so shares are subscribed for—deposits are paid—call follows call—the needy adventurer gets a seat in the Direction—and you, the shareholders, the real owners of the line, are hardly allowed to speak at a general meeting, and cannot get a civil answer at the office. Indeed, in most cases the *employés* seem to hold their office by the tenure of insulting "their real masters." I do not wish to have the time of the meeting frittered away by useless talk, nor do I seek to have questions put for the mere purpose of annoyance, but what I wish is to do away with that bland suavity of manner, that oiliness of tongue, that implicit adherence to what the Directors propose, now so general. Who ever heard, except in a most flagrant case, of an amendment being carried in opposition to the Directors' will. No. If an amendment is moved, up starts a Director, and says "that Mr. So-and-So's conduct in proposing this is such that the Board are compelled to oppose—resign—hope motions won't be pressed," —and finally induces either the mover to withdraw his motion, or his friends to leave him in a miserable minority.

Away, I say, with such bland suavity. If a man possesses an estate, does he trust solely to his steward? No. Does a merchant trust wholly to his clerks, without examining his own books? No. Or would either of these pay money away without knowing how it is expended? The answer is again, No. Then why should a shareholder? A Director is to a shareholder what a clerk is to a merchant, or a steward to landowner—their servant—aye, and a well-paid one.

But the question is, cannot we get rid of our bad Directors? Are there not some lines of railway that pay well, and are there not many that may yet yet be rescued from the mismanaging Directors' clutches? Yes. Turn out your inefficient Directors at the next meeting, and elect men who can devote their time and interest unto the affairs of the railway; then, and not till then, will railways flourish.

But I think I hear some one exclaiming, "Whom are we to have for Directors?" I will tell you. Not lawyers, who cannot devote their time to your affairs; or, if they can, possess not the talents of direction. Not people who pay not their calls, but live only on "Directors' salaries." Not people living 100 or 200 miles from the line, and only attending half-yearly meetings, to hear thanks voted to them, and to finger their allowance. Not a Director, Secretary, or even Engineer, of a rival Company—for no man can serve two masters. Not a contractor. Not a man who will squander thousands merely for the purpose of erecting stations "worthy of the Company." These gentlemen are the parties you should *not* elect; or, if you do, farewell to a dividend.

In my next I will acquaint you whom you should elect.

I am, Gentlemen, your fellow-shareholder,

DIOGENES.

THE PROPOSED EVESHAM JUNCTION RAILWAY—ENGINEERS' ESTIMATES.

To the Editor of the Railway Times.

SIR,—The remarks in your last number relating to the proposed junction line from Evesham to the Birmingham and Gloucester Railway at Eckington, have induced me to look at the prospectus of the scheme with some attention; and I think that the mass of your readers will concur with me in the opinion that it is highly desirable that something like a detailed estimate should accompany public appeals of this kind. An estimate of the traffic, in this instance, is given with great minuteness, while for a guide to the equally important question of the cost we have only "Extract from Engineer's Report," 69,647*l.* 14*s.*

Unprofessional men who are interested in railways have by this time learned to put two and two together, and to avail themselves of the ample experience of the past with a view to the future; and therefore they are more guided by the sums that *have* been spent than by the estimates of what *will* be spent, where there are any means of comparison. With your leave I shall investigate the Evesham estimate in this point of view.

I must, however, premise that an erroneous estimate frequently obtains as to the saving to be effected by laying down only one line of rails. The charges for law, surveying, engineering, Parliamentary expenses, and Direction, are the same, whether the line be single or double. The fencing, draining, and approaches, are the same in both cases. The earthwork is reduced for a single line; but by no means reduced by one-half, as, though the *line* itself is thus diminished, the *slopes* remain alike. In the masonry the arches are narrower, and the bridges consequently lighter, but the reduction will be less than in the earthwork; and in the quantity of land required the difference will be yet less, being only about five yards in width reduced for the whole length—and there being still required the remaining five yards for line—the area requisite for slopes, and also that for fencing, as in a double line. The only item, then, that can be halved, is the cost of permanent way; and even here a single line will entail extra cost in sidings, each of which will of course require additional earthwork and area of land.

Now the capital account of the Birmingham and Gloucester Railway, by whose actual cost we must judge the probable outlay on this ancillary line, was not closed at the last half-yearly meeting; neither have that Company yet been at the expense of a permanent terminus at either end of the line. The cost per mile, therefore, taken from the last statement, will be some way under the truth.

Assuming, however, the expenditure to that date as an approximation, we shall find the cost to be—

Land and compensation	£3,353	per mile.
Law, parliamentary, engineering, and surveying charges, &c.	1,831	„ „
Direction, &c.	334	„ „
Amounting to	£5,518	„ „
Now, deducting one-third of the first item for a single line	1,118	„ „
Remains for the above items	£4,400	„ „
Fencing, draining, and quicking line and approaches, and gates, cannot fall short of	400	„ „
The lowest cost of a single line of Birmingham and Gloucester permanent way, according to the prices given by Mr. Whishaw, in his "Railways of Great Britain," will be	1,912	„ „
Total	£6,712	„ „

Now, the estimated cost is 8,316*l.* per mile. We have, therefore, only left for all the earthwork and masonry requisite for the road and stations, the small sum of 1,604*l.* per mile, while the way and works of the Birmingham and Gloucester (including fencing and permanent way) have cost more than 19,000*l.* per mile.

It is possible that I have a little over-estimated the law, engineering, and Direction charges; but as these are necessarily uncertain, by taking *practice* as my guide, if I err it is on the safe side. And even were these items to cost *nothing*, the small amount that would still remain to cover so many certain and so many *contingent* expenses, would make me fear that this estimate is by no means so "certain and definite," as it certainly is "uncommonly cheap."

The published section shows seven, and the plan twelve, crossings of public roads; the bridge and approaches to each of which threaten to be costly, as the railway crosses so nearly on a level.

But the most incomprehensible part of the whole affair is, that the section shows a gradient running up at the rate of 45 feet per mile, to a *summit embankment* of 8 feet high. I think all this calls for some explanation.

I am, Sir, your obedient servant,

COMMON SENSE.

June 21, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—Allow me to inquire, through the medium of your useful publication, respecting the present position of this railway. The whole of the line was to be completed and ready for traffic in *March* last. On the 28th April a circular was issued, stating that, in consequence of the Grand Junction Company having declined entering into any arrangements, the opening would be deferred a few weeks. Now it really appears to me, that the Directors (after their attention had been so particularly called to the necessity of coming to some definite understanding with that Company by Mr. Joseph Hornby, at the meeting held in *August* last) ought to have known, a sufficient length of time before the line was ready, whether they would or would not agree upon terms, so as to have had in readiness the necessary stock for conducting the traffic, and thus to have avoided losing the best part of the year. If such had been the case, I have no doubt the shareholders might have received a fair dividend in the autumn. I shall be most happy to receive some explanation as to the present line of conduct pursued by the Directors, which I hope may free them from that blame which now so manifestly attaches itself to their proceedings. The shares are daily becoming of less value; but as I do not traffic in them, the jobbing price is of no consequence to me. I hold as an investment, and I have no doubt of the line paying, and well too, when it is thoroughly set a going.

I am, Sir, yours truly,

A SHAREHOLDER.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—In your leading article of the 28th inst. you express satisfaction in the goods' traffic of this line becoming developed, no doubt forming that conclusion from the table furnished you, and set forth accompanying that paragraph.

The object of the parties who issued it was to show a favourable comparison in the goods' traffic for the first part of the year compared with the last. It would have been little more inconsistent to have taken 1840, a period before any part of the line was opened, as to select the first four months of 1841, a time the Company were not in a position to become general carriers—the traffic at that time being local traffic between the stations only. Every shareholder acquainted with the resources of this line looked forward to a very large goods' traffic upon it; and although the trade generally have been deceived, and the early connections sacrificed and lost, still with good management the prejudice may be overcome, and a large goods' traffic secured.

On the connection with the Grand Junction line being completed, the goods' revenue was largely derived from Manchester bale goods, paying from 15s. to 20s. per ton, and local traffic. These trades are lost—the first from negligence in the mode in which it was conducted, and the latter destroyed by prohibitory rates; and the miserable amount still received is created partially by carrying cotton at 7s. 6d. per ton, leaving a profit, according to the Chairman's own calculation, of one farthing per ton per mile!

To arrive at any fair comparison of traffic, it is necessary to give each month from the commencement up to a recent period, showing the mode adopted, and the alterations in carrying it on.

The passenger traffic, in being compared with the corresponding weeks of last year, must have deducted from the present amount, that paid for carrying the mails, viz., 194*l.* 16s. weekly, included in the present returns, but not in the corresponding one of last year, the compensation at that time not having been fixed. It will be perceived that no congratulation can be drawn from the management in this department. How is it possible that men knowing nothing of their duties, whose pursuits have had no mercantile character, whose time is occupied in their own affairs, and who know nothing of the goods in *transitu*, or even of the localities of the line, can either divert the goods to the line, or, when obtained, make the necessary arrangements for their regularity? How can a trade be gained, or if gained retained, with a system requiring, as the agents here say, weeks to obtain any instructions to act upon? To continue such a one is an insult upon the understanding of the proprietors, and ruinous to their property. The excuse to the proprietors at the last general meeting, when every other futile one failed, was, that there was a lack of waggons to increase the goods' trade. I have it from competent authority, that there is *material* to carry on treble the present trade. A reference to the subjoined table shows a return of 429*l.* 16s. 1d. for the week ending the 30th July, and which traffic was nearly all local, averaging short distances, and at this time tracked by the passenger trains with noted regularity. If the number of goods' waggons prevented an extension of the trade, why has 1,500*l.* to 1,700*l.* been expended in new-fangled trucks for carriages? This is no earnest of economising the funds, or yet in wishing to push the traffic in goods by increasing the available waggons.

I remain, Sir, yours, respectfully,

A SHAREHOLDER.

Gloucester, May 30, 1842.

Up to August when the Executive Board came into operation the goods were tracked with the passenger trains at a very small cost, since then, with a diminution in quantity, by goods' trains separate. Query at what profit?

LONDON AND BLACKWALL RAILWAY.

To the Shareholders.

GENTLEMEN,—A special general meeting of our Company is at hand. On Tuesday next you will be called together to say how the additional capital required for your railway, namely, 66,000*l.*, is to be raised. The Company are empowered by their new Act, the 5th of Victoria, sess. 2, cap. 34, to raise this entire sum, or any part thereof, by new shares, if they think proper. Or the whole sum, or part thereof, may be borrowed on mortgage or bond, if that mode should be preferred. You will not, I am sure, be willing to give a vote in ignorance of the merits of the plan or plans submitted to you. This would be the conduct of insane men. But, brother shareholders (I am not now addressing the Directors), you are in ignorance, and in ignorance the most perfect, as to the peculiar eligibility of any and every plan which can be proposed to you for raising the money which is wanted. Moreover, I say you cannot, at present, form even an opinion, worth a rush, upon the subject. Do you ask how so? I will tell you:—*because you do not know the plans and intentions of the Directors.* If then you are men of business, nay, I will say men of common sense, and I assume you to be such, you will, at the meeting on Tuesday next, before you proceed to any business, or listen to any blarney or "sweet botheration" from the Chairman, or any member of the Directorial clique, give them such a catechising as they have never had since the Bishop laid his sacred hands upon their then little innocent heads.

You must first, before you can entertain the question of raising money, know what truth there is in the reports which rumour, with her hundred tongues, has put into wide circulation. For it would manifestly be most absurd to waste an hour or two in wrangling about the best way of raising 66,000*l.*, if, as is reported, the real sum which you will have to fork out, before long, will be somewhere about 250,000*l.* It is said, and, what is more, credited too, that the Directors intend (that is, if you will permit them) to purchase a large portion, if not the whole, of the exceedingly valuable shipbuilding yard at Blackwall, known as Green and Wigram's; together with Lovegrove's Brunswick Tavern. It is said it is intended to pull the tavern down, and then the Railway Pier is to be extended over the sites of the two properties. Now, if these two properties should be purchased by the Company, and certain schemes and intentions respecting this enormous extension of the pier be carried into effect, and if, as credible report says will be the case, a successful attempt should be made in the next session of Parliament to compel us poor shareholders to buy certain boats, chiefly the property of the Directors, then, in that case, every farthing of the 250,000*l.* will assuredly be wanted. And I should, for my part, be sorry to pledge myself that even that sum will be sufficient to carry into effect what I believe to be the intentions, and *know* to be the wishes, of your Directors. Before you can consistently or conscientiously give any vote at the meeting, you must demand much information. You would do well to inquire into some matters of detail respecting the working of the railway. Do the Directors keep an account of the number of times the ropes break? To my knowledge, they break, on an average, almost daily. Are the Company carrying goods *gratis?* For although they have been carrying all the goods they could get for weeks past, no separate sum of money appears in the columns of the *Railway Times* as received exclusively from goods. Is the sum received from goods so insignificant that the Directors think it would be imprudent to express it in figures? Or is the whole sum received from the railway placed under the head of passenger traffic in order to make that traffic appear larger than it really is?

Digitized by Google

Have this explained, or, in other words, have it exposed. It is clearly to your interest, brother shareholders, that as many boats as possible should use your pier; why then, you have a right, and you are bound in duty, to ask, do the Directors refuse to allow certain boats to use the pier? It is the fact, which every shareholder either does know or ought to know, that certain steam-boats, for example, the *Gravesend Diamond* boats, some of the *Gravesend Star* boats, and the famous *Waterman's* boats, are *not allowed to benefit your railway by conveying passengers from it!!!* Inquire how this happens. Learn the cause of this treacherous policy on the part of your Directors. And, if they should tell you the truth of the matter, this is the substance of what they will say:—"*Gentlemen and shareholders, be it known unto you, and to all whom it may concern, that we, your Directors, are the principal owners of certain steam-boats, respectively called the* RAILWAY, BRUNSWICK, BLACKWALL, FLIRT, and COQUETTE; *and we beg to inform you, that to us the success of our boats is a matter of far more importance than the prosperity of your railway.*" There is, I am sorry to say, much of slovenliness and neglect in the management of the railway which calls for reprobation at the ensuing meeting. Why are not the comfort and convenience of passengers having luggage better provided for and attended to? Why are not *excursions* occasionally in the season got up, starting from Blackwall? And why do not the trains commence running at eight o'clock, or before, in the height of the season, and on Sundays, and all high days and holidays? And if you omit to mention another subject, you will be unjust to yourselves. It is this—before this address will be in print, a new pier will have been finished and opened to the public at Blackwall, about a quarter of a mile from the railway pier, and so much nearer to town. Several, if not all, of the boats which were not allowed by your Directors to use the railway pier intend immediately to use this new opposition pier. Boats are to run thence to Gravesend for *sixpence*, and *Fardell's* omnibuses are to convey passengers to and from London and the pier at extremely low fares. The Directors are the sole cause of this alarming movement, for such it unquestionably is; and their conduct in this matter alone has greatly shaken my confidence in their judgment and discretion. Our opponents are powerful, and have plenty of *unsweated sovereigns*. One of them said, and the speaker is a man who is not accustomed to speak *idle words*, "I will spend *ten thousand pounds* before I have done with them," meaning our *blessed* (*auri sacra fames!*) Directors.

Gentlemen, I beseech you, speak out at the meeting. I shall, I regret to say, be unable to attend. I must be "over the hills and far away." Pray do not be humbugged out of information, under the pretence that the meeting is special. Speak about money; stick to the question of the probable expenditure of the Company, and the Directors cannot legally stop you. They dare not do it. Persist, and insist, in getting full information. I sincerely hope you will succeed in your efforts, and that the Directors will consent, upon remonstrance (if not without), to modify or abandon plans, practices, and intentions which, if considered at all, must be considered objectionable, not to say dangerous and fatal. Should, however, my hope not be realised—should the gentlemen in office maintain a solemn and indignant silence concerning their future plans—should they refuse to listen to the voice of reason urging the abandonment of present practices and arrangements, and the substitution of others—in fact, should they refuse to act as trustworthy and honest men are bound to act, then, in that sad case, be ye assured, O brother shareholders, that "*there is something rotten in the State of Denmark.*" You will know what to do. Did you ever see rats scamper away out of a sinking ship? I am told they are very nimble and picturesque in their movements. They tumble head-over-heels, *sans ceremonie*. Remember, every shareholder, *mutato nomine de te fabula narratur*. In that extremity, I say, "every man for himself, and God for us all."

Gentlemen, your faithful servant,

A MAN OF METAL.

Cornhill, June 21, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Shareholders.

GENTLEMEN,—You will observe that a special meeting of the Company is called for the 28th instant, for the purpose of getting *your* authority to borrow 66,000*l.*, as authorised by the Act the Directors have just obtained. I cannot be present at this meeting, but I beg to suggest, that the following questions should be put, and satisfactory answers received from the Chairman, *before* you give your sanction to borrow one farthing of this amount.

Why has the establishment of the goods traffic been so long delayed, and have any and what steps been taken to recover damages from the proper parties, contractors or others, for the very serious loss occasioned by the delay? The Chairman stated at the last meeting, that if the Company could show loss, they would *probably* be in a situation to recover much larger damages than any penalty which the Directors had omitted in the contract. Now there can be no doubt that great loss has been sustained, and if the Company are *not* in a *position* to recover damages, it must be the fault of the Directors themselves.

If the Directors propose to borrow a much larger sum than 20,000*l.*, which the Chairman assured the meeting would be *about* the amount of the deficiency, ask how it is that the estimates they made only four months ago were wrong? On no account should they receive authority to borrow the whole 66,000*l.*, for there can be no confidence in anything they say if the deficiency is much more than 20,000*l.* If they require the *whole* sum, being more than *three* times the amount of their estimate on 1st March last, then the sooner you put others in their place the better, and show that you are not to be trifled with in that way. There has been too much of this in many of the Railway Companies; look at your neighbours, the Brighton Railway Company, for instance.

Recollect, there has been borrowed (without the authority of any Act of Parliament I believe) a sum of 197,500*l.* called *temporary* loans. Inquire if this debt has been paid off, now that the calls on the shares are all made? and if not, why not? and when, and out of what fund it is to be discharged? If this is to become a *permanent* debt, then your capital, in place of being 1,000,000*l.*, as you have been often assured by the Directors, and the 20,000*l.* to be now borrowed, will be 197,500*l.* more.

Gentlemen, do not allow yourselves to be humbugged by the Chairman and Directors, but be bold in the management of your own affairs, regardless of the frowns of anybody whatever.

A rigid inquiry should also be instituted into the management of the *traffic*, the promise of the Directors in this respect being anything but fulfilled, and the increase *very trifling* indeed, notwithstanding the brilliant prospects so repeatedly held out. Now is the time for you to act; if you once grant the money you can do nothing.

I am, Gentlemen, yours, &c.,

A SHAREHOLDER.

June 20, 1842.

SHARE-JOBBING — MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Your columns I know are open to every body who wishes to correct any abuse appertaining to the railway system, I therefore beg to avail myself of them for the purpose of drawing public attention to a set of men whose nefarious practices have ruined many holders of railway stock. I allude to certain unprincipled persons who are in the habit, for sinister purposes, of inventing and circulating false reports, with the view of depreciating some particular stock, in which they wish to speculate. A case in point occurred within the last week—Manchester and Leeds shares being the object of attack. These shares had been for some time at about 13*l.* premium, (which would yield, at the present rate of dividend, rather more than 5 per cent. on the investment) suddenly, however, the London quotations fell to 10, 8, 5, 3 premium! and, I believe, even to par! Now, all this would have been perfectly right, if the quotations had been legitimate; but in order to test them, I sent orders to London three consecutive days in this week, to buy Leeds shares at the prices quoted, *but not a share have I been able to obtain*—thus proving that the quotations referred to were not the result of *bona fide* transactions, the prices now being 9 and 11*l.* premium.

I remember, about the same period in last half-year, a like effect was made against Leeds shares by a notable prophet, under the signature of "Verax;" and, in consequence, the Directors thought it necessary to guard their proprietors against such false and wilful mis-statements, which might have effected their property most seriously, and the dividend subsequently declared, verified the predictions of the Directors.

Now, Sir, many cases of great hardship have come to my knowledge, where parties alarmed by these sudden fluctuations have rushed into the market and sacrificed their properties, which these "sharks" have immediately purchased, and some of the latter, I know, have boasted that they have made *fortunes* by these means. What a disgrace to human nature are such practices! The wretch who pursues them ought to be spurned by all respectable brokers (for to such my remarks are not intended to apply), and held up by yourself and every other respectable journalist as an object of universal scorn.

I am, Sir, your most obedient servant,

A LEEDS SHAREHOLDER.

Liverpool, June 23, 1842.

SHARE-JOBBING—MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—I am told there are in London certain unprincipled share-jobbers, who, acting in concert, live by a systematic succession of operations to deceive the public. Can any of your correspondents say, whether the late sudden fall in the price of Manchester and Leeds shares arose from the operations of these gentry?

The price of these shares for some weeks ranged from 12*l.* to 14*l.* premium, and the supply and demand appeared nearly equal, when suddenly a sale came from London at 8*l.*, and then next day another at 4*l.*, and prices at from 4*l.* down to par. Who are the sellers, and what is the cause? None can tell. In Manchester town, where three-fourths of the sales of this stock takes place, and where the bulk of the shares are held, and their intrinsic value best known, the price was 17*l.* What motive had parties to sell in London at 4*l.* (a market in which Manchester and Leeds shares are but seldom quoted), when in one post 12*l.* might have been obtained here? That the value attempted to be stamped upon the shares was a false one is evident from the fact, that the price has already nearly resumed its former position—there being buyers to-day at 11*l.*, but *no sellers*. The only conclusion I can come to, Mr. Editor, is that the authors of the low quotations *wanted to buy*, and resorted to the dishonest expedient of alarming the timid and inexperienced shareholders by fictitious or purposely low sales, in order to obtain their shares at a lower price. As I doubt not you will willingly lend the columns of your paper to expose a system designed to rob the public, I should be glad to elicit suggestions by which such proceedings might be checked. When sales under such circumstances are made, the names of the sellers must be known when the transfer is registered. Might not the names of such parties be published, with the actual number of shares transferred? Or, when such sales are re-

Digitized by Google

ported, and no corresponding transfer makes it appearance, might not such fact be given to the shareholders through your journal, or otherwise, till such attempts at imposition become so well understood as to become harmless?

I am, Sir, yours, &c.,

AN OLD SUBSCRIBER.

SHARE-JOBBING—MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—I think, with many other *bona fide* holders in railway property, that your time would not be wasted were you to enlighten the timid as to the manner in which jobbers and speculators often act in buying and selling, in order to raise or depress stock to suit their own purposes, and also the errors they *accidentally* fall into when writing on the subject. A writer in your last wishes to prejudice the proprietors against the Manchester and Leeds Directors. Now, through the whole of their course I know not any body of Directors to whom proprietors are more indebted; and when we see that they have effected all that they could wish with respect to the great junction with the Liverpool line, which will take place in little more than a twelvemonth, we ought to think ourselves more than fortunate that our interests are superintended by such men of business. Our Chairman, at the meeting in June last, stated his opinion that in the October following our receipts would be 4,300*l.* weekly, and that we might look forward to our receiving for the present year *something like* 5,000*l.* per week. What has been the result? The October receipts fully realised his views; and although trade has this spring suffered to a *much greater extent* than was anticipated, his supposition will not be very far from the truth should we progress as we have done. For the 15 weeks ending June 14, 1841, the net traffic averaged 3,365*l.* per week; for the corresponding weeks this year it is 4,356*l.* For the remaining 29 weeks of 1841, the average was 3,390*l.*

As to future prospects, it will be recollected there is 13,000*l.* in hand from last account; and that when trade revives, as it must do, no line will sooner feel the effect, especially when the junction is completed. Some idea may be formed of the immense traffic on the Leeds and Liverpool Canal, from the fact of its 110*l.* shares being of the value of 750*l.*; but from its being very circuitous (130 miles) and studded with locks, goods are never less than three days on the journey, whereas the distance by rail will be 40 miles less, and goods delivered the same day as dispatched.

Perhaps, Mr. Editor, you could inform us when the new mode of taking 5 per cent. from the passenger traffic will commence, as no English railway will benefit more than this, our payments on that score having been hitherto rather more than 8 per cent.

I am, Sir, yours, &c.,

W. T.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—A "Disappointed Shareholder" asks, in your last number, why the traffic of the Manchester and Leeds Railway has fallen this year so far short of the Chairman's anticipations? The object of the writer is not very clear. The question, to say the least, is premature, for it is by no means certain that the total receipts of the year will fall short of 5,000*l.* per week. When Mr. Houldsworth announced his expectations of future traffic he stated that they were deduced from results obtained in other similar undertakings of longer standing; and in this way by the experience and the development of the income on other lines. I do not find any such short-coming as to affect the encouraging prospects held out to us. On the contrary, looking to the times, and to the fact that our traffic this year exceeds that of last year by 1,000*l.* per week, I profess myself *agreeably disappointed*, and perfectly satisfied that the anticipations of the Chairman in regard to the amount of income to be expected in 1842 would have been more than realised if trade had been in an ordinary state.

In confirmation of this opinion I would refer to the progress of the traffic on the London and Birmingham line, comparing it with the increase on the Manchester and Leeds line.

London and Birmingham Traffic.

	Per Week.
First 13 weeks averaged	£8,900
Corresponding weeks in the following year (1839)	12,000

Being an increase of 35 per cent.

Manchester and Leeds Traffic.

First 15 weeks averaged	3,360
Corresponding weeks of the following year (1842)	4,360

Being an increase of 30 per cent.

Now, considering the present state of the country, and that the income of the latter undertaking is derived almost entirely from a trading population, suffering more than any other from long-continued depression, unable to supply themselves with the usual quantity of food and other articles of consumption, the slight difference in the ratio of increase in the income of the Manchester and Leeds Company, and that of so successful an undertaking as the London and Birmingham line, taking the times into view, tells strongly in favour of the former.

But it may be right to show what income will be received by the Manchester and Leeds Company in 1842, if the present ratio of increase over the receipts of last year continue:—

The income of the first six months may now be assumed at	£109,000
The income of the next six months at £116,000 + 30 per cent	151,000
Total for the year 1842	£260,000

Being exactly 5,000*l.* per week, which was the Chairman's estimate in June last year.

If this amount be not realised at the close of the year, it will be attributable much more to the unprecedented state of business, and the diminished means of the population from that cause, than to any mistaken estimate of the permanent resources of the undertaking. Many facts bearing on this point are within my knowledge, but enough for the present.

I am, Sir, yours, &c.,

A CONTENTED SHAREHOLDER.

Manchester, June 22, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—Your correspondent "C. D.," in last week's *Railway Times*, either mistook or misstated my meaning in my letter of the week before. What I said was, that in all private partnerships capital is paid for either in interest for the amount of difference advanced, or an additional proportion of the profits; and that consequently the principle which the Croydon Company advocates, viz., a distribution of profits in proportion to length of line (*and not to cost of works*) would be unjust. I may add further, that I believe it would be without precedent in similar concerns; for instance, the dues on canals are always regulated by the cost of the works. *As an instance*, there is a navigation commencing near this place and extending to Hull (a distance of about 70 miles). Now, the dues of the first 3 miles are nearly equal to the whole of the other 67, the 3 miles being through an expensive canal, the other through ordinary navigation; on the Croydon principle, they should be rated equally mile for mile. Again, coach proprietors always allow a greater rate per mile over hilly or bad ground than over level or good; on the Croydon principle, they should be the same. I therefore cannot conceive how any "right-minded man" can advocate the Croydon principle; nor do I believe the legislature will ever sanction the Croydon, notwithstanding the chuckle of "C. D.," that the "Grange-road Approach Bill is only lost for one year." Has he forgotten that the Bill which the Croydon applied for, to make a road parallel with the Greenwich, and to take their tolls, was only lost for *one year*, there being nothing to prevent them but common sense on the part of the shareholders from applying indefinitely to the legislature for Acts to enable them to act dishonestly towards the Greenwich Company? I am surprised that the Croydon shareholders have not exercised the powers which they have long ago to put a stop to proceedings which is so much at variance with their interests; for if the Croydon have a right to evade the toll of the Greenwich in the way proposed, the Brighton and the South-Eastern have at least an equal right to evade paying toll to the Croydon, by making a *cheaper* line from *Croydon* to London.

In fact, if that principle be once admitted, the best parts of every railway in the kingdom must either be taken from them by competing lines, or they must submit to such reductions in their rates as would be ruinous to them, and then farewell to railway extension; the only inducement for people to promote these undertakings being the belief that such vested interests would continue to be respected by the legislature.

I remain, Sir, your obliged,

A. B.

Stonehill, June 22, 1842.

RAILWAY PLEASURE EXCURSIONS.

To the Editor of the Railway Times.

Sir,—It is, I consider, a great pity that these excursion parties are not more encouraged than they are, nay even invited, by the Railway Companies. When successful, and they would be if properly and economically managed, they do good in every possible way—promote healthy recreation—popularize the railway, and create a friendly feeling amongst all. By all means and in every conceivable way should the poor be induced to think that the rich and great, "the monopolisers" as they too frequently think we shareholders all are, take a kindly interest in promoting their happiness and innocent pleasure-taking. For myself I am inclined to think that Railway Companies have no popularity to spare.

What I have to suggest is shortly this: that to prevent all correspondence and the trouble of inquiring for terms, &c., a regulation be come to by the different Companies, and advertised at the bottom of their time-tables. For instance, what could be more simple or more reasonable than this,—that a special train be granted to any part of the line, to return the same day, at so much per mile (say 5*s.*), the travellers paying their own mileage duty; or, 100 (or 150) persons may travel by any of the regular trains, returning the same day, upon paying each the regular fare for one way—of course a proper notice to be given in every case. Special third-class trains should be allowed on payment of one fare each, returning same day, or some respectable persons guaranteeing a sufficient number so as to ensure the Company against all loss.

I am glad to observe that the London and Brighton Company have set the example of inviting tourists to travel, by making allowances to those who return the same day. Their fares, however, are much too high;—and in case of one person taking such a ticket, why not allow him to return next day?

I cannot conclude, without expressing my pleasure at the liberal conduct of the London and Birmingham Company in a recent affair of this description. Of this, however, more next week, when the excursion will have been over.

I am, Sir, yours truly,

A SHAREHOLDER.

London and Brighton Railway.—A new pier has been begun by the London and Brighton Railway Company in the western arm of Shoreham Harbour, for the accommodation of steam-vessels to and from France and the Channel Islands. The traffic on the railway continues to increase, and will, we doubt not, experience a further and very considerable development as the summer advances. This week the amount received for passengers and goods has been, we understand, upwards of 4,000*l.* — *Brighton Gazette.*

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

2. Miles toll to London and Birmingham 13*l.* 8s. 6d.

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

14. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.) The *rent* of the branch lines is together 903*l.* 16s. 11d. per week. There is likewise a *toll* payable to the Exeter Company, which, on the basis of the first half year's traffic, amounts to 130*l.* per week.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 34*l.* 14s. 0d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 9*l.* 10s. per cent., but to the original shareholders it is equal to 12*l.* 15s. per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for; and on the quarter shares upon 25*l.*, although up to the 31st of December last only 5*l.* had been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,126*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The want of dividend does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the foot-path, but is exclusive of the Brighton, Croydon, and Dorchertel.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,505*l.* 5s. 10d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include horses, 25*l.* 12s. 6d.; carriages, 53*l.* 11s. 6d.; dogs, 1*l.* 9s. 6d.; parcels, 230*l.* 19s. 3d.; cattle, 31*l.* 0s. 0d.; corn, 7*l.* 6s. 1½d.; heavy goods, 402*l.* 8s. 7d.; coal and lime, 97*l.* 14s. 10d.—Total, 849*l.* 16s. 9½d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 2,000,000*l.* The details of the receipts are as follows—Passengers, 2,738*l.* 1s. 1d.; carriages and horses, 153*l.* 4s. 5d.; parcels, 149*l.* 7s. 8d.; mails, 50*l.* 5s. 9d.; merchandise, 1001*l.* 13s. 0d.; minerals, 229*l.* 2s. 6d.; cattle, 40*l.* 17s. 10d.—Total, 4,362*l.* 1 s. 3d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 127*l.* 0s. 10½d.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on each portion of the passengers as pass over their railway. The 32½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* included that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

36. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

Dublin and Kingstown Railway.—*Week ending June 14—Receipts from passengers (number of passengers, 46,089), 1,187l. 14s. 4d.*

TO CORRESPONDENTS.

Greenwich and Croydon Railways.—*We have seen the advertisement to which* Anti-Humbug *refers relative to the proposed presentation of a piece of plate to Mr. Scrimgeour for his exertions (!!) in defeating the Grange-road Approach Bill, but we will not go so far as our correspondent and assert that Mr. Scrimgeour has published it himself. We should be glad to be informed, however, who are the subscribers to this testimonial. This we know, that one of Mr. Scrimgeour's own friends dates the ruin of Mr. S. from the late Greenwich meeting, and the report of his speech in this journal. Ever since, Mr. Scrimgeour has fancied himself a railway reformer of the first magnitude, as we should imagine the officials of the Greenwich Company know by this time to their cost. This same speech we are told Mr. S. has printed for public circulation. We believe it is quite true that so boisterous was his behaviour in the Committee room (on the Grange road Bill) that he was threatened with expulsion. Mr. S. is fond of quoting Scotch rhyme; and we recommend to his attention the following:—*

"O wad some power the gifte gie us
To see oursel'es as ithers see us,
It wad frae many a blunder free us,
An' foolish notion."

—it would totally disperse the notion of Mr. Scrimgeour, that he is born to regenerate the Greenwich Railway Company.

London and Brighton Railway.—P. P. P. *has been rightly informed. Mr. Coombe, a sub-Engineer,* has *commenced an action for (alleged) "libel" against the proprietors of this journal. Whether Mr. Coombe has been well or ill-advised, remains to be proved. Meantime we shall be glad to hear again from our correspondent, or from any other party who can give us information. We have by no means done with the engineering department.*

Directoral "Doings."—*Is it true that a letter was written to the Chairman of a certain Railway Company, by a party who had negociations pending with the Company, offering the said Chairman, without any circumlocution, 100l. if he, the Chairman, could get the Board to accede to specified terms—that the Chairman, with much seeming indignation, read the letter to his colleagues, and proposed that the employers of the party referred to should be informed of the transaction, but that no further notice has been taken of it, the Chairman's memory having apparently failed him? Is it true that the same Chairman informed his colleagues, on the occasion of a late vacancy in an official appointment, that a party had called upon him, and having solicited the situation for a connection of his own, laid down twenty 10l. notes, counting them out one by one, which he begged his acceptance of—that he was allowed to lay down all the notes without being himself knocked down—but that the incorruptible Chairman declined disclosing the party's name? If true, what an opinion these parties must have had of the worthy Chairman's character! Perhaps they were not far wrong. More anon.*

R. *(Newcastle) has our best thanks. His first suggestion is, as he hints, impracticable. Perhaps he would see what he himself can do in enabling us to carry out the other.*

Justice *will see that the subject of his letter has been noticed by other correspondents.*

A Constant Reader of the *Railway Times.—Were we in our correspondent's position we should entertain no fears on the subject. Perhaps, however, it is as well that the question should not at this moment be mooted. We fully agree with him in his estimate of the Board of Management.*

E. L. *is thanked for his hints, albeit not expressed in the most courteous terms. We are at all times glad to be set right.*

A. B. *will see that his views have been more fully developed.*

W. L. *is again thanked. We shall give the subject our best consideration.*

F. and Commentator *came to hand too late.*

In the third line of the concluding paragraph of last week's leading article on the rating of railways, the word "not" should have been omitted. The passage should have run thus:—"Another circumstance is conclusive to our mind for rejecting the doctrine that the haulage receipts are to be included in fixing the rating," &c. &c.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES .	**113,374**
Railway Magazine . .	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showthe ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, JUNE 25, 1842.

We incidentally alluded in our last to the differences which have sprung up between the Northern and Eastern and the Eastern Counties' Railway Companies. In the interval we have endeavoured to ascertain the facts, but it is difficult to obtain them, for while Companies are in a course of negociation they are generally reluctant to state what are existing between them as subjects of remaining difficulty. A prudent silence leads best to an amicable and satisfactory adjustment; and very often an outburst of hot temper, and disclosure of isolated points or conversations while arrangements are proceeding, will give so unjust a view of the conduct of either party as to occasion disgust to the other, and an indisposition ever to deal with any one whose discretion cannot perform the simple process of keeping his mouth shut.

Sterne remarks "that every man chooses to be present at the shaving of his own beard," and in the true spirit of that profound observation he ought to have added, that the shaver's general inclination is neither to cut himself nor others. It is clear also that every Chairman chooses to be present, and often is in ecstasy at being present, at the making of his own observations; and it would be well if he would likewise follow the rule of never cutting himself nor others. Wealth and great power often make a man very arbitrary in his own business, and wild and rough in his transactions and expressions, and he may be for this excused: but, when he wields the destinies and manages the concerns of other people, every act and every word should be well weighed before doing or uttering takes place, lest irremediable mischief to the common property should ensue. Railway Boards when in dispute, probably in getting through business, are much like strong-minded men; reason and good sense, and good feeling, will sway them into amicable adjustments, but bullying disperses Directors, and drives negociation to the winds. In reference to the Greenwich and Croydon disputes we have heard much said about bad temper occasioning more difficulties than all the existing circumstances of difference put together, and we greatly fear that there is "no love lost" between the Northern and Eastern and Eastern Counties' Boards, and that most of their disputes could be traced to a similar cause.

An agreement, it appears by what was stated by Mr. Crawshay at the Northern and Eastern meeting, had been prepared for adjusting all differences whatever. The Eastern Counties' Board were, we believe, to agree to a serious and liberal reduction of toll on short distance passengers, reducing the toll on third-

Digitized by Google

class passengers even as low as from 4d. to 2d., and the Northern and Eastern Railway Board in accordance with previous suggestions were to reduce the fares of these passengers materially, and give them the benefit of railway travelling, from which they are by the present high fares excluded. This was the main scope and object of the agreement, but we understand that it also arranged and settled several other points of importance in an equitable manner, calculated to make the Northern and Eastern Railway an increased feeder of traffic to the Eastern Counties' line, while the Eastern Counties' Board met the efforts towards this object of the Northern and Eastern Railway Board with liberality, and gave them much accommodation, and saved them a vast deal of expense. Why should so advisable and wise an agreement between the Companies, and one which would have brought so much benefit to the public, have been abandoned or impeded in its progress to completion? Mr. CRAWSHAY says in his speech, there were only three points of difference left between the Companies. Upon two of these points he does not dwell, and therefore we presume that they might have been adjusted easily upon further deliberation. But the great, and indeed sole, point which seems to have caused the *split*, is, that the Eastern Counties' Board have insisted that the Northern and Eastern Company shall, from the beginning, pay the duty on their own passengers carried in their carriages along the Eastern Counties' line between Stratford and Shoreditch. We are at a loss to understand how there arises any difference on this subject. Have the Eastern Counties' Company bound themselves to the Northern and Eastern Company to pay this duty? We should presume not, or the Eastern Counties' Board could not maintain the standing on the subject which they do, and it would be disgraceful in them to dispute their own agreement. It would be equally wrong and disgraceful for the Northern and Eastern Company to depart from an agreement on their part to pay. If there be no agreement at all on the subject, the simple question is, who ought to pay the duty, and who has paid it? Of parties connected with the Stamp-office we have made inquiries, and we find that the Northern and Eastern Company paid one month of this disputed duty, but have not paid any since, nor has any been paid by the Eastern Counties' Company. At the same office we are told, that it is the habit of every Railway Company in the kingdom, using a portion of the line of another Company, to pay (unless the contrary has been specially agreed) the mileage duty on all passengers they carry upon their own line or upon the portions of lines of other Companies. The universal practice, therefore, makes it very clear what justice and common sense require to be done on the Northern and Eastern Company's part; and having once paid the duty, we are surprised that they do not continue to do so, and cannot wonder at the Eastern Counties' Company resisting what they must almost deem imposition, in its being sought to fix them with the duty either past or to come. If this be the ground on which the great healing agreement between the two Companies has been upset, the conduct of the Northern and Eastern Board must meet with general reprobation. It is hopeless to expect that the Eastern Counties' Board could give way on such a point. They pay their own passenger duty; why should they pay that of the Northern and Eastern Company, who receive the fares of carrying for hire passengers in their carriages all the way to and from Shoreditch and Stratford? The Eastern Counties' Company, *quoad* the Northern and Eastern Company are merely the proprietors of a railway road from Shoreditch to Stratford, upon which the locomotive, not four-horse but forty-horse, stage coaches of the Northern and Eastern Railway Company travel, and the Eastern Counties' Company receive a toll for the use of the road constructed at an enormous cost, and they have in return to maintain it, and to keep it in repair, and keep it clear, and provide all the police. The Northern and Eastern Company, however, take the passenger fares for running upon the Eastern Counties' line, and the passenger duty is essentially a charge upon the passenger fares, or rather upon what we described in our last week's article on the rating of railways as "*haulage receipts*." The duty is actually levied under the Stage-coach Act, and this marks the character of the duty as being levied on the coach proprietor or carrier; and although, for the safety and convenience of Government, we believe that it has fixed each Railway Company with the liability to pay not only their own passenger duty, but the passenger duty of any Company running on their line, still this does not in the least alter the question of morality and justice, and honesty —"Who *ought* to pay the duty?" And if the Northern and Eastern Board wish to stand well with the public and with their constituents, we urge them strongly to continue equally just during every month of their existence as they were during the period in which they first voluntarily paid the duty, and not to raise further objections to a payment which, according to our feelings, they ought always to have made without hesitation. Until the Northern and Eastern Company have some better ground than technicality for resisting this payment, the deep responsibility rests entirely with them of having overthrown the agreement which was to have produced good fellowship, low tolls, and cheap fares—for it is obviously impossible that the Eastern Counties' Board, on a question of principle like this, can yield a jot.

We shall probably have something further to say on this subject next week.

Since the above was in type we have been requested by the Eastern Counties' Board to state officially "that the assertions made by Mr. CRAWSHAY at the Northern and Eastern Company's meeting are most unfounded and erroneous, but pending a correspondence which is taking place on the subject, they deem it improper to enter upon those details which, for the entire justification of the Eastern Counties' Board can and must hereafter be given."

PURSUANT to an Address of the House of Commons, the communications forwarded to the Board of Trade by the several Railway Companies, in reply to the official circular which recently appeared in our pages on the subject of "locking-in," have just been printed. It would appear, however, as if the documents were incomplete, for we see no answer from more than one Railway Management, who, we have reason to know, *did* reply to the circular—as, for instance, the London and Birmingham.

It seems, from the communications referred to, that the plan of locking both doors of railway carriages had prevailed upon only two lines, the Ulster and Great Western. The former Company, it is stated, "had anticipated the suggestion" of the Board of Trade, and "discontinued the practice." The Great Western Management has, likewise, as our readers are aware, given up the locking-in, but solely in deference to the strong recommendation of the Inspector-General and the Board of Trade. The views of the Directors as to the superiority of the mode formerly in use remain unchanged, and these views are very ably set forth in their answer, for which we shall endeavour to find room next week.

It appears that upon a very considerable number of railways, both doors are constantly kept unlocked. We may enumerate the Eastern Counties', the Northern and Eastern, the Midland Counties', the York and North Midland, the Hull and Selby, the Great North of England, and the Glasgow and Ayr. The Directors of these Companies having intimated their willingness to lock one of their doors should the Board of Trade deem it necessary, were severally informed, that "in expressing a decided opinion that both doors should not be locked," the Board did "not wish to interfere with the discretion of the Directors as to locking none of the doors, in case that they are convinced that such a course is calculated, under the peculiar circumstances of the railway, to promote the public safety."

This popular subject was brought forward on Saturday in the discussion on the Railways' Regulation Bill. Mr. O'BRIEN moved the insertion of a clause prohibiting the locking of the door of any carriage containing passengers, on the side nearest those stations at which such carriages stop. Mr. GLADSTONE, the Vice-President of the Board of Trade, while apparently admitting the propriety of keeping at least one door unlocked, was of opinion that no positive enactment should be framed; and in this we think the right honourable gentleman acted judiciously. It is quite manifest, from the "replies" above referred to, that the Companies are very ready to listen to any suggestions that may be offered on matters supposed to involve the public safety; and while there remains a doubt on points of detail like this—and we are bound to admit that, as usual, very much may be said on both sides—it were highly to be deprecated that any attempt should be made to tie down by an Act of Parliament to a particular course, those upon whom the anxiety and responsibility of managing these great undertakings devolves. Sir ROBERT PEEL expressed himself to this effect. "He saw no necessity whatever for any legislative regulations on this matter." "It was by far the best way to let public opinion, which generally acted in the right direction, set the matter right." A home-thrust at the Rev. Canon of St. Paul's has, we see, led Mr. SMITH into further newspaper correspondence, but as his last essay shows more bitterness and less wit, as well as less common sense than his first letter, which we transferred to our columns, we have not thought it necessary to reprint it. Ultimately Mr. O'BRIEN's clause was rejected by a majority of 23; the numbers *for* being 69, *against* 92.

A well-written letter on this subject, from Captain BEAUCLERC, one of the Directors of the London and Brighton Railway, will be found in another column.

We regret to see that the course adapted by the Great Western Directors, of prohibiting the admission of friends of passengers to the departure and entrance platforms, has led to much animadversion in the daily prints. It is

Digitized by Google

very likely that the novel circumstances in which the officers of that Company have been placed by the recent change of system, may have led to regulations somewhat more stringent than are absolutely required, but we have no doubt that in a very short time the Directors will assimilate their proceedings in this respect, as in others, to the practice of other Companies, who experience neither injury nor inconvenience from granting free access to their terminal stations.

If resolution-passing can be deemed a step towards the completion of a railway through the counties of Cornwall and Devon, such step has been taken by the Town Council of the borough of Falmouth. At a meeting of that body held last week, "the clear and convincing statements contained in the Report of the Committee" who convened the late county meeting, were specially referred to, and after the promulgation of not a few axiomatic truths with respect to the importance of a railway "to the prosperity of the counties of Devon and Cornwall and the west of England generally," it was unanimously resolved that "the Council, being deeply impressed with the necessity of using every effort to promote the undertaking in question, deem it advisable that the representatives of the county at large should be requested to take the earliest opportunity of communicating with the Directors of the Great Western Railway, for the purpose of ascertaining their disposition to encourage this very important addition to their line, and that Captain Moorsom, and any gentlemen of this neighbourhood now in town who have taken an interest in the undertaking, be solicited to co-operate with the members for this object."

This is all very well so far as it goes, but before the Cornubians stand much chance of getting a railway brought to their doors, the Town Council of Falmouth must go a great deal further. "Deeply impressed" they may be "with the necessity of using every effort to promote the undertaking," but appeals to the Great Western Company are not the very best means of testifying their anxiety for the success of the work. The depth of the impression will, in the eyes of the public at large, be gauged by the breadth of their subscriptions. And herein do the Town Council of Falmouth —and not they only, but the leading personages of Cornwall generally—act in a most impolitic manner. Important, no doubt, would this addition be to the Great Western Railway, but the proprietors of that splendid undertaking have, we suspect, rather too much on their hands already to be led into a scheme which those who would be directly, and at once, benefitted by it, show so little disposition to patronise, save by holding meetings and carrying resolutions by acclamation. It resolves itself after all into a breeches-pocket question, and if the Town Councillors of Falmouth, and those who were instrumental in getting up the county meeting, show so lamentable a (practical) distrust of the "clear and convincing statements" contained in the Report of the Committee—and that they are both clear and convincing we readily grant—it is rather too much to hope that the Directors of the Great Western Railway, or those whose interests these Directors are bound to protect, should put themselves forward in the speculation.

The truth is—and the sooner they are satisfied of it the better—that the inhabitants of Falmouth, and of the counties of Cornwall and Devon at large, must put their own shoulders to the wheel before they can reasonably hope to extricate themselves from the insulated position in which the want of railways is rapidly placing them. Resolutions won't do. There must be applications for shares. And when we find the Town Councillors of Falmouth (collectively, if they can, and, if not, individually) putting down their names for some 50,000*l.* or 60,000*l.* worth of stock in the Great Cornish Railway, we shall think better of their appeals to the Great Western and Bristol and Exeter proprietaries, and augur much more favourably of their success. How far they are likely to adopt the advice thus offered may be gathered from the fact, that even now the charges accruing on the preliminary surveys have not been made good!

A correspondent, who subscribes himself "A Victim"—and we know that, unfortunately for himself, he can lay claim to the designation —thanks us for our endeavours to resuscitate the West London Railway, and hints a very sensible piece of advice, namely, that the present Directors should offer to retire in a body, "and see if their offer be taken." We believe it *would* be taken, for however far the apathy of the shareholders may extend, however willing they may be, as our correspondent says, "to look on all as lost," they cannot, we should presume, be totally indifferent to the fact, that these same Directors are at this moment, and have been for years past, while the concern is literally bankrupt, drawing their official salaries! It is true that they may not receive their allowance (allowance for what?) in hard cash, but they receive it nevertheless in an equally tangible form, inasmuch it is "written off" certain amounts due by them to the Company, and the payment of which is liable at any time to be enforced. One would scarcely believe that any body of Directors—we suppose we must call them so, *lucus a non lucendo*; otherwise *mis*-Directors would be the proper phrase, for they and their predecessors have blundered and bungled everything from the beginning—one would scarcely suppose, we say, that any set of men could, under the present circumstances of the West London, have the coolness to come upon the impoverished treasury of the Company for doing nothing. Yet so it is; and if the proprietors choose to suffer it, perhaps other parties have not much reason to complain. Had we, however, the honour of belonging to the Company, we should at least endeavour to find out for what services performed the official guineas of the Board were ostensibly claimed, and for what length of time such claim was likely to continue. We should be glad, also, to know in how much worse a position the proprietors generally would be placed if there were no Board of Direction at all. The Directors say *they* cannot do anything towards reviving the project: for what purpose, then, but for the purpose of sacking the aforesaid guineas, do they remain in office? Let them retire. If another Board of Management can be formed, capable of carrying out the undertaking to completion, so much the better; the guineas will in that case be well bestowed. If such a Board can *not* be found, the guineas may as well be paid to Messrs. D., E., and F., as to A., B., and C., and it will be giving others a chance of enjoying a sinecure upon a small scale! By the way, is there any Engineer to this Company, and does he receive a salary? There is, we know, a Secretary—and an excellent, intelligent, officer he is—but if the concern is to be, as it would seem to be, wholly abandoned, it would be just as well that Secretary, clerks, offices, and all, should be given up. The creditors may as well have what remains of the wreck, if it were only a shilling in the pound, as that it should be expended, and the concern (for luckily the *proprietors* are not liable) involved in further debt, by the farce of keeping in nominal existence the virtually defunct "West London Railway Company."

We would fain hope, however, that something may even yet be done. The Lancashire proprietors will, we trust, take the matter in hand. Much better would it be that they should offer the concern for nothing to any one who will accept it and guarantee its completion, than that it should be suffered to remain in its present condition. As a preliminary step, let the present Board resign *en masse*, having first convened a special meeting of the proprietors, and if matters should not then be put into a better trim, there is one consolation —that nothing can possibly render them worse.

As mentioned in our number of Saturday last, the Railways' Regulation Bill was further considered in Committee of the House of Commons on that day. We have elsewhere given a somewhat ample account of the proceedings. It will be seen that not one of the motions to which we have repeatedly alluded as about to be proposed by honourable members, was carried.

The anti-Sunday travelling proposition of Mr. Plumptre was, our readers will be gratified to observe, defeated by no less a majority than that of 105 to 8! We trust we shall hear no more of these Puritanical attempts to make the people religious (or seemingly religious) by Act of Parliament. Even Sir Robert Inglis, stickler as he usually is for the pseudo piety which prompts the movers of these and kindred endeavours, recommended his honourable friend and fellow-labourer, the member for Kent, to withdraw his proposition. No doubt the honourable Baronet judged more sagaciously of the result than did his worthy colleague; but, fortunately, the obstinacy of the latter was equal to his bigotry, and defeat, by a majority which we suppose will cool the honourable gentleman's courage for some time to come, was the result.

On the question of "locking-in" we have elsewhere spoken. Here, as on other points, Mr. Gladstone hoped the clause would not be pressed, although for what good reason is not very apparent. We protest against the now too common practice of bringing forward clauses, apparently for no other purpose than to withdraw them to please some member of the Government, or other influential personage in the House. No specific resolution—no opposition to any resolution—should be ventured upon without good cause; but, once commenced, it should in every case be pressed to a division. A similar practice, we regret to say, is gaining ground among railway proprietors themselves. Motions and amendments are proposed, and because the Chairman can "talk over" the propounder, or the friends of the Board (who in nine cases out of ten comprise the majority of the periodical meetings) shout lustily for its withdrawal, an obnoxious proposal is withdrawn accordingly, although had the proposer possessed but a proper degree of moral courage, he might have triumphantly carried his point. When railway proprietors learn to look after their own interests in their

Digitized by Google

joint-stock speculation as they look after them in their respective callings as individuals—when they cease to stand upon ceremony with those whom, as Directors, they *suspect*, just as they would other agents placed in a similar position—then, and not till then, will they be properly served—then, and not till then, will the wrong-doers *feel* that they are responsible for their acts.

We are sorry that Lord ROBERT GROSVENOR'S motion, for leaving to the arbitration of the Board of Trade disputes between Companies having a common terminus, was not carried. That only 81 members should have voted upon the clause (the majority being 1), shows how little interest the House at large must have taken in the question; and yet it was a matter of much greater importance than scores of those which nightly command crowded benches. To this scheme of reference it must ultimately come. The very dread of having an impartial tribunal to decide points in dispute, would keep litigious and grasping Managements in check, and would doubtless prevent that yielding to circumstances which, we fear, is not seldom forced upon those who have "right," but not "might," upon their side.

The Bill was again discussed on Tuesday. Sir HENRY HARDINGE has given notice, that on the further proceedings he will move the following clause, to which it seems to us there can be no serious objection:—

"That whenever it shall be necessary to move any of the officers or soldiers of Her Majesty's forces of the line, ordnance corps, marines, or the police force, by any railway, the Directors thereof shall and are hereby required to permit such forces respectively, with their baggage, stores, arms, ammunition, and other necessaries and things, to be conveyed, at the usual hours of starting, at the prices contracted for by the Secretary at War, for the conveyance of such forces, on the production of a note signed by the proper authorities."

WE understand that the following statement was exhibited some days since in the share-market, and we have reason to believe that it comes from an authentic source:—

Comparative statement of toll payable to the Greenwich Company in respect of passengers passing over that line to and from Croydon and the intermediate stations, during FOUR WEEKS, commencing from the second Tuesday in May of the years 1841 and 1842.

1841.

Toll payable, THREE-PENCE per passenger; 24 trains running *daily*.

Passengers	£. s. d.	Per annum.
38,159, producing	476 19 9	Or, taking the average which the traffic of the month of May bears to the traffic of the whole year..... £4,600

1842.

Toll payable, FOURPENCE-HALFPENNY per passenger; *44 trains running *daily*.

Passengers	£. s. d.	Per annum.
20,559, producing	385 9 7	Or, taking the average which the traffic of the month of May bears to the traffic of the whole year..... £4,353
3,478, carried by Brighton Company	65 4 3	
24,037	£450 13 10	

By this statement it appears that notwithstanding the additional, and as some people said superior, accommodation afforded by the Brighton Company in the carrying of passengers to and from Croydon, and, notwithstanding that this Company has been charging 3d. per passenger less than the Croydon Company, they have only carried 3,478 passengers during a period in which the latter have carried 20,559; and together they have only carried 24,037, which is 14,122 less than were carried by the Croydon Company alone in the corresponding four weeks of last year. The consequence of all this is, that the toll payable to the Greenwich Company last year, at *three-pence* per passenger, having been 476*l.* 19s. 9d., the toll payable *this* year (which at *fourpence-halfpenny* ought to have been, according to the calculation of the Greenwich Directors, 715*l.* 9s. 7½d.) has only in reality amounted to 450*l.* 13s. 10d.—an absolute loss, upon a higher toll, of 264*l.* 5s. 11d. We think a clearer demonstration cannot well be afforded of the insufficiency of a high rate of toll or fare to secure a large revenue.

This temporary trial has also tended to demonstrate the little likelihood there is that the short traffic on this line will be prosecuted with anything approaching to the same energy by the Brighton or Dover Companies as by the Croydon. It requires but little reflection to perceive why this cannot be, and we always thought the notion of the Directors of the Greenwich Company a very mistaken one—that because these Companies went over the ground for other purposes, they would therefore be able to conduct such a traffic better, or more economically, than the Croydon Company.

If the trains of these Companies are to be *profitably* employed, they should be filled with long passengers who pay the long fare, and, if they be so filled, the short passengers, who pay only the short fare, must be otherwise provided for. Other considerations likewise demand this separate provision.

The passengers by a short train require great punctuality—frequent stoppages, and frequent opportunities of performing the same short journey—all requisites incompatible with the service of a long traffic. This is no doubt the reason why we find the short traffic on the main lines of this country so little attended to. It is not worth the while of a Company having sufficient long traffic, which pays better, to devote their energies to the cultivation of a traffic not so profitable, which might interfere with their principal business.

This consideration leads us to the conclusion, that if the traffic of the Croydon Railway, properly so called, is to be preserved to the Greenwich proprietors, it must be by means of the Croydon Company, or some Company similarly situated, and the circumstance which prevents any other Company from being so situated, is the natural privilege of the Croydon Company to levy toll. We think it would be well for the proprietors of the Greenwich Company, whose Directors seem disposed to drive away this traffic, to reflect seriously upon the position in which they are placed. It would not be difficult, we think, to demonstrate that the Brighton Company have lost money by every Croydon passenger whom they have carried, and that if the Croydon Company were to cease running trains to-morrow, the utmost increase to be expected to this traffic, as conducted by the Brighton Company, would not far exceed the number of 3,500 passengers carried in the month ending on the 6th of June, one of the best months in the year. We know that the *average* monthly numbers carried by the Croydon Company used to be more than 30,000. When will Companies, like individuals, profit by experience?

IN the House of Commons on Thursday, Mr. WILSON PATTEN brought forward the motion of which he had given notice, namely "That so much of the Standing Orders of this House as obliges promoters of Railway Bills to give their notices, and to deposit their plans and sections, in the months of February and March, instead of the months of October and November, be repealed." The motion was carried without the slightest opposition. We do not deem it a matter of much importance either way.

IN our last number we stated in a few words that on the 15th instant her Majesty, the Queen Dowager, had made a journey to Southampton by railway, but the particulars of her arrival, and of her return, we have now much pleasure in furnishing. At Southampton, the Directors residing there, and the Mayor, were in waiting. The carriages of Colonel Henderson and other gentlemen were placed at the service of the royal party, and conveyed them to the pier. A Government steamer, the *Volcano*, was in attendance, on board of which the party was embarked. A royal salute was fired from the battery, and echoed from a vessel lying near. At this moment the whole scene was highly interesting, and Southampton Water, beautiful as it always is, never appeared to more advantage. Yachts and steamers were crowded on its bosom, and the shores, wooded to the very verge, were rendered gay and enlivened by groups of persons of all classes attracted by the beauty of the day, and anxious to pay respect to the illustrious visitor.

Her Majesty returned on Friday, and having been detained beyond the appointed time, did not start till 4 o'clock. The journey was performed one minute under two hours. On the arrival of the train at the London terminus the Directors were in attendance to receive her Majesty, as also was Mr. Morgan, the Secretary, who on this, as on the occasion of the Queen's departure, attended with the other officers of the Company. The State carriage was superbly decorated, and every attention paid to the comfort and convenience of the whole party, in acknowledgement of which her Majesty was pleased to express her entire approbation. One stoppage only occurred in the journey each way at Winchfield, when the engine took in water; this occupied in the journey up 4 minutes. Here Admiral Lord Amelius Beauclerk, whose estate surrounds that station, presented himself to her Majesty, and handed into the carriage a small bouquet of flowers. This was received cordially and graciously from one who had been the messmate and friend of our late sovereign. And the trifling gift was taken home by her Majesty, and evidently prized beyond the choice exotics with which the carriage had been decorated at Southampton.

Nothing could be more satisfactory than the whole trip; and we learn it is likely to be repeated, as her Majesty is, we believe, about to take a residence on the island, or on the coast of Hampshire, where we trust she will regain health and strength. In fact, some of her suite stated, that they believed both to have been improved even by this flying visit to the Isle of Wight.

IT will be seen from an advertisement in another page that a considerable number of influential proprietors are about to make inquiries into the "present state and management of the Birmingham and Derby Railway." They have an onerous task before them, and if we can be at all auxiliary in

* This includes the trains to Croydon of the Brighton Company.

exposing malversation or remedying defects, it will give us great pleasure.

—o—

The Great Western Railway Company have petitioned the House of Commons on the subject of Post-office communication with Ireland. They represent that having effected, by the outlay of a very large amount of capital, the completion of a line of railway between Bristol and London, the successful results of which must be materially affected by the preservation and extension of the intercourse hitherto existing between this country and the southern districts of Ireland, they are deeply interested in the measures now under consideration for the improvement of the present communication by mail. They state that extensive and increasing commercial relations have immemorially subsisted between the south-western counties of England and Wales, and those fertile and populous districts of Ireland of which the ports of Cork and Waterford are the principal outlets, to the progressive growth and strengthening of which relations, the advancing cultivation and social condition of the latter, and improved facilities of mutual intercourse, cannot fail to be greatly conducive—that the establishment of the most direct regular communication between London and the counties of Cork, Clare, Kerry, Kilkenny, Limerick, Wexford, and Waterford, by way of Bristol, is of the highest importance to the public, not merely as enabling passengers to travel the intermediate distances, at an average saving of nearly 50 per cent. as respects both time and expense, but as creating an intercourse, which, if cultivated by the Government, would largely reduce the cost at which the mail service may be performed—and that the continued transmission of letters, and the facilitating of such intercourse between the south of Ireland and the south-western districts of England and Wales, as their respective products, and the geographical position of each obviously lead to, would further avert the injustice consequent on the only alternative of the arrangements prayed for, namely, that of promoting the interests of the port of Liverpool, and of the northern railways, by proportionally depressing those of the port of Bristol and the petitioners. They further represent that the Bristol Channel is peculiarly protected by its shores during gales blowing from three-fourths of the compass, whilst its nature and form afford unusual facilities for making the land on either side, and give perfect security to steam-vessels running from Lundy and Kingroad in the darkest nights, and in all weathers, as, they say, has been repeatedly proved by the arrivals and departures of the Great Western steam ship, and those numerous others which, since the establishment of steam navigation, have traded with Ireland—and, finally, that from the several advantages before-mentioned, the adoption of this line of passage, under Government auspices, becomes of the utmost importance to the public and to the petitioners, for which reason, they respectfully entreat the House will be pleased to instruct the Committee on this question, to give such consideration to their prayer as its merits may legitimately claim.

—o—

We understand that a railway on the Atmospheric principle is about to be laid down in the Thames Tunnel, and will, doubtless, be the means of adding to the attractions of that extraordinary work. The connection alluded to in the following short extract from an eloquent notice of the tunnel in *Blackwood's Magazine* for the present month, will thus be rendered more close and complete:—

"But we regard it as having a still higher character; we consider it as a noble and essential adjunct to the railway system, and to have come exactly at the proper period for completing a system which is now spreading over Europe, which is obviously meant as a great instrument of civilization, and which without it must suffer a full stop at the banks of every great river. For we cannot look to any resource in the clumsy and always insecure contrivance of a bridge of boats or masonry, incurring great loss of time, requiring change of engines and carriages, with a hundred other disadvantages; while, by a tunnel, the whole train might sweep along, wholly unobstructed, and be many a league on its course before a traveller could have crossed by the bridge. We shall thus probably see the Rhine, the Danube, and the Rhone passed below their beds, if the Governments of their countries shall have the funds or the common sense to follow up their present projects for the railways. Our impression decidedly is, that the tunnel is essential as a part of the railway. England has a right to pride herself alike on the scientific intrepidity and the palpable value of the undertaking to mankind. Brunel has been knighted on the completion of his work. But his perseverance and talents deserve a more productive distinction. We hope that he will give us a history of this great, *new*, and decided triumph over nature."

—o—

We learn from a correspondent that a requisition is in the course of signature for a special meeting of the Birmingham and Gloucester Railway Company, with a view to a change in the Management. Our advice to the shareholders is short and simple:—"Do nothing rashly."

—o—

It appears from an advertisement in another page, that the further opening of the Bristol and Exeter line to Taunton will take place on Friday next. We hear that the works beyond that point are in rapid progress.

—o—

We understand that John Power, Esq., has terminated his connection with the Preston and Wyre Railway Company, having resigned his office as Secretary some months ago.

—o—

Liability of Stage-coach Proprietors.—In the Court of Common Pleas on Tuesday, an action was tried, brought by an attorney named Curling, against the proprietors of the Yeovil and Exeter mail-coach, to recover compensation in damages for the losses he had sustained through an injury received from the negligence of their servants, and for having improperly used restive and unmanageable horses. The defendants paid 30*l.* into Court as compensation for the injury sustained. It appeared that on the 16th of October, 1840, the plaintiff, who is a solicitor in Southwark, went by the Yeovil and Exeter mail to Bruton. He was an outside passenger, and when the mail-coach was descending Ulverton Hill, about seven miles from Basingstoke, the near leader of the mail became restive and fell, and the off leader afterwards falling, the mail was overturned. The plaintiff received an injury in the arm. He had a few leeches applied, and although in great pain, he did not apprehend that he was seriously injured. He attended the meeting at Bruton, but on his return to town, the arm became swollen, he was obliged to have medical aid, was confined to his house for some days, and was subsequently obliged to carry his arm in a sling for five or six weeks. The whole question in this case was, whether the 30*l.* paid into Court was sufficient compensation. The jury returned a verdict for the plaintiff; damages 20*l.*, beyond the 30*l.* paid into Court.

RAILWAY OFFENCES AND OFFENDERS.

At Union Hall Police Court, on Wednesday, Frederick Bull, a fashionably dressed young man, was brought before Mr. Cottingham, charged with stealing 300*l.*, the property of the London and Brighton Railway Company. A policeman stated that the prisoner was a clerk in the service of the Railway Company, and that three weeks ago he absconded from the Brighton terminus, taking with him 300*l.*, the property of the Company. Every means had been devised to apprehend the prisoner, but he was not heard of until the preceding afternoon, when the witness succeeded in taking him into custody at a brothel in St. Martin's-court, St. Martin's-lane. At the time of his capture he had only a few sovereigns in his possession, together with a gold watch, chain, and seals, and without being questioned, he said that he had lost a considerable sum of money by betting at the Ascot races. Mr. Cottingham said, that as the offence was committed at Brighton, he should send the prisoner there. He was accordingly sent to that place for examination. We heard last night (but can scarcely believe it) that the matter has been "settled!"

It would appear from the details given in the daily papers, that the mode in which this department of the Company's business is conducted, is much of a piece with all the rest:—

"Mr. Rallet stated that he was Superintendent of the carriage department at the Brighton terminus, and that the prisoner was employed as one of the clerks at that station. On a recent occasion a deficiency of upwards of 100*l.* was discovered in the prisoner's accounts, and in a conversation held with one of the other clerks on the subject, the prisoner said, that on the first opportunity he should repair to his friends in London, and get them to advance the money to make up the deficiency of his books. On the 6th instant the prisoner received 52*l.* in his capacity of clerk, the proceeds of two trains which were starting for town. This money it was his duty to have locked up in a desk at the station until it was handed over to the treasurer, and the same evening, when asked for the 52*l.*, he made an excuse, and said that he had forgotten the key of the desk in which it was deposited, and added, that he should go to his lodgings and fetch it.' He then left the terminus, but instead of returning he absconded, and when the desk which was supposed to contain the money was broken open, it was found to be empty. On subsequent investigation into the prisoner's conduct, upwards of 300*l.* were found to be missing, the greater portion of which money was intrusted to him to deposit in the bank, instead of which he converted the same to his own use."

Had there been anything like proper method observed by this young man's superiors, it is impossible that he could have escaped detection for a day.

—

Last week, a man named George Hurley was taken before C. Tower, Esq., at Brentwood, by Mr. West, the Superintendent of the Eastern Counties' Railway Police, under the 13th clause of Lord Seymour's General Railway Act, with having neglected his duty in not holding, during the passing of a train, the heads of two horses which had been walking on the line. Mr. West deposed that he was proceeding to Brentwood by the 11 o'clock train, and observed the defendant stretched out at full length upon what is termed a "spoil bank," within a few yards of the permanent railway. Two horses were detached from some waggons, and were standing within a yard or two of his head, and completely free from his control. When the train had arrived nearly opposite to them they made a start, and were about to trot off, but were stopped at 9 or 10 yards distance. When called upon for his defence the prisoner said, he thought there was no great harm in his lying down to rest himself a little. His Worship said that he felt it his duty to mark his sense of the risk that had been incurred by the prisoner's idleness and neglect, by fining him 20*s.*, or, in default of payment, committing him to prison

Digitized by Google

for 14 days. The prisoner being destitute of funds, Mr. Hill stepped forward and paid the fine, remarking at the same time, that the young man was no servant of the Company, and consequently that he ought not to have been convicted. He added that the superintendent had unnecessarily interfered in the matter. The magistrate remarked that he was astonished to hear Mr. Hill complain of severity, when great leniency had been shown. The prisoner had rendered himself liable to a penalty of 10*l.*; that penalty was mitigated to 20s., in consideration of its being the first time that a charge of that sort had been brought into that Court. With respect to the superintendent, he had, in bringing this case before the bench, performed his duty to his employers and the public; and in conducting it had not pressed upon the prisoner with any undue severity.

We learn from the *Essex Mercury* that a few days since Jonathan Lennan, a police constable belonging to the Eastern Counties' Railway Company, was taken before Christopher Thomas Tower, Esq., at the White Hart Inn, Brentwood, and charged with having stolen a bundle of "faggot wood," the property of his employers. When called upon for his defence, the prisoner said he had found the faggot upon the turnpike-road, and added that the value of it did not exceed 6d. The magistrate said that the offence alleged to have been committed was by no means lessened by the trifling value of the thing said to have been stolen. Property belonging to the Company, to a very considerable amount, was unavoidably left much exposed on various parts of the line, and there could be no doubt but that depredations were frequently committed upon it; the offence charged to the prisoner was much aggravated by the circumstance of his having held the situation of a confidential and protective servant in the Company's employment; and he, therefore, felt bound to commit him to take his trial at the next sessions. The prisoner was committed.

At the Bristol police-office, last week, Charles Holland was charged with obstructing a police-officer of the Great Western Railway in the execution of his duty. It was deposed that he was drunk in the carriage from Bridgewater, and his conduct was excessively offensive to ladies in the carriage, who complained to the conductor. The officer endeavoured to remove him to another carriage, which he resisted, fighting and kicking the constable in a most outrageous manner. Fined in the full penalty of 40s. and costs.

On the same day, and before the same magistrates, John Hindy was charged with furiously driving on the Bristol and Gloucester Railway. Mr. J. G. Lansdown deposed, that he was proceeding in his carriage, in which were Mrs. L., a child, and a servant, on Kingsland Road, when at a point where the railway crosses the road, a boy made a signal to him to stop. He did so, and a train, driven by the prisoner and another, came down the inclined plane at a rapid pace. If the boy, who said he was not stationed there to give notice, had not made a signal, the train would have come against the carriage. No horn was blown, or other notice given in any way of the approach of the train. Mr. L. mentioned several instances of persons injured, one of whom had died, from neglect of the same kind. The magistrates said the public were indebted to Mr. Lansdown for bringing the case forward, and fined the defendant in the highest penalty, 40s. and costs.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I am an admirer of railways in general, and have been a considerable supporter of the Brighton from its commencement, believing it would pay well if properly conducted, and I have been grieved to observe in your paper articles and letters from correspondents tending to show, that the Managers of this important undertaking have been reckless and extravagant in the expenditure of the money entrusted to their care, and that in fact they no longer deserve the confidence of the proprietors.

I say grieved, because I am personally interested to a large extent, and because I have always supported the Directors and the Engineer at the half-yearly meetings, believing that they were doing their best, and relying that the statements they from time to time made were to be depended upon. If, however, the disclosures now made by yourself and your correspondents be true, how much have I, as well as the other proprietors, been deceived? And I am now inclined to think there is great reason for believing that all has not been right, from the information I have myself just obtained as to the land, the estimate of the cost of which has been increased fivefold.

You say that other information is pouring in upon you which shall be noticed in due time, and to this information I will with your permission contribute.

I am no engineer or lawyer, and must leave the consideration of those branches of expenditure to other and abler hands. What I propose to do is, to get the best information I can as to the land, no unimportant consideration you will admit, when you remember that it has cost nearly, if not quite, half a million of our money. By-the-bye, we have been told by our Directors that they have surplus land to the value of about 60,000*l.*, and the public journals intimated some time ago that this was to be sold by auction by Messrs. Driver, but I have heard nothing more about it. I trust the Directors will sell by *auction*, and that there will be no private bargains made to the injury of the proprietors.

With the view, then, of obtaining some information as to the land, I went to Croydon the other day, and was set down at the beautiful and commodious station at that place. On arriving at the station gate, I observed two houses opposite to it, fronting a road, the name of which, if I ever heard it, I do not now recollect.

One of these houses I observed was to be let, and reference was made for particulars to an auctioneer, whose name, I think, was Blake, and the adjoining one seemed to have been lately enlarged, as if it was intended to be adapted to business purposes. It appeared to me that those houses, or the one that had been enlarged, would be just the thing for a railway tavern or hotel for the Croydon station of the Brighton Railway; and I should have been glad if it had been one, for in truth I wanted some refreshment, which I had to walk some distance before I could get.

In conversation with the landlord of one of the inns of the town, I mentioned my impression of the eligibility of the two houses above-mentioned for a railway tavern, and suggested to him that it would be a good speculation for him to undertake, when he informed me that the houses belonged to Mr. Harman, a brewer in the town, who was the father of the Chairman of the Railway Company, and that Mr. H. intended to convert the house which had been enlarged into a tavern, and had applied to the magistrates of the place for a licence, but had been refused for the present, though he would, no doubt, ultimately get it.

I thought it a fortunate circumstance for the father of the Chairman (a brewer) to have obtained such an eligible situation for a railway tavern, and felt desirous to ascertain how he acquired the property, and made further inquiries in the neighbourhood for that purpose, the result of which was, that the houses formerly belonged to a builder in the town of the name of France, or Pance, that they brought him in about 120*l.* a year before the railway came, that the Company bought them of him for between two and three thousand pounds, and that they had sold them to the Chairman's father, who had a public-house, called the Windmill, on Croydon Common, which the railway had injured, and the licence of which he wished to be transferred to the house opposite the station.

Now, Sir, I do not complain that the Chairman's father became the purchaser of these two houses, if he paid the value for them; but I do complain that our surplus property should be thus sold by private contract; and when it is so sold, and moreover to the Chairman's own father, I think that we, the proprietors, have a right to inquire into the particulars of this transaction.

The circumstance of the Chairman's father having a public-house which was injured by the railway, for which, of course, he was entitled to compensation, and of his having bought the two houses of the Company opposite the station, and of his having applied to the magistrates to transfer the licence from the Windmill to one of the houses so purchased, led me to suspect that the two transactions between him and the Company were mixed up with one another, and that possibly the Company might have bartered the two houses opposite the station for the public-house on the common, on the supposition that the one property equalled the value of the other; I therefore went to the common, as it is called (for certainly it is not common now), to see this public-house, and I found a common pot-house, which would not fetch now 50*l.* a year, and which I learned did fetch, before the railway came, only 50*l.* a year.

My inquiry, therefore, of the Directors is, was this public-house, which before the railway was made brought in only 50*l.* a year, given in exchange for the two houses opposite the station, which at the same period brought in 120*l.* a year, which cost the Company between two and three thousand pounds, and which, on account of their proximity to the station, are daily increasing in value? I hope, for the sake of our own pockets, it will turn out not to be so; for

The enlarged house will let for at least	£100 a year.
The adjoining house will command	80
Making a total of	180
The public house fetched only	50
Leaving a balance against the Company of	£130

This is the result of my first day's investigation, and you shall have the result of the next as soon as I can send it. There is no difficulty, I find, in getting information, if the work be set about in the right way. It can be easily obtained by yourself or any other person, by making inquiries in the neighbourhood. These things, though done in a corner, are soon noised abroad in a country town. Truth will ooze out, however unpalatable.

The real arrangement respecting these two houses, and respecting the Windmill public-house, and what consideration in hard cash the Company have received, the Directors can best explain; and the above facts are, I think, abundantly sufficient to call upon them for the explanation; and if they will not explain before the next general meeting, they must *then* do so.

I am, Sir, yours most obedient servant,

JUNIUS.

STOPPING AT RAILWAY STATIONS.

To the Editor of the Railway Times.

SIR,—A plan has presented itself to me, by which I think much of the use of the break might be avoided on arriving at stations. I would propose that at all principal stations, the railway should rise so considerably as in part to stop the train; this inclination would be a great help in starting again. I do not pretend to enumerate advantages or difficulties, but study brevity.

I am, Sir, your most obedient servant,

R. O. P. E.

Cirencester, June, 1844.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The report of the meeting of the Northern and Eastern Railway Company suggests matter for painful consideration. The Chairman of that Company, the champion of its interests, the managing partner, has been convicted out of his own mouth as a trafficker in shares. He, the last man to be suspected, avows, knowing what he did of his own views and purposes, that he sold his shares at 2 discount, the highest price they have ever attained! Well may honourable and high-minded men decline to make investments in this undertaking, when they find men like the Chairman, in the midst of affluence and surrounded by luxuries, adopt practices from which many of the poorest of the poor would shrink.

Compare the course pursued by the Northern and Eastern Chairman with the conduct of the Chairman of the Great Western, who declared his intention of purchasing more shares when the merits of the line should be as well known to the whole of the shareholders as they were, by virtue of his position, to himself.

Mark also how these shares, now avowed to belong to the Chairman, were transferred. They were transferred out of the name of an individual who, it has been since ascertained, was a clerk or subordinate to the Chairman, thus leading to the belief that they were the sale of an individual shareholder.

It is singular that the individual acting thus should have been the party who denounced sales made in a similar manner by Mr. Alderman Humphery in the Blackwall Railway. But it is not merely to expose the conduct of the Chairman of this line that I address you, but with the view and purpose of devising some remedy for this trafficking in shares by parties who, of all others, ought to stand clear—even of imputation.

These things must not be, and I consider the public are interested in devising a prompt remedy. For my own part, I would not sit at a Board with any party who made purchases or sales with a speculative view, and would discountenance all sales or purchases by or on the part of a Director, made from information derived by virtue of his office. As the first step to improvement is a strict publicity, I pledge myself to furnish you with the names of all share-jobbing Directors, to be gibbetted in your columns.

I am, Sir, yours, very respectfully,

T. A.

June 21, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your last week's paper you have quoted and contrasted the receipts on this line in respect to certain stations, for seven months previously to the raising the fares, and seven months subsequently, and you have thereby shown that of the six stations referred to, viz.—

First three—Lea Bridge, Tottenham, Edmonton,
Second three—Ponder's End, Waltham, Broxbourne,

there has been by the raising of the fares a considerable loss to the Company by the produce of the three first mentioned stations, whilst there has been a more considerable gain upon the receipts of the three last stations—thus attempting to prove that such change had been advantageous to the Company upon the whole, and thus attempting to negative the assertions of one of the proprietary at the meeting of a contrary tendency.

Now, Sir, although I must admit that at first sight your *sequitur* has the appearance of fact, I must take the liberty of looking a little further, and not so readily jumping to my conclusion upon the subject.

That there has been a large loss upon the receipts of the three first stations is admitted. Now, in the first place, I contend that the first or opening year of a railway is no criterion whatever of its future receipts. It takes, and must take, time, and skill and judgment, to wean the traveller from his accustomed beat, and nothing can be more injudicious than, by opening at a fair, not a low price, to attract the trade to the rail, and then abruptly to advance the charge, as has been done in this Company.

It is quite obvious that with short stages from the metropolis, a railway commonly attracts those who live within a reasonable distance of it, whilst at more distant stages, the radii of the circle of attraction naturally open and extend themselves in the proportion of such distance, and the want of proximity to other railways. Now, I ask, has this railway been gradually opening and developing itself like other railways? and is the trifling improvement in the receipts of a few months in a second year at all commensurate with that which might have been expected from it? I humbly contend that it is far otherwise. The resources or supply of this railway are not in my mind developed, and by the mode adopted, the child is being strangled almost in its birth. Sir, if you will take the trouble to inquire of the respective turnpike trusts upon the roads or streams which should be tributary to this joint trunk, you will find them scarcely affected by its operation; and if you will take a little further trouble, and examine the stages and omnibuses, with their poor galled jades groaning in pairs under the inflictions occasioned by a load of 20 persons to each pair, under a broiling sun, as you may see them every half-hour on this main road, I think you will agree with me, that the advance of the fares on the railway has done it incalculable injury; that it has driven off the great part of the proximate traffic which was increasing, and would have still further increased to a great extent ere this, and that the increase on the more distant stations is quite below that which must have taken place in the common course of events. I perfectly agree with the honourable proprietor who spoke on this subject at the meeting, that injury has been done, (whether that injury be irreparable is another point.) In my humble opinion it is the duty of the Directors, at the earliest possible opportunity, to attempt its repair; and I will go further and say, that as soon as the Directors of the Eastern Counties' Railway will meet them in the true spirit of fair and mutual advantages, they should still further reduce their prices, and put on more third-class carriages, so that instead of carrying about a third part, as I believe they now do, of the traffic of that part of our country, they may take above two-thirds of its amount, and something like double their present receipts; at any rate giving their proprietors (as the railway could not with *proper* management from the beginning but have done) at least twice the amount of dividend which in its present state it promises.

I remain, Sir, your faithful servant,

A PROPRIETOR, LANDOWNER, AND RESIDENT ON THE LINE.

CHELTENHAM AND GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In a letter, succeeding his own, in your pages, "An Original Subscriber" will find "reasonable data" for my opinion in favour of present investment in the shares of this Company.

Three months ago his "facts" were "reasonable data" for hesitation; but *on his own supposition* purchasers at present prices might secure a handsome return.

At that period of time the proprietors in this Company had no legal means of disembarrassing themselves of a concern which they were bound by their Act to complete, and yet could not go on with for lack of funds. They were in a regular "fix," as brother Jonathan would say; and the wise public declined buying their shares, as the prospect in view ended in a "*cul de sac.*" Subsequent measures have removed the obstructions, and placed them on another footing. They have, after a severe struggle, got an Act passed, entitling them to associate themselves with other expectant parties, who will undertake the prosecution of the line without further expense on the part of this Company.

They may *so* associate themselves, or they may sell, with or without the power of future redemption, all their present rights and properties. There are parties to whom it is a great object to buy these rights, &c. Will these parties grudge paying *prime cost* for their advantages? Will they obtain them on less equitable terms?

If prime cost only is obtained, the share on which 80*l.* has been paid up will be worth 80*l.* in the market. At present it is quoted at 50*l.* discount. Does not this price leave an ample margin for profit, even in the event of *somewhat less* than prime cost being submitted to by the Company?

Suppose they make over only the unfinished portions to others, they will not, surely, make a *present* of them; they will receive in return the money laid out in works, compensation and preliminary expenses. This will greatly diminish their outstanding liabilities, and prevent the necessity for further calls. Nay, their renewed credit will effect this; tenders *now* come in freely. Thus the present purchaser will reap a dividend of 9 or 10 per cent. at present prices; and as the line will be completed before the loan expires, its renewal will be at a *higher* rate.

This is the *most unproductive* of the courses they have at their option.

It was not wonderful that the public formerly fought shy of these shares. It will be wonderful if they do so now, if they take the trouble to examine the new state of things, and can see through a millstone with a hole in its centre.

Let "An Original Subscriber" ponder these things, and be active. Let him remember that a dividend is payable on the 24th, and that another may be anticipated in August next (the time fixed for the next *general* meeting)—a dividend at the *rate of* 9½ *per cent. per annum on present prices.* Let him not trust too much *this time* to the depressing effects of the goading "missives," but be assured that all those who can raise the funds by begging or borrowing, will now hold fast their chances of a prize in the forthcoming lottery of the Cheltenham Union negociations.

I am, Sir, your obedient servant,

B.

June 20, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—An old reader of the *Railway Times* solicits the favour to ask, through the medium of your valuable journal, the following questions of the Midland Counties' Railway Directors: viz.—1st. When the proprietors of that line may expect to be called together to take into their consideration the most desirable way of raising the new capital sanctioned by Parliament upwards of a month since?

2nd. And if it be true, as I have heard it said, that the Company are carrying coals at the worse than profitless price of 1d. a ton per mile?

3rd. The reason they do not give the amount of the weekly receipts for the "mails," particularly as they are so exact in giving returns from all other sources, and when of this they manage to publish the sum total at the half-yearly meetings?

4th. And if it be true that they have not, and do not, intend renewing the contract for carrying the mails between Nottingham and Derby?

I am, Sir, yours, &c.,

A MIDLAND SHAREHOLDER.

June 22, 1842.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your account of the last meeting of the Northern and Eastern Railway, you report a proprietor to have said, that the South-Eastern Railway had issued *forfeited* shares at 25, when the price was 28; it should have been, had issued *shares* at 25, when the price was 28; and other, namely, forfeited, shares at a discount among their own proprietary.

I am, Sir, your obedient servant,

A PROPRIETOR OF EACH RAILWAY.

June 22, 1842.
